WESLEY A. STURGES

PREFACE

Part I of this book is identical with my *Federal Income Taxation,* published in the fall of 1954; the preface which follows is reprinted from that volume and sets out my educational aims. I regret that it was not possible, on this printing, to open the printer's forms to correct typographical and other errors (in part, at least, the result of going to press only a few months after the Internal Revenue Code of 1954 was enacted) but the Errata and Addenda list on page xxvii will serve both to correct the more egregious errors and to note a number of recent developments.

Part II is a revision of my *Estate and Gift Taxation,* published in 1951. I have reprinted portions of my preface to that volume, since my approach to the subject is unchanged, despite many changes of detail.

I am very grateful to the authors and publishers who have consented to my use of extracts from their copyrighted works.

BORIS I. BITTKER

PREFACE TO PART I

This casebook was planned for a federal income tax course, preferably in the second year and after the student has had some work in corporations, trusts, and partnerships, of three or four semester hours. In that time, I believe that the bulk of the material can be adequately covered, at least if some portions are assigned for collateral reading without class discussion, though some sections (*e.g.*, corporate liquidations and reorganizations, non-family partnership problems, and accounting) might be reserved for more intensive study in an advanced course or seminar. If less time is to be devoted to federal income taxation, more drastic surgery would be called for, and I would be uncertain of the outcome. No doubt, a good deal of useful information can be passed along in a two-hour course or the equivalent, or even in less time, but it would certainly be an unusual student who would gain, so rapidly, a proper appreciation of the pervasive effect of income tax on the rest of our law.

I do not mean to suggest that my intended audience is the prospective tax "expert." Quite the contrary. I have tried to address myself to the student who has no premature vocational interest in taxation, because federal income taxation today has the same credentials for a place in the law school curriculum as sales or trade regulation or trusts: it is an essential part of the well-educated lawyer's professional background, whether he ultimately makes vocational use of it or not.

I have tried to avoid burying the student in minutiae (with which the Internal Revenue Code is always overstocked), and this book is not a reference work, but the subjects covered are dealt with in some detail, because a "survey" would convey nothing of the spirit of income tax law. I have had to omit many subjects that would reward study, in order to concentrate on those fundamental problems (*e.g.*, income-splitting, capital gains and losses, the business expense as contrasted with capital outlays and personal expenses, the characteristics of income, the concept of annual accounting, *etc.*) that every student should grapple with.

With a "comprehensive revision" [1] of the Internal Revenue Code before us, the instructor may be tempted to close the books and study only the new statute. But pre-1954 law continues to be of great importance under the new Code. For while there is much in the law of federal income taxation that is "evanescent," [2] there is also much that is, if not permanent, at least tenacious. It is noteworthy that even in the "comprehensive revision" of 1954, Congress drew back from proposals to alter the fundamental nature of the law at important points.[3]

---

1 S. Rept. No. 1662, 83d Cong., 2d Sess., p. 1 (1954).

2 Coughlin v. Commissioner, *infra*, p. 232.

3 In the field of corporate distributions and adjustments, for example, the House version of the 1954 Code made drastic changes that the Senate Finance Committee successfully opposed: "The House bill in this area is, in substance, an entirely new statute, using few of the terms or concepts with which the courts or the bar have become familiar over the years. Your committee has sought a less extreme approach. Rather than to replace the existing statute, it has

Many provisions of the 1939 Code were re-enacted *in haec verba* or with only very minor changes. In some circumstances, the old law continues to govern in general, with restricted modifications for some taxpayers — for example, the expenses of child care are still non-deductible as a rule, though a limited class of taxpayers may deduct them to a degree. In other areas, the taxpayer will be governed by the pre-1954 law unless he elects to come under an optional provision in the 1954 Code, as in the case of prepaid income and reserves for future expenses. In some areas (*e.g.*, much of the partnership and short-term trust material), the new Code codifies a good deal of case law and administrative regulations. Other areas have been drastically altered, but we almost never start with a clean slate. Even the hotly-debated credit for dividends received by individuals merely alters, without overturning, familiar comparisons between the corporation and the partnership or individual proprietership as alternative means of carrying on the closely-held or one-man enterprise. Much old law will continue to be relevant in litigated cases for many years, and some will affect future transactions because, for example, it governs the basis of property acquired before 1954 or the calculation of earnings and profits. At still other points, old cases, though overruled by the new Code, are excellent springboards for class discussion; and others, like *Commissioner* v. *Court Holding Co.*[4] and *Bazley* v. *Commissioner*,[5] generated principles that will govern in foreign territory even though largely displaced in the area of their birth by the new statute. In my opinion, the study of pre-1954 statutes, cases, and regulations in conjunction with the 1954 Code is not just a temporary expedient. It is, rather, essential to an understanding of the new statute and, moreover, it offers an unusual pedagogical opportunity to inspire the student to examine the new statute, as statutes should be examined, relentlessly.

In editing the cases that are reprinted, I have omitted footnotes freely, renumbering those that were left, and, in general, when old revenue acts are cited by the court, I have substituted a reference to the corresponding section of the "old" Internal Revenue Code, as it stood just before it was supplanted by the 1954 Code. I have similarly substituted the appropriate sections of Regulations 118 (as of the summer of 1954) in place of citations of earlier regulations. While I have not always indicated that a citation has been modernized, I have made changes, of course, only if the statute or regulation was not significantly amended in the interim. At the beginning of most sections, I have commented briefly on the relation between the 1954 Code and earlier law, so that in reading the cases and other materials the student may weigh the importance of any changes in the statute.

---

sought to revise it so as to preserve the terms and concepts of existing law wherever possible. . . . The House bill departs from existing law by introducing the new terms, 'participating stock' (corresponding in general to common stock) and 'nonparticipating stock' (corresponding in general to preferred stock). It not only defines these terms but also contains a definition of the term 'security.' . . . Your committee believes that any attempt to write into the statute precise definitions which will classify for tax purposes the many types of corporate stocks and securities will be frustrated by the numerous characteristics of an interchangeable nature which can be given to these instruments. Accordingly, your committee has returned to the use of the terms 'stock,' 'common stock,' 'securities,' *etc.*, and, as in the case under existing law, has not attempted to define them in the statute." S. Rept. p. 42.

PREFACE TO PART II

Until 1950, casebooks had always relegated estate and gift taxation to a few pages or chapters, reserving major emphasis for other areas of the tax field. The appearance within one year of two books devoted exclusively to estate and gift taxes may be evidence either of a mounting interest in the subject or of the unquenchable optimism of publishers. So far, at least, few have granted to estate and gift taxation any more attention than is reflected by the subordinate position it occupies in the older casebooks.

The subject has become of increasing importance to the practicing lawyer. But even those addicted to the theory that there is a corpus of law to which every law student must be exposed would probably not say that a curriculum is fatally defective because it slights estate and gift taxation. The subject's claim for attention rather rests, in the author's opinion, in its power to stimulate and challenge the student. The interplay of legislative, administrative, and judicial action; the attempt to steer a course true to the statute's purpose through the ever-changing and involuted channels cut by reluctant taxpayers; the search for a better tax program — these offer a limitless opportunity to the instructor. Perhaps this, the second casebook in the field, will encourage more schools to exploit this opportunity.

A word about the structure of this volume. The gift tax is mainly a backstop to the estate tax; without the one, the other could achieve neither its social function of checking the undue concentration of wealth nor its incidental fiscal function of raising revenue. Part I [now Chapter 10] gathers together a brief collection of gift tax materials to give a bird's-eye view of the main outlines of this tax; then the reader passes on, in the first chapter of Part II [now Chapters 11–14], to consider the competing claims of the estate and gift taxes in specific situations. There the impact of the estate tax on various property arrangements is examined and then compared with the gift tax's claim on the same arrangement. The remaining chapters deal with the exemptions and deductions; computation of the federal estate tax and the credits applicable to it; federal estate and gift tax procedure; and apportionment of the federal estate tax among those interested in the gross estate.

There will no doubt be objection by some to the amount of space devoted to the comic fluctuations in the reach of the statutory provision taxing transfers "intended to take effect in possession or enjoyment at or after" the transferor's death. The author thinks this is a rich store of material on the whole process of law making — legislative, judicial, and administrative. Others may wish to skimp here to concentrate on today's statute; though divorced from its history it is indeed a tangle of peculiar distinctions. So too with the rather extensive section on community property: without this background, the student in a common law

state will find the "marital deduction," which entered the statute in 1948, an even more bafflingly complicated provision than it is.

Although the material in this volume can be adapted for use in a course on estate planning, the structure has not been oriented in that direction. This reflects the author's conviction that an estate plan that heavily stresses tax advantages, without giving at least as much attention to the law and practice of fiduciary administration, insurance, wills, and other relevant fields, is an inexcusable disservice to the client. And, despite a few notable exceptions, much of the writing on estate planning betrays a willingness to sacrifice everything else to a dramatic showing of tax savings, though to be sure there is usually a pious warning that an estate plan cannot be valued solely by the number of dollars that is diverted from the Treasury to the heirs. The exaltation of this kind of estate planning ought not to be fostered by law schools. Perhaps in time the estate planners among us will publish their own balanced vehicles of instruction. In the meantime, a casebook on taxation aimed primarily at the courses in estate planning might too easily displace the less accessible materials in the other equally important fields, and thus contribute to the improper emphasis just described.

The author has another reason for not moving toward what at the moment may seem to be the frontier of the future. Estate and gift taxes are the instruments of an important social policy. The practicing attorney, unless he happens to be on a public payroll, can hardly help but regard these levies as burdens to be avoided, if it is legally possible to do so. But the student has the time and the independence to reflect on their appropriate status in our public policy. If he can do so later on, when the problems of clients press themselves on him, so much the better. In any event, he will be a better citizen, and probably a better lawyer as well, if he has looked at these taxes at least once in the role of a legislator who is formulating a tax program. He will hardly do this in a course where he is playing estate planner; in the more orthodox tax course, at least the conditions are more suitable for such deliberation.

FEDERAL INCOME
ESTATE AND GIFT TAXATION

Part 1

FEDERAL INCOME TAXATION

INTRODUCTION

A Bird's Eye View of American Tax History

The Sixteenth Amendment, empowering Congress "to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration," became effective on February 25, 1913. In the fiscal year 1913, the federal income tax on individuals and corporations produced $35 million of revenue, less than 5 per cent of total federal receipts, a modest amount when compared to the yield of about $320 million from the tariff. In the fiscal year 1955, however, the federal income tax will produce about $50 billion, some 80 per cent of total federal receipts and about 2½ times the amount of taxes collected by all state, county, and municipal governments in the United States combined. For the year 1913, a married couple with two children paid a federal income tax of $10 on a net income of $5,000, of $260 on a net income of $25,000, and of $25,010 on a net income of $500,000; for the year 1954, the tax bills for these incomes will be $520, $6,268, and $402,456.[1]

These facts are of great significance to the lawyer, as to other citizens. But of even more professional interest to him is the manner in which the federal income tax has come, during the last two decades, to affect every branch of the law. Leases, conveyances, and mortgages; wills, trusts, and deeds; employment contracts, collective bargaining agreements, and pension arrangements; corporate security issues, liquidations, and mergers—every one of these legal events is today permeated with, if not dominated by, tax problems. The traditional comparison of the partnership and the corporation as methods of carrying on business enterprise (limited liability, perpetual existence, *etc.*) is hopelessly inadequate if the federal income tax is disregarded; an alimony agreement that is drafted without one eye on the Internal Revenue Code will probably be badly drafted; and a sale of anything more valuable than a lame horse requires at least brief attention to the tax "angle." Taxes were once the province of accountants,[2] but today even the general practitioner of law must know his way around this area.[3] Nor is it only the practitioner who is affected by the Internal Revenue Code. The legal scholar who seeks to understand the rise of the sale and lease-back

---

1 The figures for 1913 and 1954 are not precisely comparable, because of differences in exemptions, deductions, *etc.*, but the direction and degree of change are indisputable.

2 On the respective roles of the attorney and the accountant in federal income tax practice, see Rembar, "The Practice of Taxes," 54 *Col. L. Rev.* 338 (1954); Austin, "Relations Between Lawyers and Certified Public Accountants in Income Tax Practice," 36 *Iowa L. Rev.* 227 (1950).

3 On the ethical problems of tax practice, see Paul, "The Lawyer as a Tax Adviser," 25 *Rocky Mt. L. Rev.* 412 (1953), and works cited in footnote 2 thereof.

method of financing industrial and commercial property, or the growth of the family-controlled charitable foundation, or the use of multiple corporations to conduct a single enterprise must give due weight to the federal income tax. In its impact on our law for good or for ill, the federal income tax must be set down as one of the creative forces in legal history, like the invention of the trust, the corporation, or the doctrine of *respondeat superior*.

No other tax has had such an effect on the practice or structure of the law, at least not in our time. Many attorneys encounter the real property tax, which produces more than $8 billion a year for local governments, only at real estate closings, where its importance is minor; they may be acquainted with sales, use, and gross receipts taxes (producing about $6 billion for state governments) and with the federal taxes on alcohol and tobacco (about $4 billion per year) only as consumers; and no one will impugn the lawyer's professional competence if he goes through his career in ignorance of the customs duties. The federal income tax is something else again; he might better be ignorant of the rule against perpetuities, the parol evidence rule, or the requisites of negotiability.

How has this come about?

Until the Civil War, customs receipts were the backbone of the federal tax system; the only other source of federal income of any consequence was the sale of public lands, except for a miscellany of excise taxes imposed when customs receipts declined and expenditures increased during the War of 1812 and repealed shortly thereafter. During the Civil War, customs receipts were once again unable to carry the load, and it became necessary for Congress to seek other sources of federal revenue. Among the "war taxes" that it levied was an income tax. The measure was amended several times; the 1864 version imposed a tax of 5 per cent on incomes from $600 to $5,000, of 7½ per cent on income from $5,000 to $10,000, and of 10 per cent on income above $10,000. Income taxation was a useful supplement to customs and other levies, but total federal receipts still fell far short of expenses. There was a deficit of $423 million for the fiscal year 1862, and the annual deficit rose steadily until it amounted to $964 million for the year 1865. The Confederacy also employed an income tax, whose rates were steeper than the Union's, but its yield was much lower.

After the Civil War, the federal income tax was repealed and customs receipts once again became the basic source of federal revenue; but they were never again to be the only source. Federal excises on tobacco and liquor together produced almost as much as, and sometimes even more than, the tariff during the years between the Civil War and World War I. Throughout the seventies and eighties, moreover, agrarian and labor groups called for reductions in the tariff and for a revival of the federal income tax. To Eastern business interests, on the other hand, the income tax was "confiscation," "spoliation," and "communism," and throughout this period the Republican Party held the fort against its assaults. The task became harder as the Democratic Party gradually emerged from its handicap as the party of secession, and it finally became impossible when the Populist movement gained strength from the panic of 1893.

In 1894, during Cleveland's second administration, a federal income tax, based largely on the Civil War statute, was passed by Congress after a bitter struggle, a notable feature of which was the oratory of William Jennings Bryan. A tax of 2 per cent was imposed on individual income over $4,000 and a flat 2 per cent tax

was imposed on the income of business corporations. Congress thus went far beyond Cleveland's modest recommendation, in his 1893 message to Congress, of a "small tax upon incomes derived from certain corporate investments." The income tax was carried by Democratic and Populist votes, but it must be viewed primarily as a regional victory of the South and Middle West over the Northeast, part of the same sectional movement that produced the Interstate Commerce Act in 1887, the Sherman Antitrust Act in 1890, and the unsuccessful campaign for bi-metallism. It is worth noting, however, that the Populist effort to obtain a progressive tax on individual income was defeated, though the $4,000 exemption introduced a measure of graduation.

The tax became law on August 28, 1894[4] to take effect as of January 1, 1895, and by January 29, 1895, the Supreme Court had agreed to hear *Pollock* v. *Farmers' Loan & Trust Co.* (and a companion case), in which the Circuit Court for the Southern District of New York had refused to grant an injunction in an action that attacked the tax as unconstitutional. Immense public interest was aroused by the five days of argument before the Supreme Court, in which notable attorneys and orators were engaged on both sides. The *Pollock* action was a suit by a stockholder to enjoin his corporation from paying the tax, a legal form that has been much criticized and is seldom encountered today.[5] Consequently, the tax was defended not only by the Attorney General but also by counsel for the corporation.

One ground of attack was that the income tax was a "direct" tax, and that it was not apportioned among the several states in proportion to population, as required by Article I, Section 9, Clause 4 of the Constitution:

> No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.

A "capitation" tax clearly meant a poll tax, and there was general agreement that a tax on real estate, the kind that produces the bulk of municipal revenue today, was also a "direct tax" as that term was used in the Constitution. But was the income tax a "direct" tax because it included rents received by the owner of real property, along with all other types of income? If an income tax on rents derived from real property was a "direct" tax, was the inclusion of income from personal property (*i.e.*, interest from bonds, dividends from stock, etc.) equally invalid? Finally, if the inclusion of rentals or dividends and interest made the tax "direct," were these provisions separable from the rest of the tax, or was the statute invalid *in toto?*

Whatever may have been the purpose of the constitutional requirement that direct taxes be apportioned among the several states in relation to their population,[6] it was jeopardized by the lack of a consensus on what, besides a poll tax and a tax on real property, was included in the term "direct tax." Chief Justice Fuller was surely mistaken when he said in the *Pollock* case (157 U.S. at 573)

[4] Without President Cleveland's approval. The tax was a rider to the Wilson tariff bill, and Cleveland opposed the imposition in it of tariffs on sugar and other commodities. But since a veto would have kept alive the McKinley tariff schedules, Cleveland allowed the act to become law without his approval.

[5] *Infra*, Chapter 9, Section B.

[6] In the *Pollock* case, Chief Justice Fuller explained the provision's purpose as follows: "Nothing can be clearer than that what the Constitution intended to guard against was the exercise by the general government of the power of directly taxing persons and property

that "the distinction between direct and indirect taxation was well understood by the framers of the Constitution and those who adopted it." More descriptive of the prevailing uncertainty is this extract from Madison's *Notes:* "Mr. King asked what was the precise meaning of *direct* taxation. No one answered." [7]

The term "direct tax" had caused difficulty at the very outset of the Republic. In 1794, Congress levied a tax on carriages, after a debate in which Madison argued that the tax was a direct one, while Fisher Ames, drawing on Massachusetts experience, asserted that it was indirect. The Supreme Court, in a case [8] in which ex-Secretary of the Treasury Hamilton participated in the argument, held that the tax was constitutional. Mr. Justice Chase was "inclined to think" that the only taxes that were "direct" within the meaning of the Constitution were the poll tax and taxes on land. Expressing doubt that a tax on personal property was "direct," he found that it was not necessary to decide, because "a tax on expense is an indirect tax; and I think, an annual tax on a carriage for the conveyance of persons, is of that kind. . . ." (3 Dall. at 174.) Mr. Justice Paterson and Mr. Justice Iredell, who wrote separate opinions, were equally unable to suggest any examples of a direct tax except the poll tax and taxes on land.

So far as federal income taxation was concerned, the Supreme Court's most important foray into the morass before the *Pollock* case was *Springer* v. *United States,* 102 U.S. 586 (1880). In this case, the Court unanimously upheld the validity of the Civil War income tax, which embraced (13 Stat. 479):

> the annual gains, profits, and income of every person . . . whether derived from any kind of property, rents, interest, dividends, or salaries, or from any profession, trade, employment, or vocation . . . or from any other source whatever.

Citing the *Hylton* case, and other cases in which it had held that taxes on the receipts of insurance companies, on state bank notes, and on inheritances were all indirect taxes, the Court held that the federal income tax was also indirect, saying (102 U.S. at 602):

> Our conclusions are, that *direct taxes,* within the meaning of the Constitution, are only capitation taxes, as expressed in that instrument, and taxes on real estate; and that the tax of which the plaintiff in error complains is within the category of an excise or duty.

Despite this history, the Supreme Court in the *Pollock* case, by a vote of six to two (one justice not sitting), held that insofar as it taxed income from real estate, the 1894 federal income tax was unconstitutional:

> . . . [I]t is admitted that a tax on real estate is a direct tax. Unless, therefore, a tax

---

within any State through a majority made up from the other States." 157 U.S. at 582. Seligman, on the other hand, concluded that the restriction was concerned only with the slavery question: it was intended to induce the slave states to accept representation in the lower house of Congress based on the number of free persons in the state plus only three-fifths of the slaves, by promising that direct taxes would be similarly apportioned. This link between representation and direct taxation is clearly seen in Article 1, Section 2, Clause 3 of the Constitution: "Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, . . . three fifths of all other Persons." Seligman comments: "The direct-tax clause was inserted into the constitution simply and solely as a concession to slavery, and with the disappearance of slavery and the adoption of the fourteenth amendment the very reason of its existence passed away." Seligman, *The Income Tax* (1911) 559.

[7] 5 Elliot, *Debates on the Adoption of the Federal Constitution* (1866) 451.

[8] Hylton v. United States, 3 Dall. 171 (1796).

upon rents or income issuing out of lands is intrinsically so different from a tax on the land itself that it belongs to a wholly different class of taxes, such taxes must be regarded as falling within the same category as a tax on real estate *eo nomine*. . . . An annual tax upon the annual value or annual user of real estate appears to us the same in substance as an annual tax on the real estate, which would be paid out of the rent or income. . . . If, by calling a tax indirect when it is essentially direct, the rule of protection could be frittered away, one of the great landmarks defining the boundary between the Nation and the States of which it is composed, would have disappeared, and with it one of the bulwarks of private rights and private property. (157 U.S. at 580, 581, and 583.)

The *Springer* case was distinguished because none of the income of the taxpayer there in question was derived from real estate, a factual distinction that was accurate but that probably would have come as a surprise to the *Springer* court.

In addition to holding that the inclusion of rents was unconstitutional, the Court in the *Pollock* case decided, all eight justices agreeing, that the inclusion of municipal bond interest constituted "a tax on the power of the States and their instrumentalities to borrow money" and that it was unconstitutional as a violation of the federal principle. This determination was not of fundamental importance, because an income tax exemption for interest from state and municipal bonds was entirely feasible (and, indeed, all subsequent income taxes have exempted such income). It might even have been possible to re-enact a federal income tax with an exemption for income derived from real property. But two other questions were left unanswered because the Court was equally divided, and so long as these questions were in doubt, re-enactment of an income tax law was hardly likely. The first was whether a tax on income from personal property was an improper direct tax. This was a fundamental issue because if not only rents but also interest and dividends had to be granted an exemption, a federal income tax would have to be restricted to personal earnings and business profits. Secondly, the Court did not decide whether the granting of a minimum exemption of $4,000 to individuals violated the uniformity clause of Article I, Section 8, Clause 1 of the Constitution: "[A]ll Duties, Imposts and Excises shall be uniform throughout the United States." This issue too was basic. A third question of great immediate importance was also left unanswered by an equally divided Court: whether the invalid provisions taxing income from real estate and municipal bond interest were separable from the rest of the statute or rendered it invalid *in toto*.

One week later, counsel for the appellants applied for a rehearing on the undecided questions, and the Attorney General in response suggested that the whole case be reargued. The Court set both applications for rehearing down for argument in May, 1895; this time all nine justices were on the bench. In a second opinion (158 U.S. 601), the previous holding as to income from real estate was reaffirmed by a vote of five to four. The same five justices agreed that a tax on the income from personal property was an invalid direct tax, and they held that the invalid provisions were not separable from the rest of the tax, so that the tax was invalid *in toto*.[9] Mr. Justice Jackson, who did not sit on the

[9] The Court did not find it necessary to pass on the other undecided question—did the $4,000 exemption violate the uniformity clause of Article I? A few years later, however, in *Knowlton* v. *Moore*, 178 U.S. 1 (1900), the Supreme Court held that a federal inheritance tax was constitutional despite certain exemptions; the term "uniform throughout the United States," it held, meant geographical uniformity, so that persons and property would be taxed in the same manner without regard to geographical location, rather than "intrinsic" uniformity (*i.e.*, without exemptions).

first argument, voted to uphold the tax on all three counts. Since he was part of a minority of four, it was immediately assumed that one of the four justices who at the first argument thought the tax on income from personal property was proper and that the provision taxing rents was separable from the rest of the statute must have switched sides. This in itself would not have been of earth-shaking importance, but it was dramatic evidence of the power of a single judge, and the fact that the reports did not reveal the name of the "vacillating" judge lent an air of mystery to the event. Mr. Justice Shiras was long identified, on what now seems to be slim evidence, as the judge who switched, though some scholars have more recently awarded the blame, or credit, to others. It is also possible that the assumption of a switch is incorrect.[10]

After the *Pollock* decision, advocates of the income tax turned to an amendment to the Constitution as a means of reviving the tax, though there was also some agitation for confronting the Supreme Court with a new statute in the hope of securing a reversal of the judicial position. McKinley's victories in 1896 and 1900 over William Jennings Bryan, the candidate of the Democrats and Populists, reflected the temper of the times, however, and not even the financial demands of the Spanish-American War could restore the federal income tax. But within a few more years after the *Pollock* case, in which Mr. Justice Field had called the income tax "usurpation," an "assault upon capital," and "the stepping-stone to . . . a war of the poor against the rich" (157 U.S. at 607), the very same tax had found eminent support within the Republican Party itself: both Theodore Roosevelt and William Howard Taft announced that they favored a federal income tax. Taft, indeed, expressed at one time the view that a constitutional amendment might not be required because of the changed membership on the Supreme Court, though he later reconsidered. Bryan, apparently having more faith in the rule of precedent than the future Chief Justice, insisted that a constitutional amendment was necessary, and that Taft's hope of a change in the Supreme Court's sentiment was insincere. Whether Taft himself was engaged in a campaign maneuver or not, the insurgent Republicans who followed Roosevelt were unquestionably serious.

In 1909, a combination of these insurgent Republicans and the Democrats laid plans for an income tax amendment to the Payne-Aldrich Tariff bill, then pending in the Senate. The proposal was a tax on both corporate and individual incomes, with a $5,000 exemption; it was a direct challenge to the *Pollock* case, except that interest from state, county, and municipal bonds was to be excluded, in recognition of the Supreme Court's unanimity on this point. The conservative wing of the Republican Party was able to head off the threat by winning over President Taft, but the price of victory was high. To obtain Taft's assistance in beating down the income tax on individuals, its opponents were forced to agree that Congress would enact a tax on corporate income[11] and that it would adopt

---

[10] There is a full account of the puzzle and a review of earlier comments in Shiras, *Justice George Shiras, Jr. of Pittsburgh* (1953) 168–183.

[11] The 1909 corporate income tax was held constitutional in Flint v. Stone Tracy Co., 220 U.S. 107 (1911). The Court rejected (220 U.S. at 150) the argument that it imposed an unapportioned "direct" tax:

"Within the category of indirect taxation, as we shall have further occasion to show, is embraced a tax upon business done in a corporate capacity, which is the subject-matter of the tax imposed in the act under consideration. The *Pollock* case construed the tax there

a joint resolution proposing to the States an amendment to the Constitution to permit a federal income tax on individuals. Taft favored the constitutional amendment partly as a sop to the insurgents and partly because he thought that an income tax might be good policy in time of great national need. The backers of the income tax were dismayed by Taft's open opposition and especially by the fact that a constitutional amendment could be defeated if only 12 state legislatures were won over by the conservatives.[12] Moreover, even with an amendment to the Constitution, the battle in Congress would have to be fought again, perhaps at a less auspicious time.

The joint resolution passed by Congress in 1909 on Taft's insistence, adopted in time as the Sixteenth Amendment to the Constitution, was in the following terms:

> The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

The most influential opposition to the proposed amendment, when it was before the states for ratification, stemmed from a special message on January 5, 1910, from Governor Charles Evans Hughes to the New York State Legislature. Governor Hughes stated that he believed the federal government should have the power to impose an unapportioned income tax, but he recommended against ratification because the words "from whatever source derived" in the proposed amendment, "if taken in their natural sense," would permit income from state and municipal bonds to be taxed by the federal government, a power that would "afford the opportunity for federal action in violation of the fundamental conditions of State authority." This message led to the defeat of ratification in New York in 1910. Some supporters of the amendment rejected Hughes' construction, but others were willing to accept it, and his views were quoted throughout the nation. But the Democrats and insurgent Republicans were successful in the state elections of 1910 (New York ratified in 1911) and again in 1912, and by early 1913 thirty-six states had ratified.

The Sixteenth Amendment thus became a part of the Constitution on February 25, 1913, less than four years after the advocates of the income tax thought they

---

levied as direct, because it was imposed upon property simply because of its ownership. In the present case the tax is not payable unless there be a carrying on or doing of business in the designated capacity, and this is made the occasion for the tax, measured by the standard prescribed. The difference between the acts is not merely nominal, but rests upon substantial differences between the mere ownership of property and the actual doing of business in a certain way."

The Court also upheld (220 U.S. at 162) the inclusion of income from state and municipal bonds:

"It is further contended that some of the corporations, notably insurance companies, have large investments in municipal bonds and other non-taxable securities, and in real estate and personal property not used in the business, that therefore the selection of the measure of the income from all sources is void, because it reaches property which is not the subject of taxation—upon the authority of the *Pollock* case, *supra*. But this argument confuses the measure of the tax upon the privilege, with direct taxation of the estate or thing taxed. In the *Pollock* case, as we have seen, the tax was held unconstitutional, because it was in effect a direct tax on the property solely because of its ownership."

[12] Amending the Constitution seemed a graver and more formidable undertaking then than now; the first ten amendments were virtually part of the original Constitution, the eleventh and twelfth had been adopted in 1798 and 1804, and for more than a century the only other amendments were the thirteenth, fourteenth, and fifteenth, representing the political settlement of a civil war.

TABLE I

** Estimates.

had been defrauded of victory by the maneuver of the tax's opponents. Within a few months, moreover, Congress passed the Revenue Act of 1913, imposing a "normal" tax of 1 per cent (with an exemption of $3,000 for an individual and of $1,000 additional for a married person living with his spouse) and a "surtax" ranging from 1 per cent on net income from $20,000 to $50,000 up to 6 per cent on that part of any net income exceeding $500,000. This should be compared with the income tax proposal that was defeated in 1909: a flat 2 per cent on net income in excess of $5,000.

The Role of the Income Tax Today: A Brief Survey

The income tax's career from 1913 to the present day is starkly summarized in Table I.

Where do we go from here? In answering this question, we might begin by analyzing the last column of Table I—the expenditures of the federal government. These expenditures, broken down for the period since World War II, are shown in Table II.

TABLE II

TOTAL EXPENDITURES BY MAJOR CLASSIFICATIONS
ALTERNATE FISCAL YEARS 1947–1955*
(In Millions)

	1947	1949	1951	1953	1955 †
National Defense and Related Activities	$16,812	$12,158	$19,955	$44,584	$38,271
International Finance and Aid	4,928	6,016	4,469	5,788	5,250
Interest on the Public Debt	4,958	5,339	5,613	6,508	6,800
Veterans Administration	7,259	6,878	5,333	4,335	4,165
Agriculture	1,226	2,658	635	3,063	2,523
Commerce	149	239	378	477	421
Housing and Home Financing	129	−56	460	382	−385
Postal Deficiency	242	524	624	660	90
Public Works	690	1,519	1,458	1,655	1,471
Reconstruction Finance Corporation	215	314	−71	−86	−238
Social Security Program	1,066	1,696	2,027	2,253	1,525
Atomic Energy Commission	159	647	908	1,802	2,425
Miscellaneous	1,456	2,124	2,844	3,185	3,253
Total	$39,289	$40,057	$44,633	$74,607	$65,570

† Estimates.

What are the prospects for a massive reduction in these expenditures—not by substituting paper napkins for linen on naval flagships, but by fundamental cuts in the budget? Much of our budget obviously hinges on the men in Moscow and Peiping, not on Bostonians and San Franciscans. A dependable international settlement would have a prompt repercussion on federal expenditures, and so would further aggression. Our expenditures for national defense and foreign aid reflect our international hopes, aims, and estimates. These in turn are partly

trimmed to our economic position, but not even those who believe that the Kremlin's long-range strategy is to lure us into "bankruptcy" would recommend a cessation of defense expenditures to improve the national financial statement. Other important items in the federal budget, like veterans' benefits and interest on the public debt, can be reduced only painfully. The prospect for a substantial cut in these expenditures is dark. Still other domestic expenditures are more flexible, but social aims, regional and occupational pressures, political pledges and ambitions, and kindred drives may lead to increases instead of to reductions. Moreover, if expenditures that aid one group (farmers, veterans, tenants of public housing developments, *etc.*) are—or seem to be—financed by taxes on other groups, the pressure to cut expenditures may be decisively overbalanced by the drive to increase benefits. Of course, the favored group, conscience-stricken, may advocate a reduction in its benefits, but such a subversive refusal to play the economic man may be matched by an infection of altruism within the taxed group, causing them to insist on increasing the benefits paid to the others. Last year's level of federal expenditures is not sacrosanct; one has only to examine the last column of Table I to see how widely expenditures can vary from decade to decade. But Tables I and II also demonstrate that our international interests, aspirations, and responsibilities are of overwhelming importance in fixing the level of national expenditures.

So much for the expenditure side of the federal budget. What of federal taxes? While the two items are related, they are certainly not in balance. Though expenditures decline, taxes may be held up to produce a surplus for debt retirement, to combat inflation by draining off funds that might be used for consumer goods, or for other reasons. Conversely, taxes might be cut without a corresponding decline in expenditures, the gap being closed by government borrowing. Such a fiscal policy might be adopted in a depression in order to stimulate the national economy by government spending; deficit financing may also be resorted to in wartime, to finance expenditures essential to national survival, if taxes are already as high as is politically or economically feasible. A gap between federal expenditures and federal taxes, then, is not only possible but may be a deliberately adopted policy. Still, one cannot minimize the facts that, on the one hand, there is strong opposition to deficit financing, while, on the other hand, any decrease in federal expenditures will stimulate a demand that the "saving" be "passed on" to the taxpayer. The bond between taxes and expenditures cannot be ignored, then, though it may be more of an uneasy family tie than an inflexible chain. Without a drastic change in federal expenditures, a drastic change in total federal taxes is unlikely.

To be sure, the taxpayer's readiness to accept heavy federal expenditures will be molded not only by his assessment of their short and long run value to him, but also by the type of tax imposed to finance the expenditures. A tax that is out in the open, like an income or sales tax, may cause more resistance to federal expenditures than one that is less clearly identifiable—like a manufacturer's excise, though even the latter type of tax, if separately stated by the vendor of products or services, may produce "tax consciousness" on the consumer's part. An income tax paid once a year may be a crushing blow, while the same amount

withheld from wages may not be missed, as though gross wages were a mirage and "take-home" pay the only reality. On the other hand, if the tax is hidden, some taxpayers may be uneasy about expenditures they would endorse if they knew where the money was coming from; and still others, feeling that the income tax withholding system is fit only for serfs and school children, may protest any expenditures by a government that will not trust them until the annual due date. The distribution of the burden among economic and regional groups and the taxpayer's sense of justice also affect the likelihood of a taxpayers' movement for the reduction of expenditures. While a taxpayers' revolution is always possible, the author's own, no doubt unforgiveably cynical, conclusion is that the users of the mail are about as likely to band together to force a reform of the postal service.

If federal expenditures, and hence federal taxes, remain high, what part will the federal income tax play in the foreseeable future? Its phenomenal success in raising revenue cannot be disputed, but its position of pre-eminence has not gone unchallenged. Some critics argue that it is dangerous for the federal government to rely so heavily on a tax whose yield is entirely at the mercy of national income, so that any decline in income will produce an immediate decline in revenue.[13] To others, however, this "built-in-flexibility," far from being a drawback, is one of the merits of the income tax; the automatic decline in tax liability when income falls serves to release consumer spending power when it is most needed, without the delay of political action, while in a period of boom, the automatic rise in tax liability serves to reduce the inflationary pressure of increased purchasing power.

The most vigorous attacks on the pre-eminence of the federal income tax, however, have come from those who fear its strength, not its instability. In part, the fear is that the income tax undermines the incentive to work. The criticism is not easily assessed, and the task is not made less perplexing by the fact that many of the critics are academic economists, who, if they are themselves motivated by financial ambition, have shown poor judgment, and lawyers, among whom the tradition of uncompensated public service is strong. Some taxpayers are indifferent to money; but others, no doubt, are indifferent to everything else. Even those who do not themselves care much for money, of course, may be goaded into lethargy by the government's demands for part of what they earn. Of those taxpayers who are driven principally by ambition for financial success, some may work harder under the lash of the income tax to maintain a stable after-tax income, while others may flee to Florida or Tahiti or to jobs that require less energy. While in general it is thought that an income tax on wages and salaries cannot be shifted by the taxpayer, it may be that some groups, *e.g.*, organized labor, may demand higher pay for the same work, leaving their incentives untouched by the tax, except insofar as the whole economy eventually reflects the higher cost of labor. The income tax's impact on incentives is unquestionably also affected by the purpose for

13 A decline of 10 percent in the adjusted gross income of individuals below the 1953 level, it has been estimated, would reduce tax liabilities by $4 billion, from $32 billion to $28 billion. A decline of 25 per cent in individual income would cut tax liabilities from $32 billion to $22 billion. Pechman, "Yield of the Individual Income Tax During a Recession," 7 *Nat. Tax J.* 1, 13 (1954).

which the tax is levied, the climate of political opinion, the steepness of any increase, the prospects for later changes in tax rates, the taxpayer's sense of justice, *etc.*

If we assume that the federal income tax impairs the incentives of persons who can join or withdraw from the labor market with comparative freedom—like men near retirement age or housewives, one must still decide whether it is undesirable for housewives to turn down factory jobs or for business executives to accelerate their retirement. Opinions would surely differ, and we cannot avoid the question by saying that such decisions should be left to the individual without coercion by the tax system. All taxes have effects on the economy, and if the income tax were reduced or repealed to encourage the housewife or older executive to work, some other tax would have to be imposed, or deficit financing would have to be resorted to, and the taxpayer would then be coerced in some other area of his economic life. We know little of the incentive effects of income taxation,[14] but even if we knew much more, policy decisions would not flow inexorably from the information.

Economists seem to feel on more solid ground when they turn from the impact of income taxation on incentives to its effect on consumption and savings. Assuming that the tax is not shifted, as by a successful demand for higher wages or salaries, the usual view is that it deprives low income taxpayers of funds that would go for consumer goods and services, while high income groups are impelled to reduce their savings rather than their consumption. This conclusion rests on the assumption that low incomes are largely or entirely exhausted by consumption expenditures, saving being either nil or confined to relatively inelastic items like insurance premiums. Higher income groups devote increasingly large portions of their income to savings, it is thought, and hold their consumption at relatively inflexible levels. Our knowledge of the distribution of investments among income groups is quite fragmentary, but one recent study presented these conclusions:

> 1. That, as a minimum estimate, the top 1 per cent of all spending units with incomes of about $15,000 and over accounted for more than one-quarter of the annual accumulations of investable funds made by all spending units in 1948 and presumably also in other postwar years.
>
> 2. That, again as a minimum estimate, the top 3 per cent of all spending units with incomes of $10,000 and over accounted for more than 40 per cent of the total.
>
> 3. That the top 5 per cent of all spending units with net incomes of $7,500 and over accounted for more than 55 per cent of the total.[15]

These estimates of 25 per cent, 40 per cent, and 55 per cent as the annual accumulations of investable funds by the top 1 per cent, 3 per cent, and 5 per cent were regarded by the authors as minimums that might more probably be stated as 30-35 per cent, 45-50 per cent, and 60-65 per cent respectively.

Though these statistics indicate a high degree of concentration of "investable

---

[14] A recent study of business executives found some evidence of an adverse effect of income taxation on incentives, but it also states: "The evidence of the interviews tends to show that the extent to which business executives have reduced their work and effort, as a result of taxes, has frequently been much exaggerated. . . What all history goes to show is again confirmed by a good deal of evidence in this study, that difficulty, danger, and strenuous effort are themselves incentives to many men." Sanders, *Effects of Taxation on Executives* (1951) 12, 14.

[15] Butters, Thompson, and Bollinger, *Effects of Taxation: Investments By Individuals* (1953) 19.

funds," they also indicate that some 65-75 per cent of the annual accumulation of such funds is diffused among the 99 per cent of spending units with incomes of under $15,000. The income tax even at present rates is hardly confiscatory at the level of $15,000 and below, and these are the families that would have to bear the brunt of any alternative tax that might be levied to replace the federal income tax. Would their investment capacity be enhanced, or reduced, if Congress turned its affections from the income tax to a national sales or manufacturers' excise tax? One must not overlook, of course, the apparent fact that the higher income groups, on whom the income tax rests more heavily, invest increasingly higher portions of their investable funds in risk ventures, without which there can be no sound investment of lower class money; and it is also possible that lower income groups keep disproportionately large parts of their savings in the form of cash rather than in investments. But we may be seeing a shift in this pattern, as insurance companies, pension funds, investment companies, and other pools of capital that are fed by lower income groups exhibit an interest in the type of business equities that they once avoided as imprudent investments. Moreover, installment investment plans for lower income groups may introduce an element of inelasticity here, at least so long as wages exceed the subsistence level. It is not inconceivable that we will become a nation of mass investment, as well as mass purchasing, power. If that time is already at hand, we shall have to rethink, and perhaps to revise, our views of the relation of income taxation to savings and investment.

Individuals are not the only source of funds for investment, of course, and they may not even be the most important. Corporate investment in recent years has been financed by retained earnings more than by the sale of securities. The corporate income tax reduces earnings available for investment, though this pressure may be alleviated to some unknown degree by a shifting of the tax through the medium of higher prices or lower wages. It may also be alleviated by a reduction in dividends, though this expedient, while conserving the corporation's internal resources, would repel outside capital. Besides reducing the supply of corporate capital for investment, an income tax may reduce the incentive to invest. Generalizations in this area are but faint guideposts to national policy, however, without differentiation according to the size, age, and risk of the enterprise. In its present form, the federal income tax may encourage investment in bonds rather than in stocks, and in tax-exempt state and municipal bonds rather than in taxable securities, but these effects, which will be adverted to later in this book, are more adventitious than central to income taxation.

As has already been indicated, the attempt to measure or predict the effect of income taxation on the drive to work and on the pattern of consumption, savings, and investment, is complicated by the rudimentary state of our knowledge about the incidence of taxation. Does the burden of an income tax rest on the person who pays it, or can he shift the burden, in either the short or the long run, to others? Traditionally it has been thought that an income tax on business profits cannot be shifted either by cutting wages or other costs or by raising prices, because the taxpaying business must compete with the marginal firm that, because it is just breaking even, pays no income tax, and fixes its prices (and therefore its competitors') without regard to the tax. In recent years, however,

some economists have been less sure that the marginal firm sets the pace for the others; and, even if it theoretically would do so under conditions of perfect competition, the intervention of monopolistic advantages (trade names, unique locations, other forms of good will, etc.) will in practice greatly modify the role of the marginal producer. It may be that even with such advantages, the most profitable price prior to the levy of an income tax will still be the most profitable price afterwards, so that the tax could be the occasion but not the cause of increased prices. But if the firm has not previously pressed its advantages home and is impelled to do so by the tax, the tax has in a very real sense been "shifted." The chairman of the finance committee of the U. S. Steel Corporation and the research department of the C.I.O. have both asserted that corporate income taxes are costs that are passed on to the public in the form of higher prices,[16] and one must think twice before rejecting these empirical opinions in favor of a contrary position that is derived from an economic "model" that may have no counterpart in real life. An income tax that was shifted would, of course, have very different effects upon incentives, savings, and investment from one whose burden remained on the taxpayer.

Many economists who reject the possibility of a short-run shifting of an income tax acknowledge that it may be shifted in the long run. If the marginal firm is earning no profits, they reason that it will be induced to transfer its investment to a sector of the economy where a return can be realized, thus curtailing supply in the old area, while no new funds will flow there until prices have risen sufficiently to offer a profit. These effects can be felt only as fast as the marginal firms can, and will, liquidate. Similarly, the traditional view has been that an income tax on wages cannot be shifted. But a strong union's insistence on stable "take-home" pay will surely have some effect, at least in the short run. When we look beyond the immediate consequences of such institutional pressure, however, we find that increased wages will in turn affect prices, consumption, and investment, and predictions become precarious indeed.

The principle of progression in the federal income tax has always been controversial, but in the last few years it has been more severely criticized than at any time since the formative years of the tax. For several decades, the opponents of progression were, if not acquiescent, at least quiescent. Just as many supporters of the tax look on progression as its greatest virtue (though they may disagree about the proper rate of progression), so many of its critics have come to think that this is its worst characteristic; and, unquestionably, a proportional income tax would be palatable, and perhaps even attractive, to some of them. Progression is inescapable if any personal or dependency exemptions are allowed, a practice as old as the British income tax of 1799, and a more deliberate form of progression also has some eighteenth and early nineteenth century antecedents. But not until the Civil War income tax (both in the North and the South) can significant graduation be found, and this was only the primitive origin of what is now, as Table I indicates, a fine art.[17] As the student will soon dis-

[16] Goode, *The Corporation Income Tax* (1951) 44-45.

[17] In point of fact, the degree of actual (as opposed to nominal) progression in the federal income tax is open to dispute (partly because of the flat 25 per cent tax on capital gains, the exclusion of interest from state and municipal bonds, and other specially treated items), and even more uncertain is the extent of progression in the aggregate national tax burden. See Musgrave, Carroll, Cook, and Frane, "Distribution of Tax Payments by Income Groups: A

cover, many of the most troublesome administrative and legal problems created by the federal income tax are the direct result of progression; these difficulties and complications may not in themselves count heavily against progression, if it can be defended on more fundamental grounds, but they do force us to think about whether a progressive tax has advantages over a proportional tax that would be much simpler.

Is progression justified? The taxes on cigarettes, whiskey, retail sales, and real property are the same for each taxable item and taxpayer. If the taxpayer's purchases increase in number or his property in value, he pays proportionately, not progressively, more. If the tax on the third martini is no more than the tax on the first, why should the millionth dollar of income in a given year be taxed more heavily than the ten-thousandth? A number of arguments for progression have been put forward; some are variations on the "sacrifice" theory, assuming that it is less painful to relinquish the last dollar of a high income than the last dollar of a lower income, an idea that is popularly expressed in the phrase, "ability to pay"; some rest on the assumption that the benefits "bought" with taxes increase progressively with the taxpayer's income or wealth; sometimes there are appeals to equalitarian principles; and sometimes it is argued that progression contributes to a better balance between savings and consumption in the economy. None of the purely "rational" arguments are entirely satisfactory; either they rest on premises that are intuitive rather than demonstrable, or they carry implications that go far beyond progressive taxation alone. It seems likely that the emotional and ethical appeal of progression is ultimately more persuasive; but, of course, it is less susceptible to analysis. The authors of a recent painstaking examination of the intellectual history of progression concluded that the case for progression "turns out to be stubborn but uneasy."[18] The strength of conviction in this area is amply demonstrated by the reviews of their study. John Chamberlain,[19] in whose eyes the Sixteenth Amendment "legalizes a theft," welcomed the book for conferring "academic recognition" on "the intellectual sapping operation against the progressive principle." Randolph Paul,[20] on the other hand, tells us that the book "has confirmed rather

Case Study for 1948," 4 *Nat'l Tax J.* 1 (1951); Tucker, "Distribution of Tax Burdens in 1948," *id.* at 269; Musgrave and Frane, "A Rejoiner to Dr. Tucker," 5 *id.* at 15 (1952); Colm and Wald, "Some Comments on Tax Burden Comparisons," *id.* at 1. These articles cite several earlier studies. See also Neisser, "The Dynamics of Tax Burden Comparisons," *id.* at 351. For an attempt to gauge the net redistributive effect of the American fiscal system, taking into account not only tax burdens but also the receipt of benefits by income groups, see Adler, The Fiscal System, the Distribution of Income, and Public Welfare, in Poole, *Fiscal Policies and the American Economy* (1951) 359. Any calculation of the degree of progression in the American tax structure must come to grips with the question of shifting, since if the burden of the tax does not rest on the taxpayer, the effect of progression is minimized or obliterated.

18 Blum and Kalven, *The Uneasy Case for Progressive Taxation* (1953) 103, to be found also in 19 *U. of Chi. L. Rev.* 417 (1952). The authors sum up thus: "The case for progression, after a long critical look, thus turns out to be stubborn but uneasy. The most distinctive and technical arguments advanced in its behalf are the weakest. It is hard to gain much comfort from the special arguments, however intricate their formulations, constructed on notions of benefit, sacrifice, ability to pay, or economic stability. The case has stronger appeal when progressive taxation is viewed as a means of reducing economic inequalities. But the case for more economic equality, when examined directly, is itself perplexing. And the perplexity is greatly magnified for those who in the quest for greater equality are unwilling to argue for radical changes in the fundamental institutions of the society."

19 Book review, 21 *U. of Chi. L. Rev.* 502, 503, 505 (1954).

20 Book review, 67 *Harv. L. Rev.* 725, 730 (1954).

than shaken my belief that there should be more, rather than less, progression in the American tax system."

In recent years, opponents of progression have centered their hopes on a movement, which has taken several forms, to amend the Constitution to limit the maximum rate for federal income taxation to 25 per cent. The movement has apparently drawn some strength recently from a widely-publicized essay by Colin Clark, the Australian economist, arguing that "the safe political and economic level of taxation is somewhere near 25 per cent of the national income" and that "beyond this point inflation may become uncontrollable." [21] Although this benchmark referred to the ratio of all types of taxes, national and state, to total national income, it seems to have gained unwarranted currency as a scientific validation of the proposal to limit federal income taxation to 25 per cent of the individual taxpayer's income.[22]

The original plan for combating federal income tax progression, which has been before the states since 1939,[23] was for petitions by the state legislatures for a constitutional convention, a method for proposing amendments that is authorized by Article V of the Constitution,[24] though never yet employed. Some twenty-nine states have adopted such resolutions; [25] only 32 are required by the Constitution. But in some states the resolution was vetoed by the governor or later rescinded by the state legislature, and the effect of such action is not clear. Also perplexing is the question whether all resolutions must be adopted within some limited period of time. (The first of the resolutions was adopted in 1939.) Some of the resolutions call for a maximum rate of income tax of 25 per cent, with no escape; others permit the limit to be raised by a vote of three-quarters of the members of both Houses of Congress, but only "in the event of a war in which the United States is engaged creating a grave national emergency requiring such action to avoid national disaster." Even in such a case, the action (requiring a consensus not needed for any other action by Congress, including the declaration of war) is effective for a one year period only, though by a similar vote the limit may be raised for successive periods of one year each. It is not clear whether the Korean "police action" would have been a "war" as that term is used in the proposed amendment, nor whether a declaration by Congress that a war had created the requisite emergency would be conclusive on the courts. Possibly, it would be open to a taxpayer, in the event the 25 per cent barrier was pierced by Congress, to show that such action was not required

[21] Clark, "The Danger Point in Taxes," *Harper's Magazine* (December, 1950) p. 67; Clark, "Public Finance and Changes in the Value of Money," 55 *Economic J.* 371 (1945); for criticisms, see Goode, "An Economic Limit on Taxes: Some Recent Discussions," 5 *Nat'l. Tax. J.* 227 (1952); Tax Institute, *The Limits of Taxable Capacity* (1953). Ironically, Clark's 25 per cent limit was foreshadowed in his pamphlet, *A Socialist Budget*, recommending policies for a Labor Government "for a period of transition to Socialism," published by the British New Fabian Research Bureau in 1935.

[22] Still another proposal is for a constitutional amendment to limit total federal taxes for all non-military expenditures to not more than 5 per cent of national income. H.J. Res. 252, 97 Cong. Rec. A4334 (1951).

[23] *Constitutional Limitation on Federal Income, Estate, and Gift Tax Rates* (Prepared for the Joint Committee on the Economic Report and the House Select Committee on Small Business), 82d Cong., 2d Sess. (1952).

[24] "The Congress, . . . on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments. . . ."

[25] Packard, "The Need to Limit Federal Taxes," 32 *Taxes* 151, 154 (1954).

"to avoid national disaster" because Congress could either levy other types of taxes or borrow to finance the costs of the war. The limit may be lifted only while the nation is "actively engaged" in war, a qualification that would presumably prevent going above 25 percent in later years to pay veterans' benefits, to pay off a war-occurred debt, or even to pay the interest on war bonds.

The Constitution is silent on the powers of a constitutional convention, and it is possible that its authority would be unlimited. Partly because of the possibility that a convention would have the power to rewrite the Constitution (although its proposals would still be subject to ratification in the same manner as amendments proposed in the usual manner by Congress), and partly because of other uncertainties in the use of a convention, the tax limitation movement has lately turned to the more traditional way of amending the Constitution—by an amendment proposed by a two-thirds vote of both Houses of Congress and submitted for ratification to the states.

In 1951, the so-called first Reed-Dirksen Amendment was introduced, imposing the familiar 25 per cent limit as the maximum rate for federal income taxation. Like the state proposal, this amendment, which has been endorsed by the House of Delegates of the American Bar Association,[26] provides for a suspension of the limit by a vote of three-fourths of the membership of both Houses of Congress in time of war when necessary "to avoid national disaster." It also permits the limit to be raised, by a similar vote, to 40 per cent at any time, for one or more periods of one year each. This proposal has now been modified by the second Reed-Dirksen Amendment, which adheres to the 25 per cent limit, but allows Congress by a three-fourth vote to exceed the limit at any time, except that the top rate (if above 25 per cent) may never be more than 15 percentage points above the bottom rate. While enlarging the power of Congress to suspend the 25 per cent limit, the modified proposal would restrict the degree of progression even in wartime, by requiring the top and bottom rates to be separated by no more than 15 percentage points.[27]

It has been estimated that the 25 per cent limit on income taxation would have reduced federal revenues by $16 billion, using 1951 income levels as the basis of comparison. Corporate income tax liabilities would have accounted for $14 billion of this revenue loss and individual income tax liabilities for $2 billion. If this loss was not made up by a reduction in expenditures (Table I shows the composition of expenditures in 1951) or by federal borrowing, some additional tax or taxes would have been necessary, and the most likely would be a federal sales tax. It has been estimated that a tax of 10 percent on all retail sales, or of 15 per cent on all retail sales except food, would have been necessary to fill the gap. If the 25 per cent ceiling were lifted, the revenue loss would of course be lower. Assuming the 40 per cent authorized by the first Reed-Dirksen Amendment, one supporter of the limitation movement estimates a revenue reduction in the neighborhood of $9 billion for the fiscal year 1951; as

[26] The report of the A.B.A.'s Special Committee on the amendment may be found in 98 Cong. Rec. A4366 (1952).

[27] But apparently exemptions can be granted, without thereby making the bottom rate 0 per cent. Thus, it would be possible for Congress (by a three-quarters vote) to enact an income tax with an exemption for the taxpayer, his spouse, and his dependents of $2,500 each, with a tax rate of 75 per cent for the first $25,000 above the exemption and of 90 per cent for all amounts thereafter.

to the revised Reed-Dirksen amendment (allowing the 25 per cent limit to be suspended, so long as the maximum rate is within 15 percentage points of the bottom rate), he estimates that if individual rates were graduated from 22 per cent (the present bottom rate) to 37 per cent (*i.e.*, 15 per cent above the minimum rate) and if corporate rates ranged from 30 per cent (the present bottom rate) to 45 per cent, the yield of the individual and corporate income taxes would be reduced by about $5 billion.[28] He estimates that these losses could be made up by a federal retail sales tax of 8 per cent or 4 per cent respectively, and argues that even this course would be unnecessary in time because the stimulating effect of the reduction in income taxes would eventually give us a higher yield than the old rates.[29] The criticism of progression, like the attack on other aspects of the federal income tax, must always eventually come to grips with the problem of alternative sources of federal revenue, unless either deficit spending is to be employed or the level of expenditures is drastically cut. Any tax that is levied as a substitute for the federal income tax will have its own effect on incentives, spending, investment, and the price level; and in predicting these effects, it is necessary to make assumptions about the shifting and incidence of any such alternative tax. Moreover, one must also contend with the taxpayer's sense of fairness: would an abandonment of the progressive principle in the income tax arouse animosity to any other tax that might be imposed in its place, and frustrate its administration? The student who wishes to pursue these problems further will find suggestions in the Selected Bibliography at the end of this introduction.

A Hop, Skip, and a Jump through Federal Tax Procedure [30]

When income tax rates began to soar at the beginning of World War II, it became evident that the old method of waiting until March 15th [31] of each year to collect the tax on the income of the preceding year called for a degree of thrift that many taxpayers lacked and would guarantee a large volume of uncollectible tax liabilities. To meet this problem, Congress enacted the Current Tax Payment Act of 1943, putting wage and salary earners on a withholding basis of tax collections. This system, which has been in effect ever since, covers all wage and salary payments by an employer to an employee, except payments

[28] The Reed-Dirksen Amendment, in both forms, would also eliminate the federal estate and gift taxes, which have produced from $500 to $900 million annually for the last ten years.

[29] The course of a running debate on the tax limitation movement may be followed in these articles: Griswold, "Can We Limit Taxes to 25 per cent?" 190 *Atlantic Monthly* 76 (1952); Dresser, "The Case for the Income Tax Amendment: A Reply to Dean Griswold," 39 *A.B.A.J.* 25 (1953); Dresser, "The Reed-Dirksen Amendment: Developments in the 83d Congress," *id.* at 206; Cary, "The Income Tax Amendment: A Strait Jacket for Sound Fiscal Policy," *id.* at 885. Dresser, "The Reed-Dirksen Amendment: A Reply to Professor Cary," 40 *id.* at 35 (1954).

[30] Parts of this subject will be examined in detail in Chapter 9; the discussion at this point is in general terms, without any attempt to state the rules or qualifications for special groups of taxpayers, like farmers, aliens, foreign corporations, taxpayers engaged in foreign trade, insurance companies, co-operative organizations, non-profit institutions, *etc.*

[31] The filing date for individual taxpayers on a calendar year basis was extended to April 15th by the 1954 Code. Corporate returns, however, are due on March 15th in the case of calendar year taxpayers. Most non-business taxpayers and many business taxpayers file on the calendar year basis, but a fiscal year may be elected instead, in which event an individual return is due 3½ months, and a corporate return 2½ months, after the fiscal year ends.

to agricultural and domestic workers and a few other groups. The employee informs his employer of the number of exemptions to which he is entitled, and the employer then computes, either by a formula or by reference to tables prescribed by statute, the amount to be withheld at each pay period from the employee's wages. The employer periodically pays the withheld amounts to the Treasury, and at the end of the year he prepares a Withholding Tax Statement (Form W-2) for each employee. One copy of this form is sent to the Treasury, where it serves as an information return to insure compliance by the employee. Another copy is attached by the employee to his tax return, which he files on April 15th of the following year. The amount withheld is credited on his actual liability, and he either pays the balance due or receives a refund if there was an overpayment. If the employee is in the lower tax brackets, the amount withheld will correspond closely, and perhaps exactly, to the tax due, unless he worked irregularly, had outside income, or had deductions exceeding the standard amount assumed by the withholding tables. (An employee who anticipates a tax liability in excess of the amount that would normally be withheld may authorize his employer to withhold additional amounts.) In the fiscal year 1953, approximately $21 billion of the $32.5 billion of individual income taxes collected was withheld by employers.

Although the withholding system keeps many taxpayers on a current basis, requiring only minor year-end adjustments between the amount withheld and the actual tax liability, there are many gaps in its coverage. Being restricted to wage payments, it does not cover the income of self-employed persons, members of partnerships, or income from investments; and for upper-bracket employees the amounts withheld may be only a small down payment on the actual liability.

But the withholding system is buttressed by a requirement that certain taxpayers file declarations of "estimated tax" on April 15 of each year (or on a corresponding date if a fiscal year is employed), estimating their tax liability for the current year and the amount to be withheld from their wages. Any balance due must be paid in four installments, the first on April 15th (when the declaration is filed) and the others on June 15th, September 15th, and the following January 15th. Such declarations of estimated tax must be filed by any individual expecting $5,000 or more of gross income, except married persons and "heads of households," for whom the limit is $10,000. In addition, an individual whose gross income is expected to be below these limits must file a declaration if he expects to receive more than $100 of income not subject to withholding and if his gross income from all sources is expected to exceed his exemptions by more than $400. When the tax return itself is prepared on or before April 15th of the following year, payments of estimated tax, like taxes withheld from wages, are credited against the actual tax liability reported on the return, and any balance is either paid by or refunded to the taxpayer, as the case may be.

An individual income tax return must be filed by any one with gross income of $600 or more for the taxable year, unless he is 65 or older, in which case the limit is $1,200.[32] A taxpayer whose gross income falls below the limit could have no tax liability, but if any amounts were withheld from his wages or paid on a declaration of estimated tax, he would file a return in order to get a refund.

[32] A person aged 65 or more is entitled to two exemptions of $600 each, so that no tax could be due unless gross income exceeded $1200.

The return itself may take one of three forms. The simplest is Form 1040A, the Employee's Optional return, which may be used by a taxpayer with gross income of less than $5,000 provided (a) he had no income other than wages, dividends, and interest, and (b) he did not have more than $100 of gross income not subject to withholding. Form 1040A calls for a statement of the taxpayer's exemptions, his employer's name and address, his wages and other income, and the amount of income tax withheld. The return, with Form W-2 attached, is sent to the District Director of Internal Revenue, who computes the tax due from the statutory tables, and either bills the taxpayer for any additional amount due or refunds any overpayment. This is a mechanical process, not foreclosing the possibility of an audit of the return and a correction of any errors in it at a later date.

Form 1040 is more elaborate. It calls for a statement of the taxpayer's exemptions, for detailed information about his income from all sources (wages, salaries, dividends, interest, rents and royalties, *etc.*), and for an itemization of his business and personal deductions. (In lieu of itemizing personal deductions such as charitable contributions, interest, taxes, and extraordinary medical expenses, the taxpayer may take an "optional standard deduction," as will be seen in Section B(5) of Chapter 3.) If the taxpayer was engaged in a business or profession, he segregates the income and deductions attributable to this activity and reports them on a separate Schedule C, carrying the net profit or loss from Schedule C to a summary schedule on Form 1040 itself. Similarly, if the taxpayer sold or exchanged any property, he reports such transactions on Schedule D, and carries a summary of the profit or loss on such transactions from Schedule D to Form 1040. Another schedule is employed by farmers (Form 1040F), the net profit or loss being likewise carried over from this schedule to the body of Form 1040. From this information, the taxpayer computes his tax, credits himself with any taxes withheld from his wages and with any amounts paid on his declaration of estimated tax, and pays the balance due or, if there was an overpayment, informs the Treasury whether he wishes the overpayment refunded to him or credited on his declaration of estimated tax for the current year.

Form 1040 calls for three pages of information, not including any schedules or further explanations that may accompany it, and when prepared in full is known as "Form 1040—Long Form." Taxpayers with "adjusted gross income" [33] of less than $5,000 may omit part of Form 1040, employing it in a "Short Form." Such a taxpayer reports his gross income and business deductions as required by Form 1040, but instead of itemizing his personal deductions and calculating the tax due by reference to the schedule of tax rates, he turns to the tax table on page 4 of Form 1040 and finds his tax liability without any arithmetical calculation. The table allows about 10 per cent of the adjusted gross income for personal deductions; if the taxpayer's actual personal expenses exceed this amount, it will be to his advantage to itemize them and calculate his tax on the Long Form. The Short Form may be disadvantageous in another respect: the table of tax liability lumps together incomes by $25 or $50 "steps," and imposes a uniform tax on all incomes within each step. Thus, single taxpayers having one exemption must pay $724 on incomes between $4,500 and $4,550. A tax-

[33] This term is defined by § 62 of the Code (see also Chapter 3, Sec. B(5); roughly speaking, it means gross income less business expenses.

payer using the Long Form and claiming the 10 per cent optional standard deduction would pay $728.70 on an income of $4549, but only $719 on an income of $4500. This discrepancy results from the fact that the Short Form table bases the tax liability on the mid-point of the "step," *i.e.*, in the example given, on $4,525 of income. Taxpayers above the midpoint may save a few dollars by using the Short Form; taxpayers below it may save by using the Long Form.

Just as the Long Form may sometimes be preferable to the Short Form, it may also be preferable to Form 1040A, the Employee's Optional return. This will be true, for example, if the employee has personal deductions in excess of the standard 10 per cent allowed by the table, or if the taxpayer's income falls below the mid-point on which the tax for his "step" is based.

Use of either the Short Form or the Employee's Optional return also entails a loss of certain credits.

Before the enactment of the 1954 Code, corporations were not required to file declarations of estimated tax. Moreover, until 1950, the corporate tax liability was payable in equal quarterly installments after the end of the taxable year; in the past few years, however, the delay in payment has been gradually reduced, so that a corporation on the calendar year basis must pay the tax on its 1954 income in equal installments on March 15 and June 15, 1955. The 1954 Code accelerates payment of some corporate tax liabilities still further. It requires any corporation expecting an income tax liability in excess of $100,000 in 1955 to file a declaration of estimated tax on September 15, 1955 (if a calendar year basis is employed), and to pay the estimated tax in installments on September 15 and December 15, 1955, and March 15 and June 15, 1956. To ease the transition, in the first year of the accelerated system, the installments will be in the ratio 5-5-45-45 per cent; but the first two installments will increase each year of the new system's operation, until by the taxable year 1959, the tax will be payable in four equal installments. (The last two installments may vary in amount, however, if the actual tax liability proves to be different from the tax as estimated on the declaration.) Corporations with an expected income tax liability of $100,000 or less are not required to file declarations; such corporations may continue to pay the tax in two equal installments, the first on March 15th following the taxable year (if a calendar year basis is used) and the second on June 15th. It is estimated that about 20,000 of a total of about 425,000 corporations will be required to file declarations of estimated tax; this group, however, pays about 85 per cent of the total corporate tax liability.

The corporate income tax return is Form 1120. Provision is made on the return for reconciling differences between the treatment of financial items for tax purposes and their treatment on the regular books of the corporation. Special forms are prescribed for certain categories of corporations, such as life insurance companies, non-resident foreign corporations, and others. While an individual is required to file a return only if his gross income is $600 or more, a corporation must file a return without regard to the amount of its gross income or even if the year's operations produced a loss.

Fiduciaries must also file tax returns. A fiduciary who is in charge of an individual's income (*e.g.*, the guardian of a minor or the committee of an incompetent) must file Form 1040 or Form 1040A for the person in his charge, and an executor or administrator must also file Form 1040 or 1040A for the in-

come of a decedent to the date of his death. In addition, Form 1041 (Fiduciary Return) must be filed by a fiduciary for an estate if its gross income for the taxable year is $600 or more and for a trust if its gross income is $600 or more or if it has any taxable income. The fiduciary deducts any amounts distributable to beneficiaries; these amounts are taxable to the beneficiaries, to be reported on their respective individual returns, and the fiduciary pays a tax only on the balance.

The partnership return requires a special word. A partnership reports its income and deductions on Form 1065 in about the same way that a corporation reports on Form 1120 and an individual engaged in business reports on Schedule C of Form 1040. But the partnership is not a taxable entity. After calculating its profit or loss for the taxable year, the firm reports, on a schedule at the end of Form 1065, how this amount is allocated among the partners by the partnership agreement. No tax is calculated, however, since each partner's share of the firm's profit or loss is reported by him on his individual tax return, Form 1040. The partnership return, then, is an information return, explaining how the individual partner's share of the firm's profit or loss has been computed.

Many other information returns are also filed with the Treasury. Form W-2, informing the government of an employee's gross wages and of the amount of the tax withheld by the employer, has already been mentioned. Any one who pays an employee, in the course of trade or business, $600 or more of wages, salaries, or other compensation not subject to withholding must file Form 1099, and a similar report is required for payments in the course of trade or business of $600 or more (a) of fees to attorneys, accountants, physicians, and other professional persons, and (b) of rent, royalties, annuities, or other fixed or determinable income. Before the 1954 Code, such payments were supposed to be reported even though not made in the course of trade or business, but apparently the requirement was widely disregarded; the House of Representatives proposed to eliminate the requirement altogether, but the Senate restored it, restricted to payments in the course of trade or business. Certain payments of interest and dividends must also be reported; and information returns are also prescribed for a number of other specialized items, transactions, and persons.

The procedure that is set in motion by the filing of a tax return is examined in some detail in Chapter 9. The return is inspected for mathematical accuracy,[34] and examiners select for audit those returns that most merit further inspection. Their selection is based on the amount and nature of the income and deductions, errors apparent on the face of the return, random sampling techniques, and other factors. The examiners are assisted by the data on information returns, by the taxpayer's own returns for earlier years, by the deductions claimed by other taxpayers, by newspaper accounts of unusual or large-scale financial operations, and by tips from informers. The examiner may also resort to a subpoena, if necessary, to examine the taxpayer and others who may have knowledge of his financial affairs. About 2.5 million individual income tax returns were examined in the fiscal year 1953.

When an examiner's audit discloses an error in tax liability, he advises the

[34] In 1953, about 1.7 million out of 52 million individual returns were corrected for mathematical errors, resulting in tax increases of about $98 million and tax decreases of about $27 million.

taxpayer of his finding and attempts to settle the matter by agreement. If an agreement is not reached with the examiner, the taxpayer may have an informal conference with the examiner's group chief, and if no agreement is reached at this point, the taxpayer may have a more formal conference with an appellate staff that is administratively disconnected from the examiner and his chief. Most disputes are settled at the administrative level.

Should no agreement be reached, however, the taxpayer may "go to law." He may refuse to pay an alleged deficiency and file a petition in the Tax Court of the United States (formerly the Board of Tax Appeals), in which event the tax cannot be collected by the Treasury until the case is decided.[35] Instead of filing a petition in the Tax Court, the taxpayer may if he chooses pay the alleged deficiency and sue for a refund, with interest, in a federal District Court or in the Court of Claims. The advantages and drawbacks of the refund route as compared with the Tax Court are taken up in Chapter 9. If the dispute involves not a deficiency but a refund (*e.g.*, if after filing a return and paying the reported tax liability, the taxpayer finds that he reported too much income or failed to claim a deduction or credit to which he was entitled), and if the matter cannot be settled at the administrative level, the taxpayer may not go to the Tax Court, whose jurisdiction is restricted to deficiency cases, but must instead sue in the District Court or Court of Claims.

Cases in the Tax Court and in the District Courts go by appeal to the Courts of Appeals and thence by certiorari to the Supreme Court; cases in the Court of Claims may be reviewed only by the Supreme Court on certiorari.

The Sources of Federal Tax Law in a Nutshell

Taxes are imposed only by statute, and while the lawyer will often err if he does not go beyond the statute in passing on a tax question, the statute should almost always be his starting point. Moreover, this is not a field where the statute is encrusted with the wisdom or folly of the centuries, like the Statute of Frauds, nor is it one where the statute's principal function is to declare or to qualify the common law, like the Uniform Partnership Act or the Negotiable Instruments Law. Seldom in the law is it so essential that the lawyer study his statute intensively; sometimes the judicial decisions are mere embellishments of the handiwork of Congress. At the same time, some areas of tax law, especially where statutory pronouncements were absent, vague, or confused, have been immensely influenced by judicial doctrines of a common law character, created, that is to say, by the courts as case after case came before them,—and in these areas the lawyer must be attuned to the judiciary's signals even more than to those of Congress. Moreover, the very detail of the statute is often deceptively clear, since, as the student will find, the courts may exercise their traditional power to disregard form for substance, and to hold that an arrangement that complies with the literal terms of the statute is not within its spirit, just as a deed absolute on its face may be shown to be a mortgage. One of the fascina-

[35] If the Commissioner determines that ultimate collection of the tax would be jeopardized by delay, however, he may levy a jeopardy assessment and seize the taxpayer's property. This drastic procedure is often employed in cases involving fraud, or where it is feared that the taxpayer may dissipate or secrete his property. The government may not ordinarily sell the seized property, however, as a result of a 1954 amendment. See Chapter 9, Sec. B(2).

tions of federal law is the interplay between the detail of a statute and the creative spirit of the courts; and even the tax attorney who cannot pause to enjoy this interplay must understand it to survive.

The "statute" is of course the Internal Revenue Code of 1954, now bright as a penny. In recommending its enactment, the House Committee on Ways and Means said:

> Your committee has undertaken the first comprehensive revision of the internal-revenue laws since before the turn of the century and the enactment of the income tax. This revision includes a rearrangement of the provisions to place them in more logical sequence, the deletion of obsolete material, and an attempt to express the internal-revenue laws in a more understandable manner. . . .
>
> In addition, to the rearrangement, however, your committee has made many substantive changes in the code.[36]

It is apparent that, while the pre-1954 statute may not rule us from the grave, meditation on its meaning will be profitable, or at least necessary, for some time to come.

The "old" Internal Revenue Code, which was supplanted by the 1954 Code, was enacted in 1939, and was frequently amended in the years 1939-1954. Before 1939, federal income taxes were levied by biennial Revenue Acts, passed by each Congress for a two year period only. In point of fact, however, there was so much continuity of statutory language from one Revenue Act to another that permanent legislation in the form of an Internal Revenue Code represented no real break with the past. Before the 1939 Code was enacted, however, there existed the pleasant possibility that on the expiration of one Revenue Act Congress might be unable to agree on another. With a Code, we are assured that should Congress fail to act on a tax bill, the old tax rates will continue to control until changed. There is also a legal distinction, in that prior to 1939, the re-enactment of a taxing provision by Congress sometimes carried an implication that a construction of that provision by the courts or by the Treasury was approved. After the 1939 Code was adopted, Congress from time to time altered those sections of the Code that it wished to change, but there was no reason (except when the 1954 Code was adopted) to re-enact satisfactory sections, and hence no occasion for judicial application of the re-enactment rule. While Congressional inaction in the face of an administrative or judicial construction of a statute sometimes leads to the inference that Congress has adopted that interpretation, especially if *other* sections of the same statute have been amended in the meantime, this theory (that silence gives consent) has been applied more sparingly than the re-enactment rule. It remains to be seen whether the 1954 Code, where it re-enacts pre-1954 provisions, will be held to blanket in the administrative and judicial construction of these provisions. The 1939 Code was merely a codification of existing law, intended to draw together in one place a mass of statutes scattered throughout the many volumes of the *Statutes At Large*, and consequently would not support an inference of Congressional approval of existing interpretations. But the 1954 Code is a "comprehensive revision," and when an existing provision of law is accepted and re-enacted by it, there is a basis for assuming that no fault was found with the decisions or regulations construing that provision.

---

[36] H. Rept. No. 1337, 83d Cong., 2d Sess., p. 1 (1954); the Senate Finance Committee's report, S. Rept. No. 1622 (1954), is identical on this point.

Although the Congressional debates ordinarily do not illuminate technical problems of federal taxation, since they are usually concerned primarily with the tax's rates and expected yield, there are occasional exceptions, and then recourse to the Congressional Record is necessary. The Committee Reports, on the other hand, are frequently helpful,[37] and it is common for the courts to rely heavily on them.[38] They are carefully prepared by technicians on the staff of the Joint Committee on Internal Revenue Taxation (composed of representatives of the House Ways and Means Committee and the Senate Finance Committee, who are assisted by a kind of legislative civil service of tax experts), but the profusion of technical detail in them makes it clear that they evidence the "intent" of Congress only if we apply the doctrine of *respondeat superior*.[39] Some members of th committee may know little of the content of the committee's reports, and this is *a fortiori* true of the members of Congress who do not serve on the tax committees, though no doubt some of them know no more about the statute itself.

Occasionally, though far more rarely, the courts refer to the hearings before the House and Senate Committees as an aid to construction. Although much of the oral testimony is often quite diffuse, interested public and private individuals and groups usually present closely reasoned memoranda in support of their positions. If a proposal is accepted, modified, or rejected by the committee after it has been explained by testimony or memorandum, the presentation may be a clue to the meaning of the committee's action and, by extension, to the meaning of the action of Congress. The hearings are printed by the committees in limited quantities, and are to be found in only a few libraries.[40]

Second only to the statute and the legislative "materials" in importance are the Treasury Regulations. Section 7805 of the 1954 Code authorizes the Secretary of the Treasury or his delegate to prescribe "all needful rules and regula-

---

37 Since 1939, the reports of the House Committee on Ways and Means, the Senate Finance Committee, and the conference committees have been reprinted in the Internal Revenue Bulletin, which is published weekly (formerly biweekly) by the Internal Revenue Service. Every six months a compilation of these bulletins is issued; the compilation for the second half of 1953 is cited: 1953-2 Cumulative Bulletin, 53-2 C.B., or 53-2 I.R.B. The Congressional reports for the period 1913-1939 were reprinted together in a separate number of the Bulletin: 39-1 (Part 2) C.B.

38 On the use of such legislative "material" as an aid to the construction of statutes, see Lenhoff, *Comments, Cases and Other Materials on Legislation* (1949) 787-796, 814-816.

39 The preparation of the committee report is described as follows in Blough, *The Federal Taxing Process* (1952) 75-76:

> Preparation of the Committee report is ordinarily in the hands of the Chief of Staff of the Joint Committee [on Internal Revenue Taxation] and his staff members. The report is customarily divided into two parts. The first is a discussion in non-technical language of the need for the legislation, what the bill provides, and the anticipated impact on various groups of taxpayers. Among the tax staffs this section of the report is referred to as the "guff". Despite this derisive label, the section is very important. The latter part of the Committee report is a technical explanation of what each section of the bill provides. The Legislative Counsel [of the Treasury] and the Treasury tax staff participate in the preparation of the technical section. This part of the report is coming to be known as the "paraphrase"; it consists largely of a paraphrase of each section of the bill with examples showing how the provision presumably would apply in given situations. The Committee members usually listen to a reading of the "guff" before the report is submitted but ordinarily do not go over the "paraphrase," at least not in Committee.

40 On use by the judiciary of inaccessible legislative history as an aid to the construction of statutes, see Mr. Justice Jackson, concurring, in United States v. Public Utilities Commission, 345 U.S. 295, 319 (1953).

tions for the enforcement" of the Code. Identical authority was vested in the Secretary by earlier law. In addition, the Secretary is authorized to prescribe regulations to cover more specific areas, *e.g.*, by Section 170 of the 1954 Code he may lay down the method of verifying charitable contributions, by Section 453 he may prescribe how income from certain installment sales is to be reported, and by Section 472 he is authorized to issue regulations governing use of the last-in-first-out method of accounting for inventories. Regulations issued under these sections are of a quasi-legislative character; Congress has chosen to delegate to the Treasury authority it might have exercised itself. Other regulations interpret the statute for the guidance of the taxpayers and the staff of the Internal Revenue Service. Whatever their function, regulations are issued from time to time in the form of Treasury Decisions ("T.D."), which are compiled at irregular intervals as a systematic series of regulations. The last such compilations before the 1954 Code were known as "Regulations 118" (income tax), "Regulations 105" (estate tax), and "Regulations 108" (gift tax). There were other series for more specialized subjects. Changes in such a set of Regulations are issued as Treasury Decisions, and when the changes have accumulated in quantity, a new compilation of regulations is issued. Thus Regulations 118 was issued in 1953 to supplant Regulations 111, which had been frequently amended by Treasury Decisions since its issuance in 1943. The Administrative Procedure Act, 5 U.S.C. 1003, provides that proposed regulations (with certain exceptions) must be published in the Federal Register to permit interested parties to file their objections or suggestions for consideration before adoption. The Internal Revenue Service is now (August, 1954) in the process of completely revising the Regulations to accord with the clerical and substantive changes wrought by the 1954 Code.

Regulations, whether of a legislative or an interpretive character, can serve a useful function only if both administrators and taxpayers can rely on them. Seldom are regulations, of either kind, overturned by the courts, but occasionally a regulation, especially the interpretive type, is invalidated. It is impossible to generalize beyond saying that a regulation that was issued soon after the statute it interprets and that has been adhered to consistently by the government will command great respect from the courts, but that if contemporaneity and consistency are lacking, the courts will be less constrained to accept the regulation. As already mentioned, re-enactment of a statute may carry an implication of Congressional approval of an interpretive regulation,[41] and this doctrine may give the effect of law to some regulations that were in force when the 1954 Code was enacted. Since this was a comprehensive revision, the re-enactment doctrine may now be applied with greater fidelity to the facts of legislative life than for earlier years when revenue acts often carried over much of the language of earlier acts in the interest of simplicity rather than because administrative interpretations were endorsed. Another problem in this area is whether a proper interpretive regulation, either with or without re-enactment of the underlying statute, in time takes on the force of law so that only Congress, and not the Treasury, may alter it. Partly because the Treasury seldom

[41] It is hard to assess the importance of the re-enactment rule in this area. It may be only a handkerchief covering something already covered by a blanket if the court would have upheld the regulation, whether the statute had been re-enacted or not; but it may be crucial if the court thinks the regulation when issued was either debatable or demonstrably wrong.

amends interpretive regulations except to bring them into harmony with subsequent judicial decisions or new statutes, there is little authority on this subject. Despite earlier doubts, apparently the Treasury may ordinarily amend an interpretive regulation if the new interpretation is to be given prospective force only, and there may also be power to apply it retroactively. Retroactive application may be withheld by the Treasury itself, however, as wise administration, pursuant to its power, now conferred by Section 7805(b) of the 1954 Code, to prescribe the extent to which regulations and rulings shall be applied prospectively only.[42]

In addition to the Regulations, which are issued by authority of the Secretary of the Treasury, a steady supply of rulings, instructions, releases, and other lesser pronouncements flows from the Internal Revenue Service. Not bearing the imprimatur of the Secretary, these documents are less authoritative than the Regulations, but they are of great importance in the day-to-day administration of the tax laws, and often they are persuasive to the courts. The most important are letters to taxpayers in response to requests for rulings on past or contemplated transactions and instructions of a more general nature to field offices of the Service. Some rulings are no more than a curt "yes" or "no" to an inquiry; others are more or less elaborately argued interpretations of the statute, regulations, and judicial decisions. The designation "Revenue Ruling" is now employed for substantially all such announcements; previously they were issued under various labels, of which the most important were "I.T." (rulings to taxpayers on income tax matters), "G.C.M." (General Counsel Memorandum, usually discussions of legal problems of general interest), and "Mim." (Mimeograph, usually instructions to field offices). Revenue Rulings are published in the Internal Revenue Bulletin; not all are chosen for this distinction, however, and the criteria now governing publication are outlined in Rev. Rul. 2, quoted in Section A, Chapter 9. Chapter 9 also contains material on the status and effect of rulings.

Tax litigation commences in the Tax Court of the United States (formerly the Board of Tax Appeals), in the various federal District Courts, and in the Court of Claims. The opinions of the Tax Court fall into two categories: "regular" decisions, which are published by the court itself, and "memorandum" decisions, which are not officially reported but are published commercially by Prentice-Hall, Inc. and by Commerce Clearing House. The opinions of the District Courts, Court of Claims, Courts of Appeals, and Supreme Court are, of course, to be found in the regular federal reports, but the tax cases decided by these courts are also separately published by Prentice-Hall, Inc. in the series "American Federal Tax Cases" (cited as A.F.T.R.) and by Commerce Clearing House in the series "United States Tax Cases" (cited as U.S.T.C.). These sets also contain some opinions of the lower federal courts in tax cases that are not

Rev.* 292 (1950); Eisenstein, "Some Iconoclastic Reflections on Tax Administration," 58 *Harv. L. Rev.* 477 (1945).

to be found in the Federal Supplement. A few opinions on federal tax claims are handed down by federal courts sitting in bankruptcy and by state courts passing on probate or receivership matters.

When the Internal Revenue Service loses a case in the Tax Court, the Commissioner ordinarily announces, in the Internal Revenue Bulletin, whether he "acquiesces" ("Acq." or "A") or does not acquiesce ("Non-Acq." or "NA") in the decision. Acquiescence operates as advice to the staff of the Service to rely on the decision in the disposition of other cases. Non-acquiescence indicates that the Service, whether it appeals the decision or not, will not accept the principle enunciated in it in disposing of other cases (though of course it binds the government as to the taxpayer in the case itself, unless reversed on appeal), and that it may litigate the same issue when it arises again. Because decisions of the Tax Court are reviewed by eleven Courts of Appeals, the government may eventually succeed in obtaining a reversal of the Tax Court, even though in the non-acquiesced case its decision was affirmed by a Court of Appeals; and, indeed, the principal way for the Treasury to get a conflict among the circuits (as a basis for a petition for certiorari) when the Tax Court decides in favor of the taxpayer is to stick to its guns and relitigate the same issue in one or more other cases. After announcing its non-acquiescence, the Treasury may be discouraged by a series of losses in the Courts of Appeals, or it may reconsider its views for other reasons, and substitute an acquiescence for non-acquiescence.[43] Another administrative practice related to litigation is based on the Treasury's power, already mentioned, to prescribe the extent to which its rulings and regulations will be applied prospectively only. When a judicial decision in the government's favor overrules earlier cases or conflicts with rulings that had been extensively relied on by taxpayers, the Treasury sometimes announces that a new regulation or ruling, issued to conform to the judicial decision, will not be applied retroactively.[44]

SELECTED BIBLIOGRAPHY

History. Ratner, *American Taxation* (1942), is a standard account of taxation as a social force in American history. Seligman, *The Income Tax* (1911), is a study of the history and theory of income taxation, at home and abroad, by a scholar whose influence on federal income taxation in its early days was very great. Paul, *Taxation in the United States* (1954), follows Ratner and Seligman for the early period, but it is an indispensable account of the economic and political background of federal taxation from 1932 on, made more spirited by the author's own role as advisor and official of the Treasury Department from 1937 to 1944. Current problems in theory and administration are also discussed in detail. Another useful work is Blakey, *The Federal Income Tax* (1940), which summarizes each Revenue Act from 1913 to 1939. Shehab, *Progressive Taxation* (1953), traces the history of progression in the British income tax.

Statistics. *Statistics of Income*, published annually by the Treasury Department, is a compilation of information from tax returns. Additional information

[43] Dwan, "Administrative Review of Judicial Decisions: Treasury Practice," 46 *Col. L. Rev.* 581, 591-594 (1946).

may be found in the *Annual Reports* of the Secretary of the Treasury and of the Commissioner of Internal Revenue, and in the *Statistical Abstract of the United States* and a supplement to it, *Historical Statistics of the United States.* An analytical study of recent statistics is Kuznets, *Shares of Upper Income Groups in Income and Savings* (1953).

Theory. General works on public finance that discuss the relation of income taxation to the economy are: Shultz and Harriss, *American Public Finance* (5th ed. 1949); Somers, *Public Finance and National Income* (1949); and Lutz, *Public Finance* (4th ed. 1947). Three useful symposiums on such problems are: Groves, *Viewpoints on Public Finance* (1947); Poole, *Fiscal Policies and the American Economy* (1951); and Millikan, *Income Stabilization for a Developing Democracy* (1953). Works that are concerned more exclusively with taxation are: Seligman, *Essays in Taxation* (10th ed. 1928); Simons, *Personal Income Taxation* (1938); Vickrey, *Agenda for Progressive Taxation* (1947); Blum and Kalven, *The Uneasy Case for Progressive Taxation* (1953); Rhys-Williams, *Taxation and Incentive* (1953); Kimmel, *Taxes and Economic Incentives* (1950); von Mering, *The Shifting and Incidence of Taxation* (1942). Other studies of the shifting and incidence of taxes are cited by Shultz and Harriss, *supra*, pp. 193–226.

Current problems. Some of the works cited above discuss issues of particular contemporary interest, as well as long run problems. Recent works with programs for overall reform of the federal tax structure are: Groves, *Postwar Taxation and Economic Progress* (1946); Simons, *Federal Tax Reform* (1950); Paul, *Taxation for Prosperity* (1947) (the recommendations are in Chapters 27–46; the earlier historical matter is supplemented by the author's 1954 book, cited above); Committee on Postwar Tax Policy, *A Tax Program for a Solvent America* (1945). The Tax Institute sponsors annual symposiums on subjects of current interest; some are referred to hereafter, but mention should also be made of: *Taxation and Business Concentration* (1950); *The Limits of Taxable Capacity* (1953); and *Excess Profits Taxation* (1953). Blough, *The Federal Taxing Process* (1952), is an excellent account of the way federal revenue laws are drafted, enacted, and administered. A number of more specialized works are cited throughout the casebook.

Empirical studies. A series of empirical studies, by questionnaire and interview, of the effects of federal taxation was recently conducted under the sponsorship of the Harvard Business School. Some are cited elsewhere in this book; see also Butters and Lintner, *Effect of Federal Taxes on Growing Enterprises* (1945); Hall, *Effects of Taxation: Executive Compensation and Retirement Plans* (1951); Smith, *Effects of Taxation on Corporate Financial Policy* (1952).

Legal works. Magill, *Taxable Income* (rev. ed. 1945), discusses the main problems in defining income. Stanley and Kilcullen, *The Federal Income Tax* (2d ed. 1951) is a brief summary of the most important provisions of pre-1954 law. Two admirable collections of essays (in separate pamphlets) covering the subject of federal income taxation fairly systematically are *Fundamentals of Federal Taxation* and *Current Problems in Federal Taxation.* Both series are published by the Practising Law Institute and will no doubt be revised to reflect the 1954 Code. Mertens, *Law of Federal Income Taxation* (2d ed. 1948), in 14 volumes, supple-

mented by pocket supplements, is a standard reference work. The student should also become familiar with the resources, and limitations, of the looseleaf services. The February, 1954, draft of a *Federal Income Tax Statute*, published in two volumes by the American Law Institute, may be profitably compared with the 1954 Code adopted by Congress. A number of specialized treatises, proceedings of tax institutes, and law journal articles are referred to at appropriate points in the editor's Notes hereafter.

Bibliography. There is a more complete bibliography in Blough, *The Federal Taxing Process* (1952) 481–494.

CHAPTER 1

INTRODUCTORY: SOME CHARACTERISTICS OF INCOME

The Sixteenth Amendment grants Congress the power "to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration." Section 61(a) of the Internal Revenue Code of 1954 announces broadly that:

> Except as otherwise provided in this subtitle, gross income means all income from whatever source derived, including (but not limited to) the following items. . . .

Section 22(a) of the 1939 Code was more elaborate

> "Gross income" includes gains, profits, and income derived from salaries, wages, or compensation for personal service . . . of whatever kind and in whatever form paid, or from professions, vocations, trades, businesses, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in such property; also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever.

The committee reports on the 1954 Code state that while the language of § 22(a) has been simplified, the "all-inclusive nature of statutory gross income has not been affected thereby," and that it was "not intended to change the concept of income that obtains under § 22(a)." H. Rept. p. A18; S. Rept. p. 168.* This introductory chapter is an examination of the outer limits of § 61(a). We will leave for later study the various self-denying ordinances by which Congress has excluded from income certain items, or has allowed others to be deducted or credited. We are concerned here only with how far Congress might go if it chooses.

We shall see that the boundaries of the term "income" are hazy and shifting. Yet most transactions and items are either clearly within or clearly without its area. The bulk of our administrative rulings and judicial decisions is concerned with the issues that are met in later chapters of this book—issues which arise only where this chapter leaves off, so to speak. These more frequently litigated issues arise under provisions of the Internal Revenue Code that exclude from taxable income items that could clearly be taxed if Congress chose, that grant preferential treatment to certain kinds of income, and that allow various deductions, exemptions, and credits in computing the actual tax to be paid. Other areas of dispute are the determination of the proper year for reporting items that are admittedly income to the particular taxpayer in one year or another, and the determination of which

* H. Rept. No. 1337 and S Rept. No. 1622, 83d Cong., 2d sess. (1954). The conference committee's report is H. Rept. No. 2543.

of several taxpayers must report items that are undeniably income to one of them. Yet we cannot ignore, even though we less frequently encounter, the question which this chapter asks and seeks to answer: what are the characteristics of income?

The inquiry is a difficult one, and the author should confess at the outset that organizing this chapter has been troublesome. The Supreme Court, which at one time attempted to define "income" in a neat sentence, has recently announced:

> In fact, no single, conclusive criterion has yet been found to determine in all situations what is a sufficient gain to support the imposition of an income tax. No more can be said in general than that all relevant facts and circumstances must be considered. *Commissioner* v. *Wilcox,* 327 U.S. 404, 407 (1946).

The items or transactions that have forced the courts back to a consideration of fundamentals by requiring them to pass on the "outer limits" of the term "income"—thus providing the grist for this chapter—often seem to have little in common with each other. These items are, moreover, on the whole of minor importance to the generality of taxpayers, when they are not downright bizarre.

Furthermore, despite the fact that we have several times been advised that Congress intended "to use the full measure of its taxing power" in promulgating § 22(a) of the 1939 Code, *Helvering* v. *Clifford,* 309 U.S. 331, 334 (1940), it is not always clear whether courts in holding that this or that item does not represent "income" were excluding it on constitutional grounds or on the theory that it was not within the intended scope of § 22(a). As indicated above, § 61(a) of the 1954 Code is intended to have the same meaning as § 22(a) of the 1939 Code. This would suggest that it does not change the treatment of the items dealt with in this chapter, whether they were believed by the courts to be exempt from taxation on constitutional grounds or only because not within the statutory grasp of § 22(a). But the House Report on the 1954 Code states that the term "income" in § 61(a) is used "in its constitutional sense," and, as will be seen, there are some instances where it has been thought that § 22(a)'s use of the term "income" was not so broad. To add to our difficulty, the Senate Report says that in § 61(a) "the word 'income' is used *as in section 22(a)* in its constitutional sense." S. Rept. p. 168 (italics added).

The waters are muddied still further by the fact that the Sixteenth Amendment is not the only source of Congressional authority to tax. Article 1, Section 8, Clause 1 of the Constitution provides:

> The Congress shall have Power to Lay and Collect Taxes, Duties, Imposts, and Excises, to pay the Debts and provide for the common Defense and general Welfare of the United States; but all Duties, Imposts, and Excises shall be uniform throughout the United States.

Direct taxes must by virtue of Article 1, Sections 2 and 9, be apportioned among the states according to population (a requirement that makes them totally impracticable), and to the extent that an income tax is a direct tax, recourse must be had to the Sixteenth Amendment for relief from this requirement of apportionment. But to the extent that a tax on income or on anything else is *not* a direct tax, Congress does not have to rely on the Sixteenth Amendment.

Even though a particular item is not "income" as the term is used in the Sixteenth Amendment, then, it is not necessarily placed beyond the reach of Congress. An indirect tax on the item is authorized by Article 1, Section 8, Clause 1. But we then are face to face with a dilemma. For if the item is not "income," can Congress

have intended to tax it under an income tax law? Would Congress have desired to add together "income" and other appropriate objects of taxation and levy a single graduated tax on the total? The student will find that the last two questions are hardly acknowledged, let alone answered, by the cases that follow. It has generally been assumed that if an item is not "income," Congress did not intend to tax it under the income tax sections of the Internal Revenue Code.

SELIGMAN
INCOME TAX

IN ENCYCLOPEDIA OF THE SOCIAL SCIENCES

New York: The Macmillan Co., 1932, Vol. 7, pp. 628–9, 630–1

(Reprinted by Permission)

The Concept of Taxable Income. As an economic concept income denotes a flow of wealth during a definite period, as opposed to capital as a fund of wealth at a distinct point of time. It may be defined as the money or money's worth which comes in during a definite period over and above the expenses of acquisition. The fiscal concept of income, however, is still subject to dispute. In the nineteenth century Hermann and Schmoller elaborated the free disposition or consumption concept, which regards as income only those receipts of which an individual can dispose without impairing his capital. More common outside Germany was the periodicity concept, which would limit income to regularly recurring receipts. The broadest definition of income for taxation purposes was formulated by Georg Schanz in 1894 and was independently advanced over two decades later by R. M. Haig, who defines income as "the money value of the net accretion to one's economic power between two points of time." This view is in substantial agreement with the accountant's practice of ascertaining the annual profit of an enterprise by comparing the balance sheet at the opening and the close of the year. As a reaction to Schanz, Strutz and Fuisting developed the source concept (Quellentheorie), which would confine taxable income to receipts from permanent sources.

With the exception of the income taxes in Basel and in Bremen, where the broader concept was almost wholly accepted, fiscal practice at the outset inclined toward the narrower interpretation of income. In the course of time, however, the concept was widened, the characteristic of regularity disappeared, while chance or aleatory receipts were subjected to supplementary taxes. At the present time findings, occasional earnings or lottery prizes are everywhere included in income, while inheritances are separately taxed, in part because they constitute irregular or accidental income. Special taxation of gifts is also widespread but is sometimes frustrated by administrative difficulties, as in the American experiment of 1922.* Neither the permanence of the source nor the regularity of the receipt any longer forms a necessary part of the concept of taxable income.

The widening of the income concept, however, brought forth a number of difficult problems. . . .

Another disputed point is the problem of including savings in taxable income. John Stuart Mill claimed that to include savings in income is to impose double

* A federal gift tax was imposed by the Revenue Act of 1924 (not 1922), but it was repealed by the 1926 Act. It was reimposed in 1932, however, and is still in effect. [Ed.]

taxation—a tax first on the entire income and then again on the yield of the income that has been transmuted into capital. This contention, which has been renewed in recent years by Einaudi and others, suffers from several defects. First, it rests on a confusion between the receipt and the disposition of income. Income may be either spent or saved, but both these actions are subsequent, not anterior, to the receipt. One must have the income before he decides what to do with it. The concept of income is independent of the use to which it is put. Secondly, the double tax argument is a fallacy. In the first year a tax is imposed on the entire income from whatever source derived; in the second year there is similarly imposed a new tax, which is now increased because of the additional income. This is not taxing the same thing twice, it is levying taxes on different things; namely the successive and therefore different incomes. If the individual prefers to save rather than to spend his income, his preference is evidently due to the anticipated advantages of his action. But these clearly augment his ability to pay. To refrain from taxing the proceeds of the capital into which the income of the previous year has been transmuted would involve the abandonment not of a double tax, but of a single tax. Thirdly, if savings are not taxed as income then the income tax is transformed into a tax on expenditure, which is the least defensible of all the criteria of ability to pay. While a poor man indeed spends less than a rich man, the disparity in outlay bears no proportion to the disparity in wealth. The richer a man is, the more difficult it is to spend his income and the more automatic his savings become. To tax both Henry Ford and his seven dollar a day employee on their expenditures would be a travesty of justice: the latter has to spend virtually his entire earnings; the former, even with the best of will, can spend only a fraction of his profits. For these reasons no country has ever seriously entertained the idea of excluding savings from taxable income. The exemption of insurance premiums and the isolated instances of the exemption of certain types of saving deposits may be defended on quite different grounds.

Quite an opposite suggestion was advanced by J. A. Hobson, urging that only so much of income should be deemed taxable as constitutes a true surplus. By surplus Hobson means "all rents and all gains for the use of capital, brains or labor which are not a necessary incentive to secure such use." But the essential vagueness of this concept and the almost insuperable difficulties of application, coupled with the well nigh practical identity of the results with those of the existing system of graduated income tax and exemptions, have combined to prevent any hearing for the suggestion.

SURREY AND WARREN
THE INCOME TAX PROJECT OF THE AMERICAN LAW INSTITUTE. GROSS INCOME, DEDUCTIONS, ACCOUNTING, GAINS AND LOSSES, CANCELLATION OF INDEBTEDNESS

66 Harv. L. Rev. 761, 769–71, 775 (1953)

(Reprinted by Permission)

The American Law Institute through its Tax Project is undertaking a complete examination of the technical provisions of the federal income, estate, and gift tax laws. Commenced in 1948 as an Income Tax Project, the undertaking was enlarged in the summer of 1952 to cover the estate and gift tax fields. The major

portion of the work on the income tax has been completed. It is expected that the entire Project will be finished by 1954 or 1955. The work under this study is being made public in the form of Tentative Drafts, the latest of which are Numbers 6 and 7 and which together cover the income tax material through May, 1952. . . .

Those who seek a precise definition of "income" will not find complete solace in the Draft. On the contrary, as the Comments state, "Attempts to define 'income' have been unsatisfactory." The Eisner v. Macomber* definition—"Income may be defined as the gain derived from capital and from labor, or from both combined, provided it be understood to include profit gained through a sale or conversion of capital assets"—is vulnerable on several grounds. For one thing, it is incomplete, for it hardly covers income from a cancellation of indebtedness. And for the hard questions that lie at the periphery it would force a narrow dissection of the terms "capital" or "labor" in place of a broad consideration of the issues. Is the act of picking up found money "labor"? Is the activity required in an embezzlement "labor"? Essentially, the Eisner v. Macomber statement is a generalization rather than a definition.

The economists' definitions, apart from the fact that there is no unanimity among economists, are here not desirable. While they are helpful in indicating possible overall objectives of an income tax, they are neither appropriate for statutory use nor intended to be. For example, Henry Simons has defined personal income as "the algebraic sum of (1) the market value of rights exercised in consumption and (2) the change in the value of the store of property rights between the beginning and end of the period in question." From the standpoint of tax administration this definition clearly covers too much ground—for example, all forms of imputed income would be included—and hence puts too great a strain on the exclusion sections. For much the same reasons, attempts to solve the problem by starting with all receipts as the taxable base and then subtracting those receipts which should not be taxed are equally unsatisfactory. Such an approach requires at the outset a definition of "receipt." Is a cancellation of indebtedness a "receipt" by the debtor? Does an assignment of income involve a "receipt" by the assignor? Next, it requires an enumeration of all those receipts which should not be taxed, a task which is as difficult as that which would be faced under the economists' definitions. Loans, capital replacements, perhaps imputed income, would have to be specifically excluded since they are "receipts." Our experience will always be insufficient to achieve a satisfactory itemization of all of the desired exclusions. The less rigid term "income" does not involve us in this exclusionary strait jacket. The "receipts" approach is thus neither a simplification nor a clarification of the tax base for an income tax.

The Supreme Court has recognized the futility of attempting to capture the concept of income and confine it within a phrase. In *United States* v. *Kirby Lumber Co.* the Court explicitly abandoned the search for a definition,** and succeeding cases have not revived the search. The courts have given a wide scope to the

* *Infra*, p 51. [Ed.]

** Holding that a taxpayer that had repurchased some of its own bonds for less than the price at which it had issued them realized income thereby, the Supreme Court (through Mr. Justice Holmes) there said: "We see nothing to be gained by the discussion of judicial definitions. The defendant in error has realized within the year an accession to income, if we take words in their plain popular meaning, as they should be taken here" 284 U.S. 1, 3 (1931). [Ed.]

income tax, but have recognized that the borderline content of "income" must be determined case by case. Essentially the concept of income is a flexible one, with the result in a particular case being determined by the interplay of common usage, accounting concepts, administrative goals, and finally judicial reaction to these forces. Each force and judicial reaction in turn reflects an underlying judgment as to what types of receipts should be subject to a tax imposed on "income."

It is believed that this combination of wide inclusiveness and elasticity should be retained, and that a simple reference to "all gains, profits, and income" is sufficient. It is also believed that familiar wording should be continued to avoid generating, by attempts to eliminate linguistic overlapping, new and nebulous problems of definition. Hence the Draft adheres to the old and seasoned terminology of "gains, profits, and income."...

In the income tax, as in other complex legislation, the need is for a standard which will project our present aims into the future and serve as the vehicle for solving the unforeseen cases as they arise. The legislative function is not denied or thwarted when other branches of the Government are relied upon by Congress to perform substantial tasks in the application of statutes. Administration and judicial interpretation are necessary parts of the overall process of legislation. The income tax is no exception. The general phrase "gains, profits, and income" is a satisfactory legislative command to the administrator and the judge. It provides a proper balance between the demand of a particular taxpayer that he should not be called upon to pay a tax without prior warning and the demands of all other taxpayers as a group that each particular taxpayer bear his proper part of the tax burden. The phrase is therefore retained in the Draft as a standard to solve the unforeseen cases until enough wisdom accumulates to build a more complete legislative solution to the problems of the future.

Section A. Non-Cash Benefits

UNITED STATES v. DRESCHER

United States Court of Appeals, Second Circuit, 1950
179 F 2d 863

Before L. HAND, Chief Judge, and SWAN, and CLARK, Circuit Judges.

SWAN, Circuit Judge.

This appeal brings up for review an action against the United States to recover additional income taxes for the years 1939 and 1940 which the plaintiff asserts were illegally assessed and collected. He was an officer and director of Bausch & Lomb Optical Company, and in each of the taxable years the Company purchased from an insurance company at a cost of $5,000 a single premium annuity contract naming him as the annuitant. The taxes in dispute resulted from the Commissioner's including such cost as additional compensation received by the plaintiff in the year when the annuity contract was purchased. The district court awarded the plaintiff judgment for overpayments in the aggregate amount of $5,924.22, ruling that he received no income in 1939 or 1940 attributable to the purchase of

the annuity contracts. The correctness of this ruling is presented by the appeal.

The facts are not in dispute. In 1936 the Optical Company inaugurated a plan to provide for the voluntary retirement at the age of 65 of its principal officers then under that age. There were five such, of whom Mr. Drescher was one. He was born April 28, 1894. Pursuant to this plan and in "recognition of prior services rendered," the Company purchased on December 28, 1939, and on the same date in 1940, a single premium, non-forfeitable annuity contract which named Mr. Drescher as the annuitant. Each policy was issued by Connecticut General Life Insurance Company and was delivered to the Optical Company which retained possession of it. It was the Company's intention, and so understood by the annuitant, that possession of the policy should be retained until the annuitant should reach the age of 65. The premium paid for each policy was $5,000. The amount of such payment was deducted by the Company in its tax return for the year of payment as part of the compensation paid to Mr. Drescher during that year. His salary as an officer was not reduced because of the purchase of the annuity contract, and he was not given the option to receive in cash the amounts expended by the Company for the premium payments. In filing income tax returns Mr. Drescher reported on the cash basis; the Optical Company on the accrual basis.

By the terms of the policy the Insurance Company agrees to pay the annuitant, commencing on December 28, 1958, a life income of $54.70 monthly under the 1939 policy and $44.80 monthly under the 1940 policy, with a minimum of 120 monthly payments. If the annuitant dies before receiving 120 monthly payments, the rest of them are payable to the beneficiary named in the policy. Each policy gives the annuitant an option to accelerate the date when monthly payments shall commence, but this option must be exercised by the annuitant in writing and endorsed on the policy. Consequently so long as the Optical Company retains possession of the policy the annuitant cannot exercise the option. If the annuitant dies before December 28, 1958, or before the acceleration date if he has exercised the option to accelerate monthly income payments, a death benefit is payable to the beneficiary designated by him (his wife). The policy reserves to him the right to change the beneficiary. The policy declares that "Neither this contract nor any payment hereunder may be assigned, and the contract and all payments shall be free from the claims of all creditors to the fullest extent permitted by law." The policy has no cash surrender, salable, or loan value, and does not entitle the annuitant to a distribution of surplus.

This case is governed by the provisions of the Internal Revenue Code as they existed in 1939 and 1940. The appellant contends that the contracts are taxable to the annuitant in the year of purchase by the employer because § 22(a), 26 U.S.C.A., sweeps into gross income "compensation for personal service, of whatever kind and whatever form paid, . . . and income derived from any source whatever." The taxpayer replies that these general provisions must be construed with regard to § 22(b) (2), printed in the margin,[1] as well as to § 165 relating to employees' trusts, and §§ 42 and 43 relating to accounting periods and methods of accounting. He cites Treasury rulings to the effect that retirement annuity contracts purchased for an employee gave rise to taxable income only as the annuitant

[1] Sec. 22(b) (2) "Annuities, etc.—Amounts received (other than amounts paid by reason of the death of the insured and interest payments on such amounts and other than amounts received as annuities) under a life insurance or endowment contract, but if such amounts (when added

received payments under the contract; and that the entire amount of each annuity payment was includible in gross income for the year of its receipt if he had made no contribution toward the purchase of the annuity, while, if he had made contributions, he was taxable in the manner and to the extent provided in § 22 (b) (2) by the three per cent. rule.

Whether we should construe the statute in accord with these Treasury rulings if the matter were *res integra,* we need not say. In this court the question of construction is not *res integra* because of our decision in *Ward* v. *Commissioner,* 2 Cir., 159 F.2d 502. That case involved a single premium annuity contract delivered to the annuitant and assignable by him. We there held that "the petitioner became taxable in 1941 upon whatever value was, by the delivery of the policy to him in that year, then unconditionally placed at his disposal. . . . This was the then assignable value of the policy." 159 F.2d page 504. We then considered whether it was error to value the policy in the amount of the premium paid for it. We recognized that the assignable value of the policy in 1941 might be less than the single premium paid for it, but as the purchaser had offered no proof that it was we held that the Tax Court was right in treating "cost to the purchaser as the assignable value of the policy when received by the taxpayer." 159 F.2d page 505.

As we shall not overrule the Ward case, the question is narrowed to determining whether the present case is distinguishable because the plaintiff's policies are non-assignable and were retained in the possession of the employer. We do not think these facts are sufficient to distinguish the cases with respect to taxability of the contracts, although they may affect the value of the rights the respective annuitants acquired. It cannot be doubted that in 1939 the plaintiff received as compensation for prior services something of economic benefit which he had not previously had, namely, the obligation of the insurance company to pay money in the future to him or his designated beneficiaries on the terms stated in the policy. That obligation he acquired in 1939 notwithstanding the employer's retention of possession of the policy and notwithstanding its non-assignability. The perplexing problem is how to measure the value of the annuitant's rights at the date he acquired them. The taxpayer contends that they then had no present value, while the appellant argues that their value was equal to the premium paid by the employer. We are unable to accept either contention.

The prohibition against assignment does not prove complete absence of present value. The right to receive income payments which accrued to the plaintiff when the Optical Company received each contract represented a present economic benefit to him. It may not have been worth to him the amount his employer paid for it;

---

to amounts received before the taxable year under such contract) exceed the aggregate premiums or consideration paid (whether or not paid during the taxable year) then the excess shall be included in gross income. Amounts received as an annuity under an annuity or endowment contract shall be included in gross income; except that there shall be excluded from gross income the excess of the amount received in the taxable year over an amount equal to 3 per centum of the aggregate premiums or consideration paid for such annuity (whether or not paid during such year), until the aggregate amount excluded from gross income under this chapter or prior income tax laws in respect of such annuity equals the aggregate premiums or consideration paid for such annuity. In the case of a transfer for a valuable consideration, by assignment or otherwise, of a life insurance, endowment, or annuity contract, or any interest therein, only the actual value of such consideration and the amount of the premiums and other sums subsequently paid by the transferee shall be exempt from taxation under paragraph (1) or this paragraph." [This method of taxing annuities was revised in 1954, see *infra.* p. 142. Ed.]

but it cannot be doubted that there is a figure, greater than zero although less than the premium cost, which it would have cost him to acquire identical rights. Likewise, the assurance that any beneficiary named by him at the time the contract was executed, or substituted by him at a later date, would in the event of his death receive the cost of each contract, plus interest after a few years, conferred a present economic benefit on him. Whatever present value the life insurance feature had to him is clearly taxable. See *Commissioner of Internal Revenue* v. *Bonwit*, 2 Cir., 87 F.2d 764, certiorari denied *Bonwit* v. *Helvering*, 302 U.S. 694, 58 S. Ct. 13, 82 L. Ed. 536. Another element of value inheres in the possibility that the annuitant could realize cash by contracting with a putative third person to hold in trust for him any payments to be received under the annuity contract. True, the promisee would run the risk that the annuitant might die before becoming entitled to any payments, in which event they would be payable to the beneficiary designated in the policy, but by exercising the reserved power to change the beneficiary the annuitant could designate his promisee. The power to make such a contract based on the policy may well have had some present value. No proof was offered as to this. For reasons which will be stated later the plaintiff had the burden of proving the amount by which he was overtaxed. On the other hand, it seems clear that the policy was worth less to the annuitant than the premium paid because the employer's retention of possession precluded him from exercising the privilege of accelerating the date of annuity payments since the insurance company's approval had to be endorsed upon the policy. The granting of this privilege must have been one of the factors taken into account in fixing the premium—at least, we may so assume in the absence of evidence. Hence deprivation of ability to exercise the privilege would decrease the value of the policy to the annuitant below its cost to the employer.

None of the authorities relied on by the parties is precisely in point on the issue of valuation. In *Hackett* v *Commissioner*, 1 Cir., 159 F.2d 121 although the policy was non-assignable, the value to the annuitant was measured by the cost of the premium. As already stated, that basis is inapplicable here, for retention of the policy by the employer cut off the acceleration privilege. The same distinction exists with respect to the partially assignable policy involved in *Oberwinder* v. *Commissioner*, 8 Cir., 147 F.2d 255. And the tax treatment of the assignable policy in that case, as well as of those involved in the *Ward* case and in *Hubbell* v. *Commissioner*, 6 Cir., 150 F.2d 516, 161 A.L.R. 764, affords little guidance to a correct valuation here. Likewise, the cases holding free from taxation a non-assignable promise to pay money at a future date do not assist us, since they rest decision on taxability—here concluded by the *Ward* case—rather than on valuation. But it is unnecessary on the present appeal to determine the precise valuation of the policies.

As already mentioned the burden of proving by how much he was overtaxed was on the plaintiff. He had paid the additional taxes assessed upon the valuation ascribed by the Commissioner to the annuity contracts. An action to recover taxes erroneously collected is essentially an action for money had and received and unjustly detained by the defendant. *Stone* v. *White*, 301 U S. 532, 57 S. Ct. 851, 81 L. Ed. 1265; *DeGuire* v. *Higgins*, 2 Cir., 159 F.2d 921. Hence the plaintiff must show how much was unjustly detained. He relied upon the terms of the

contract to prove that it had no present value whatever. But for reasons already stated we are satisfied that the 1939 policy had some present value and since he did not prove that such value was less than $5,000, the judgment in his favor cannot stand. . . .

Judgment reversed and cause remanded.

CLARK, Circuit Judge *(dissenting in part).*

I agree that the judgment must be reversed, but do not share in the view that some amount less than the $5,000 expended by the employer for this taxpayer in each of the years in question may be found to be the value of the annuity and hence the amount of additional compensation for which he is to be taxed. For the contrary seems to me well supported in reason and well established by the authorities cited in the opinion, some directly in point and some with, I suggest, immaterial variations of fact. In the light of modern conditions of life, the satisfying of the highly natural and indeed burning desire of most men of middle age to obtain security for their old age and for their widows at death seems so clearly an economic benefit that I wonder it has been questioned as much as it has. Nor do I see the need to support this conclusion by looking for some highly theoretical possibility of turning this benefit into immediate dollars and cents any more than in the case where an employee is furnished living quarters or meals. Just as the latter are valued as additional compensation, though not assigned or assignable, so I think this highly valuable security is a purchased benefit for these company executives. Consequently the making of nice distinctions in either taxability or the amount thereof between assignable or accelerable annuities or their delivery or retention by the company—after careful forethought and advice of its attorneys with naturally an eye on both pension and tax possibilities—seems to me improper, when the general purpose to make adequate retirement provisions for these employees was made so clear.

Hence for any issues here involved I do not think it is important to discover what reasons impelled the employer to make the slightly differing provisions from those before this court in *Ward* v. *Commissioner*, 2 Cir., 159 F.2d 502, 505. Perhaps the employer may have had the prescience to foresee these tax problems which are troubling my brothers and did trouble the court below and may result in at least postponement, if not non-collectibility, of most, if not all, of the tax on the additional return provided by the employer for these executives. Perhaps, rather, the employer was providing only for a surer provision "free from the claims of all creditors to the fullest extent permitted by law" for this taxpayer and his wife. So in retaining possession of the policies and cherishing the present intent not to permit acceleration of the annuities, the employer may have had in mind a way of both securing the purchased services to the retirement age in normal cases and guarding against unusual situations due to disability or other special cause. In any event the fact is that the employer purchased at the going insurance rate those contracts which for the parties fulfilled the conditions desired.[1] Actually they would return to the annuitant, or to his

[1] This was a tightly controlled corporation, so much so that the executives receiving the annuities and their families owned approximately 35 per cent of the voting stock, while the older officers and directors owned approximately 57 per cent. Hence there was never a sharp divergency of interest between these executives and their employer.

widow, total amounts at least well in excess of the premiums paid and increasing yet more the longer he lived. The parties got just what they paid for in the insurance market, and its cost price is the additional compensation the executive received. The two features stressed in the opinion, namely, the nonassignability and the present non-accelerability of the annuities, may add to their usability for the particular purpose, but would seem not to change the basis of value. Perhaps, indeed, they render the contracts more desirable not only to the employer, but also to the annuitant's wife, as making the security provisions less easily impaired, and thus have a special appeal to a husband solicitous of his wife's future. At least, I do not see what basis we have for thinking they adversely affect values of provisions for a particular purpose, *viz.*, security. If, in fact, these conditions do affect the amount of the premium, as the opinion rather naturally assumes, then all the more is the bargain of the parties to be respected as made; even the annuitant would doubtless be interested in a maximum return though it be strictly limited to himself or his wife. It seems to me that there is being set up some premise, not found in any of the precedents, of a fictitious partly-impaired transferability which is now somehow to be given a value in place of the wholly practical values set upon these contracts in the insurance market itself.

Of the cases, *Hackett* v. *Commissioner*, 1 Cir., 159 F.2d 121, seems directly in point and Judge Mahoney's opinion wholly persuasive as to both the meaning of the statute and the value to be set upon a nonassignable annuity contract. The suggested ground of distinction, that here retention of the policy by the employer cut off the acceleration privilege, cannot be accepted, since there does not appear to have been any such privilege in the annuity there considered; for no mention of the fact, or allusion of any kind to it, is made by the court. The same is true in *Oberwinder* v. *Commissioner*, 8 Cir., 147 F.2d 255, which also appears to be on all fours with this case. Similar results were reached in *Hubbell* v. *Commissioner*, 6 Cir, 150 F.2d 516, 161 A.L.R. 764, and by this court in *Ward* v. *Commissioner, supra;* for the reasons I have stated, the fact that the annuities in these cases were assignable should not make their purchase price any more accurate a gauge of their value than is the purchase price here. A like conclusion has been reached with respect to insurance premiums, *Commissioner of Internal Revenue* v. *Bonwit*, 2 Cir., 87 F.2d 764, certiorari denied *Bonwit* v. *Helvering*, 302 U.S. 694, 58 S. Ct. 13, 82 L. Ed. 536, and amounts deposited in the federal Civil Service Retirement Fund, *Miller* v. *Commissioner*, 4 Cir., 144 F.2d 287, while no case supporting a lesser valuation has been discovered True, in the *Ward* case we spoke of the failure of the taxpayer "to show that the contract was not worth as much as it cost." Surely there is nothing in this record to suggest anything different. Here there was even an official of the insurance company to testify to the somewhat ordinary nature of these contracts. That the parties actually got the particular provisions they desired for their purposes does not at all suggest that the policies were overpriced.

Hence unless these benefits are now taxed, this small group of top executives will be given a tax advantage not accruing to less fortunate or less well-advised persons. Such taxation should not be confused or rendered abortive by directions for valuation impossible of execution in any realistic way.

BENAGLIA v. COMMISSIONER

Board of Tax Appeals, 1937
36 B.T.A. 838

STERNHAGEN: The Commissioner has added $7,845, each year to the petitioner's gross income as "compensation received from Hawaiian Hotels, Ltd.", holding that this is "the fair market value of rooms and meals furnished by the employer." In the deficiency notice he cites article 52[53], Regulations 77, and holds inapplicable *Jones* v. *United States,* 60 Ct. Cls. 552, I.T. 2232; G.C.M. 14710; and G.C.M. 14836. The deficiency notice seems to hold that the rooms and meals were not in fact supplied "merely as a convenience to the hotels" of the employer.

From the evidence, there remains no room for doubt that the petitioner's residence at the hotel was not by way of compensation for his services, not for his personal convenience, comfort, or pleasure, but solely because he could not otherwise perform the services required of him. The evidence of both the employer and employee shows in detail what petitioner's duties were and why his residence in the hotel was necessary. His duty was continuous and required his presence at a moment's call. He had a lifelong experience in hotel management and operation in the United States, Canada, and elsewhere, and testified that the functions of the manager could not have been performed by one living outside the hotel, especially a resort hotel such as this. The demands and requirements of guests are numerous, various, and unpredictable, and affect the meals, the rooms, the entertainment, and everything else about the hotel. The manager must be alert to all these things day and night. He would not consider undertaking the job and the owners of the hotel would not consider employing a manager unless he lived there. This was implicit throughout his employment, and when his compensation was changed from time to time no mention was ever made of it. Both took it for granted. The corporation's books carried no accounting for the petitioner's meals, rooms, or service.

Under such circumstances, the value of meals and lodging is not income to the employee, even though it may relieve him of an expense which he would otherwise bear. In *Jones* v. *United States, supra,* the subject was fully considered in determining that neither the value of quarters nor the amount received as commutation of quarters by an Army officer is included within his taxable income. There is also a full discussion in the English case of *Tennant* v. *Smith,* H.L. (1892) App. Cas. 150, III British Tax Cases 158. A bank employee was required to live in quarters located in the bank building, and it was held that the value of such lodging was not taxable income. The advantage to him was merely an incident of the performance of his duty, but its character for tax purposes was controlled by the dominant fact that the occupation of the premises was imposed upon him for the convenience of the employer. The Bureau of Internal Revenue has almost consistently applied the same doctrine in its published rulings.

The three cases cited by the respondent, *Ralph Kitchen,* 11 B.T.A. 855; *Charles A. Frueauff,* 30 B.T.A. 449; and *Fontaine Fox,* 30 B.T.A. 451, are distinguishable entirely upon the ground that what the taxpayer received was not shown to be primarily for the need or convenience of the employer. Of course, as in the *Kitchen* case, it can not be said as a categorical proposition of law that, where

an employee is fed and lodged by his employer, no part of the value of such perquisite is income. If the Commissioner finds that it was received as compensation and holds it to be taxable income, the taxpayer contesting this before the Board must prove by evidence that it is not income. In the *Kitchen* case the Board held that the evidence did not establish that the food and lodging were given for the convenience of the employer. In the present case the evidence clearly establishes that fact, and it has been so found.

The determination of the Commissioner on the point in issue is reversed.

Reviewed by the Board.

Judgment will be entered under Rule 50. MURDOCK concurs only in the result.

ARNOLD, *dissenting:* I disagree with the conclusions of fact that the suite of rooms and meals furnished petitioner and his wife at the Royal Hawaiian Hotel were entirely for the convenience of the employer and that the cash salary was fixed without reference thereto and was never regarded as part of his compensation.

Petitioner was employed by a hotel corporation operating two resort hotels in Honolulu—the Royal Hawaiian, containing 357 guest bed rooms, and the Moana, containing 261 guest bed rooms, and the bungalows and cottages in connection with the Moana containing 127 guest bed rooms, and the Waialae Golf Club. His employment was as general manager of both hotels and the golf club.

His original employment was in 1925, and in accepting the employment he wrote a letter to the party representing the employer, with whom he conducted the negotiations for employment, under date of September 10, 1925, in which he says:

> Confirming our meeting here today, it is understood that I will assume the position of general manager of both the Royal Waikiki Beach Hotel (now under construction) and the Moana Hotel in Honolulu, at a yearly salary of $10,000.00, payable monthly, together with living quarters, meals, etc., for myself and wife In addition I am to receive $20.00 per day while travelling, this however, not to include any railroad or steamship fares, and I to submit vouchers monthly covering all such expenses.

While the cash salary was adjusted from time to time by agreement of the parties, depending on the amount of business done, it appears that the question of living quarters, meals, *etc.*, was not given further consideration and was not thereafter changed. Petitioner and his wife have always occupied living quarters in the Royal Hawaiian Hotel and received their meals from the time he first accepted the employment down through the years before us. His wife performed no services for the hotel company.

This letter, in my opinion, constitutes the basic contract of employment and clearly shows that the living quarters, meals, *etc.*, furnished petitioner and his wife were understood and intended to be compensation in addition to the cash salary paid him. Being compensation to petitioner in addition to the cash salary paid him, it follows that the reasonable value thereof to petitioner is taxable income. *Cf. Ralph Kitchen,* 11 B.T.A. 855; *Charles A. Frueauff,* 30 B.T.A. 449.

Conceding that petitioner was required to live at the hotel and that his living there was solely for the convenience of the employer, it does not follow that he was not benefited thereby to the extent of what such accommodations were reasonably worth to him. His employment was a matter of private contract. He was careful to specify in his letter accepting the employment that he was to be

furnished with living quarters, meals, *etc.*, for himself and wife, together with the cash salary, as compensation for his employment. Living quarters and meals are necessities which he would otherwise have had to procure at his own expense. His contract of employment relieved him to that extent. He has been enriched to the extent of what they are reasonably worth.

The majority opinion is based on the finding that petitioner's residence at the hotel was solely for the convenience of the employer and, therefore, not income. While it is no doubt convenient to have the manager reside in the hotel, I do not think the question here is one of convenience or of benefit to the employer. What the tax law is concerned with is whether or not petitioner was financially benefited by having living quarters furnished to himself and wife. He may have preferred to live elsewhere, but we are dealing with the financial aspect of petitioner's relation to his employer, not his preference. He says it would cost him $3,600 per year to live elsewhere.

It would seem that if his occupancy of quarters at the Royal Hawaiian was necessary and solely for the benefit of the employer, occupancy of premises at the Moana would be just as essential so far as the management of the Moana was concerned. He did not have living quarters or meals for himself and wife at the Moana and he was general manager of both and both were in operation during the years before us. Furthermore, it appears that petitioner was absent from Honolulu from March 24 to June 8 and from August 19 to November 2 in 1933, and from April 8 to May 24 and from September 3 to November 1 in 1934—about 5 months in 1933 and 3½ months in 1934. Whether he was away on official business or not we do not know. During his absence both hotels continued in operation. The $20 per day travel allowance in his letter of acceptance indicates his duties were not confined to managing the hotels in Honolulu, and the entire letter indicates he was to receive maintenance, whether in Honolulu or elsewhere, in addition to his cash salary.

At most the arrangement as to living quarters and meals was of mutual benefit, and to the extent it benefited petitioner it was compensation in addition to his cash salary, and taxable to him as income.

The Court of Claims in the case of *Jones* v. *United States*, relied on in the majority opinion, was dealing with a governmental organization regulated by military law where the compensation was fixed by law and not subject to private contract. The English case of *Tennant* v. *Smith*, involved the employment of a watchman or custodian for a bank whose presence at the bank was at all times a matter of necessity demanded by the employer as a condition of the employment. The facts in both these cases are so at variance with the facts in this case that they are not controlling in my opinion.

SMITH, TURNER and HARRON agree with this dissent.

MIMEOGRAPH 6472

Bureau of Internal Revenue, 1950

1950-1 C.B. 15

1. Section 22(a) of the Internal Revenue Code defines gross income as including "gains, profits, and income derived from salaries, wages, or compensation for

personal service . . . of whatever kind and in whatever form paid, . . ." Section 39.22(a)-3 of Regulations 118, relating to compensation paid other than in cash, provides in part as follows. ". . . If a person receives as compensation for services rendered a salary and in addition thereto living quarters or meals, the value to such person of the quarters and meals so furnished constitutes income subject to tax. If, however, living quarters or meals are furnished to employees for the convenience of the employer, the value thereof need not be computed and added to the compensation otherwise received by the employees. . . ."

Similar language is contained in section 405.101 of Regulations 116, relating to wages subject to withholding of income tax at the source.

2. The first sentence of the above-quoted regulation adheres closely to the definition of gross income included in section 22(a) of the Internal Revenue Code and establishes the general rule that every person receiving living quarters or meals "as compensation for services rendered" must include in gross income the value to him of such quarters or meals. The second sentence quoted above must be construed in the light of the first sentence to avoid being inconsistent therewith and to prevent violation of the statutory definition of gross income. The "convenience of the employer" rule is simply an administrative test to be applied only in cases in which the compensatory character of such benefits is not otherwise determinable. It follows that the rule should not be applied in any case in which it is evident from the other circumstances involved that the receipt of quarters or meals by the employee represents compensation for services rendered. This position is in accord with I.T. 2692 (C.B.XII-1, 28 (1933), and the decision of the United States Board of Tax Appeals (now The Tax Court of the United States) in *Herman Martin* v. *Commissioner* (44 B.T.A. 185).

3. For example, a State civil service employee is employed at an institution in which the conditions of employment require him to live at the institution and be available for duty at any time. In connection with his employment, he is furnished living quarters and meals. Under the applicable State statute, the civil service rules and regulations of the State, or the individual contract of employment, the value of the living quarters and meals is considered as part of the employee's compensation. Regardless of whether living quarters and meals are furnished in addition to the cash salary, or the value thereof is deducted from the total salary, established for the particular position, it is evident that the living quarters and meals are furnished as compensation for services rendered. Consequently, the value of the living quarters and meals is includible in his gross income and is subject to withholding of income tax at the source by the employer, notwithstanding the fact that the employee is required to live at the institution and be available for duty at any time.

Note

1. Before the 1954 Code was enacted, there was no statutory provision dealing with meals and lodging supplied by employers to employees But the Regulations for many years included the statement quoted in the first paragraph of Mim. 6472, *supra* Apparently the American source for the "convenience of the employer" doctrine was *Jones* v. *United States*, cited in the *Benaglia* case.

If the nature of the services require the furnishing of a house for their proper performance, and without it the service may not be properly rendered, the house

so furnished is part of the maintenance of the general enterprise, an overhead expense, so to speak, and forms no part of the individual income of the laborer. . . . It is indeed far from impressive that where an employer, in the course of the promotion and efficiency of the enterprise in which he is engaged, must of necessity provide the indispensable facilities for the successful prosecution of the same, because perchance an employee in the not to be avoided course of his duties may be in a position to avoid an expense which in a different character of service he might be obliged to incur, that therefore the use of the facility constitutes income. 60 Ct. Cl. 552, 575, 577 (1925).

2. Section 119 of the 1954 Code should be examined with care. To what extent is earlier law modified? Is it now necessary to determine whether meals or lodging are "intended as compensation?" Even though § 119 provides that the terms of an employment contract or state statute are not "determinative," are they significant in deciding whether the meals or lodging are excluded by § 119? Are meals or lodging furnished to members of the employee's family within the meaning of § 119? Lodging is excluded only if the employee "is required to accept such lodging on the business premises of his employer as a condition of his employment." Does this automatically insure that the lodging was furnished "for the convenience of the employer?" Can meals be excluded even if the employee is not "required to accept" them "as a condition of his employment?" Was this requirement omitted from § 119(1) only because employers do not customarily force-feed their employees, or is there some difference between meals and lodging so far as the requirement of acceptance as a condition of employment is concerned?

3. Why the stress on "compensation" in both the *Benaglia* case, *supra*, and the ruling? The Sixteenth Amendment speaks of "incomes, from whatever source derived." Section 22(a) of the 1939 Code embraced not only "income derived from salaries, wages, or compensation for personal service," but also "gains or profits and income derived from any source whatever." Must a benefit accruing to an employee be "compensation" to be taxable?

Perhaps the quarters furnished to soldiers in the field, to Pullman porters, to men in construction camps, *etc.*, are entirely non-compensatory, at least if the recipient is a married man and must maintain his usual place of abode for his family. But can the quarters of a hotel manager, a college president, an army officer in peace-time, *etc.* be realistically termed non-compensatory? So viewed, are meals ever non-compensatory? Bittker, "The Individual as Wage Earner," *11th Annual N Y.U. Inst. on Fed. Taxation* 1147 (1953).

4. What are the administrative problems of taxing compensation in kind? See Guttentag, Leonard, and Rodewald, "Federal Income Taxation of Fringe Benefits: A Specific Proposal," 6 *Nat'l. Tax J.* 250 (1953). Other tax and regulatory statutes must also cope with compensation in kind. See Comment, Tax Treatment of Compensation in Kind, 37 *Calif. L. Rev.* 628 (1949). Under the Social Security Act, the Treasury has ruled that "facilities and privileges" (such as cafeterias, medical service, or courtesy discounts) furnished by the employer will not be treated as a part of taxable wages if "offered or furnished by the employer merely as a convenience to the employer or as a means of promoting the health, good will, contentment, or efficiency of his employees." Regs. 90, Art. 207. The Treasury has ruled that this exclusion ordinarily embraces only "items which are insubstantial in character and value" and not "board and lodging." S.S.T. 321, 1938–2 C.B. 323. Is there any justification for including meals and quarters when calculating the employer's social security taxes and the employee's benefits but excluding them in computing the employee's income tax? See *Pacific American Fisheries* v. *United States*, 138 F.2d 464 (9th Cir. 1943).

5. Consider the tax status of these three individuals. *A* works for $75 a week for the *X* Co., which makes available to its employees a cafeteria serving inexpensive meals, medical and dental service caring for the entire family, an extensive program of social and recreational activities, and a discount on purchases of its goods. These "fringe benefits" cost the employer, on the average, $5 weekly per employee. *B* receives $80 a week

in identical employment for the *Y* Co., which offers its employees no such benefits. *C* receives $77.50 for identical work at *Z* Co., which offers no fringe benefits, but which has more pleasant lighting, air-conditioning, and foremen These attractions cost *Z* Co. about $2.50 weekly per employee.

GEESEMAN v. COMMISSIONER

Board of Tax Appeals, 1938
38 B.T.A. 258

[Pursuant to a plan adopted by the stockholders of Continental Can Co., the taxpayer's employer, its board of directors in 1931 granted to the taxpayer the right to purchase 800 shares of its common stock at $40 (later reduced to $30) per share, the option being exercisable in equal installments over the years 1931–34. The option contract stated that the employer "recognizing the value to it of the continuance of the services of D.B. Geeseman . . . and desiring the continuance of such services, grants to the Employee" the option. It also provided that if the taxpayer was discharged or resigned or died prior to the expiration date of the contract (September 2, 1935), he or his estate could purchase only the installments which had accrued at the time of the discharge, resignation, or death.

[When the option was granted, the stock was selling on the New York Stock Exchange at about 58 and it fluctuated from then to the end of 1933 between 33 and 72. In 1933 the taxpayer purchased 640 shares for $19,200. When purchased, the shares were worth about $45,000, and the Commissioner asserted that the "spread" was income to the taxpayer.

[The employer did not deduct the difference between the option price and the value of the shares when the option was granted as additional compensation. When the options were exercised in 1933, however, it did deduct the "spread" as additional compensation, though it had not done so for options exercised in 1931 or 1932.]

TURNER: The respondent contends that the option granted the petitioner "by its terms was strictly an employment of service contract" and that the difference between the price paid for the shares of stock and their fair market value on the date of purchase was additional compensation received by him as an employee of Continental Can Co. The petitioner contends that his purchase of stock was a "bargain" purchase and that such acquisition does not result in the realization of gain until the shares are sold or otherwise disposed of at a profit. In the alternative, he contends that if the transaction did constitute the payment of compensation, such compensation was received either when the option was originally granted or on the respective dates when the right to acquire the various allotments of stock matured.

Numerous cases which resemble the instant case in many respects have been decided and the results in many of them can not be reconciled as to conclusions of fact or conclusions of law. The disposition of such cases has become increasingly difficult because of the effort to spell out some set rule or formula whereby transactions of the type here involved may be automatically classified either as "bargain" purchases having no dependency on a contract of employment and which in the absence of sale or other disposition of the shares are said not to

result in the present realization of gain, or classified as the payment of compensation which, to the extent that the fair market value of the shares on the date of acquisition exceeds the purchase price, must be returned by the employee as income in the year of the purchase. To hold that a transaction of the character here involved is a "bargain" purchase having nothing to do with the employer-employee relationship, or, to the contrary, that it is not a purchase but constitutes the receipt of compensation having nothing to do with the purchase of property, to the extent that the fair market value exceeds the purchase price, is to ignore obvious facts and to assume a case substantially different from the one before us. In the first place, it may not be said that the acquisition of the stock of Continental Can Co. was not a purchase merely because the price paid was substantially lower than the price at which the same stock was then selling on the market, and, in the second place, obvious facts are ignored if it be said that the stock transaction was separate and apart from, or was not based upon, the employer-employee relationship, or that it had no relation to services rendered or to be rendered. In practically all such cases both elements are present and decision is impossible if the absence of one or the other is essential thereto.

Normally the purchase of property does not result in the realization of taxable gain, but rather in the acquisition of an asset with a view to the later realization of gain or profit through its use or subsequent sale, and upon sale the general rule is that no taxable gain is realized until the seller has recovered his cost or capital. *Burnet* v. *Logan*, 283 U.S. 404. Certainly the above principle is applicable in the instant case in so far as the stock acquired by the petitioner under the option granted to him by his employer was acquired at a cost to him of $30 per share in cash. It is also equally obvious that the petitioner did not at the time of or in the year of purchase recover any part of such cost. Our question then is whether on the facts presented it must be said that some undivided part of the 640 shares of Continental Can acquired by the petitioner was acquired by purchase and in respect of that part no taxable gain is realized until the stock is sold or otherwise disposed of and the petitioner has recovered his cost, while saying that the remaining undivided part of the said shares was received as the payment of compensation and must be reported as income in the year received to the extent of the fair market value of such undivided part. If so, it must be because of the fact that the price paid was lower than the price at which the same stock was selling on the market either at the time of purchase or at the time the offer was extended or became effective; otherwise, there would be no basis for holding that any portion of the stock was acquired other than by purchase, even though the sale to petitioner was based on an employer-employee relationship. *Gardner-Denver Co.* v. *Commissioner*, 75 Fed. (2d) 38. Furthermore it is not at all unusual that the purchaser of property may through his ability and shrewdness as a buyer, or by reason of other influences or forces, be able to purchase property at a price substantially lower than the price at which it may be immediately sold, but it does not follow that gain is presently realized through such a purchase. *Manomet Cranberry Co.*, 1 B.T.A. 706; *Morgan J. McMichael*, 4 B.T.A. 266; *George W. Van Vorst, Executor*, 22 B.T.A. 632; affd., 59 Fed. (2d) 667; *James William Everhart*, 26 B.T.A. 318; *W. L. Dunn*, 14 B.T.A. 13; and *Rose* v. *Trust Co. of Georgia*, 28 Fed. (2d) 767. Accordingly it is our opinion that as a prerequisite to the conclusion sought by the respondent it should def-

initely and clearly appear that a transaction, which in form is nothing more than a purchase and to an obvious and substantial extent is unquestionably a purchase, is in fact to some extent the payment of compensation for services rendered or to be rendered.

If the agreement between an employer and employee shows that the amount of money which is to be paid by the employee in connection with the acquisition of stock in the employer is fixed or controlled by services rendered or to be rendered and further shows that the employee agrees to receive payment of his compensation in the form of stock, the parties should not be heard to say that the excess of the fair market value of the stock over the cash paid by the employee should not be treated for income tax purposes as compensation paid. *Albert Russel Erskine*, 26 B.T.A. 147. *Cf. W. M. Ritter Lumber Co.*, 30 B.T.A. 231. It is also possible that even in the absence of such a definite understanding or expressed declaration in the agreement between the employer and employee, the circumstances surrounding the agreement may be such as to render unreasonable and absurd any conclusion that the acquisition of the stock at the price named did not constitute the payment of compensation to the extent of the difference between the amount paid and the fair market value of the stock. Such, however, is not the case before us. It is true that the prospective purchasers were selected solely because they were valued employees of Continental Can Co., and there is no doubt that the added interest of these employees and the proprietary attitude toward the company which would result from their ownership of the stock constituted one of the motives for the granting of the option. It is equally obvious, however, that the continued employment of the petitioner was not dependent upon the receipt by him of the right to purchase the stock at less than the market price. The terms and conditions of his employment and the compensation he was receiving were in no way changed by the receipt of the privilege of purchasing the stock. Accordingly the rule stated in the *Erskine* and *Ritter Lumber Co.* cases is not applicable here. Furthermore the price to be paid by petitioner for the stock was substantial and, if consideration be given to the language of the offer, the margin of difference between the option price and the current market price at the time the option price was fixed, and to the fluctuation of prices on the stock market during the period in which the offer was made, we do not believe that it can be said that the margin of difference between the offering price and the fair market value of the stock was so great as to require the conclusion that the transaction here constituted the payment of compensation. *Cf. Omaha National Bank* v. *Commissioner*, 75 Fed. (2d) 434; *Gardner-Denver Co., supra;* and *Rossheim* v. *Commissioner*, 92 Fed. (2d) 247. Accordingly we are unable to find in the instant case the elements which would indicate that the transaction was not what its form indicates, that is, a purchase of stock by the petitioner with a view to the subsequent realization of profit through dividends or sale or other disposition of the property.

The conclusion stated makes it unnecessary to consider the petitioner's alternative contentions.

Decision will be entered for the petitioner.

Note

1. In *Commissioner* v. *Smith,* 324 U.S. 177 (1945), the Supreme Court held that the "spread" was income to an employee in the year the option was exercised. The Tax Court had found that the option in question was issued to the employee "as compensation for services" and that it had no ascertainable market value when issued. The Supreme Court said (324 U.S. at 181–2):

> Section 22(a) of the Revenue Act is broad enough to include in taxable income any economic or financial benefit conferred on the employee as compensation, whatever the form or mode by which it is effected . . . the compensation for respondent's services, which the parties contemplated, plainly was not confined to the mere delivery to respondent of an option of no present value, but included the compensation obtainable by the exercise of the option given for that purpose. It of course does not follow that in other circumstances not here present the option itself, rather than the proceeds of its exercise, could not be found to be the only intended compensation.

The *Smith* case led, in 1946, to an amendment to the Regulations, flatly declaring:

> If property is transferred by an employer to an employee for an amount less than its fair market value, regardless of whether the transfer is in the form of a sale or exchange, the difference between the amount paid for the property and the amount of its fair market value is in the nature of compensation and shall be included in the gross income of the employee. Regs. 118, Sec. 39.22(a)-1.

The amended regulation has been the center of controversy. Friedman and Silbert, "Stock Option and Stock Purchase Plans," *8th Annual N.Y.U. Inst. on Fed. Taxation* 433 (1950), Comment, The Treasury's Proposal to Tax Employees' Bargain Purchases T.D. 5507, 56 *Yale L.J.* 706 (1947). In 1950, the Senate Finance Committee stated that it "believes these regulations go beyond the decision of the Supreme Court in *Commissioner* v *Smith,* 324 U.S. 177 (1945)." S. Rept. No. 2375, 81st Cong., 2d sess., reprinted in 50–2 C.B. 483, 526 The Tax Court has continued to apply the *Geeseman* case to options granted before the amended regulation, which was intended to be prospective only, was issued (see *Rosenberg* v. *Commissioner,* 20 T.C. 5 1953) and, in *LoBue* v. *Commissioner,* 22 T.C. No. 58 (1954), it refused to apply the amended regulation to a post-1946 stock option, saying that it believed that the criteria of the *Geeseman* case are "still the most reliable guide to be followed" Four judges dissented, but without opinion.

2. Would the amended regulation apply to property purchased pursuant to a "courtesy discount?" To meals served for less than value or cost in an employees' lunchroom? For the circumstances that may lead to treating the *issue* of the option, rather than its exercise, as "the only intended compensation" (in the words of the *Smith* case), see *McNamara* v. *Commissioner,* 210 F.2d 505 (7th Cir. 1954).

3. The amended regulation, in conjunction with earlier doubts as to the breadth of the *Geeseman* doctrine, discouraged the issuance of employee stock options after 1946. The Revenue Act of 1950 added § 130A to the 1939 Code, providing favorable tax treatment for so-called "restricted stock options." As a result of these tax benefits, considered in Chapter 5, stock options have once more become a popular device for compensating corporate employees, especially executives. Options that do not meet the qualifications of the statute, however, may possibly still be entitled to go tax-free if they are non-compensatory within the *Geeseman* doctrine. Washington and Rothschild, *Compensating the Corporate Executive,* 143–147 (rev. ed. 1951). Section 130A was rewritten by the 1954 Code and, as modified, appears as § 421

4. Note that even if the option is "compensatory" and does not qualify under § 421, taxing the "spread" requires a determination of the stock's fair market value. Suppose the stock is made non-transferable for a limited period of time and the employer retains the right to reacquire the stock at the sales price if the employee voluntarily

leaves his job. It has been held that such restrictions on transfer may deprive the stock of a fair market value and thus prevent the assessment of tax when the option is exercised. *Kuchman* v. *Commissioner,* 18 T.C. 154 (1952). *A fortiori* the option itself would lack an ascertainable market value so as to permit a tax to be assessed in the year it was issued. Moreover, it was held in *Lehman* v. *Commissioner,* 17 T.C. 652 (1951), that the "spread" between cost and fair market value could not be taxed in the year in which the restrictions on transfer expired:

> Termination of the restrictions was not a taxable event such as the receipt of compensation for services or the disposition of property. Values fluctuate from time to time and the value on a later date might be out of all proportion to the compensation involved in the original acquisition of the shares.

Section B. The Requirement of a "Realization"

EISNER v. MACOMBER

Supreme Court of the U.S., 1920

252 U.S. 189

MR. JUSTICE PITNEY delivered the opinion of the Court.

This case presents the question whether, by virtue of the Sixteenth Amendment, Congress has the power to tax, as income of the stockholder and without apportionment, a stock dividend made lawfully and in good faith against profits accumulated by the corporation since March 1, 1913.

It arises under the Revenue Act of September 8, 1916 (39 Stat. 756 *et seq.,* c. 463 Comp. St. Sec. 6336a *et seq.*), which, in our opinion . . . plainly evinces the purpose of Congress to tax stock dividends as income.

The facts, in outline, are as follows:

On January 1, 1916, the Standard Oil Company of California, a corporation of that state, out of an authorized capital stock of $100,000,000, had shares of stock outstanding, par value $100 each, amounting in round figures to $50,000,000. In addition, it had surplus and undivided profits invested in plant, property, and business and required for the purposes of the corporation, amounting to about $45,000,000, of which about $20,000,000 had been earned prior to March 1, 1913, the balance thereafter. In January, 1916, in order to readjust the capitalization, the board of directors decided to issue additional shares sufficient to constitute a stock dividend of 50 per cent of the outstanding stock, and to transfer from surplus account to capital stock account an amount equivalent to such issue. Appropriate resolutions were adopted, an amount equivalent to the par value of the proposed new stock was transferred accordingly, and the new stock duly issued against it and divided among the stockholders.

Defendant in error, being the owner of 2,200 shares of the old stock, received certificates for 1,100 additional shares, of which 18.07 per cent, or 198.77 shares, par value $19,877, were treated as representing surplus earned between March 1, 1913, and January 1, 1916. She was called upon to pay, and did pay under protest, a tax imposed under the Revenue Act of 1916, based upon a supposed income of $19,877 because of the new shares; and an appeal to the Commissioner of Internal

Revenue having been disallowed, she brought action against the Collector to recover the tax. In her complaint she alleged the above facts, and contended that in imposing such a tax the Revenue Act of 1916 violated Article 1, Sec. 2, Cl. 3, and Article 1, Sec. 9, Cl. 4, of the Constitution of the United States, requiring direct taxes to be apportioned according to population, and that the stock dividend was not income within the meaning of the Sixteenth Amendment. . . .

The Sixteenth Amendment must be construed in connection with the taxing clauses of the original Constitution and the effect attributed to them before the amendment was adopted. In *Pollock* v. *Farmers' Loan & Trust Co.*, 158 U.S. 601, 15 Sup. Ct. 912, 39 L. Ed. 1108, under the Act of August 27, 1894 (28 Stat. 509, 553, c. 349, Sec. 27), it was held that taxes upon rents and profits of real estate and upon returns from investments of personal property were in effect direct taxes upon the property from which such income arose, imposed by reason of ownership; and that Congress could not impose such taxes without apportioning them among the states according to population, as required by Article 1, Sec. 2, Cl. 3, and Section 9, Cl. 4, of the original Constitution.

Afterwards, and evidently in recognition of the limitation upon the taxing power of Congress thus determined, the Sixteenth Amendment was adopted, in words lucidly expressing the object to be accomplished "The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration."

As repeatedly held, this did not extend the taxing power to new subjects, but merely removed the necessity which otherwise might exist for an apportionment among the states of taxes laid on income. . . .

A proper regard for its genesis, as well as its very clear language, requires also that this amendment shall not be extended by loose construction, so as to repeal or modify, except as applied to income, those provisions of the Constitution that require an apportionment according to population for direct taxes upon property, real and personal. This limitation still has an appropriate and important function, and is not to be overridden by Congress or disregarded by the courts.

In order, therefore, that the clauses cited from Article 1 of the Constitution may have proper force and effect, save only as modified by the amendment, and that the latter also may have proper effect, it becomes essential to distinguish between what is and what is not "income," as the term is there used, and to apply the distinction, as cases arise, according to truth and substance, without regard to form. Congress cannot by any definition it may adopt conclude the matter, since it cannot by legislation alter the Constitution, from which alone it derives its power to legislate, and within whose limitations alone that power can be lawfully exercised.

The fundamental relation of "capital" to "income" has been much discussed by economists, the former being likened to the tree or the land, the latter to the fruit or the crop; the former depicted as a reservoir supplied from springs, the latter as the outlet stream, to be measured by its flow during a period of time. For the present purpose we require only a clear definition of the term "income," as used in common speech, in order to determine its meaning in the amendment, and, having formed also a correct judgment as to the nature of a stock dividend, we shall find it easy to decide the matter at issue.

After examining dictionaries in common use *(Bouv. L.D.; Standard Dict.; Webster's Internat. Dict.; Century Dict.)*, we find little to add to the succinct definition adopted in two cases arising under the Corporation Tax Act of 1909 (*Stratton's Independence* v. *Howbert*, 231 U.S. 399, 415, 34 Sup. Ct. 136, 140, 58 L. Ed. 285, *Doyle* v. *Mitchell Bros. Co.*, 247 U.S. 179, 185, 38 Sup. Ct. 467, 469, 62 L. Ed. 1054), "Income may be defined as the gain derived from capital, from labor, or from both combined," provided it be understood to include profit gained through a sale or conversion of capital assets, to which it was applied in the *Doyle* Case, 247 U.S. 183, 185, 38 Sup. Ct. 467, 469 (62 L. Ed. 1054).

Brief as it is, it indicates the characteristic and distinguishing attribute of income essential for a correct solution of the present controversy. The government, although basing its argument upon the definition as quoted, placed chief emphasis upon the word "gain," which was extended to include a variety of meanings; while the significance of the next three words was either overlooked or misconceived. "Derived-from-capital"; "the gain-derived-from-capital," *etc.* Here we have the essential matter: *not* a gain accruing to capital, not a growth or increment of value in the investment; but a gain, a profit, something of exchangeable value, proceeding from the property, severed from the capital, however invested or employed, and coming in, being "derived"—that is, received or drawn by the recipient (the taxpayer), for his separate use, benefit and disposal—that is income derived from property. Nothing else answers the description.

The same fundamental conception is clearly set forth in the Sixteenth Amendment—"incomes, from whatever source derived"—the essential thought being expressed with a conciseness and lucidity entirely in harmony with the form and style of the Constitution.

Can a stock dividend, considering its essential character, be brought within the definition? To answer this, regard must be had to the nature of a corporation and the stockholder's relation to it. . . .

Certainly the interest of the stockholder is a capital interest, and his certificates of stock are but the evidence of it. They state the number of shares to which he is entitled and indicate their par value and how the stock may be transferred. They show that he or his assignors, immediate or remote, have contributed capital to the enterprise, that he is entitled to a corresponding interest proportionate to the whole, entitled to have the property and business of the company devoted during the corporate existence to attainment of the common objects, entitled to vote at stockholders' meetings, to receive dividends out of the corporation's profits if and when declared, and, in the event of liquidation, to receive a proportionate share of the net assets, if any, remaining after paying creditors. Short of liquidation, or until dividend declared, he has no right to withdraw any part of either capital or profits from the common enterprise; on the contrary, his interest pertains not to any part, divisible or indivisible, but to the entire assets, business, and affairs of the company. Nor is it the interest of an owner in the assets themselves, since the corporation has full title, legal and equitable, to the whole. The stockholder has the right to have the assets employed in the enterprise, with the incidental rights mentioned; but, as stockholder, he has no right to withdraw, only the right to persist, subject to the risks of the enterprise, and looking only to dividends for his return. If he desires to dissociate himself from the company he can do so only by disposing of his stock.

For bookkeeping purposes, the company acknowledges a liability in form to the stockholders equivalent to the aggregate par value of their stock, evidenced by a "capital stock account." If profits have been made and not divided they create additional bookkeeping liabilities under the head of "profit and loss," "undivided profits," "surplus account," or the like. None of these, however, gives to the stockholders as a body, much less to any one of them, either a claim against the going concern for any particular sum of money, or a right to any particular portion of the assets or any share in them unless or until the directors conclude that dividends shall be made and a part of the company's assets segregated from the common fund for the purpose. The dividend normally is payable in money, under exceptional circumstances in some other divisible property; and when so paid, then only (excluding, of course, a possible advantageous sale of his stock or winding-up of the company) does the stockholder realize a profit or gain which becomes his separate property, and thus derive income from the capital that he or his predecessor has invested. . . .

A "stock dividend" shows that the company's accumulated profits have been capitalized, instead of distributed to the stockholders or retained as surplus available for distribution in money or in kind should opportunity offer. Far from being a realization of profits of the stockholder, it tends rather to postpone such realization, in that the fund represented by the new stock has been transferred from surplus to capital, and no longer is available for actual distribution.

The essential and controlling fact is that the stockholder has received nothing out of the company's assets for his separate use and benefit; on the contrary, every dollar of his original investment, together with whatever accretions and accumulations have resulted from employment of his money and that of the other stockholders in the business of the company, still remains the property of the company, and subject to business risks which may result in wiping out the entire investment. Having regard to the very truth of the matter, to substance and not to form, he has received nothing that answers the definition of income within the meaning of the Sixteenth Amendment. . . .

We are clear that not only does a stock dividend really take nothing from the property of the corporation and add nothing to that of the shareholder, but that the antecedent accumulation of profits evidenced thereby, while indicating that the shareholder is the richer because of an increase of his capital, at the same time shows he has not realized or received any income in the transaction.

It is said that a stockholder may sell the new shares acquired in the stock dividend; and so he may, if he can find a buyer. It is equally true that if he does sell, and in doing so realizes a profit, such profit, like any other, is income, and so far as it may have arisen since the Sixteenth Amendment is taxable by Congress without apportionment. The same would be true were he to sell some of his original shares at a profit. But if a shareholder sells dividend stock he necessarily disposes of a part of his capital interest, just as if he should sell a part of his old stock, either before or after the dividend. What he retains no longer entitles him to the same proportion of future dividends as before the sale. His part in the control of the company likewise is diminished. Thus, if one holding $60,000 out of a total $100,000 of the capital stock of a corporation should receive in common with other stockholders a 50 per cent stock dividend, and should sell his part, he thereby would be reduced from a majority to a minority stockholder, having six-fifteenths

instead of six-tenths of the total stock outstanding. A corresponding and proportionate decrease in capital interest and in voting power would befall a minority holder should he sell dividend stock, it being in the nature of things impossible for one to dispose of any part of such an issue without a proportionate disturbance of the distribution of the entire capital stock, and a like diminution of the seller's comparative voting power—that "right preservative of rights" in the control of a corporation. Yet, without selling, the shareholder, unless possessed of other resources, has not the wherewithal to pay an income tax upon the dividend stock. Nothing could more clearly show that to tax a stock dividend is to tax a capital increase, and not income, than this demonstration that in the nature of things it requires conversion of capital in order to pay the tax....

We have no doubt of the power or duty of a court to look through the form of the corporation and determine the question of the stockholder's right, in order to ascertain whether he has received income taxable by Congress without apportionment. But, looking through the form, we cannot disregard the essential truth disclosed, ignore the substantial difference between corporation and stockholder, treat the entire organization as unreal, look upon stockholders as partners, when they are not such, treat them as having in equity a right to a partition of the corporate assets, when they have none, and indulge the fiction that they have received and realized a share of the profits of the company which in truth they have neither received nor realized. We must treat the corporation as a substantial entity separate from the stockholder, not only because such is the practical fact but because it is only by recognizing such separateness that any dividend—even one paid in money or property—can be regarded as income of the stockholder. Did we regard corporation and stockholders as altogether identical, there would be no income except as the corporation acquired it; and while this would be taxable against the corporation as income under appropriate provisions of law, the individual stockholders could not be separately and additionally taxed with respect to their several shares even when divided, since if there were entire identity between them and the company they could not be regarded as receiving anything from it, any more than if one's money were to be removed from one pocket to another.

Conceding that the mere issue of a stock dividend makes the recipient no richer than before, the government nevertheless contends that the new certificates measure the extent to which the gains accumulated by the corporation have made him the richer. There are two insuperable difficulties with this In the first place, it would depend upon how long he had held the stock whether the stock dividend indicated the extent to which he had been enriched by the operations of the company; unless he had held it throughout such operations the measure would not hold true. Secondly, and more important for present purposes, enrichment through increase in value of capital investment is not income in any proper meaning of the term.

The complaint contains averments respecting the market prices of stock such as plaintiff held, based upon sales before and after the stock dividend, tending to show that the receipt of the additional shares did not substantially change the market value of her entire holdings. This tends to show that in this instance market quotations reflected intrinsic values—a thing they do not always do. But we regard the market prices of the securities as an unsafe criterion in an inquiry such as the

present, when the question must be, not what will the thing sell for, but what is it in truth and in essence.

It is said there is no difference in principle between a simple stock dividend and a case where stockholders use money received as cash dividends to purchase additional stock contemporaneously issued by the corporation. But an actual cash dividend, with a real option to the stockholder either to keep the money for his own or to reinvest it in new shares, would be as far removed as possible from a true stock dividend, such as the one we have under consideration, where nothing of value is taken from the company's assets and transferred to the individual ownership of the several stockholders and thereby subjected to their disposal. . . .

MR. JUSTICE HOLMES *dissenting*. . . .

I think that the word "incomes" in the Sixteenth Amendment should be read in "a sense most obvious to the common understanding at the time of its adoption." *Bishop* v. *State*, 149 Ind. 223, 230, 48 N.E. 1038, 1040, 39 L.R.A. 278, 63 Am. St. Rep. 270; *State* v. *Butler*, 70 Fla. 102, 133, 69 South. 771. For it was for public adoption that it was proposed. *McCulloch* v. *Maryland*, 4 Wheat. 316, 407, 4 L. Ed. 579. The known purpose of this Amendment was to get rid of nice questions as to what might be direct taxes, and I cannot doubt that most people not lawyers would suppose when they voted for it that they put a question like the present to rest. I am of opinion that the Amendment justifies the tax. See *Tax Commissioner* v. *Putnam*, 227 Mass. 522, 532, 533, 116 N.E. 904, L.R.A. 1917F, 806.

MR. JUSTICE DAY concurs in this opinion.

MR. JUSTICE BRANDEIS delivered the following *dissenting* opinion:

Financiers, with the aid of lawyers, devised long ago two different methods by which a corporation can, without increasing its indebtedness, keep for corporate purposes accumulated profits, and yet, in effect, distribute these profits, among its stockholders. One method is a simple one. The capital stock is increased; the new stock is paid up with the accumulated profits; and the new shares of paid-up stock are then distributed among the stockholders pro rata as a dividend. If the stockholder prefers ready money to increasing his holding of the stock in the company, he sells the new stock received as a dividend. The other method is slightly more complicated. Arrangements are made for an increase of stock to be offered to stockholders pro rata at par, and, at the same time, for the payment of a cash dividend equal to the amount which the stockholder will be required to pay to the company, if he avails himself of the right to subscribe for his pro rata of the new stock. If the stockholder takes the new stock, as is expected, he may endorse the dividend check received to the corporation and thus pay for the new stock. In order to ensure that all the new stock so offered will be taken, the price at which it is offered is fixed far below what it is believed will be its market value. If the stockholder prefers ready money to an increase of his holdings of stock, he may sell his right to take new stock pro rata, which is evidenced by an assignable instrument. In that event the purchaser of the rights repays to the corporation, as the subscription price of the new stock, an amount equal to that which it had paid as a cash dividend to the stockholder.

Both of these methods of retaining accumulated profits while in effect distributing them as a dividend had been in common use in the United States for many

years prior to the adoption of the Sixteenth Amendment. They were recognized equivalents. Whether a particular corporation employed one or the other method was determined sometimes by requirements of the law under which the corporation was organized; sometimes it was determined by preferences of the individual officials of the corporation; and sometimes by stock market conditions. Whichever method was employed the resultant distribution of the new stock was commonly referred to as a stock dividend....

It is conceded that if the stock dividend paid to Mrs. Macomber had been made by the more complicated method pursued by the Standard Oil Company of Kentucky; that is, issuing rights to take new stock pro rata and paying to each stockholder simultaneously a dividend in cash sufficient in amount to enable him to pay for this pro rata of new stock to be purchased—the dividend so paid to him would have been taxable as income, whether he retained the cash or whether he returned it to the corporation in payment for his pro rata of new stock. But it is contended that, because the simple method was adopted of having the new stock issued direct to the stockholders as paid-up stock, the new stock is not to be deemed income, whether she retained it or converted it into cash by sale. If such a different result can flow merely from the difference in the method pursued, it must be because Congress is without power to tax as income of the stockholder either the stock received under the latter method or the proceeds of its sale; for Congress has, by the provisions in the Revenue Act of 1916, expressly declared its purpose to make stock dividends, by whichever method paid, taxable as income...

Suppose that a corporation having power to buy and sell its own stock, purchases in the interval between its regular dividend dates, with moneys derived from current profits, some of its own common stock as a temporary investment, intending at the time of purchase to sell it before the next dividend date and to use the proceeds in paying dividends, but later, deeming it inadvisable either to sell this stock or to raise by borrowing the money necessary to pay the regular dividend in cash, declares a dividend payable in this stock; can any one doubt that in such a case the dividend in common stock would be income of the stockholder and constitutionally taxable as such? See *Green* v. *Bissell*, 79 Conn. 547, 65 Atl. 1056, 8 L.R.A. (N.S.) 1011, 118 Am. St. Rep. 156, 9 Ann. Cas. 287; *Leland* v. *Hayden*, 102 Mass. 542. And would it not likewise be income of the stockholder subject to taxation if the purpose of the company in buying the stock so distributed had been from the beginning to take it off the market and distribute it among the stockholders as a dividend, and the company actually did so? And proceeding a short step further: Suppose that a corporation decided to capitalize some of its accumulated profits by creating additional common stock and selling the same to raise working capital, but after the stock has been issued and certificates therefor are delivered to the bankers for sale, general financial conditions make it undesirable to market the stock and the company concludes that it is wiser to husband, for working capital, the cash which it had intended to use in paying stockholders a dividend, and, instead, to pay the dividend in the common stock which it had planned to sell; would not the stock so distributed be a distribution of profits—and hence, when received, be income of the stockholder and taxable as such? If this be conceded, why should it not be equally income of the stockholder, and taxable as such, if the common stock created by capitalizing profits, had been originally

created for the express purpose of being distributed as a dividend to the stockholder who afterwards received it? . . .

MR. JUSTICE CLARKE concurs in this opinion.

Note

Eisner v. *Macomber* has been included at this point because of its discussion of the term "income." The subsequent statutory and judicial treatment of stock dividends must be reserved for detailed examination later. See Chapter 6, Sec. H(1). No other income tax case has been as extensively and acutely discussed as *Eisner* v. *Macomber*.* A classic article by Thomas Reed Powell is, "Stock Dividends, Direct Taxes, and the Sixteenth Amendment," 20 *Col. L. Rev.* 536 (1920); he concludes that the majority justices are better economists than the minority but finds a "stalemate" in the legal battle. E. R. A. Seligman, the distinguished economist, supported the majority, *Studies in Public Finance*, Chapter 5, while his son, an attorney, preferred the dissents, "Implications and Effects of the Stock Dividend Decision," 21 *Col. L. Rev.* 313 (1921). Henry Simons, who ordinarily had little use for the views of Seligman père, nevertheless agreed with him in approving the result of the decision, though he could not accept the opinion:

> The decision that stock dividends should be ignored in calculating taxable income (except for the appropriate changes in the basis from which capital gains and losses are measured) was eminently sound, as a judgment about a question of legislative policy. It is most unfortunate, however, that a constitutional issue was ever raised; for brief experience with the legislation in question would almost certainly have led to general disapproval and early repeal. . . . Actually, an utterly trivial issue was made the occasion for injecting into our fundamental law a mass of rhetorical confusion which no orderly mind can contemplate respectfully, and for giving constitutional status to naive and ridiculous notions about the nature of income and the rationale of income taxes. (Simons, *Personal Income Taxation* 198-199 (1938)).

But see Surrey, "The Supreme Court and the Federal Income Tax: Some Implications of the Recent Decisions," 35 *Ill L. Rev.* 779 (1941): "The cornerstone was laid, but the Court proceeded no further with its task of building upon it a concept of income. Each succeeding opinion paid its respects to the principle of realization which was the core of the Court's pronouncement in *Eisner* v. *Macomber*, but went on to a result which never matched the rigor of that pronouncement." Does the case that follows represent a retreat from the "rigor" of *Eisner* v. *Macomber?*

HELVERING v. BRUUN

Supreme Court of the U S, 1940

309 U.S. 461

MR. JUSTICE ROBERTS delivered the opinion of the Court.

The controversy had its origin in the petitioner's assertion that the respondent realized taxable gain from the forfeiture of a leasehold, the tenant having erected

---

* The opinion had been avidly awaited by the financial world, especially since a number of corporations had announced that stock dividends would be declared if held non-taxable. When Mr. Justice Pitney began to read his opinion, its import was misunderstood by a representative of Dow, Jones & Co., and a report that the Court had held the dividend taxable was sent out on the ticker. A collapse of stock prices, especially of those corporations which had previously been expected to declare stock dividends, resulted. After the false report was corrected, there was a rebound, sending prices up more than they had dropped. One observer blamed the incident on the fact that Supreme Court opinions are read "in a low or mumbling tone" and added. "I have heard that a committee of stockbrokers is going to investigate the occurrence." New York Times, March 9, 1920, p. 1.

a new building upon the premises. The court below held that no income had been realized. Inconsistency of the decisions on the subject led us to grant certiorari. . . .

The Board of Tax Appeals made no independent findings. The cause was submitted upon a stipulation of facts. From this it appears that on July 1, 1915, the respondent, as owner, leased a lot of land and the building thereon for a term of ninety-nine years.

The lease provided that the lessee might, at any time, upon giving bond to secure rentals accruing in the two ensuing years, remove or tear down any building on the land, provided that no building should be removed or torn down after the lease became forfeited, or during the last three and one-half years of the term. The lessee was to surrender the land, upon termination of the lease, with all buildings and improvements thereon.

In 1929 the tenant demolished and removed the existing building and constructed a new one which had a useful life of not more than fifty years. July 1, 1933, the lease was cancelled for default in payment of rent and taxes and the respondent regained possession of the land and building.

The parties stipulated

that as at said date, July 1, 1933, the building which had been erected upon said premises by the lessee had a fair market value of $64,245.68 and that the unamortized cost of the old building, which was removed from the premises in 1929 to make way for the new building, was $12,811.43, thus leaving a net fair market value as at July 1, 1933, of $51,434.25, for the aforesaid new building erected upon the premises by the lessee.

On the basis of these facts, the petitioner determined that in 1933 the respondent realized a net gain of $51,434.25. The Board overruled his determination and the Circuit Court of Appeals affirmed the Board's decision.

The course of administrative practice and judicial decision in respect of the question presented has not been uniform. In 1917 the Treasury ruled that the adjusted value of improvements installed upon leased premises is income to the lessor upon the termination of the lease. The ruling was incorporated in two succeeding editions of the Treasury Regulations. In 1919 the Circuit Court of Appeals for the Ninth Circuit held in *Miller* v. *Gearin*, 258 F. 225, that the regulation was invalid as the gain, if taxable at all, must be taxed as of the year when the improvements were completed.

The regulations were accordingly amended to impose a tax upon the gain in the year of completion of the improvements, measured by their anticipated value at the termination of the lease and discounted for the duration of the lease. Subsequently the regulations permitted the lessor to spread the depreciated value of the improvements over the remaining life of the lease, reporting an aliquot part each year, with provision that, upon premature termination, a tax should be imposed upon the excess of the then value of the improvements over the amount theretofore returned.

In 1935 the Circuit Court of Appeals for the Second Circuit decided in *Hewitt Realty Co.* v. *Commissioner*, 76 F.2d 880, 98 A.L.R. 1201, that a landlord received no taxable income in a year, during the term of the lease, in which his tenant erected a building on the leased land. The court, while recognizing that the lessor need not receive money to be taxable, based its decision that no taxable gain was realized in that case on the fact that the improvement was not portable or detach-

able from the land, and if removed would be worthless except as bricks, iron, and mortar. It said, 76 F.2d at page 884:

> The question as we view it is whether the value received is embodied in something separately disposable, or whether it is so merged in the land as to become financially a part of it, something which, though it increases its value, has no value of its own when torn away.

This decision invalidated the regulations then in force.

In 1938 this court decided *M. E. Blatt Co.* v. *United States*, 305 U.S. 267, 59 S. Ct. 186, 83 L. Ed. 167. There, in connection with the execution of a lease, landlord and tenant mutually agreed that each should make certain improvements to the demised premises and that those made by the tenant should become and remain the property of the landlord. The Commissioner valued the improvements as of the date they were made, allowed depreciation thereon to the termination of the leasehold, divided the depreciated value by the number of years the lease had to run, and found the landlord taxable for each year's aliquot portion thereof. His action was sustained by the Court of Claims. The judgment was reversed on the ground that the added value could not be considered rental accruing over the period of the lease; that the facts found by the Court of Claims did not support the conclusion of the Commissioner as to the value to be attributed to the improvements after a use throughout the term of the lease, and that, in the circumstances disclosed, any enhancement in the value of the realty in the tax year was not income realized by the lessor within the Revenue Act.

The circumstances of the instant case differentiate it from the Blatt and Hewitt cases; but the petitioner's contention that gain was realized when the respondent, through forfeiture of the lease, obtained untrammeled title, possession and control of the premises, with the added increment of value added by the new building, runs counter to the decision in the *Miller* case and to the reasoning in the *Hewitt* case.

The respondent insists that the realty,—a capital asset at the date of the execution of the lease,—remained such throughout the term and after its expiration; that improvements affixed to the soil became part of the realty indistinguishably blended in the capital asset; that such improvements cannot be separately valued or treated as received in exchange for the improvements which were on the land at the date of the execution of the lease; that they are, therefore, in the same category as improvements added by the respondent to his land, or accruals of value due to extraneous and adventitious circumstances. Such added value, it is argued, can be considered capital gain only upon the owner's disposition of the asset. The position is that the economic gain consequent upon the enhanced value of the recaptured asset is not gain derived from capital or realized within the meaning of the Sixteenth Amendment and may not, therefore, be taxed without apportionment.

We hold that the petitioner was right in assessing the gain as realized in 1933.

We might rest our decision upon the narrow issue presented by the terms of the stipulation. It does not appear what kind of a building was erected by the tenant or whether the building was readily removable from the land. It is not stated whether the difference in the value between the building removed and that erected in its place accurately reflects an increase in the value of land and building considered as a single estate in land. On the facts stipulated, without more, we

should not be warranted in holding that the presumption of the correctness of the Commissioner's determination has been overborne.

The respondent insists, however, that the stipulation was intended to assert that the sum of $51,434.25 was the measure of the resulting enhancement in value of the real estate at the date of the cancellation of the lease. The petitioner seems not to contest this view. Even upon this assumption we think that gain in the amount named was realized by the respondent in the year of repossession.

The respondent can not successfully contend that the definition of gross income in Sec. 22 (a) of the Revenue Act of 1932 is not broad enough to embrace the gain in question. That definition follows closely the Sixteenth Amendment. Essentially the respondent's position is that the Amendment does not permit the taxation of such gain without apportionment amongst the states. He relies upon what was said in *Hewitt Realty Co.* v. *Commissioner*, *supra*, and upon expressions found in the decisions of this court dealing with the taxability of stock dividends to the effect that gain derived from capital must be something of exchangeable value proceeding from property, severed from the capital, however invested or employed, and received by the recipient for his separate use, benefit, and disposal. He emphasizes the necessity that the gain be separate from the capital and separately disposable. These expressions, however, were used to clarify the distinction between an ordinary dividend and a stock dividend. They were meant to show that in the case of a stock dividend, the stockholder's interest in the corporate assets after receipt of the dividend was the same as and inseverable from that which he owned before the dividend was declared. We think they are not controlling here.

While it is true that economic gain is not always taxable as income, it is settled that the realization of gain need not be in cash derived from the sale of an asset. Gain may occur as a result of exchange of property, payment of the taxpayer's indebtedness, relief from a liability, or other profit realized from the completion of a transaction. The fact that the gain is a portion of the value of property received by the taxpayer in the transaction does not negative its realization.

Here, as a result of a business transaction, the respondent received back his land with a new building on it, which added an ascertainable amount to its value. It is not necessary to recognition of taxable gain that he should be able to sever the improvement begetting the gain from his original capital. If that were necessary, no income could arise from the exchange of property; whereas such gain has always been recognized as realized taxable gain.

Judgment reversed.

THE CHIEF JUSTICE concurs in the result in view of the terms of the stipulation of facts.

MR. JUSTICE MCREYNOLDS took no part in the decision of this case.

Note

1. Would the result have been the same if the taxpayer had proved that in 1933 the land was worth less than its cost? What if the original building had not been razed but had been made more valuable by the tenant, either because he had renovated it or because by superior management he had attracted a better class of tenants?

2. Constitutional or not, a tax on the value of Mr. Bruun's building strikes unfairly because so much income is telescoped into a single year. Since the tax must be paid in

cash, the building may have to be sold by the taxpayer. The taxpayer could have avoided trouble by constructing the building himself and charging a higher annual rent to recoup its cost. If the Court's decision had been anticipated, the taxpayer might have preferred to renegotiate the rent downward, possibly to substantially less than the property's fair rental value, just to keep the tenant from throwing up the lease. These considerations led Congress in 1942 to enact what is now § 109 of the 1954 Code; see also § 1019. Note that "rent" is not excluded by § 109. I.T. 4009, 1950–1 C.B. 13, states that the fair market value of improvements that a lessee was to install "in lieu of rent" (to become the property of the lessor at the termination of the lease) was taxable to the lessor in the year of installation. See *Your Health Club, Inc.* v. *Commissioner*, 4 T.C. 385, 389 (1944). If the Bruun building had had a life expectancy longer than the lease, would part of its value have been taxable in 1929, when it was constructed, either under the court's decision, or under § 109 had it then been in effect? Note that § 109 excludes only such income as the lessor derives upon the *termination* of a lease Does this embrace only income arising from a premature termination of the lease, leaving fully taxable any income resulting from the fact that the building when constructed is expected to outlast the lease?

INAJA LAND CO. v. COMMISSIONER

Tax Court of the U S., 1947
9 T.C. 727

[In 1928 the taxpayer paid $61,000 for 1,236 acres of land on the banks of the Owens River, Mono County, California, together with certain water rights, for use as a private fishing club. The City of Los Angeles constructed a tunnel nearby in 1934 and commenced to divert polluted waters into the Owens River, and this action had a deleterious effect on the fishing on the taxpayer's preserve. In 1939 the City paid taxpayer $50,000 for a release of any liability for this diversion of foreign waters, and for an easement to continue to divert such waters, into the Owens River. In settling its claim against the City, the taxpayer incurred attorneys' fees and costs of $1,055.]

LEECH, Judge: The question presented is whether the net amount of $48,945 received by petitioner in the taxable year 1939 under a certain indenture constitutes taxable income under section 22(a), or is chargeable to capital account. The respondent contends: (a) That the $50,000, less $1,055 expenses incurred, which petitioner received from the city of Los Angeles under the indenture of August 11, 1939, represented compensation for loss of present and future income and consideration for release of many meritorious causes of action against the city, constituting ordinary income; and, (b) since petitioner has failed to allocate such sum between taxable and nontaxable income, it has not sustained its burden of showing error. Petitioner maintains that the language of the indenture and the circumstances leading up to its execution demonstrate that the consideration was paid for the easement granted to the city of Los Angeles and the consequent damage to its property rights; that the loss of past or future profits was not considered or involved, that the character of the easement rendered it impracticable to attempt to apportion a basis to the property affected: and, since the sum received is less than the basis of the entire property, taxation should be postponed until the final disposition of the property. . . .

Upon this record we have concluded that no part of the recovery was paid for

loss of profits, but was paid for the conveyance of a right of way and easements, and for damages to petitioner's land and its property rights as riparian owner. Hence, the respondent's contention has no merit. Capital recoveries in excess of cost do constitute taxable income. Petitioner has made no attempt to allocate a basis to that part of the property covered by the easements. It is conceded that all of petitioner's lands were not affected by the easements conveyed. Petitioner does not contest the rule that, where property is acquired for a lump sum and subsequently disposed of a portion at a time, there must be an allocation of the cost or other basis over the several units and gain or loss computed on the disposition of each part, except where apportionment would be wholly impracticable or impossible *Nathan Blum*, 5 T.C. 702, 709. Petitioner argues that it would be impracticable and impossible to apportion a definite basis to the easements here involved, since they could not be described by metes and bounds; that the flow of the water has changed and will change the course of the river, that the extent of the flood was and is not predictable; and that to date the city has not released the full measure of water to which it is entitled. In *Strother* v. *Commissioner*, 55 Fed.(2d) 626, the court says:

> . . . A taxpayer . . . should not be charged with gain on pure conjecture unsupported by any foundation of ascertainable fact See *Burnet* v *Logan*, 283 U.S. 404; 51 S.Ct. 550, 75 L.Ed. 1143.

This rule is approved in the recent case of *Raytheon Production Corporation* v. *Commissioner*, 1 T.C. 952, affd., 144 Fed.(2d) 110, certiorari denied, 323 U.S. 779. Apportionment with reasonable accuracy of the amount received not being possible, and this amount being less than petitioner's cost basis for the property, it can not be determined that petitioner has, in fact, realized gain in any amount. Applying the rule as above set out, no portion of the payment in question should be considered as income, but the full amount must be treated as a return of capital and applied in reduction of petitioner's cost basis. *Burnet* v. *Logan*, 283 U.S. 404.

Reviewed by the Court.

Decision will be entered for the petitioner.

Note

See Regs. 118, Sec. 39.22(a)-11, providing that upon the sale of sub-divided property, gain or loss shall be computed on the sale of each parcel, notwithstanding the taxpayer has not recouped his entire investment. This rule has been applied in a long line of cases, some of which are cited with approval in *Heiner* v. *Mellon*, 304 U.S. 271, at 275, n. 3 (1938). Suppose the taxpayer paid $10,000 for a tract of land, a block of securities, or a similar aggregate of property, and sells one-half for $7,500. Has he had a gain under *Eisner* v. *Macomber's* definition? What if he can prove that later in the year of sale the remaining property declined in value to $1,000?

Section C. Recovery of Capital

STANTON v. BALTIC MINING CO.

Supreme Court of the U.S., 1916
240 U.S. 103

[Under the 1913 income tax law, the taxpayer (a mining corporation) was taxed on its gross income less business expenses and losses and less 5% of the gross value of its production of ore. It attacked the constitutionality of the law on a number of grounds, only one of which is involved in the extract that follows. This ground was that the 5% allowance for depletion of its ore body was inadequate, since the ore in question had cost it more than the depletion allowance. This contention can be better understood if illustrated. Assume that a mining corporation pays $1,000,000 for a mine containing 1,000,000 tons of recoverable ore, and that the land will be totally worthless when this deposit has been mined. Assume further that in a given year 100,000 tons are mined and sold for $1,500,000. Under the 1913 law the taxpayer could deduct 5% of the sales price, or $75,000, for depletion, and the balance (less other expenses) would be taxable income. But, argued the taxpayer, the ore mined actually cost $100,000, since it paid $1,000,000 for a deposit of 1,000,000 tons, and therefore the depletion allowance is inadequate. (It should be noted that percentage depletion might exceed, instead of falling short of, any particular taxpayer's cost for his product. The importance of this possibility will be seen in Chapter 3, Sec. B(4).

MR. CHIEF JUSTICE WHITE delivered the opinion of the court: . . . The contention is that as the tax here imposed is not on the net product, but in a sense somewhat equivalent to a tax on the gross product of the working of the mine by the corporation, therefore the tax is not within the purview of the 16th Amendment, and consequently it must be treated as a direct tax on property because of its ownership, and as such void for want of apportionment. But, aside from the obvious error of the proposition, intrinsically considered, it manifestly disregards the fact that by previous ruling* it was settled that the provisions of the 16th Amendment conferred no new power of taxation, but simply prohibited the previous complete and plenary power of income taxation possessed by Congress from the beginning from being taken out of the category of indirect taxation to which it inherently belonged, and being placed in the category of direct taxation subject to apportionment by a consideration of the sources from which the income was derived,—that is, by testing the tax not by what it was, a tax on income, but by a mistaken theory deduced from the origin or source of the income taxed. Mark, of course, in saying this we are not here considering a tax not within the provisions of the 16th Amendment, that is, one in which the regulation of apportionment or the rule of uniformity is wholly negligible because the tax is one entirely beyond the scope of the taxing power of Congress, and where consequently no authority to impose a burden, either direct or indirect, exists. In other words, we are here dealing solely with the restriction imposed by the 16th Amendment on the right to resort to the source whence an income is derived in a case where there is power to tax for the purpose of taking the income tax out of the class of indirect, to

* Brushaber v. Union Pacific R. Co., 240 U.S. 1 (1916).

which it generically belongs, and putting it in the class of direct, to which it would not otherwise belong, in order to subject it to the regulation of apportionment. But it is said that although this be undoubtedly true as a general rule, the peculiarity of mining property and the exhaustion of the ore body which must result from working the mine cause the tax in a case like this, where an inadequate allowance by way of deduction is made for the exhaustion of the ore body, to be in the nature of things a tax on property because of its ownership, and therefore subject to apportionment. Not to so hold, it is urged, is as to mining property but to say that mere form controls, thus rendering in substance the command of the Constitution that taxation directly on property because of its ownership be apportioned, wholly illusory or futile. But this merely asserts a right to take the taxation of mining corporations out of the rule established by the 16th Amendment when there is no authority for so doing. It moreover rests upon the wholly fallacious assumption that, looked at from the point of view of substance, a tax on the product of a mine is necessarily in its essence and nature in every case a direct tax on property because of its ownership, unless adequate allowance be made for the exhaustion of the ore body to result from working the mine. We say wholly fallacious assumption because, independently of the effect of the operation of the 16th Amendment, it was settled in *Stratton's Independence* v. *Howbert,* 231 U.S. 399, 58 L. ed. 285, 34 Sup. Ct. Rep. 136, that such tax is not a tax upon property as such because of its ownership, but a true excise levied on the results of the business of carrying on mining operations. (Pp. 413 *et seq.*)

As it follows from what we have said that the contentions are in substance and effect controlled by the *Brushaber* Case, and, in so far as this may not be the case, are without merit, it results that, for the reasons stated in the opinion in that case and those expressed in this, the judgment must be and it is affirmed.

Mr. Justice McReynolds took no part in the consideration and decision of this case.

Note

What if by the time the mine has been exhausted the taxpayer has been taxed on more than the difference between its gross receipts and the sum of operating expenses plus the cost of the mine? Would the Court's reasoning sustain a federal "excise" tax on the receipt by Taxpayer Macomber of her stock dividends? See Magill, *Taxable Income* 335-373 (rev. ed. 1945). Does this case mean that taxpayers engaged in selling property need not be allowed a deduction for the cost of the property?

Doyle v. *Mitchell Bros. Co.,* 247 U.S. 179 (1918), involved a corporate taxpayer that sold, after the 1909 corporate income tax was enacted, timber that it had purchased before 1909. The taxpayer sought to offset against the gross receipts from the timber its *value* as of the beginning of 1909, and the Treasury took the position that only its *cost* could be used in computing taxable income. The Court held for the taxpayer, saying.

> There is no express provision that even allows a merchant to deduct the cost of the goods that he sells. Yet it is plain, we think, that by the true intent and meaning of the act the entire proceeds of a mere conversion of capital assets were not to be treated as income. . . . In order to determine whether there has been gain or loss, we must withdraw from the gross proceeds an amount sufficient to restore the capital value that existed at the commencement of the period under consideration . . . It may be observed that it is a mere question of methods, not affecting the result, whether the amount necessary to be withdrawn in order to preserve capital intact

should be deducted from gross receipts in the process of ascertaining gross income, or should be deducted from gross income in the form of a depreciation account in the process of determining net income. In either case the object is to distinguish capital previously existing from income taxable under the act. There is only a superficial analogy between this case and the case of an allowance claimed for depreciation of a mining property through the removal of minerals, since we have held that owing to the peculiar nature of mining property its partial exhaustion attributable to the removal of ores cannot be regarded as depreciation within the meaning of the act.

See Magill, *Taxable Income* (rev. ed. 1945) 347–368, discussing the *Stanton* and *Mitchell Bros. Co.* cases, which states (at 351):

. . . the *Stanton* case is not a sufficient basis for the generality that gross *receipts* (as distinguished from gross income) can be taxed as income under the [Sixteenth] amendment. Rather, the *Stanton* case and its successors are authority for the proposition that, in view of the fact that the extent of a mineral deposit is an unknown quantity, Congress may impose limitations on the depletion deduction which it could not place upon the deduction for the cost of other goods sold.

SULLENGER v. COMMISSIONER

Tax Court of the U.S., 1948
11 T.C. 1076

MURDOCK, Judge: . . . .

The petitioner paid to wholesale meat packing firms during the taxable years, for meats purchased from them, amounts in excess of the O.P.A. prices in effect at the time of the purchases. The petitioner then sold the meat and the income from those sales is being taxed. The Commissioner, in determining the deficiencies, failed to recognize the excess over O.P.A. prices as cost of goods sold.

The respondent argues that the amounts paid in excess of the O.P.A. prices were "not truly a part of cost of goods sold" but were "in reality nothing but a 'bribe' to the various packing firms or amounts paid to them illegally to induce them to sell the goods to petitioner at the ceiling price." He then argues that the amounts must be considered from the standpoint of deductions, deductions are a matter of grace and not of right, to allow these amounts as deductions would be contrary to public policy, and, therefore, the determination of the Commissioner must be affirmed.

The trouble with his argument is that its major premise is unsound. The amounts in question were actually, as the stipulation shows, a part of the cost of goods sold and are not being claimed by this petitioner as a deduction under § 23. Section 23 [§§ 162-175, '54 Code] makes no provision for the cost of goods sold, but the Commissioner has always recognized, as indeed he must to stay within the Constitution, that the cost of goods sold must be deducted from gross receipts in order to arrive at gross income. No more than gross income can be subjected to income tax upon any theory. The income from a business which is wholly illegal was held subject to income tax in *United States* v. *Sullivan*, 274 U.S. 259. Nevertheless, it was necessary to determine what that income was, and the cost of an illegal purchase of liquor was subtracted from proceeds of the illegal sale of the liquor in order to arrive at the gain from the illegal transactions which were subjected to income tax in that case. This is not a case of penalties provided for violation of the O.P.A. regulations. See the Emergency Price Control Act of

1942 (Title 50, App. U.S.C.A., sec. 901 *et seq.*). No authority has been cited for denying to this taxpayer the cost of goods sold in computing his profit, which profit alone is gross income for income tax purposes. It is unnecessary to discuss cases involving deductions, since this case does not involve any deduction. The point in controversy is decided for the petitioners.

Decisions will be entered under Rule 50.

DISNEY, J., *dissenting.*

I can not agree with the conclusion that the cost of goods above the ceiling price set by law should be subtracted from gross receipts in order to determine gross income. No such question was considered or conclusion reached in *United States* v. *Sullivan*, 274 U.S. 259, relied on in the majority opinion. There only two points were considered: (a) Is the income from illegal business taxable? (b) Did the Fifth Amendment protect the taxpayer from making a return? As indication of how narrow the Court's field of examination was, we quote the last paragraph:

> It is urged that if a return were made the defendant would be entitled to deduct illegal expenses such as bribery. This by no means follows, but it will be time enough to consider the question when a taxpayer has the temerity to raise it.

This problem has received attention in I.T. 3724 and I.T. 3811. Though not cited as authority, they do indicate study of the question here presented. In I.T. 3811, Section 117(j) [§ 1231 of the 1954 Code] (as to capital gains and losses) was refused application to that part of the gain from sales in excess of the ceiling prices established by the Office of Price Administration, and the gain in excess of ceiling price was held to be ordinary income. In I.T. 3724 precisely the instant situation was involved, and amounts paid in "black market" operations in excess of ceiling prices were held not allowable either as a part of cost of goods sold, or as business expense deduction in computing Federal income tax. The I.T. quotes the Emergency Price Control Act of 1942, in pertinent part, as follows: "It shall be unlawful, . . . to sell or deliver any commodity, or in the course of trade or business to buy or receive any commodity, . . . in violation of any . . . price schedule . . ." set by the law. Thus, both the buying and selling by the petitioner were illegal, if above ceiling prices. Though *Steinberg* v. *United States*, 14 Fed.(2d) 564, holds that ordinary and necessary expenses may be deducted in arriving at profits of an illegal business, a long line of cases establishes that "ordinary and necessary" does not include illegal expenses contrary to public policy. Such cases are assembled in I.T. 3724, *supra;* and there it is concluded, referring to payments in excess of ceiling prices, that "The excess payments are not legitimately to be classified as a part of the cost of goods sold, and public policy decrees that no tax advantage may be derived from such expenditures." I am unable to distinguish the expenditure here involved, so far as here concerned, from expenses found, on grounds of public policy, not to be ordinary and necessary; and any suggestion that the petitioners' capital went into the goods purchased is subject to the same conclusion, that public policy forbids the allowance. The majority view stultifies the law. In effect it means that, though for purposes of preventing inflation the O.P.A. law is effective, the law of income taxation can not recognize it, regardless of the sound public policy involved. The law

of income taxation is thus made to uphold the inflation the O.P.A. law seeks to prevent. Had the petitioner, violating the O.P.A. law in purchasing above price ceilings, taken, on the contrary, a loss, it would not be allowable. *Lawrence A. Wagner*, 30 B.T.A. 1099, and cases following it. On the broad question of public policy here involved, I think there is no sound reason to distinguish the present situation from those above covered. The definition of income is broad and inclusive, therefore illegality of business can not serve as a shield; but it does not follow that every expense incurred, however illegal in its nature, may serve to diminish the receipts. Would expenses of bribery be allowed because an integral part of an illicit business? If not, why exclude from the same category an amount expended which is equally illegal? The amount above ceiling price is affirmatively and positively illegally expended, under the O.P.A. law. It was not necessary, in order to stay in business, to pay the prices in excess of the ceiling set (under any application of *Commissioner* v. *Heininger*, 320 U.S. 467), so far as I see indicated in this case. I think the law here administered must be consistent with the statute passed against inflation, and not contribute thereto despite that law. The whole income tax set-up and administration is a creature of constitution and law. Why an expenditure in contravention of law, and of public policy, should be permitted subtraction and thus affect such taxation, is difficult to understand. Is the law of income tax thus to serve as an exception to the O.P.A. law and its objectives? I think that purchases, like other expenses, to secure effect in reducing what would otherwise be taxed, must be within the law. I respectfully dissent.

Note

1. In a number of other cases, the same result was reached on the ground that Congress did not *intend* to disallow such over-ceiling payments in calculating taxable income. *Commissioner* v. *Weisman*, 197 F.2d 221 (1st Cir. 1952); and cases cited in I.T. 4104, 52- 2 C.B. 71, where the Bureau announced its acquiescence in the *Sullenger* case. Chief Judge Magruder, concurring in the *Weisman* case, said

> But I hope the court's opinion will not give the impression that there is any serious doubt of the constitutional power of Congress to exclude from the offset so much of the cost of the goods sold as represented payment by the taxpayer in excess of the applicable ceiling price.
>
> It may be that a merchant's gross receipts from sales of a commodity represent a return of capital, and not gross income, at least to the extent of the cost to the merchant of the goods sold. In this view, a tax by Congress on the merchant's gross receipts, as such, would not be a tax on income, sustainable under the Sixteenth Amendment. The question then would be whether such a tax fell within the general taxing power of Congress conferred by Article I, § 8, of the Constitution, or whether it would be deemed a "direct" tax which had to be laid in proportion to the population, as provided in Article I, § 9.

Judge Magruder went on to argue that as a penalty for violating the price control program, Congress could have provided for the disallowance of over-ceiling payments for goods sold:

> It seems to me clear that Congress would have constitutional power to impose such a sanction, to be applied in the administration of the tax laws, whether or not Congress would have power to impose a general tax on gross receipts, applicable to the law-abiding as well as to law violators. (197 F.2d 221, 224-226.)

The Defense Production Act of 1950 (unlike its World War II counterpart, under which the *Sullenger* case was decided) expressly authorizes a disallowance of over-ceiling payments in calculating gain on the sale of property. I.T. 4105, 52-2 C.B. 93.

2. The World War II Price Control Act did authorize the President to prescribe the extent to which over-ceiling *wage* and *salary* payments should be disregarded "in determining the costs or expenses of any employer," and pursuant to this authorization the President issued an Executive Order providing that such payments should not be allowed as deductions under the Revenue Code. In *Weather-Seal Mfg. Co.* v. *Commissioner,* 16 T.C. 1312 (1951), aff'd. w.o.op., 199 F.2d 376 (6th Cir. 1952), this disallowance was held to be constitutional, despite the fact that the disallowed wage payments were, pursuant to customary accounting practice, part of the taxpayer's "cost of goods sold." See also *N. A Woodworth Co.* v *Kavanaugh,* 102 F. Supp. 9 (E.D. Mich. 1952), aff'd. w.o.op , 202 F.2d 154 (6th Cir. 1953).

3. Aside from the constitutional issue, illegal payments pose certain statutory questions. These are considered *infra,* pp. 245-250.

Section D. Increase in Net Worth

DALLAS TRANSFER & TERMINAL WAREHOUSE CO. v. COMMISSIONER

U.S. Court of Appeals, Fifth Circuit, 1934
70 F.2d 95

[The taxpayer was the lessee of part of a warehouse, the rental for which was $7,000 per month In September, 1928, it owed the lessor $107,880 77 in back rent. In full settlement of this debt, taxpayer conveyed to the lessor certain real estate, its equity in which was worth $17,507.20, and the lessor charged off as a bad debt the difference of $90,373.59. The Commissioner asserted a deficiency against the taxpayer, based on the theory that it had realized taxable gain in the amount of $93,367.35—the difference between the debt, $107,880.77, and the cost (less depreciation already taken) to it of the property conveyed in settlement, $14,513.42.

[At the time of the settlement, taxpayer was insolvent. It had assets of about $152,500, liabilities to creditors (including its landlord) of about $179,000, and a common stock liability of $200,000. Thus its deficit was about $226,500, and its assets were about $26,500 less than its liabilities to creditors.]

Before Bryan, Sibley, and Walker, Circuit Judges.

Walker, Circuit Judge. . . .

It is plain that in September, 1928, the above-mentioned lease had resulted in burdening the petitioner with a debt of $107,880.77 to its lessor and rendering the petitioner insolvent, and that the lessor, for the purpose of enabling the petitioner to remain in business and to have a chance to pay the reduced future rental agreed upon, and also for the purpose of keeping the lessor's 9-story building from being vacant and unprofitable, accepted in part payment on the debt owing to it petitioner's equity in the Alamo street property at the appraised value of that equity, $17,507.20, and canceled the balance of that debt, charging it off as worthless. The transaction was not in form or substance a sale for $107,880.77 of

property which had an appraised value of $17,507.20. In effect the transaction was similar to what occurs in an insolvency or bankruptcy proceeding when, upon a debtor surrendering, for the benefit of his creditors, property insufficient in value to pay his debts, he is discharged from liability for his debts. This does not result in the debtor acquiring something of exchangeable value in addition to what he had before. There is a reduction or extinguishment of liabilities without any increase of assets. There is an absence of such a gain or profit as is required to come within the accepted definition of income. *Eisner* v. *Macomber*, 252 U.S. 189, 40 S. Ct. 189, 64 L. Ed. 521, 9 A.L.R. 1570, *Merchants' L. & T. Co.* v. *Smietanka*, 255 U.S. 509, 519, 41 S. Ct. 386, 65 L. Ed. 751, 15 A.L.R. 1305. It hardly would be contended that a discharged insolvent or bankrupt receives taxable income in the amount by which his provable debts exceed the value of his surrendered assets. The income tax statute does not purport to treat as income what did not come within the meaning of that word before the statute was enacted The instant case is substantially different from the case of *United States* v. *Kirby Lumber Co.*, 284 U.S. 1, 52 S. Ct. 4, 76 L. Ed. 131, which was principally relied on by the Board of Tax Appeals for support of its conclusion that the canceled indebtedness in excess of the depreciated cost of the Alamo street property constituted income to the petitioner for the year 1928. In the last-mentioned case a corporation issued its bonds at par and in the same year repurchased some of them at less than par. The taxpayer's assets having been increased by the cash received for the bonds, by the repurchase of some of those bonds at less than par the taxpayer, to the extent of the difference between what is received for those bonds and what it paid in repurchasing them, had an asset which had ceased to be offset by any liability, with a result that after that transaction the taxpayer had greater assets than it had before. The decision (which was followed in *Helvering, Commissioner* v. *American Chicle Co.*, 291 U.S. 426, 54 S. Ct. 460, 78 L. Ed. 891) that the increase in clear assets so brought about constituted taxable income is not applicable to the facts of the instant case, as the cancellation of the respondent's past due debt to its lessor did not have the effect of making the respondent's assets greater than they were before that transaction occurred. Taxable income is not acquired by a transaction which does not result in the taxpayer getting or having anything he did not have before. Gain or profit is essential to the existence of taxable income. A transaction whereby nothing of exchangeable value comes to or is received by a taxpayer does not give rise to or create taxable income. *Commissioner of Internal Revenue* v. *Rail Joint Co.* (C.C.A.) 61 F.(2d) 751, 752; *Bowers* v. *Kerbaugh-Empire Co.*, 271 U.S. 170, 46 S. Ct. 449, 70 L. Ed. 886, *Burnet* v. *John F. Campbell Co.*, 60 App. D.C. 197, 50 F.(2d) 487.

The decision that the petitioner acquired taxable income as a result of the cancellation of its debt to its lessor was erroneous. The petition is granted, and the order under review is reversed.

Note

1. Note the statement that the taxpayer in the *Kirby Lumber Co.* case "had greater assets than it had before." Were its assets immediately after the repurchase of the bonds greater than its assets immediately before the repurchase? Or does the court mean only that it took in more on issuing the bonds than it paid out on retiring them? This would

be equally true of an insolvent debtor who had borrowed money and settled with the lender for less than the face amount of the loan.

2. Apparently an insolvent taxpayer must report other kinds of income, such as compensation for personal services. See *Parkford* v. *Commissioner*, 133 F.2d 249 (9th Cir. 1943), cert. den., 319 U S. 741. Note that compensation paid to an insolvent taxpayer, like the partial cancellation of the *Dallas Warehouse Company's* indebtedness, decreases his deficit. Should it make any difference for tax purposes that this decrease in his deficit is the result of an increase in his assets rather than of a decrease in his liabilities? The result of either event is to bring the taxpayer closer to solvency and to increase the percentage of their claims that remaining creditors may collect

3. In *Lakeland Grocery Co.* v. *Commissioner*, 36 B.T.A. 289 (1937), a divided court held that where a partial cancellation of an insolvent taxpayer's debt not only wiped out its deficit but restored it to solvency, it realized income to the amount of its net worth after the cancellation. The majority, apparently erroneously, thought that these facts had not been present in the *Dallas Transfer & Terminal Warehouse Co.* case.

4. Certain other aspects of the cancellation of a taxpayer's indebtedness are taken up *infra*, p. 116.

Section E. Recoveries for Personal and Business Injuries

SOL. OP. 132

Bureau of Internal Revenue, 1922

I-1 C.B. 92

The question presented is whether the following receipts constitute income within the meaning of the sixteenth amendment and the statutes enacted thereunder: (1) Damages for alienation of affections; (2) damages for slander or libel of personal character; and (3) money received by a parent in consideration of the surrender of his right to the custody of his minor child.

All of these items relate to personal or family rights, not property rights, and accordingly may be treated together. Nor is there a material distinction between payment under an agreement of the parties and payment pursuant to a judgment of a court.

It is held in Solicitor's Memorandum 957 that money recovered as damages in libel proceedings is subject to income tax, and in Solicitor's Memorandum 1384, that damages for alienation of a wife's affections are not exempt from income tax under section 213(b) 6 of the Revenue Act of 1918. Both of these rulings, however, were made prior to the decision of the Supreme Court in *Eisner* v. *Macomber* (252 U.S. 189). Solicitor's Memorandum 1384 correctly held that the exemption contained in section 213(b) 6 of the Revenue Act of 1918 does not include damages for alienation of affections, but the question is really more fundamental, namely, whether such damages received by a lawyer for libel of his professional reputation constitute income. Business libel may be distinguished from ordinary defamation of character and is not here under consideration. The ruling in Solicitor's Memorandum 957, however, was not limited but apparently applied to libel generally.

In *Stratton's Independence* v. *Howbert* (231 U.S. 399) and in *Eisner* v. *Macomber* (252 U.S. 189, 207), the Supreme Court defined income as "the gain

derived from capital, from labor, or from both combined. . . ." In other words, without gain of some sort no income within the meaning of the sixteenth amendment can be said to be realized.

In the light of these decisions of the Supreme Court it must be held that there is no gain, and therefore no income, derived from the receipt of damages for alienation of affections or defamation of personal character. In either case the right invaded is a personal right and is in no way transferable. While a jury endeavors roughly to compute the amount of damage inflicted, in the very nature of things there can be no correct estimate of the money value of the invaded rights. The rights on the one hand and the money on the other are incomparable things which can not be placed on opposite sides of an equation. If an individual is possessed of a personal right that is not assignable and not susceptible of any appraisal in relation to market values, and thereafter receives either damages or payment in compromise for an invasion of that right, it can not be held that he thereby derives any gain or profit. It is clear, therefore, that the Government can not tax him on any portion of the sum received. This also applies to money received in consideration of the surrender of the custody of a minor child. Holding otherwise would be equivalent to treating as chattels the wife whose affections were alienated and the child whose custody was surrendered.

In the cases cited above, in *Lynch* v. *Turrish* (247 U.S. 221), and in other cases, the Supreme Court has repeatedly held that gross income does not include everything that comes in. In *Gould* v. *Gould* (245 U.S. 151) it was held that alimony is not income. Before the enactment of the Revenue Act of 1918, which specifically exempted from gross income damages for personal injuries, it was held that damages for personal injuries due to accident do not constitute income. T.D. 2747 (not published in Bulletin service). Much less should damages for alienation of affections or defamation of personal character be held to constitute income. Slander or libel affecting business reputation or property rights, however, are not considered in this opinion.

I am of the opinion, therefore, that money received, whether under agreement of the parties or pursuant to judgment of a court, on account of damages for alienation of affections or defamation of personal character or in consideration of the surrender of the custody of a minor child, does not constitute income within the meaning of the sixteenth amendment and the statutes enacted thereunder.

Solicitor's Memorandum 957 is modified to accord with this opinion, and Solicitor's Memorandum 1384 is revoked.

Note

1. In 1923 the Bureau of Internal Revenue announced that damages received for breach of a promise to marry were not taxable, on the ground that "a promise to marry is a personal right not susceptible of any appraisal in relation to market values and that damages or payment in compromise of the invasion of such right does not constitute taxable income" I.T. 1804, II-2 C.B. 61, 62 (1923). Later this ruling was revoked. I.T. 2170, IV-1 C.B. 28 (1925). The revocation was apparently based on a distinction between payments for relinquishing contract rights and payments to redress torts:

> As a general rule, rights acquired . . . through the exercise of one's physical or mental faculties, when converted into cash or its equivalent, constitute income to the recipient to the full amount received. . . .

> The situation presented by Solicitor's Opinion 132 is quite different. The payment involved was attributable to a tort. A personal injury was inflicted, an inherent right was invaded, a right in rem given by the law against the whole world. The holding is merely that payments to compensate a taxpayer for that of which he has been deprived by the invasion of such an inherent right do not constitute "gain" to him, and therefore no income results. . . .
>
> Solicitor's Opinion 132 is distinguishable in that the damages received by the taxpayer in that case were on account of a past injury suffered through an invasion of an inherent, personal right, a right which is granted by law to all persons in similar circumstances, as distinguished from one which arises out of a contract of which the benefits are due, in the last analysis, to the exercise of the mental faculties. S.M. 2042, IV-1 C.B 26, 27-28 (1925).

In *McDonald* v. *Commissioner*, 9 B.T A 1340 (1928), damages for breach of contract to marry were held non-taxable on the authority of the *Hawkins* case, *infra*, p. 74.

2. In *Ehrlich* v. *Higgins*, 52 F. Supp. 805 (S.D.N.Y. 1943), the widow of Paul Ehrlich (the discoverer of "Salvarsan") asserted that $42,500 paid to her by Warner Bros. Pictures, Inc., which was producing a motion picture based on her husband's life, was not taxable because the payment was intended as damages for invasion of her right of privacy. The Court found that the payment was made primarily for the use of certain letters, notes, and similar material, and not as compensation for an invasion of privacy. But the Court went on (52 F. Supp. 805, 808–09) to make this comment on Solicitor's Opinion 132·

> It seems probable that if a woman were paid a consideration in monthly payments for a voluntary release of her fiance from a promise to marry, she would be paid for giving up a legal right and, therefore, the foundation would be the same as in all other contracts.
>
> The only suggestion in the literature on the subject that a contrary result might be reached appears in an opinion of the Solicitor of Internal Revenue (Cumulative Bulletin I-1, 92), where it is said that money received by a parent in consideration of the surrender of his right to the custody of his minor child stands on the same basis as damages for alienation of affections and damages for personal libel or slander. This notion permits no distinction between damages for wrongs committed and payments for giving up any legal right. The parent could contract for the labor of the child and the payments would not be exempt. The writer of the opinion arrived at the conclusion by the emotional avenue, saying that· "Holding otherwise would be equivalent to treating as chattels the wife whose affections were alienated and the child whose custody was surrendered." The real difference between the two cases is that in one there is consummated damage to a personal right which is compensated, and in the other a simple contract, whereby a right presently possessed is resigned for a future period for money.
>
> Much more accurate are the cases which recognize the fact that contractual surrender of any legal right for stated payments produces income to the recipient. So it has been held that payments not to work for another or compete in business are taxable as income. So, also, the sales of good will, together with tangible assets of a business are subject to the laws regulating taxes.
>
> If the contrary principle were recognized, there would be suits for refunds by each of the actresses in Hollywood upon the ground that, although each is paid a salary for personal services in the production of films, the real value which the producer obtains from the contract is the right to produce before the public the representation so made, and that the payments are really damages in prospect for the violation of the right of personal privacy. The revenue laws do not contain any such loophole.

HAWKINS v. COMMISSIONER

Board of Tax Appeals, 1927
6 B.T.A. 1023

Findings of Fact

Petitioner, an individual residing in San Francisco, Calif., was an industrial engineer engaged in corporate management. Prior to March 23, 1918, he had for some time been president of the C. L. Best Gas Traction Co. On that date he was removed from office by the directors, and thereafter certain of the officers of the corporation made and published defamatory statements about him. He instructed his attorney to file against the corporation and the individual officers a suit in libel and slander demanding $1,000,000 damages for injury to his reputation, business and health. Two of the officers of the corporation had already filed suits against the petitioner, one for libel and one for money owed by reason of an alleged misuse of corporate funds during petitioner's term of office. Before petitioner's attorney began the suit in his behalf a settlement of petitioner's claims was orally negotiated and made. By this settlement the petitioner received, on or about January 15, 1919, $100,000 in cash and the corporation's note for $12,500. He also received $306.41 as interest. In further consideration under the settlement agreement the two suits which had been begun against him were dismissed.

Opinion

Sternhagen: The consideration of the question whether the damages received for libel and slander are taxable as income must proceed not so much according to the refinements of economists, *Lynch* v. *Turrish,* 247 U.S. 221; *Merchants' Loan & Trust Co.* v. *Smietanka,* 255 U.S. 509, as according to such decisions of the Supreme Court as mark the course. That stock dividends, *Eisner* v. *Macomber,* 252 U.S. 189; stock rights, *Miles* v. *Safe Deposit & Trust Co.,* 259 U.S. 247; subsidies, *Edwards* v. *Cuba R.R. Co.,* 268 U.S. 628; or savings, under certain circumstances, on the liquidation of indebtedness through a drop in foreign exchange, *Bowers* v. *Kerbaugh-Empire Co.,* 271 U.S. 170, have been held not to be income; while the gain from capital sales, *Merchants' Loan & Trust Co.* v. *Smietanka,* 255 U.S. 509; *Goodrich* v. *Edwards,* 255 U.S. 527; dividends in specie, *Peabody* v. *Eisner,* 247 U.S. 347; *United States* v. *Phellis,* 257 U.S. 156; and periodic payments under a will from a trust fund in which the payee has no direct interest, *Irwin* v. *Gavit,* 268 U.S. 161, have been held to be income, narrows the course but little, because the nature of the situations which gave rise to those decisions is inherently different from the question here.

The petitioner cites some of these decisions for the statement therein contained that income is the gain derived from capital or labor or both, including profit from the conversion of capital assets, and that nothing else answers the description. Whether this description of income is to be regarded as exclusive of everything not clearly within its terms, so that both the Sixteenth Amendment and the statute (which is said to be the fullest exercise of the constitutional power, *Eisner* v. *Macomber,* 252 U.S. 189, *Irwin* v. *Gavit,* 268 U.S. 161) are forever to be limited by a judicial definition, may still be doubtful, for the Supreme Court is not

in the habit of defining words abstractly, but only for the purpose of determining whether the matter then under consideration comes within their fair intendment. The court has itself said that the word is not a crystal,* *Towne* v. *Eisner*, 245 U.S. 418, and it is conceivable that since the income tax is primarily an application of the idea of measuring taxes by financial ability to pay, as indicated by the net accretions to one's economic wealth during the year, there may be cases in which taxable income will be judicially found although outside the precise scope of the description already given.

This we think is not such a case, but is on the other hand one which in no event involves income. So far as the evidence shows, the amount which petitioner received was wholly by way of general damages for the personal injury suffered by reason of the defamatory statements made. It was compensation for injury to his personal reputation for integrity and fair dealing, including, as the record indicates, the injury to his health. This is the ordinary basis for compensatory damages, *Childers* v. *San Jose Mercury Printing & Publishing Co.*, 105 Cal. 284; 38 Pac. 903. No suggestion is made that there was special damage paid or that any was asserted or that punitive or exemplary damages were claimed or paid, and we need not consider the law as to them. Here there is only the compensation which the law sanctions as the only remedy which has thus far been devised for an injury which in its nature is wholly personal and nonpecuniary. Even to the economist, character or reputation or other strictly personal attributes are not capital or otherwise measurable in terms of wealth, notwithstanding that all will recognize them as important factors of economic success. They are not property or goods. Such compensation as general damages adds nothing to the individual, for the very concept which sanctions it prohibits that it shall include a profit. It is an attempt to make the plaintiff whole as before the injury.

There is some support for this reasoning in the dictum of the Chief Justice in *United States* v. *Supplee-Biddle Hardware Co.*, 265 U.S. 189, as to the insurance received by a corporation upon the life of its officer:

> . . . Life insurance in such a case is like that of fire and marine insurance, a contract of indemnity. *Central Bank of Washington* v. *Hume*, 128 U S 195. The benefit to be gained by death has no periodicity. It is a substitution of money value for something permanently lost, either in a house, a ship, or a life. Assuming without deciding that Congress could call the proceeds of such indemnity, income, and validly tax it as such, we think that in view of the popular conception of the life insurance as resulting in a single addition of a total sum to the resources of the beneficiary, and not in a periodical return, such a purpose on its part should be express, as it certainly is not here

If compensation for the loss of a life is not taxable as income unless expressly provided, compensation for the injury to personal reputation should similarly require an express provision.

Note

1. The Bureau has ruled that an award paid by the Mixed Claim Commission of the United States and Germany for the death of a passenger on the *Lusitania* is not taxable:

---

* "But it is not necessarily true that income means the same thing in the Constitution and the Act. A word is not a crystal, transparent and unchanged, it is the skin of a living thought and may vary greatly in color and content according to the circumstances and the time in which it is used." Mr. Justice Holmes, in Towne v. Eisner, 245 U S. 418, 425 (1918). [Ed.]

> An award paid for the loss of a life is compensation for the loss, and as such is not embraced in the general concept of the term "income" . . .
>
> It is held, therefore, that inasmuch as the award of 40x dollars payable to A is not expressly taxable under the provisions of the Revenue Act of 1926 [no different in this respect from any later Revenue Act], and is not embraced in the general concept of the term "income," the amount of the award is not taxable to A. I.T. 2420, VII–2 C.B. 123, 124 (1928).

Note that since the award was designed "to restore A to substantially the same financial and economic status as she possessed prior to the death of her husband," it took the place of income that would have been taxed had he survived. Has the tortfeasor wronged the Treasury as well as his victim's family so that he should pay accordingly? See Wurzel, "The Origin and Development of Quo Minus," 49 *Yale L. J.* 39 (1939). If the award *were* taxable, the position of the tortfeasor would not be an enviable one. To give a widow $75,000 free and clear, for example, would require a payment by the tortfeasor of more than $600,000 (at present rates and assuming the widow had no other income).

Do juries understand that their awards in death cases are not taxable? In *Dempsey* v. *Thompson*, 363 Mo. 339, 251 S.W.2d 42 (1952), it was held that the jury should be instructed that any award it made would not be taxable. On the other hand, the court held that although the recovery was to compensate for loss of future earnings, the defendant could not go into the extent to which such earnings would have been reduced by income taxes had the decedent not been injured, on the ground that a reasonably accurate estimate of future taxes is not possible. See also *Hall* v. *Chicago & N.W. Ry. Co.*, 349 Ill App. 175, 110 N.E.2d 654 (1953); Comment, Propriety of Comment on Non-Taxability of Personal Injury Verdicts, 21 *U. of Chi. L. Rev.* 156 (1953).

2. Section 104 specifically exempts damages on account of personal injuries or sickness and will be examined *infra*, p. 143.

FARMERS' & MERCHANTS' BANK v. COMMISSIONER

U.S. Court of Appeals Sixth Circuit, 1932

59 F.2d 912

Before MOORMAN, HICKS, and HICKENLOOPER, Circuit Judges.

HICKS, Circuit Judge.

Petitioner, a corporation, was engaged in the banking business at Catlettsburg, Ky., and within the district of the Federal Reserve Bank of Cleveland, Ohio. It was the custom of petitioner to make a charge for the collection of checks on foreign banks and of checks drawn on it and sent from other banks. Petitioner was not a member of the Federal Reserve System so that checks drawn on it instead of being cleared through the Reserve Bank were sent direct to petitioner by the holding bank and paid by drafts on Cincinnati or New York.

In 1920 the Reserve Bank demanded that petitioner should clear checks at par. This demand was refused, and thereupon the Reserve Bank notified its members that it would collect without charge all checks sent to it and drawn on petitioner. Its method was to employ agents who would appear daily at the bank with these checks and demand payment thereof in cash. This practice was followed about eighteen months. For a greater portion of the time these collections were effected in such an unusual and unbusinesslike manner as to attract unfavorable public comment, and petitioner claimed that it was thereby annoyed, embarrassed, and

interfered with in the conduct of its affairs. Subsequently petitioner brought an action against the Reserve Bank for damages alleged to have been sustained by reason of these tactics. In its petition it set out particularly that, by reason of the wrongful conduct of the Reserve Bank, it had been forced to procure and keep in its vaults and with its correspondents unusually large amounts of money; that it had lost the earning power of a great deal of money; that it had lost deposits and depositors, and had failed to gain new ones; that it had been unable to grow, and to develop new business; and that it had been permanently injured in its reputation, standing, growth, and prosperity. The petition also included a claim for exemplary damages based upon a charge that the conduct of the Reserve Bank was malicious.

This action was compromised in 1925 and the Reserve Bank paid $18,750.00 in full settlement. The expense of the suit being deducted the net amount received by petitioner was reduced to $13,792.96. Respondent conceived that this fund represented earnings for the year 1925 and included it in petitioner's net income for that year. The Board of Tax Appeals sustained the respondent. It decided that at least some portion thereof represented earnings and that petitioner had failed to show what portion did not.

We cannot assent.

The fund involved must be considered in the light of the claim from which it was realized and which is reflected in the petition filed in its action against the Reserve Bank. We find nothing therein to indicate, with the certainty required in the statement of a cause of action, that petitioner sought reparation for profits which petitioner's misconduct prevented it from earning in 1925. Charles E. Rous, petitioner's cashier, testified before the Board that the loss of such earnings could not be definitely determined and this probably furnishes the explanation for the failure definitely to demand it. Petitioner not only did not insist upon the restoration of anticipated profits as a matter of fact, but based its claim for damages upon an alleged tortious injury to the good will of its business, and we can see no legal distinction between compensation for destruction of or damage to incorporeal or intangible property, such as good will, and similar compensation for damage to tangible property. Compare *Harris & Co.* v. *Lucas* (C.C.A.) 48 F.(2d) 187, syl. 5.

We think that the gravamen of petitioner's action against the Reserve Bank was the injury inflicted to its banking business generally, and that the true measure of damages was compensation to be determined by ascertaining how much less valuable its business was by reason of the wrongful acts of the Reserve Bank. See *Yates* v. *Whyel Coke Co.*, 221 F. 603, 607 (C.C.A. 6); *Central Coal & Coke Co.* v. *Hartman*, 111 F. 96, 99 (C.C.A. 8). Injury to its business of course means injury to its financial standing, credit, reputation, good will, capital, and other possible elements. Profits were one of the chief indications of the worth of the business; but the usual earnings before the injury, as compared with those afterward, were only an evidential factor in determining actual loss and not an independent basis for recovery. We think that, if petitioner's case had proceeded to a verdict, the law would not have awarded to it what it might have expected to gain but only that which it had actually lost. We are not justified in reading an element into the compromise which was not therein distinctly recognized in fact and would not have been recognized in law. We think therefore that there is no

logical basis upon which petitioner could be charged with gain. See *Strother* v. *Commissioner*, 55 F.(2d) 626, 633 (C.C.A. 4). One may be recompensed for an injury but it is a rare case in which one should have a profit out of it.

The order of the Board of Tax Appeals is reversed.

RAYTHEON PRODUCTION CORPORATION *v.* COMMISSIONER

U.S. Court of Appeals, First Circuit, 1944

144 F.2d 110, cert. den., 323 U.S. 779

Before MAGRUDER, MAHONEY, and WOODBURY, Circuit Judges.

MAHONEY, Circuit Judge.

This case presents the question whether an amount received by the taxpayer in compromise settlement of a suit for damages under the Federal Anti-Trust Laws, 15 U.S.C.A. § 1 *et seq.*, is a non-taxable return of capital or income. . . .

The original Ratheon Company was a pioneer manufacturer of a rectifying tube which made possible the operation of a radio receiving set on alternating current instead of on batteries. In 1926 its profits were about $450,000; in 1927 about $150,000; and in 1928, $10,000. The Radio Corporation of America had many patents covering radio circuits and claimed control over almost all of the practical circuits. Cross-licensing agreements had been made among several companies including R.C.A., General Electric Company, Westinghouse, and American Telephone & Telegraph Company. R.C.A. had developed a competitive tube which produced the same type of rectification as the Raytheon tube. Early in 1927, R.C.A. began to license manufacturers of radio sets and in the license agreement it incorporated "Clause 9," which provided that the licensee was required to buy its tubes from R.C.A. In 1928 practically all manufacturers were operating under R.C.A. licenses. As a consequence of this restriction, Raytheon was left with only replacement sales, which soon disappeared. . . . On December 14, 1931, the petitioner caused its predecessor, Raytheon, to bring suit against R.C.A. in the District Court of Massachusetts alleging that the plaintiff had by 1926 created and then possessed a large and valuable good will in interstate commerce in rectifying tubes for radios and had a large and profitable established business therein so that the net profit for the year 1926 was $454,935; that the business had an established prospect of large increases and that the business and good will thereof was of a value exceeding $3,000,000; that by the beginning of 1927 the plaintiff was doing approximately 80% of the business of rectifying tubes of the entire United States; that the defendant conspired to destroy the business of the plaintiff and others by a monopoly of such business and did suppress and destroy the existing companies; that the manufacturers of radio sets and others ceased to purchase tubes from the plaintiffs; that by the end of 1927 the conspiracy had completely destroyed the profitable business and that by the early part of 1928 the tube business of the plaintiff and its property and good will had been totally destroyed at a time when it had a present value in excess of $3,000,000, and thereby the plaintiff was injured in its business and property in a sum in excess of $3,000,000. . . .

. . . R.C.A. and the petitioner finally agreed on the payment by R.C.A. of $410,000 in settlement of the anti-trust action. . . .

Damages recovered in an anti-trust action are not necessarily non-taxable as a

return of capital. As in other types of tort damage suits, recoveries which represent a reimbursement for lost profits are income. *Swastika Oil & Gas Co.* v. *Commissioner*, 6 Cir., 1941, 123 F.2d 382, certiorari denied 1943, 317 U.S. 639, 63 S. Ct. 30, 87 L. Ed. 515, *H. Liebes & Co.* v. *Commissioner*, 9 Cir., 1937, 90 F.2d 932; *Sternberg* v. *Commissioner*, 1935, 32 B.T.A. 1039. The reasoning is that since the profits would be taxable income, the proceeds of litigation which are their substitute are taxable in like manner.

Damages for violation of the anti-trust acts are treated as ordinary income where they represent compensation for loss of profits. *Commercial Electrical Supply Co.* v. *Commissioner*, 1927, 8 B.T.A. 986; see *Park* v. *Gilligan*, D.C.S.D. Ohio 1921, 293 F. 129, 130.

The test is not whether the action was one in tort or contract but rather the question to be asked is "In lieu of what were the damages awarded?" *Farmers' & Merchants' Bank* v. *Commissioner*, 6 Cir., 1932, 59 F.2d 912, *Swastika Oil & Gas Co.* v. *Commissioner*, *supra*; *Central R. Co. of New Jersey* v. *Commissioner*, 3 Cir., 1935, 79 F.2d 697, 101 A.L.R. 1448. See *United States* v. *Safety Car Heating & Lighting Co.*, 1936, 297 U.S. 88, 98, 56 S. Ct. 353, 80 L. Ed. 500. Plumb, "Income Tax on Gains and Losses in Litigation" (1940) 25 *Cornell L.Q.* 221. Where the suit is not to recover lost profits but is for injury to good will, the recovery represents a return of capital and, with certain limitations to be set forth below, is not taxable. *Farmers' & Merchants' Bank* v. *Commissioner*, *supra.* Plumb, *supra*, 25 *Cornell L.Q.* 221, 225. "Care must certainly be taken in such cases to avoid taxing recoveries for injuries to good will or loss of capital." 1 Paul and Mertens *Law of Federal Income Taxation* § 6.48.

Upon examination of Raytheon's declaration in its anti-trust suit we find nothing to indicate that the suit was for the recovery of lost profits. The allegations were that the illegal conduct of R.C.A. "completely destroyed the profitable interstate and foreign commerce of the plaintiff and thereby, by the early part of 1928, the said tube business of the plaintiff and the property good will of the plaintiff therein had been totally destroyed at a time when it then had a present value in excess of three million dollars and thereby the plaintiff was then injured in its business and property in a sum in excess of three million dollars." This was not the sort of antitrust suit where the plaintiff's business still exists and where the injury was merely for loss of profits. The allegations and evidence as to the amount of profits were necessary in order to establish the value of the good will and business since that is derived by a capitalization of profits A somewhat similar idea was expressed in *Farmers' & Merchants' Bank* v. *Commissioner*, *supra*, 59 F.2d at page 913. "Profits were one of the chief indications of the worth of the business; but the usual earnings before the injury, as compared with those afterward, were only an evidential factor in determining actual loss and not an independent basis for recovery." Since the suit was to recover damages for the destruction of the business and good will, the recovery represents a return of capital. Nor does the fact that the suit ended in a compromise settlement change the nature of the recovery; "the determining factor is the nature of the basic claim from which the compromised amount was realized." Paul *Selected Studies in Federal Taxation*, Second Series, pp. 328–9, footnote 76; *Helvering* v. *Safe Deposit & Trust Co. of Baltimore*, 1941, 316 U.S. 56, 62 S. Ct. 925, 86 L. Ed. 1266, 139 A.L.R. 1513; *Lyeth* v. *Hoey*, 1938, 305 U.S. 188, 59 S. Ct. 155, 83 L. Ed. 119, 119 A.L.R. 410; *Central R. of New Jersey* v. *Commissioner, supra; Farmers'*

& Merchants' Bank v. *Commissioner, supra; Megargel* v. *Commissioner,* 1944, 3 T.C. 238.

But, to say that the recovery represents a return of capital in that it takes the place of the business good will is not to conclude that it may not contain a taxable benefit. Although the injured party may not be deriving a profit as a result of the damage suit itself, the conversion thereby of his property into cash is a realization of any gain made over the cost or other basis of the good will prior to the illegal interference. Thus A buys Blackacre for $5,000. It appreciates in value to $50,000. B tortiously destroys it by fire. A sues and recovers $50,000 tort damages from B. Although no gain was derived by A from the suit, his prior gain due to the appreciation in value of Blackacre is realized when it is turned into cash by the money damages.

Compensation for the loss of Raytheon's good will in excess of its cost is gross income. See Magill *Taxable Income*, p. 339. 1 Mertens, *Law of Federal Income Taxation*, § 5.21, footnote 82. Plumb, *supra*, 25 *Cornell L.Q.* 225, 6.

Since we assume with the parties that the petitioner secured the original Raytheon's assets through a series of tax free reorganizations, petitioner's basis for the good will is the same as that of the original Raytheon. As the Tax Court pointed out, the record is devoid of evidence as to the amount of that basis and "in the absence of evidence of the basis of the business and good will of Raytheon, the amount of any nontaxable capital recovery cannot be ascertained." 1 T.C. 952. *Cf. Sterling* v. *Commissioner*, 2 Cir., 1937, 93 F.2d 304.

Where the cost basis that may be assigned to property has been wholly speculative, the gain has been held to be entirely conjectural and not taxable. In *Strother* v. *Commissioner*, 4 Cir., 1932, 55 F.2d 626, affirmed on other grounds, 1932, 287 U.S. 308, 53 S. Ct. 150, 77 L. Ed. 325, a trespasser had taken coal and then destroyed the entries so that the amount of coal taken could not be determined. Since there was no way of knowing whether the recovery was greater than the basis for the coal taken, the gain was purely conjectural and not taxed. Magill explains the result as follows: "as the amount of coal removed could not be determined until a final disposition of the property, the computation of gain or loss on the damages must await that disposition." *Taxable Income*, pp. 339–340. The same explanation may be applied to *Farmers' & Merchants' Bank* v. *Commissioner, supra*, which relied on the *Strother* case in finding no gain. The recovery in that case had been to compensate for the injury to good will and business reputation of the plaintiff bank inflicted by defendant reserve banks' wrongful conduct in collecting checks drawn on the plaintiff bank by employing "agents who would appear daily at the bank with checks and demand payment thereof in cash in such a manner as to attract unfavorable public comment." Since the plaintiff bank's business was not destroyed but only injured and since it continued in business, it would have been difficult to require the taxpayer to prove what part of the basis of its good will should be attributed to the recovery. In the case at bar, on the contrary, the entire business and good will were destroyed so that to require the taxpayer to prove the cost of the good will is no more impractical than if the business had been sold.[1]

. . . *The decision of the Tax Court is affirmed.*

[1] Since the plant and other physical assets of the taxpayer were not destroyed but were used by it in the new tube business under licenses from R.C A., the recovery was only for the destruction of business good will and not the physical assets.

Section F. Gifts, "Windfalls," and the Like

TAFT v. BOWERS.
GREENWAY v. SAME.

Supreme Court of the United States, 1929
278 U.S. 470

MR. JUSTICE MCREYNOLDS delivered the opinion of the Court.

Petitioners, who are donees of stocks, seek to recover income taxes exacted because of advancement in the market value of those stocks while owned by the donors. The facts are not in dispute. Both causes must turn upon the effect of paragraph (2), § 202, Revenue Act 1921 (chapter 136, 42 Stat. 227, 229), which prescribes the basis for estimating taxable gain when one disposes of property which came to him by gift. The records do not differ essentially and a statement of the material circumstances disclosed by No. 16 will suffice.

During the calendar years 1921 and 1922 the father of petitioner, Elizabeth C. Taft, gave her certain shares of Nash Motors Company stock, then more valuable than when acquired by him. She sold them during 1923 for more than their market value when the gift was made.

The United States demanded an income tax reckoned upon the difference between cost to the donor and price received by the donee. She paid accordingly and sued to recover the portion imposed because of the advance in value while the donor owned the stock. The right to tax the increase in value after the gift is not denied.

Abstractly stated, this is the problem:

In 1916 *A* purchased 100 shares of stock for $1,000, which he held until 1923 when their fair market value had become $2,000 He then gave them to *B* who sold them during the year 1923 for $5,000. The United States claim that under the Revenue Act of 1921 *B* must pay income tax upon $4,000, as realized profits. *B* maintains that only $3,000—the appreciation during her ownership—can be regarded as income; that the increase during the donor's ownership is not income assessable against her within intendment of the Sixteenth Amendment.

The District Court ruled against the United States; the Circuit Court of Appeals held with them. . . .

We think the manifest purpose of Congress expressed in paragraph (2), § 202, *supra,* was to require the petitioner to pay the enacted tax.

The only question subject to serious controversy is whether Congress had power to authorize the exaction.

It is said that the gift became a capital asset of the donee to the extent of its value when received and, therefore, when disposed of by her no part of that value could be treated as taxable income in her hands.

The Sixteenth Amendment provides:

> The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration.

Income is the thing which may be taxed—income from any source. The amendment does not attempt to define income or to designate how taxes may be laid thereon, or how they may be enforced.

Under former decisions here the settled doctrine is that the Sixteenth Amendment confers no power upon Congress to define and tax as income without apportionment something which theretofore could not have been properly regarded as income.

Also, this court has declared:

"Income may be defined as the gain derived from capital, from labor, or from both combined," provided it be understood to include profit gained through a sale or conversion of capital assets. *Eisner* v. *Macomber*, 252 U.S. 189, 207, 40 S. Ct 189, 193 (64 L. Ed. 521, 9 A L.R. 1570).

The "gain derived from capital," within the definition, is "not a gain accruing to capital, nor a growth or increment of value in the investment, but a gain, a profit, something of exchangeable value proceeding from the property, severed from the capital however invested, and coming in, that is, received or drawn by the claimant for his separate use, benefit and disposal." *United States* v. *Phellis*, 257 U.S. 156, 169, 42 S. Ct. 63, 65 (66 L. Ed. 180).

If, instead of giving the stock to petitioner, the donor had sold it at market value, the excess over the capital he invested (cost) would have been income therefrom and subject to taxation under the Sixteenth Amendment. He would have been obliged to share the realized gain with the United States. He held the stock—the investment—subject to the right of the sovereign to take part of any increase in its value when separated through sale or conversion and reduced to his possession. Could he, contrary to the express will of Congress, by mere gift enable another to hold this stock free from such right, deprive the sovereign of the possibility of taxing the appreciation when actually severed, and convert the entire property into a capital asset of the donee, who invested nothing, as though the latter had purchased at the market price? And after a still further enhancement of the property, could the donee make a second gift with like effect, *etc.*? We think not.

In truth the stock represented only a single investment of capital—that made by the donor. And when through sale or conversion the increase was separated therefrom, it became income from that investment in the hands of the recipient subject to taxation according to the very words of the Sixteenth Amendment. By requiring the recipient of the entire increase to pay a part into the public treasury, Congress deprived her of no right and subjected her to no hardship. She accepted the gift with knowledge of the statute and, as to the property received, voluntarily assumed the position of her donor. When she sold the stock she actually got the original sum invested, plus the entire appreciation and out of the latter only was she called on to pay the tax demanded.

The provision of the statute under consideration seems entirely appropriate for enforcing a general scheme of lawful taxation. To accept the view urged in behalf of petitioner undoubtedly would defeat, to some extent, the purpose of Congress to take part of all gain derived from capital investments. To prevent that result and insure enforcement of its proper policy, Congress had power to require that for purposes of taxation the donee should accept the position of the

donor in respect of the thing received. And in so doing, it acted neither unreasonably nor arbitrarily.

The power of Congress to require a succeeding owner, in respect of taxation, to assume the place of his predecessor is pointed out by *United States* v. *Phellis,* 257 U.S. 156, 171, 42 S. Ct. 63, 66 (66 L. Ed. 180):

Where, as in this case, the dividend constitutes a distribution of profits accumulated during an extended period and bears a large proportion to the par value of the stock, if an investor happened to buy stock shortly before the dividend, paying a price enhanced by an estimate of the capital plus the surplus of the company, and after distribution of the surplus, with corresponding reduction in the intrinsic and market value of the shares, he was called upon to pay a tax upon the dividend received, it might look in his case like a tax upon his capital. But it is only apparently so. In buying at a price that reflected the accumulated profits, he of course acquired as a part of the valuable rights purchased the prospect of a dividend from the accumulations—bought "dividend on," as the phrase goes—and necessarily took subject to the burden of the income tax proper to be assessed against him by reason of the dividend if and when made. He simply stepped into the shoes, in this as in other respects, of the stockholder whose shares he acquired, and presumably the prospect of a dividend influenced the price paid, and was discounted by the prospect of an income tax to be paid thereon In short, the question whether a dividend made out of company profits constitutes income of the stockholder is not affected by antecedent transfers of the stock from hand to hand.

There is nothing in the Constitution which lends support to the theory that gain actually resulting from the increased value of capital can be treated as taxable income in the hands of the recipient only so far as the increase occurred while he owned the property. And *Irwin* v. *Gavit,* 268 U.S. 161, 167, 45 S. Ct. 475, 69 L. Ed. 897, is to the contrary.

The judgment below is affirmed.

The Chief Justice took no part in the consideration or decision of these causes.

Note

1. Examine § 1015(a) (the successor, in an amended form, of the provision involved in the foregoing case) with care. Using the illustration in the fifth paragraph of the opinion, what would *B*'s gain or loss be if he sold the stock for $750? For $1500? What if the stock had been bought by *A* for $2000, had been worth $1000 at the time of the gift, and had been sold by *B* for $5000? For $750? for $1500?

2. Could the donor have been constitutionally taxed at the time of the gift on the stock's increase in value during the period he held it? Section 1015(a) seems clearly, though not explicitly, to exempt the donor, at least in ordinary circumstances. The Internal Revenue Service in recent years has ruled to the contrary in a few special situations. See Griswold, "Charitable Gifts of Income and the Internal Revenue Code," 65 *Harv. L. Rev.* 84 (1951), Bittker, "Charitable Gifts of Income and the Internal Revenue Code· Another View," *id.* 1375 (1952), Griswold, "In Brief Reply," *id.* 1389, and Roehner and Roehner, "Realization· Administrative Convenience or Constitutional Requirement?" 8 *Tax L. Rev.* 173 (1953).

3. Dealers in securities *may* report their inventories of unsold securities at market, and thereby take "unrealized" gain or loss into account at the end of each year. Regs. 118, Sec. 39.22(c)-5. Could *all* taxpayers be *required* to account annually for unrealized gain and loss on their assets? Would such a scheme, if constitutional, be feasible?

4. Look at the first sentence of § 1014(a). If in the foregoing case the taxpayer's father had been elderly, what advice might have been given to him?

PARK & TILFORD DISTILLERS CORP. v. UNITED STATES.

U. S. Court of Claims, 1952
107 F. Supp. 941

Before JONES, Chief Judge, and LITTLETON, WHITAKER, MADDEN and HOWELL, Judges.

MADDEN, Judge.

The plaintiff has sued for the refund of corporation income and personal holding company income taxes paid by it for the year 1944. It paid the taxes, together with accrued interest, in 1949. The total payment was $285,257.24. The plaintiff filed a timely claim for refund, which has not been acted upon, and it is entitled to have its claim decided here on its merits.

The money which came to the plaintiff in 1944, and whose status as taxable income *vel non* is here in litigation, was paid to it by David A. Schulte. He was an officer and a director of the plaintiff corporation, and owned more than ten per cent of its stock. During the years 1942, 1943 and 1944 Schulte had sold and purchased, or purchased and sold, 9,900 shares of the plaintiff's stock in the open market, each purchase and sale or sale and purchase having occurred within a six-month period. He realized a profit of $264,827.57 on these transactions. Section 16(b) of the Securities Exchange Act of 1934, 48 Stat. 896, 15 U.S.C.A. § 78p(b) provides that when a person who owns more than ten per cent of the stock of a corporation makes a profit from selling and purchasing, or purchasing and selling, shares of the corporation's stock within a six-month period, he must turn his profits over to the corporation. The plaintiff corporation made a demand upon Schulte that he pay over to the corporation his profits of $264,827.57, and he did so in 1944. As we have said, it was this payment to the corporation which was taxed by the Government as income and which the plaintiff insists was not taxable income.

The money was paid to the plaintiff and became its money. In a general sense, then, it was income. But not everything of value that comes into one's control is taxable income. So far as is here pertinent, that is because the income tax statutes do not purport to levy an income tax on all money or things of value which come into one's control. We say, so far as is here pertinent, because we do not understand the plaintiff to suggest that Congress could not constitutionally tax the plaintiff on the money here in question. Our question, then, is a question of the proper construction of the income tax statutes.

Section 22(a) of the Internal Revenue Code, 26 U.S.C.A. § 22(a), says:

> (a) *General definition.* "Gross income" includes gains, profits, and income derived from salaries, wages, or compensation for personal service . . . , of whatever kind and in whatever form paid, or from professions, vocations, trades, businesses, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in such property; also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever. . . .

The receipt of the money here in question seems not to fall within any of the language of Section 22(a) except the clause last quoted, "gains or profits and income derived from any source whatever." It was clearly not compensation for

services, or profits from sales, or rent, interest or dividends. But it was "income derived from any source whatever," unless those words, as used in the statute, have a meaning more restricted than their apparent meaning.

We see no reason for not giving the statutory language its natural meaning, as to the money here in question. It was, to be sure, a "windfall" to the plaintiff. If Congress were to select one kind of receipt of money which, above all others, would be a fair mark for taxation, it might well be "windfalls." That would not penalize industry nor discourage enterprise or economy as taxes on wages, salaries and profits do. At any rate we cannot imagine Congress expressly exempting windfalls from taxation as income, as it has done expressly with regard to gifts and inheritances. That being so, it is not for the courts, by the process of statutory construction, to create an exception which the legislature would quite certainly not have made if it had dealt expressly with the question.

The plaintiff relies upon language used by the Supreme Court of the United States in *Eisner* v. *Macomber*, 252 U.S. 189, 40 S. Ct. 189, 64 L. Ed. 521. The question in that case was whether stock dividends distributed by a corporation to its shareholders, in proportion to their existing holdings, constituted taxable income. The court's decision was that they did not, they being merely evidence of accretions to capital which had not been "realized" by conversion into money in the hands of the shareholder. The shareholder still had the same interest in the corporation, though he now had two pieces of paper instead of one, to evidence that interest. The court said, 252 U.S. at page 207, 40 S. Ct. at page 193, with regard to the statutory language "gain derived from capital":

> . . . Here we have the essential matter: *not* a gain *accruing to* capital; not a *growth* or *increment* of value *in* the investment, but a gain, a profit, something of exchangeable value, *proceeding from* the property, *severed from* the capital, however invested or employed, and *coming in*, being *"derived"*—that is, *received* or *drawn by* the recipient (the taxpayer) for his *separate* use, benefit and disposal—*that* is income derived from property. Nothing else answers the description.

The court concluded that Congress could not constitutionally tax unrealized accretions to capital.

The instant case does not involve at all the problem of unrealized accretions to capital. The receipt of the money in question was, in every possible sense, a realization. The money came in from an outside source, it went into the plaintiff's treasury, it did not replace something which went out of plaintiff's ownership as a consideration for it. The decision in *Eisner* v. *Macomber*, *supra*, seems, then, not to be in point in the instant case. But in *Eisner* v. *Macomber* the court defined "income" for income tax purposes, as follows:

> ". . . the gain derived from capital, from labor, or from both combined," provided it be understood to include profit gained through a sale or conversion of capital assets. . . .

We are unwilling to surmise that the court intended by this language, not necessary to its decision, to read out of the income tax statute language which Congress must have inserted with great deliberation and for important reasons, *viz.*, "income derived from any source whatever." It could not have so intended for constitutional reasons since the quoted language was taken almost literally from the Constitutional Amendment which authorized the taxation of incomes.

In *Helvering* v. *Clifford*, 309 U.S. 331, 334, 60 S. Ct. 554, 556, 84 L. Ed. 788, the court said:

The broad sweep of this language [Section 22(a)] indicates the purpose of Congress to use the full measure of its taxing power within those definable categories

In *Helvering* v. *Brunn*, 309 U.S. 461, 60 S. Ct. 631, 84 L. Ed. 864, the court said that its expressions in *Eisner* v. *Macomber* were merely for the purpose of clarifying the distinction between an ordinary dividend and a stock dividend, and were not controlling in the case then before it for decision. In *United States* v. *Safety Car Heating Co.*, 297 U.S. 88, 93, 56 S. Ct. 353, 356, 80 L. Ed. 500, the court said of the words "from any source whatever" as they appeared in the Revenue Act of 1926, § 213(a), 26 U.S.C.A. Int. Rev. Acts, page 163

We have said of that act that it reveals in its provisions an intention on the part of Congress to reach "pretty much every sort of income subject to the federal power." *Helvering* v. *Stockholms Enskilda Bank*, 293 U S 84, 89, 55 S. Ct. 50, 52, 79 L. Ed. 211

In *Douglas* v. *Willcuts*, 296 U.S. 1, 9, 56 S. Ct. 59, 62, 80 L. Ed. 3, the court said, of the definitions of gross income in the statutes

They are to be considered in the light of the evident intent of the Congress "to use its power to the full extent." *Irwin* v. *Gavit*, 268 U S. 161, 45 S. Ct 475, 476, 69 L. Ed. 897; *Helvering* v. *Stockholms Enskilda Bank*, 293 U.S. 84, 89, 55, S Ct. 50, 79 L. Ed. 211.

If we give heed to those repeated statements of the Supreme Court that Congress has intended, in the income tax laws, to use its power to the full extent, we must hold the payment here in question to be subject to the tax. It is not, and we think could not rationally be, suggested that Congress lacks the power to tax windfalls as income.

In *Rutkin* v. *United States*, 343 U.S. 130, 72 S. Ct. 571, the court held that an extortioner who coerced the payment of an nonexistent claim against another by threatening to inflict harm upon him and his family, was taxable upon the proceeds of his extortion. It is not possible to bring such income within the definition of income given by the court in *Eisner* v. *Macomber*, *supra.* Yet the court said, 343 U.S. at page 138, 72 S. Ct. at page 576:

We think the power of Congress to tax these receipts as income under the Sixteenth Amendment is unquestionable. The broad language of § 22(a) supports the declarations of this Court that Congress in enacting that section exercised its full power to tax income.

Congress has, of course, expressly exempted gifts from the income tax, and there are decisions holding transactions resembling gifts not taxable. In *Edwards* v. *Cuba Railroad*, 268 U.S. 628, 45 S. Ct 614, 69 L. Ed. 1124, it was held that a subsidy paid by a government to a railroad company for erecting a railroad was not taxable income to the railroad. The court said that the subsidy was a "windfall" and not subject to income tax. A windfall may, of course, be a gift, and thus expressly exempt from income tax. But if, as in the instant case, the windfall is clearly not a gift, but a payment required by a statute, see *Robertson* v. *United States*, 343 U.S. 711, 72 S. Ct. 994, we do not see how its exemption could be reconciled with the reiterated statements that Congress intended, by Section 22(a), to tax income to the extent of its constitutional power.

In addition to subsidies, the plaintiff cites other types of receipts by corporations which have been held not to constitute taxable income, viz., capital contributions, receipts from the sale of its own stock at a premium, forfeited stock subscriptions, and revaluation of appreciated assets. Most of the decisions cited

by the plaintiff in this connection are justifiable on the ground that the transaction involved a donation, or a purchase of an interest in the corporation, or an unrealized accession to the corporation's wealth. Such of them as must rest merely upon the definition of income in *Eisner* v. *Macomber*, which the Supreme Court no longer regards as authoritative except in cases involving stock dividends or analogous problems, we respectfully decline to follow, since we think they are not consistent with the tax statutes.

The plaintiff urges that the payment was a penalty imposed upon Schulte for the benefit of the plaintiff. That question would be of importance in a case where an inside trader, such as Schulte, sought to deduct the payment from his taxable income, either as a loss under Section 23(e) or as a business expense under Section 23(a)(1) of the Internal Revenue Code [§§ 162(a) and 165(c), 1954 Code]. The Tax Court of the United States has held that the insider is not entitled to the deduction, since to allow it would frustrate the policy of Section 16(b) *William F. Davis, Jr.*, 17 T.C. 549. In *Smolowe* v. *Delendo Corp.*, 2 Cir., 136 F.2d 231, 148 A.L.R. 300, and in *Dottenheim* v. *Emerson Electric Mfg. Co.*, E.D, N.Y., 7 F.R.D. 195 such payments have been called penalties. We do not understand, however, that the fact that *A*, who pays money to *B*, cannot deduct the amount of the payment from his income in computing his income tax, has any direct bearing upon whether the receipt of the payment by *B* is income to him. For example, if an employer pays wages or salaries in excess of those permitted by a wage stabilization law, and is therefore not entitled to charge them against his income as a business expense, that does not mean that they are not fully taxable to the employees who receive them.

The treatment, for income tax purposes, of a penalty, so far as the receiver of the penalty is concerned, is analogous to the treatment of damages received by him for some violation of his rights. Where damages are recovered in lieu of profits or income to which the taxpayer would have been entitled, but for the violation of his rights, they are taxable to him as income. *Swastika Oil & Gas Co.* v. *Commissioner*, 6 Cir., 123 F.2d 382, certiorari denied 317 U.S. 639, 63 S. Ct. 30, 87 L. Ed. 515; *Martin Bros. Box Co.* v. *Commissioner*, 6 Cir., 142 F.2d 457, affirming T.C. Memo. Decision.

It would seem that if the damages were awarded as a recompense for the impairment of a capital asset, they would not represent an economic gain and would not be taxable as income. Perhaps that is the *rationale* of *Farmers' & Merchants' Bank of Catlettsburg, Ky.* v. *Commissioner*, 6 Cir., 59 F.2d 912 where the taxpayer recovered damages from another person for conduct designed to destroy or injure the taxpayer's business. The damages recovered were held not to be taxable income. Cases such as *Central R. Co. of New Jersey* v. *Commissioner*, 3 Cir., 79 F.2d 697, 101 A.L.R. 1448, *Edward H. Clark*, 40 B.T.A. 333, and *Highland Farms Corporation*, 42 B.T.A. 1314, 1319, which seem to rest only upon the definition of income given by the Supreme Court in *Eisner* v. *Macomber*, do not seem to us persuasive.

The plaintiff's motion for summary judgment is denied and the petition is dismissed. It is so ordered.

JONES, Chief Judge, and HOWELL, WHITAKER and LITTLETON, Judges, concur.

Note

The Tax Court has come to the same conclusion, *General American Investors Co., Inc.* v. *Commissioner*, 19 T.C 581 (1952),* but in doing so, it distinguished and apparently reaffirmed its decisions in the *Clark* and *Highland Farms* cases, which the Court of Claims found "unpersuasive" The *Clark* case held non-taxable a payment to a taxpayer by his tax counsel to compensate him for loss suffered through erroneous advice in an earlier year. (Caveat to the student: the payment was $20,000.) The *Highland Farms* case involved actual and punitive damages imposed upon a creditor of the taxpayer for slandering its title and conspiring to wreck its business. See Note, The Taxability of Punitive Damages, 101 *U. of Pa. L. Rev.* 1052 (1953), Comment, Taxation of Found Property and Other Windfalls, 20 *U. of Chi. L. Rev.* 748 (1953).

COMMISSIONER v. GLENSHAW GLASS CO.
COMMISSIONER v. WILLIAM GOLDMAN THEATRES, INC.

U.S. Court of Appeals, Third Circuit, 1954
211 F.2d 928

Before BIGGS, Chief Judge, and MARIS, MCLAUGHLIN, KALODNER, STALEY and HASTIE, Circuit Judges.

BIGGS, Chief Judge.

The Commissioner seeks to reverse two decisions of the United States Tax Court in favor of two taxpayers. In Glenshaw a claim for punitive damages based upon a competitor's, Hartford's, fraudulent suits which disastrously affected the taxpayer's business, as well as a claim for treble damages under Section 4 of the Clayton Act, 15 U.S.C.A. § 15, were settled by the payment of a sum of money. In Goldman a judgment for treble damages was awarded Goldman against Loew's, Inc., also pursuant to Section 4 of the Clayton Act. The sole question presented for our determination is whether moneys paid as punitive or statutory treble damages are taxable as income under Section 22(a) of the Internal Revenue Code. The Tax Court has decided that they are not and the Commissioner of Internal Revenue has petitioned this court for review. Insofar as the issue before us is concerned no valid distinctions can be drawn between a money settlement and money paid in satisfaction of a judgment or between punitive damages levied for fraud and treble damages rendered under the Clayton Act.[1]

The positions of the taxpayers are based in large part upon the definition of

* This decision was affirmed by the Court of Appeals for the Second Circuit, 211 F 2d 522 (1954), which observed: "Is there some common principle or touchstone by the application of which one may infallibly determine what is and what is not in a given case 'gains or profits and income derived from any source whatever'? We think not The old definition of *Eisner* v. *Macomber* was perhaps contrived in the hope that a final and definitive solution had been found. But by reason of the very nature of the subject matter this was not to be. The decision in *Eisner* v. *Macomber* still stands, but the definition has met the common fate of generalities, and it has long since given way to an empirical case by case approach, which has the virtue of elasticity and makes possible a more sensible solution of new problems as they arise."

[1] The Commissioner and Glenshaw do not now dispute that $324,529.94 was the amount paid in settlement of punitive damages. In the Goldman case the amount of actual damage, found to be $125,000, was trebled and a judgment was entered for $375,000. We are concerned solely with the taxability of the sum of $324,529.94 (Glenshaw) and the taxability of $250,000 (Goldman).

"income" set out in *Eisner* v. *Macomber*, 1920, 252 U.S. 189, 207, 40 S. Ct. 189, 64 L. Ed. 521, on the decision of this court in *Central R. Co.* v. *Commissioner*, 3 Cir., 1935, 79 F.2d 697, 101 A.L.R. 1448, the decision of the Board of Tax Appeals in *Highland Farms Corporation* v. *Commissioner of Internal Revenue*, 1940, 42 B.T.A. 1314, and the applicable Treasury Regulations.[2] The taxpayers also assert considerations which are based on the general philosophy of income taxation but we will not discuss these specifically in this opinion But the United States for its part contends that *Eisner* v. *Macomber* does not settle the applicable definition of what constitutes taxable income insofar as the cases at bar are concerned, that the decision of this court in the *Central R. Co.* case is not applicable, but if it is, it was wrongly decided, and that the decision of the Board of Tax Appeals in *Highland Farms* was clearly erroneous. The substance of the government's argument is that all property or money coming into the hands of a taxpayer is income except where specifically exempted by the taxing statute.

In *Eisner* v. *Macomber* the Supreme Court stated [252 U.S. 189, 40 S. Ct. 193]: " 'Income may be defined as a gain derived from capital, from labor, or from both combined,' provided it be understood to include profit gained through a sale or conversion of capital assets. . . ." In *Eisner* v. *Macomber* the Supreme Court laid emphasis on the ordinary meaning of income in common parlance and said, 252 U.S. at pages 206–207, 40 S. Ct. at page 193 "For the present purpose we require only a clear definition of the term 'income' as used in common speech, in order to determine its meaning in the amendment. . . ." The second sentence of Treasury Regulations 118, § 39.22(a)-1, adopted the *Eisner* v. *Macomber* definition *in toto*. The only qualification of the second sentence of the regulation lies in the phrase "In general" and surely little can be taken from that. Of course, as the United States points out, in *Eisner* v. *Macomber* the Supreme Court was primarily concerned with distinguishing between capital and income, not between sources of property which came into the hands of the taxpayer and we cannot doubt but that the Supreme Court has departed in some degree from the *Eisner* v. *Macomber* definition. This is apparent from *United States* v. *Kirby Lumber Co.*,[3] 1931, 284 U.S. 1, 52 S. Ct. 4, 76 L. Ed. 131 where Mr. Justice Holmes stated: "We see nothing to be gained by the discussion of judicial definitions."

If the property or money paid represents a return of capital or a contribution of capital it is not subject to income taxation. Subsidies paid by a sovereign to aid in the construction and operation of a railroad line were held not to be in-

[2] The facts of the *Central R. Co.* case are distinguishable from those at bar. In the *Central R Co.* case the taxpayer received property in settlement of a suit brought by it against an unfaithful officer who violated his fiduciary duty to it and thereby deprived the railroad of revenues. A kind of resulting or constructive trust was imposed upon the fruits of his fraud in favor of the railroad company. Nevertheless this court considered the railroad's gain to be a "windfall," not derived either wholly or in part from the taxpayer's capital or labor and therefore not income at all within the definition of *Eisner* v. *Macomber*

The decision was followed by the Board of Tax Appeals in *Highland Farms Corporation*, *supra*, where punitive damages were allowed for slander of title to land. The Board of Tax Appeals refused to treat these punitive damages as income, relying also on the test of taxable income set out in Eisner v. Macomber.

[3] The lumber company purchased its own bonds in the open market at less than par and the difference in price was held to be taxable as income. It is clear, however, that compensatory damages for loss of income are taxable as income and that income takes its color from source See Chapter 10 "Compensatory Payments," *Taxable Income*, Magill, Rev. Ed , 1945, at p. 377 *et seq.*

come in *Edwards* v. *Cuba R. Co.*, 1925, 268 U S. 628, 45 S. Ct. 614, 69 L. Ed. 1124, and the money and property acquired were treated in effect as an accretion to capital. But compare *Detroit Edison Co.* v. *Commissioner*, 1943, 319 U.S. 98, 63 S. Ct. 902, 87 L. Ed. 1286, where the Supreme Court has indicated some halt in the doctrine of capital donation expressed in *Edwards* v. *Cuba R. Co., supra. Cf.* also *Great Northern Ry. Co.* v. *Commissioner*, 8 B.T.A. 225 (1927), affirmed 8 Cir., 1930, 40 F.2d 372. A single gift of money or property probably should not be treated as taxable income even if the specific exemption granted to gifts by statute were unavailable. Periodicity seems to be considered a factor. See *Irwin* v. *Gavit*, 1925, 268 U.S. 161, 168, 45 S. Ct. 475, 69 L. Ed. 897; Magill, *Taxable Income, supra*, note 3, at p. 428. The spontaneity of the gift may also serve to relieve the recipient of tax. See *Bogardus* v. *Commissioner*, 1937, 302 U.S. 34, 42, 58 S. Ct. 61, 82 L. Ed. 32; *Washburn* v. *Commissioner*, 1945, 5 T.C. 1333.

The United States lays emphasis on the decision of the Court of Claims in *Park & Tilford Distillers Corp.* v. *United States*, Ct. Cls. 1952, 107 F. Supp. 941, 943–945. In this case the issue was whether a recovery under Section 16(b) of the Securities Exchange Act, 15 U.S.C.A. § 78p(b), constituted income to the recovering corporate taxpayer. The Court of Claims held that the recovery was taxable as income and specifically rejected the reasoning of this court in *Central R. Co.* v. *Commissioner* and the decision of the Board of Tax Appeals in *Highland Farms*. The Court of Claims stated: "The money came in from an outside source, it went into the plaintiff's treasury, it did not replace something which went out of plaintiff's ownership as a consideration for it." The Court went on to say that it was unwilling to surmise that the definition of "income" of *Eisner* v. *Macomber* was sufficient to read out of the taxing statute the phrase "income derived from any source whatever." In our opinion the theory of recovery under Section 16(b) of the Securities Exchange Act of 1934 is not a purely punitive one. The statute was designed to prohibit profit being made by an "insider" possessing peculiar knowledge of future profitable operations of his corporation. The making of a profit by the "insider" is the mainspring of the statute, a profit required by law to be passed on to the corporation probably because the corporation is the most convenient receptacle. An "outsider" purchasing stock in the open market, theoretically at least, would be compelled to pay a higher price because an insider was purchasing stock in the market against him. But, under the operation of the statute, all of the stockholders, save only the "insider" whose operations were prohibited by statute, would receive via the corporate entity the profit made by the prohibited transaction. We do not agree with the position of the Court of Claims that Park & Tilford's recovery was purely a "windfall."

In *General American Investors Co., Inc.* v. *Commissioner*, 1952, 19 T.C. 581, affirmed 2 Cir, 1954, 211 F.2d 522, the Tax Court followed the *Park & Tilford* decision of the Court of Claims but distinguished its decision from that in the instant *Glenshaw Glass Company* case and the decisions in *Central R. Co.* and *Highland Farms* employing the definition of taxable income of *Eisner* v. *Macomber*. Judge Murdock in his concurring opinion pointed to the provisions of Section 16(b) of the Securities Exchange Act of 1934, *viz.*, that "any profit realized" under the circumstances presented by the *General American Investors* case "shall

inure to and be recoverable by the issuer," i.e., the corporation. Judge Murdock took the position that the profits were income to General American Investors within the purview of Section 22(a) of the Internal Revenue Code "since they were 'profits' either from 'sales or dealings in property . . . growing out of the ownership of . . . or interest in such property' or 'from any source whatsoever'."

The facts of the *Park and Tilford* and the *General American Investors* decisions are distinguishable both from those at bar and from *Central R. Co.* v. *Commissioner, supra.*

The United States contends that the "source of gain" should not be controlling in view of the final phrase of Section 22(a) dealing with gains or profits or income "derived from any source whatever"; that the phrase last quoted expresses congressional intent that the source of income or gain is immaterial—a complete negation of the concept of source in relation to taxable income. The government in substance asserts that any money or property coming into the hands of any person is taxable as income unless specifically exempted. But we have found no case in which the court did not look to source as at least coloring or bearing upon the incidence of taxation.

Punitive damages seem to be *sui generis.* By definition they are not compensatory. They certainly possess no periodicity. They are not derived from capital, from labor or from both combined and assuredly they are not profit gained through the sale or conversion of capital assets. It is clear that they do not fall within the definition of *Eisner* v. *Macomber* and if we could be certain that the definition of that case was controlling we would have no difficulty with the issue at bar. It is easy to say what punitive damages are not but difficult to say what they really are. They smack of donations made to the individual by the State, by operation of law. A person does a prohibited act to another injuring him. The injured individual is subsequently enriched by a gift taken from the pocket of the injuring party by virtue of law. There is no *quid pro quo.* An analogy seems to us to lie in those cases where contributions are made by the sovereign in the general public interest to an individual. *Cf Edwards* v. *Cuba R. Co., supra.* Where the injuries were gross, the doctrine of punitive damages comes into play. The taxpayers have recovered because the sovereign has seen fit to punish gross behavior for the good of the public. There are naked exactions by the sovereign which go to the injured corporations rather than to the fisc. There is vague likeness to a fine exacted by the sovereign but which goes to the taxpayer.

The Supreme Court has never expressly departed from the definition of income of *Eisner* v. *Macomber.* In fact it has reiterated it fairly recently. See *Merchants Loan & Trust Co.* v. *Smietanka,* 1921, 255 U.S. 509, 519, 41 S. Ct. 386, 65 L. Ed. 751 and *Commissioner of Internal Revenue* v. *Culbertson,* 1949, 337 U.S. 733, 740, 69 S. Ct. 1210, 93 L. Ed. 1659. And see *Helvering* v. *Griffiths,* 1943, 318 U.S. 371, 63 S. Ct. 636, 87 L. Ed. 843 in which the Supreme Court expressly declined to overrule *Eisner* v. *Macomber* on the facts there presented. The *Culbertson* decision cites not only Treasury Regulation 118, Article 39.22(a)–1 but also 1 Mertens, *Law of Federal Income Taxation,* 159 *et seq.* See the authorities set out in note 9 cited to § 5.02 of Mertens. We concede that no definition is too helpful, *United States* v. *Kirby Lumber Co., supra,* and

that the decisions relating to income tax law contain charts rather than definitions, as Mr. Mertens has aptly stated. But it should be borne in mind that in *Eisner* v. *Macomber*, albeit where severability was the primary issue, the Supreme Court said, 252 U.S. at pages 206–207, 40 S. Ct. at page 193, that "only a clear definition of the term 'income,' as used in common 'speech' . . . ." was required. We do believe that a "windfall"—and the payments at bar were "windfalls"—would not be regarded as "income" within the terms of common speech. Certainly the payments to the taxpayers cannot fairly be regarded as products of capital or labor. We believe that the ordinary man regards income as something which comes to him from what he has done, not from something which is done to him. This is perhaps an over-simplification but we are of the opinion that the ordinary man using terms of common speech would not regard punitive damages as "income."

We must further concede that the decision of this court in *Central R. Co.* v. *Commissioner* cannot be deemed to be overwhelmingly persuasive for the sources of the moneys in that case can be distinguished from the sources of the moneys sought to be taxed in the instant cases but the decision has been followed frequently and has been applied to the issue of taxation of punitive damages. See *Highland Farms, supra.* There is as yet no decision which has adopted the contentions made by the Government here. The position of the United States would indeed, if adopted, bring symmetry into this aspect of the law of income taxation. See "The Taxability of Punitive Damages," 101 *U. of P. L. Rev.* 1052 (1953). *Cf. Keasbey & Mattison Co.* v. *Rothensies*, 3 Cir., 1943, 133 F.2d 894, 897. But we think if such a result is to be achieved after nearly two decades it should be effected by the Supreme Court and not by this tribunal.

The decisions of the Tax Court will be affirmed.

Section G. Control and Claim of Right

UNITED STATES v. LEWIS

Supreme Court of the United States, 1951
340 U.S. 590

Mr. Justice Black delivered the opinion of the Court.

Respondent Lewis brought this action in the Court of Claims seeking a refund of an alleged overpayment of his 1944 income tax. The facts found by the Court of Claims are: In his 1944 income tax return, respondent reported about $22,000 which he had received that year as an employee's bonus. As a result of subsequent litigation in a state court, however, it was decided that respondent's bonus had been improperly computed; under compulsion of the state court's judgment he returned approximately $11,000 to his employer. Until payment of the judgment in 1946, respondent had at all times claimed and used the full $22,000 unconditionally as his own, in the good faith though "mistaken" belief that he was entitled to the whole bonus.

On the foregoing facts the Government's position is that respondent's 1944 tax should not be recomputed, but that respondent should have deducted the $11,000 as a loss in his 1946 tax return. See G.C.M. 16730, XV–1 Cum. Bull. 179 (1936). The Court of Claims, however, relying on its own case, *Greenwald* v. *United States*, 57 F. Supp. 569, 102 Ct. Cl. 272, held that the excess bonus received "under a mistake of fact" was not income in 1944 and ordered a refund based on a recalculation of that year's tax. 91 F. Supp. 1017, 1022. We granted certiorari, 340 U.S. 903, 71 S. Ct. 279, because this holding conflicted with many decisions of the courts of appeal, see, *e.g.*, *Haberkorn* v. *United States*, 6 Cir., 173 F. 2d 587, and with principles announced in *North American Oil Consolidated* v. *Burnet*, 286 U.S. 417, 52 S. Ct. 613, 76 L. Ed. 1197.

In the North American Oil case we said:

> If a taxpayer receives earnings under a claim of right and without restriction as to its disposition, he has received income which he is required to return [*i e.*, to report], even though it may still be claimed that he is not entitled to retain the money, and even though he may still be adjudged liable to restore its equivalent. 286 U.S. at 424, 52 S. Ct. at page 615, 76 L. Ed. 1197.

Nothing in this language permits an exception merely because a taxpayer is "mistaken" as to the validity of his claim. Nor has the "claim of right" doctrine been impaired, as the Court of Claims stated, by *Freuler* v. *Helvering*, 291 U.S. 35, 54 S. Ct. 308, 78 L. Ed. 634, or *Com'r* v. *Wilcox*, 327 U.S. 404, 66 S. Ct. 546, 90 L. Ed. 752. The *Freuler* case involved an entirely different section of the Internal Revenue Code, and its holding is inapplicable here. 291 U.S. at 43, 54 S. Ct. at page 311, 78 L. Ed. 634. And in *Com'r* v. *Wilcox*, *supra*, we held that receipts from embezzlement did not constitute income, distinguishing *North American Oil* on the ground that an embezzler asserts no "bona fide legal or equitable claim." 327 U.S. at 408, 66 S. Ct. at page 549, 90 L. Ed. 752.

Income taxes must be paid on income earned (or accrued) during an annual accounting period. *Cf.* I.R.C. §§ 41, 42, 26 U.S.C.A. §§ 41, 42; and see *Burnet* v. *Sanford & Brooks Co.*, 282 U.S. 359, 363, 51 S. Ct. 150, 151, 75 L. Ed. 383. The "claim of right" interpretation of the tax laws has long been used to give finality to that period, and is now deeply rooted in the federal tax system. See cases collected in 2 Mertens, *Law of Federal Income Taxation*, § 12.103. We see no reason why the Court should depart from this well-settled interpretation merely because it results in an advantage or disadvantage to a taxpayer.[1]

Reversed.

MR. JUSTICE DOUGLAS (*dissenting*).

The question in this case is not whether the bonus had to be included in 1944 income for purposes of the tax. Plainly it should have been because the taxpayer claimed it as of right. Some years later however it was judicially determined that he had no claim to the bonus. The question is whether he may then get back the tax which he paid on the money.

Many inequities are inherent in the income tax. We multiply them needlessly by nice distinctions which have no place in the practical administration of the

[1] It has been suggested that it would be more "equitable" to reopen respondent's 1944 tax return. While the suggestion might work to the advantage of this taxpayer, it could not be adopted as a general solution because, in many cases, the three-year statute of limitations would preclude recovery. I.R.C. § 322(b), 26 U.S.C.A. § 322(b) [§ 6511(a), 1954 Code].

law. If the refund were allowed, the integrity of the taxable year would not be violated. The tax would be paid when due; but the government would not be permitted to maintain the unconscionable position that it can keep the tax after it is shown that payment was made on money which was not income to the taxpayer.

Note

The question in the foregoing case is entangled with accounting concepts, and its ramifications will be considered later. Chapter 8, Sec. C(2). But the student should bear in mind that a system of annual accounting for income will inevitably breed disputes over the proper year to report numerous items and may require some to be reported in one year though they are repaid in another.

Section 1341 of the 1954 Code allows the taxpayer to get a refund for the earlier year, instead of taking a deduction in the later year, in the case of many refunds, if the amount exceeds $3000

RUTKIN v. UNITED STATES

Supreme Court of the United States, 1952

343 U.S. 130*

MR. JUSTICE BURTON delivered the opinion of the Court.

The principal issue before us is whether money obtained by extortion is income taxable to the extortioner under § 22(a) of the Internal Revenue Code. For the reasons hereafter stated we hold that it is.

The petitioner, Rutkin, was indicted under I.R.C. § 145(b)[1] [see § 7201, '54 Code], for willfully attempting to evade and defeat a large part of his income and victory taxes for 1943. He was charged with filing a false and fraudulent return stating his net income to be $18,966.64, whereas he knew that it was $268,622.04. That difference, which would increase his tax liability from $6,843.93 to $222,408.32, was due largely to his omission from his original return of $250,000 received by him in cash from Joseph Reinfeld. The United States claims that this sum was obtained by petitioner by extortion and as such was taxable income. Petitioner contests both the fact that the money was obtained by extortion and the conclusion of law that it was taxable income if so obtained. He contends also that he did not willfully attempt to evade or defeat the tax. Petitioner was found guilty by a jury in the United States District Court for the Disrict of New Jersey, fined $10,000 and sentenced to four years in prison. The Court of Appeals affirmed, one judge dissenting. 189 F.2d 431. We granted certiorari, 342 U.S. 808, 72 S. Ct. 50, so as to pass upon the alleged conflict between that decision and the decision in *Commissioner of Internal Revenue* v. *Wilcox*, 327 U.S. 404, 66 S. Ct. 546, 90 L. Ed. 752.

* A petition for retrial, based on claims of newly discovered evidence and fraud by the government's principal witness, was denied by the District Court and its action was affirmed, one judge dissenting, by the Court of Appeals. United States v. Rutkin, 208 F.2d 647 (3d Cir. 1954). [Ed.]

1 "§ 145. Penalties . . .

"(b) . . . attempt to defeat or evade tax. . . . any person who willfully attempts in any manner to evade or defeat any tax imposed by this chapter or the payment thereof, shall, in addition to other penalties provided by law, be guilty of a felony and, upon conviction thereof, be fined not more than $10,000, or imprisoned for not more than five years, or both, together with the costs of prosecution." 53 Stat. 62–63, 26 U.S.C. § 145(b), 26 U.S.C.A. § 145(b).

The facts are unusual but there can be no doubt that, under the instructions given the jury, we must regard its verdict as reflecting its conclusion that the $250,000 was obtained by petitioner by extortion. There was substantial evidence supporting that result. Reinfeld's first association with petitioner was in 1929 with several others in a bootlegging operation known as the "High seas venture." It was accomplished through the use of a ship in the sale of whiskey at sea more than 12 miles from shore. Reinfeld testified that petitioner contributed no money to the enterprise but was taken in because Reinfeld's associates were afraid that otherwise they would get "interference and trouble" from petitioner. His interest was recognized to be 6% but, when the venture was liquidated in 1933, he already was overdrawn and no distribution was made to him. Without including petitioner, the others then organized Browne Vintners Co., Inc., a New York corporation, to engage in the liquor business. In 1936 petitioner, without making an investment, claimed a 6% interest in Browne Vintners. Despite Reinfeld's denial of petitioner's claim, Reinfeld paid him $60,000 and took from him an assignment of "any and all of such shares of capital stock in the said Browne Vintners Co. Inc., that I am entitled to." In 1940 all the Browne Vintners stock was sold for $7,500,000 to a purchaser who also assumed $8,000,000 of the company's debts. The shares of stock when sold stood in the names of, and were transferred by, "nominees" so as to conceal the identity of Reinfeld and the other beneficial owners. A capital gains tax upon the profits from these sales was paid by the respective nominees.[2] Petitioner was neither a stockholder of record nor a beneficial owner of any of the stock of the company at any time.

In 1941, in response to petitioner's request, Reinfeld gave him about $10,000 to help buy a tavern. When petitioner used the money for other purposes Reinfeld refused to finance him further and his "trouble" with petitioner began. In 1942 petitioner again claimed that he had had an interest in Browne Vintners Company and that Reinfeld must give him $100,000 to help him pay his debts. Upon Reinfeld's refusal, petitioner threatened to kill him. From that time on, the record presents a lurid story of petitioner's unsatisfied demands upon Reinfeld for various sums up to $500,000, petitioner's threatening use of a gun and his repeated statements that he would kill Reinfeld and Reinfeld's family unless his demands were met. Finally, on May 11, 1943, in New Jersey, Reinfeld paid petitioner $250,000 in cash.

Throughout this melodrama petitioner asserted that he was entitled to the payments he demanded from Reinfeld because of petitioner's alleged former interest in Browne Vintners Company. That interest never was identified by petitioner. Reinfeld and others testified positively that petitioner never had any such interest. Nevertheless, on May 11, Reinfeld handed to petitioner $250,000 in cash at the same time that Reinfeld paid $358,000 to Zwillman and Stacher representing their conceded interest in the proceeds of Browne Vintners stock. Petitioner, with Zwillman and Stacher, thereupon signed a "general release." It did not state

[2] The United States concedes that although, on a strict construction of the Internal Revenue Code, it may be that the proceeds of the sales should have been reported by the beneficial rather than by the record owners, their failure to so report the proceeds does not provide a satisfactory basis for a charge against them of a willful attempt to evade and defeat the tax in violation of § 145(b).

the amounts paid but it did purport to release Reinfeld, Browne Vintners Company and others from all claims the signers had against them.

Under the jury's verdict, we accept the fact to be that petitioner had no basis for his claim to this $250,000 and that he obtained it by extortion. Accordingly, if proceeds of extortion constitute income taxable to the extortioner, his omission of it from his tax return was unlawful. The further factual issue whether, under all the surrounding circumstances, petitioner's omission of the $250,000 from his tax return amounted to a willful attempt to evade and defeat the tax is not open to review here. That issue is settled by the verdict of the jury supported by substantial evidence. It remains for us to determine the legal issue of whether money obtained by extortion is taxable to the extortioner under § 22(a).

Under the instructions to the jury, extortion here meant that the $250,000 was paid to petitioner in response to his false claim thereto, his harassing demands therefor and his repeated threats to kill Reinfeld and Reinfeld's family unless the payment were made. Petitioner was unable to induce Reinfeld to believe petitioner's false and fraudulent claims to the money to be true. He induced Reinfeld to consent to pay the money by creating a fear in Reinfeld that harm otherwise would come to him and to his family. Reinfeld thereupon delivered his own money to petitioner. Petitioner's control over the cash so received was such that, in the absence of Reinfeld's unlikely repudiation of the transaction and demand for the money's return, petitioner could enjoy its use as fully as though his title to it were unassailable.

An unlawful gain, as well as a lawful one, constitutes taxable income when its recipient has such control over it that, as a practical matter, he derives readily realizable economic value from it. *Burnet* v. *Wells*, 289 U.S. 670, 678, 53 S. Ct. 761, 764, 77 L. Ed. 1439; *Corliss* v. *Bowers*, 281 U.S. 376, 378, 50 S. Ct. 336, 337, 74 L. Ed. 916. That occurs when cash, as here, is delivered by its owner to the taxpayer in a manner which allows the recipient freedom to dispose of it at will, even though it may have been obtained by fraud and his freedom to use it may be assailable by someone with a better title to it.

Such gains are taxable in the yearly period during which they are realized. This statutory policy is invoked in the interest of orderly administration. "[C]ollection of the revenue cannot be delayed, nor should the Treasury be compelled to decide when a possessor's claims are without legal warrant." *National City Bank* v. *Helvering*, 2 Cir., 98 F.2d 93, 96. There is no adequate reason why assailable unlawful gains should be treated differently in this respect from assailable lawful gains. Certainly there is no reason for treating them more leniently. *United States* v. *Sullivan*, 274 U.S. 259, 263, 47 S. Ct. 607, 71 L. Ed. 1037.

There has been a widespread and settled administrative and judicial recognition of the taxability of unlawful gains of many kinds under § 22(a). The application of this section to unlawful gains is obvious from its legislative history. Section II, subd. B of the Income Tax Act of 1913 provided that "the net income of a taxable person shall include gains, profits, and income . . . from . . . the transaction of any *lawful* business carried on for gain or profit, or gains or profits and income derived from any source whatever. . . ." (Emphasis supplied.) 38 Stat. 167. In 1916, 39 Stat. 756, this was amended by omitting the one word "lawful" with the obvious intent thereafter to tax unlawful as well as lawful gains, profits or income derived from any source whatever.

There is little doubt now that where unlawful gains are secured by the fraud of the taxpayer they are taxable. In the instant case it is not questioned that the $250,000 would have been taxable to petitioner if he had obtained it by fraudulently inducing Reinfeld to believe petitioner's false claims to be true. That being so, it would be an extraordinary result to hold here that petitioner is to be tax free because his fraud was so transparent that it did not mislead his victim and his victim paid him the money because of fear instead of fraud.

We do not reach in this case the factual situation involved in *Commissioner of Internal Revenue* v. *Wilcox*, 327 U.S. 404, 66 S. Ct. 546, 90 L. Ed. 752. We limit that case to its facts. There embezzled funds were held not to constitute taxable income to the embezzler under § 22(a). The issue here is whether money extorted from a victim with his consent induced solely by harassing demands and threats of violence is included in the definition of gross income under § 22(a). We think the power of Congress to tax these receipts as income under the Sixteenth Amendment is unquestionable. The broad language of § 22(a) supports the declarations of this Court that Congress in enacting that section exercised its full power to tax income. We therefore conclude that § 22(a) reaches these receipts.

We have considered the other contentions of petitioner but find them without merit sufficient to justify a reversal or remand of the case.

The judgment of the Court of Appeals accordingly is affirmed.

Affirmed.

MR. JUSTICE BLACK, with whom MR. JUSTICE REED, MR. JUSTICE FRANKFURTER, and MR. JUSTICE DOUGLAS concur, *dissenting.*

In *Commissioner of Internal Revenue* v. *Wilcox*, 327 U.S. 404, 66 S. Ct. 546, 90 L. Ed. 752, decided February, 1946, we held that embezzled money did not constitute taxable income to the embezzler under § 22(a) of the Internal Revenue Code. We there pointed out that the embezzler had no bona fide legal or equitable claim to the money, was under a definite legal obligation to return it to its rightful owner, and consequently had no more received the kind of "gain" or "income" which Congress has taxed than if he had merely borrowed money. One who extorts money not owed him stands in this precise situation. He has neither legal nor equitable claim to the extorted money and is under a continuing obligation to return it to its owner. See, *e.g., Bank of the United States* v. *Bank of Washington*, 6 Pet. 8, 19, 8 L. Ed. 299, *Miller* v. *Eisele*, 111 N.J.L. 268, 168 A. 426; 2 N.J.S.A. 2:73-1. A comparison of MR. JUSTICE BURTON's opinion in this case with his dissent in the *Wilcox* case reveals beyond doubt that the Court today adopts the reasoning of his prior dissent, thereby rejecting the *Wilcox* interpretation of § 22(a). A tax interpretation which Congress has left in effect for six years is thus altered largely as a consequence of a change in the Court's personnel. I think that our former interpretation was right and do not believe that the Government is suffering because of a failure to collect income taxes from embezzlers and extortioners. Indeed further considerations strengthen my support of our *Wilcox* holding.

I fully agree that earnings from businesses such as gambling and bootlegging are subject to the income tax law even though these earnings are derived from illegal transactions. *United States* v. *Sullivan*, 274 U.S. 259, 47 S. Ct. 607, 71

L. Ed. 1037. The majority seems to think that the *Wilcox* case holds otherwise because some states have laws which under special circumstances permit some particular groups to assert a legal claim for recovery of gambling losses or money paid for bootleg liquor. But these state laws vary far too much in their scope and operation to justify saying that these businessmen never have a bona fide legal or equitable claim to monies paid them. And ". . . we must generally assume, in the absence of a plain indication to the contrary, that Congress when it enacts a statute is not making the application of the federal act dependent on state law." *Jerome* v. *United States*, 318 U.S. 101, 104, 63 S. Ct. 483, 485, 87 L. Ed. 640. Moreover, even if we were to take these state recoupment laws into consideration, the sums recovered under them would do no more than decrease the yearly net earnings of such questionable businesses. To all intents and purposes bootleggers and gamblers are engaged in going businesses and make regular business profit which should be taxed in the same manner as profits made through more legitimate endeavor However, in my judgment it stretches previous tax interpretations too far to classify the sporadic loot of an embezzler, an extortioner or a robber as taxable earnings derived from a business, trade or a profession. I just do not think Congress intended to treat the plunder of such criminals as *theirs*.

It seems illusory to believe, as the majority apparently does, that the burden on honest American taxpayers will be lightened by a governmental policy of pursuing extortioners in futile efforts to collect income taxes. I venture the guess that this one trial has cost United States taxpayers more money than the Government will collect in taxes from extortioners in the next twenty-five years. If this statute is to be interpreted on the basis of what is financially best for honest taxpayers, it probably should be construed so as to save money by eliminating federal prosecutions of state crimes under the guise of punishing tax evaders.

Since it seems pretty clear that the Government can never collect substantial amounts of money from extortioners, there must be another reason for applying the tax law to money they extract from others. The Government's brief is suggestive of the only other reason that occurs to me—to give Washington more and more power to punish purely local crimes such as embezzlement and extortion. Today's decision illustrates an expansion of federal criminal jurisdiction into fields of law enforcement heretofore wholly left to states and local communities. I doubt if this expansion is wise from the standpoint of the United States or the states.

Insofar as the United States is concerned, many think that taking over enforcement of local criminal laws lowers the prestige of the federal system of justice. It certainly tends to make the federal system top-heavy. Of supreme importance is the fact that the United States cannot perform the monumental tasks which lie beyond state power if the time, energy and funds of federal institutions are expended in the field of state criminal law enforcement.

Federal encroachment upon local criminal jurisdiction can also be very injurious to the states. Extortion, robbery, embezzlement and offenses of that nature are traditionally matters of local concern. The precise elements of these offenses as well as the problems underlying them vary from state to state. Federal assumption of the job of enforcing these laws must of necessity tend to free the states from a sense of responsibility for their own local conditions. Even when states

attempt to play their traditional role in the field of law enforcement, the overriding federal authority forces them to surrender control over the manner and policy of construing and applying their own laws. State courts not only lose control over the interpretation of their own laws, but also are deprived of the chance to use the discretion vested in them by state legislatures to impose sentences in accordance with local ideas. Moreover, state prosecutors are deprived of the all-important function of deciding what local offenders should be prosecuted. Final authority to make these important decisions becomes located in the distant city of Washington, D. C. Here, as elsewhere, too many cooks may spoil the broth.

Moreover, I doubt if this expansion of federal criminal jurisdiction can be carried on in a manner consistent with our traditional ideas of what constitutes a fair trial in criminal cases. There is the question of the wisdom and fairness of subjecting a person to double and even triple prosecutions for the same conduct, since the nation, state and municipality might make this one mistake or wrong punishable as a crime.

That consideration gives additional weight to the view that where Congress is creating offenses which duplicate or build upon state law, courts should be reluctant to expand the defined offenses beyond the clear requirements of the terms of the statute. *Jerome* v. *United States*, supra, 318 U.S. at page 105, 63 S. Ct. at page 486.

Of course, looked at technically, multiple prosecutions for the same conduct could be avoided by national prosecution of one part of the conduct, state prosecution of another part, and municipal prosecution of a third part. This would still leave a defendant faced with the burden of defending three separate prosecutions.

Expansion of federal criminal jurisdiction entails many other unfair and complicating factors. Criminal rules of substance and of procedure vary widely among the jurisdictions. Punishment is frequently different. In fact, the same kind of conduct may be ignored as not worth criminal punishment by one jurisdiction while considered a serious criminal offense by another. For example, under the Federal White Slave Law men can be imprisoned five years for conduct which many states would not hold criminal at all. Schwartz, "Federal Criminal Jurisdiction and Prosecutors' Discretion," 13 *Law and Contemporary Problems* 64, 72. When faced with specific federal legislation, such differences in treatment may be inevitable, but I do not think the tax laws should be judicially extended for the purpose of taking from local officials the responsibility for prosecuting local offenses.

When the Government takes over a case like the one before us, the resulting confusion of issues is manifestly prejudicial to the defendant. Here for instance it can hardly be said that Rutkin was tried for tax evasion. Most of the 900 printed pages of oral testimony in the two week's trial are devoted to proof of things other than an attempt to evade the tax. Four pages deal with Rutkin's allegedly false 1943 tax return; three pages deal with the amount of tax Rutkin would have owed if he had received $250,000 more income than he actually reported; six pages contain testimony of Rutkin tending to show willful evasion of the tax laws so as to bring the case within *Spies* v. *United States*, 317 U.S. 492, 63 S. Ct. 364, 87 L. Ed. 418. A mere reference to the contents of the remaining 887

pages shows what a great threat there was that Rutkin would be convicted because he was a "bad man" ("scoundrel" to use the trial court's title) regardless of whether he was guilty or innocent of the tax evasion charged.

Most of the evidence dealt with the following aspects of Rutkin's past life and associations: Back in prohibition days Rutkin had joined one Reinfeld and others in a bootlegging scheme called the "High seas venture." The organization made millions. About 1940, some time after prohibition ended, Reinfeld, apparently acting for the group, sold the business establishment for about $7,500,000 net. Reinfeld's accounting methods and management of the proceeds were not satisfactory to his associates. They claimed that Reinfeld held back more than his share of the millions. Reinfeld claimed that some of his former associates, including Rutkin, were "overdrawn" and entitled to nothing out of the $7,500,000. This quarrel went on for several years during which time Reinfeld was required to pay hundreds of thousands of dollars to former partners as a result of their claims that he had swindled them. Rutkin was one of them. Rutkin's $250,000 was paid to him by lawyers whose reputations seem to have been above reproach. It was paid openly. And it was some eight years later when Rutkin sued Reinfeld for more millions that Reinfeld, apparently for the first time, charged that Rutkin had extorted the $250,000 under threats of death. Yet he has been convicted here of federal tax evasion on the theory that he was guilty of the crime of "extortion."

From the beginning to the end the evidence in this case was devoted to showing the lawless life Rutkin, Reinfeld and their associates led from the 1920's to 1950, ranging from bootlegging to bribery to gambling. The charge of the court largely emphasized and reemphasized the iniquity of the criminal conduct shown by the testimony. Early in his charge the trial court told the jury:

> You are not deciding which is the bigger scoundrel, Reinfeld or Rutkin, they have both blandly admitted on the stand that they prostituted justice in this country; that they paid public servants to close their eyes to law violation, and that is a canker which eats away at the body public. But you are not passing upon respective degrees of scoundrelism between any two people. The bland way in which we were told that the Reinfelds and the Rutkins and the Zwillmans and all of the others prostituted justice should give us cause for pause, but we are not passing on that question now.

In concluding his charge the trial court told the jury:

> The Government of the United States doesn't ask you to sacrifice anybody to prove its might. It asks you to do justice. That's all that Rutkin has a right to ask you to do, and that's what the government of the United States asks you to do. It asks you to remember its rights too, remembering that unpunished crime, undetected crime, are threats to the majesty and dignity of our government; and that unpunished crime undermines our government. We all of us must do that which is our duty and do it without fear or favor.

My study of this record leads me to believe that the fantastic story of supposed extortion told here would probably never have been accepted by a jury if presented in a trial uncolored by the manifold other inflammatory matters which took up 887 of the 900 pages in this "tax evasion" case.

If we are going to depart from the *Wilcox* holding, I think this is a poor case in which to do so. I would reverse this judgment.

Note

1. Do the dissenters believe that it is unconstitutional to tax extorters, or only that Congress did not intend to tax them? In their view would Rutkin have realized income once the statute of limitations barred a recovery of the funds by his victim? See last sentence of G.C.M. 24945, 1946-2 C.B. 27.

2. Would the government's tax claim against Rutkin be superior to the claim of the victim if there was not enough to pay both? See generally Note, 62 *Yale L.J.* 662 (1953).

3. In the Wilcox case, 327 U.S. 404 (1946), which the Court now holds must be limited "to its facts," the Court said:

> . . . taxable gain is conditioned upon (1) the presence of a claim of right to the alleged gain and (2) the absence of a definite, unconditional obligation to repay or return that which would otherwise constitute a gain. Without some bona fide legal or equitable claim, even though it be contingent or contested in nature, the taxpayer cannot be said to have received any gain or profit within the reach of Section 22(a).

On several subsequent occasions persons prosecuted for tax evasion have denied they were business men, endeavoring instead to masquerade as embezzlers *Ho* v. *United States*, 186 F.2d 574 (9th Cir. 1951), *Currier* v *United States*, 166 F 2d 346 (1st Cir. 1948) An especially ingenious (but unsuccessful) attempt to exploit the *Wilcox* case is to be found in *Kann* v. *Commissioner*, 18 T C. 1032 (1952). Officers and stockholders of a corporation had caused it to understate its income, pocketing the amounts in question and omitting them also from their individual return. When the Commissioner assessed deficiencies against them individually, they took the position that the funds were not taxable because embezzled from the corporation. The minutes of the board of directors (several years after the events in question) stated that the officers had "explained the amounts and circumstances involving the unauthorized withdrawal . . . for their own use of certain funds belonging to the Company" and that they admitted owing these funds and intended to repay them to the corporation. The Tax Court said:

> Petitioners were never indicted nor convicted of embezzlement, and there is hence no external evidence as there was in *Wilcox* that they were guilty of that offense. They were in complete control of the corporations from which they obtained the funds and there is in fact no adequate proof that the method if not the act has not been forgiven or condoned. The details of the supposed liability to repay are such as to leave serious doubt whether the whole project was not a false front erected to deceive not the corporation nor its stockholdcis but the Commissioner of Internal Revenue.

In a final twist of the screw, the Court said that since the petitioners were self-confessed defrauders, their testimony that they had embezzled was entitled to little weight. The Tax Court was affirmed by a divided Court of Appeals. *Kann* v. *Commissioner*, 210 F.2d 247 (3rd Cir. 1954); see also *Ace Tool & Eng., Inc.* v. *Commissioner*, 22 T.C No. 101 (1954).

4. The *Wilcox* case had been subject to some airy distinctions even before the *Rutkin* case was decided. In *United States* v. *Iozia*, 104 F. Supp. 846 (S.D N.Y. 1952), it was held that an embezzler of property realizes income on selling the property; in *Akers* v. *Scofield*, 73 F. Supp. 553 (W.D. Tex. 1947), it was held that a swindler realizes income because, unlike an embezzler, he acquires title to the money, at least until it is "divested out of him by court action." See also *Rollinger* v. *United States*, 208 F.2d 109 (8th Cir. 1953), involving funds obtained by selling zircons as diamonds and by later "shaking down" the buyer by persuading him that the gems had been stolen and that bribes were necessary to prevent detection.

5. Although it was held as long ago as 1927 that illegal income is taxable, *United States* v. *Sullivan*, 274 U.S. 259 (1927), involving the income of a bootlegger during Prohibition, the extent to which recipients of such income must keep records and report the details on their tax returns is still uncertain. Perhaps the United States may

compel recording and reporting the details of income connected with violations of *state* law, but federal compulsion to reveal violations of *federal* law is another matter. The taxpayer could not be compelled to give testimony that would incriminate himself, can he be required to keep books and records or to execute a tax return that will do so? In the *Sullivan* case, Mr. Justice Holmes, writing for a unanimous court, said only:

> If the form of return provided called for answers that the defendant was privileged from making he could have raised the objection in the return, but could not on that account refuse to make any return at all. We are not called on to decide what, if anything, he might have withheld. Most of the items warranted no complaint. It would be an extreme if not an extravagant application of the Fifth Amendment to say that it authorized a man to refuse to state the amount of his income because it had been made in crime.

Investigations in recent years by the Kefauver Committee and others have revealed that when illegal income is reported, it is often designated merely as "commissions," "fees," "other income," and the like, rather than labelled specifically Must the government tolerate this kind of reporting? In *Shapiro* v. *United States*, 335 U.S. 1 (1948), it was held that the privilege against self-incrimination does not extend so far as to permit the taxpayer to withhold from the government "records required to be kept by a valid regulation under the Price Control Act" at least "when there is a sufficient relation between the activity sought to be regulated and the public concern so that the government can constitutionally regulate or forbid the basic activity concerned, and can constitutionally require the keeping of particular records, subject to inspection by the Administrator" As to the relation of all this to tax returns and to records kept for tax purposes, see Meltzer, "Required Records, the McCarran Act, and the Privilege Against Self-Incrimination," 18 *U. of Chi. L. Rev.* 687, 708-819 (1951). See also *Falsone* v. *United States,* 205 F.2d 734 (5th Cir. 1953), stating that the privilege against self-incrimination does not extend to books kept pursuant to § 54(a) of the '39 Code [§ 6001, '54 Code]; Doyle, "Fraud Cases. Review of Law and Bureau Policy, Recent Cases, Opinions and Decisions," *12th Annual N.Y.U. Institute on Fed. Taxation* 1, 4-9 (1954), *United States* v *Kahriger*, 345 U.S 22(1953), sustaining the validity of the excise tax on persons engaged in the business of accepting wagers against objections based on the Fifth Amendment.

Section H. Imputed Income

VICKREY
AGENDA FOR PROGRESSIVE TAXATION

New York. The Ronald Press Company, 1947, pp. 18-9, 24-5, 32-3, 44-7, 48-50
(Reprinted by Permission)

I. Imputed Income from Assets

Home Ownership

Among the non-monetary items to be evaluated as part of income or spendings, the two most frequently mentioned are the rental value of owner-occupied homes and the value of homegrown produce consumed on the farm. Of these two the more important, in terms of securing an adequate progression of the tax, is imputed net rental. Home ownership tends to increase with increasing income, particularly in urban areas. However desirable home ownership may be as a

social institution, the omission of this imputed net rent from the present federal income tax base is hardly the most appropriate or the most effective method of promoting home ownership. Even if a subsidy of home ownership should be considered proper, this particular form is inefficient, for the subsidy is greatest at the top of the income scale where the need for such a stimulus is least.

Present Discriminations.—The discrimination involved in ignoring imputed net rent may be seen from the following example. *A* may rent his home with the $800 income he gets from $20,000 worth of securities, while *D* sells $10,000 of securities and buys a similar home with the proceeds, using the $400 income from his remaining securities to pay taxes and maintenance costs and to set aside against the depreciation of the property. With no tax, *A* and *D* are in the same position economically, but under the present federal tax law not only does *D* have only $400 to report as income as compared with *A*'s $800, but from that $400, *D* will be able to deduct that part used to pay property and other taxes on the home. . . .

Consumer Durables Generally

Miscellaneous Consumer Durables.—From imputed rental it is only a slight generalization to the problem of imputed income from the ownership of other durable consumer goods. The problem is essentially similar, although of smaller magnitude. Consider an individual *A* who has $25,000 of securities and uses the income to rent a furnished dwelling, as compared with a comparable individual *B* who uses the income from $20,000 of securities to rent an unfurnished dwelling, uses the proceeds from the sale of $3,000 worth of securities to buy furnishings and uses the income from the remaining $2,000 to replace the furnishings as they wear out. If no allowance is made for such income, *A* will pay a heavier tax than *B*. If the yield is 4%, *A* will have to pay tax on $1,000 a year, *B* on only $880, though there is no difference in their real situation such as would warrant such a tax differential. Similarly if *B* sells $1,000 worth of securities and buys a phonograph and records with the proceeds, while *A* uses the $40 annual income from the securities to buy tickets to concerts, *A* will pay more tax than *B*, though his real income is quite comparable.

All forms of durable consumer goods give rise to an imputed income in this way, although the discrimination is not so patent if the item in question is not commonly rented, and the services derived by the owner are of a type not comparable to any service commonly furnished separately.

Services of Debtors (Interest in Kind)

Bank Deposits.—In addition to the services of durable consumer goods as such, services in kind are sometimes rendered to the owners of certain types of assets in a way that is usually overlooked in determining income or consumption. One of the clearest cases of this is the service rendered by a bank to its depositors. For example, *A* may have a $500 bond, yielding $20 a year in interest and a checking account with little or no balance, so that he must pay the bank $20 a year in service charges. *B*, on the other hand, might sell the bond and deposit the proceeds, thus keeping a balance large enough so that there are no service charges to pay. Both *A* and *B* would be in the same economic position, but under usual methods of computing income, *B* would pay the smaller tax. . . .

Prepayments.—Another source of this type of imputed income is the purchase of goods or services in advance. Probably the most important instance of this is the purchase of fire and casualty insurance a year or more in advance. For example, *A* may purchase a five-year policy for $50, while *B* pays $12 annually for the same policy, or $2 a year more. Perhaps $1 of this difference may be due to economies in billing and the like, but about $1 per year will be the interest at about 4% on the average balance of $25, which *A* has invested in his policy. To equalize the tax on *A* and *B* it will be necessary to include in *A*'s income the $1 of interest earned on his deposit by the insurance company, which the insurance company presumably passes on to him in the form of insurance services and protection. . . .

III. Self-Service and Leisure

A taxpayer may not only consume some of the products he himself produces but he may also "consume" his own services. These services may or may not be the same as those he normally sells to others the principle involved is the same in either case, but the discrimination appears more distinctly when the services are of the same sort. For example, if a carpenter who has some carpentering to be done around his home were to stay home from his regular job a day or two to do it, then under the present income tax law, (and under most concepts of income which have been translated into statistics), we do not consider this work as producing any income either individually or nationally. On the other hand, if he were to stay at his regular job and hire another carpenter to do the work, his income is increased by the amount earned, although the real situation has not substantially altered. Obviously the value of the work done at home should in principle be added to the income. The same principle holds, though the case is not so striking, if an accountant stays at home to do some amateur plumbing instead of working and using his earnings to hire a professional plumber. In a modern industrial economy with division of labor carried to considerable lengths, such cases are not likely to be frequent enough to constitute a serious problem.

Housework of Wives

The really important case of consumption of one's own services is that of the housework done by wives. If two housewives were to agree to do each other's work for pay, the income reported under present laws would be greater than if they each do their own work. An arrangement of just that sort is rather infrequent, but there are a large number of cases where a wife will go to work and employ a servant to do the work she formerly did herself. For the wife to thus engage in "gainful" employment will increase the real family income only by the amount by which the wife's money earnings exceed the wages and keep of the servant. Where rates of tax are high and no allowance is made in the income tax base for income (or alternatively for expense) of this character the tax may seriously inhibit the entrance of married women into gainful occupations.

In wartime, when the manpower shortage is acute, the effects are serious. Even though the wife may require a full-or part-time servant if she goes to work, her productivity will often be greater than that of the servant or, at least, than her contributions as a housewife to the short-run output. In peacetime and particularly in time of unemployment there may be a plea that married women should

stay at home anyhow; but even if this objective were accepted, a tax differential of this sort is hardly a desirable method of bringing about this result. From a strictly economic point of view the discrimination is patent, and the effect on the national income and the general welfare may be substantial, some allowance, no matter how arbitrary, is imperative. Even though the measurement of either the imputed income from the wife's efforts in the case where she stays at home, or the expenses attributable to her remunerative employment be extremely difficult, the magnitude of the problem and the frequency with which it occurs demand that it be given close attention....

Objectives and Difficulties.—Fundamentally, the objective is to provide that if a wife is on the margin of deciding whether to take a job or to stay and do the housework the tax should not affect the decision; that is, the tax should be the same whichever she does. On this basis, one would either exempt from tax the minimum amount of the wife's earnings that would be necessary to persuade her to take a job, or add to the tax base of the non-working wife the maximum wage that could be offered without inducing her to take a job, or some equivalent combination of credit and imputed income would be required. The amount involved in such credits and additions would presumably vary with the other income of the family as well as with other factors. To attempt to determine such a quantity for each individual case would of course be completely impractical. On the other hand, to set up an arbitrary schedule related to family income would not be satisfactory either. The fundamental difficulty is that unless a tax is assessed on the imputed income from self-service and leisure in the case of single persons and husbands, or alternatively a very liberal earned income credit provided, any attempt to eliminate the effect of the tax on the employment of wives will necessarily involve discriminations and inconsistencies.

As an alternative, one might suggest the deduction from income of the expenses incurred because the wife works. But this is also unsatisfactory, for the line between expenses that really take the place of the services of the wife and the additional services that can be afforded because of the increased income of the family is extremely difficult to draw, even if the expenses arising as a result of the wife's decision to go to work can be segregated. Other adjustments than the provision of substitute services may be made. Alternative expenditures may be made in rather subtle ways. Groceries may be purchased by telephone from a store offering delivery service instead of at the "cash and carry"; meals may be eaten more often in restaurants; higher prices may be paid generally because of lack of time for leisurely shopping; quarters may be of a different type, etc....

The Non-Employed

The imputed income from the wife's industry has its counterpart in the case of the husband or single person who lives on a property income rather than from personal earnings. Though this difference is considerably less important in the aggregate amount involved, in the degree of choice open to the individual and in the importance of the difference to the individual, it merits consideration. In general, a person who voluntarily refrains from productive activity may be considered to be consuming his own services, or at least consuming his potential services in the form of leisure. At one extreme, this leisure may be valued at what the individual could earn by giving up the leisure and engaging in remunerative

employment. But to tax a person on what he could earn if he would (which is what this would amount to), instead of on what he actually does earn, is probably somewhat harsh, inasmuch as the tax is payable in money and the individual under those circumstances might well not have the wherewithal to pay the tax. Assessment of such a tax would be rather like levying a heavy fine for vagrancy, graduated according to the talents of the victim, with the likelihood that alternative penalties might have to be invoked. In practice this issue is not likely to be taken up, since it may be extremely difficult to determine when idleness is voluntary (or perverse) and hence indicative of an imputed leisure income, and when it is involuntary and decidedly not productive of imputed income. There is already sufficient difficulty in distinguishing between voluntary and involuntary unemployment in the occupationally fairly well-defined groups of people covered by unemployment compensation. the difficulties of extending this to miscellaneous occupations, professions, and trades would be considerable.

But without attempting to evaluate leisure as such, there is a very real and concrete sense in which the cost of living of the gainfully occupied may exceed that of the individual who lives on property income exclusively. The employed person is under the necessity of living near his place of work, which in many cases means increased cost of housing. He usually has certain expenses for carfare to and from work, for clothing suitable to the work, and possibly other incidental items which cannot well be allowed as specific deductions from gross income. Particularly if he is single, he will probably have to pay to have certain services such as laundry, household cleaning, and possibly cooking done for him which he might, if at leisure, do for himself in his free time. Again, if single, he will probably spend more for food, being unable to prepare it himself, and whether married or single may have to spend more for lunches and so on. Shopping may be done in a more hurried and less thrifty fashion. Thus even in a strict monetary sense, there is a substantial difference in the real income of a person who earns an income and one who obtains the same money income from property.

Note

The value of certain untaxed items of imputed income is estimated, in determining gross national output, in *National Income:* 1951 Edition (U.S. Department of Commerce) 55–144. While the estimates are often based on limited data and do not purport to state the amount by which taxable income would be increased if imputed income were taxable, they are still of interest The net rental value of owner-occupied nonfarm dwellings is estimated at \$2 6 billion and imputed interest received by persons and businesses at \$2 1 billion. The value of produce consumed at home by farmers is estimated at \$3.1 billion and the rental value of owner-occupied farm dwellings at \$1.2 billion; these are gross amounts, however, and the net amounts (*i.e*, gross less allocable expenses) are not separately estimated.

Apparently the only Supreme Court comment on the taxation of imputed income is in *Helvering* v. *Independent Life Ins. Co*, 292 U.S. 371 (1934), involving § 245(b) of the Revenue Act of 1921, the predecessor of § 803(h) of the 1954 Code. In the case of real estate owned and occupied by a life insurance company, maintenance expenses, taxes, and depreciation could be deducted only if the taxpayer included in income the rental value of the real estate. The Court held that since deductions are a matter of legislative grace, Congress might qualify any deduction that it chose to allow. If the taxpayer did not wish to take the deductions, it was not required to include the rental value in income; thus, the rental value operated simply as a limitation on deductions

that Congress could have denied entirely The Court also said, however, that a tax on the rental value of a building (*i.e.*, if the taxpayer were *required* to include the rental value in income) would be a "direct" tax within the meaning of Article 1, Section 9, Clause 4 of the Constitution, valid only if apportioned among the states in proportion to population, and that it was not excused from the requirement of apportionment by the Sixteenth Amendment, because the rental value of a building occupied by its owner is not "income."

Section 1087*m*-2(a) of the Wisconsin Income Tax Law of 1911 provided that "the term 'income' shall include . . estimated rental of residence property occupied by the owner." This provision was upheld in *Income Tax Cases*, 148 Wis. 456, 134 N.W. 673, 135 N.W. 164 (1912). The United States Supreme Court dismissed a writ of error on procedural grounds and refused to comment on the substantive issue involved. *Bolens* v. *Wisconsin*, 231 U S. 616 (1914). In the Revenue Acts of 1864, 1865, 1867, and 1870, Congress specifically rejected recommendations by the Commissioner of Internal Revenue that the "rental value of any homestead used or occupied by any person, or by his family, . . be included and assessed as part of the income of such person." 13 U S. Stat. 281 (1864), *id.* at 478 (1865), 14 *id.* at 478 (1867), 16 *id.* at 258 (1870), see Smith, *The United States Federal Internal Tax History from 1861-1870* at 58, 62, 76 (1914).

See also Marsh, "The Taxation of Imputed Income," 58 *Pol. Sci. Q.* 514 (1943).

CHAPTER 2

THE INDIVIDUAL, NON-BUSINESS TAXPAYER

Section A. Non-Taxable Items

Chapter 1 was concerned with the "outer limits" of federal income taxation. There we saw, among other things, that not everything that comes in is income. Some of the exempt items were found to be immune on constitutional grounds, though others were protected on the theory that Congress did not intend to tax them and others perhaps only because the rulings or decisions concerning them have not been challenged in recent years. At any rate, Chapter 1's exempt items were not placed beyond the tax collector's reach by any specific statutory exemption.

Now we will examine a variety of specific statutory exemptions. For the most part, these exemptions apply to items that would otherwise be taxable; but in some cases the exemption was originally enacted because the item in question was thought to be constitutionally immune to tax, and the continued existence of the statutory exemption has made it unnecessary for the courts to pass on the constitutional issue.

1. Gifts

Note: Section 22(b)(3) of the 1939 Code excluded from gross income "the value of property acquired by gift, bequest, devise, or inheritance," and § 113(a)(2) (involved in *Taft* v. *Bowers, supra,* p. 81) prescribed how the "basis" of property acquired by gift should be determined. These sections were carried over as §§ 102 and 1015 of the 1954 Code, without substantive change. Certain questions that were troublesome under § 22(b)(3) of the 1939 Code — the treatment of prizes and scholarships — are now dealt with specifically by the statute: Sections 74 (prizes and awards) and 117 (scholarships and fellowships).

See Regs. 118, Secs. 39.22(a)-2(a), 39.22(b)(3)-1, 39.23(a)-8, and 39.113(a)(2)-1.

FARID-ES-SULTANEH v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1947

160 F.2d 812

Before SWAN, CHASE, and CLARK, Circuit Judges.

CHASE, Circuit Judge.

The problem presented by this petition is to fix the cost basis to be used by the

petitioner in determining the taxable gain on a sale she made in 1938 of shares of corporate stock. She contends that it is the adjusted value of the shares at the date she acquired them because her acquisition was by purchase. The Commissioner's position is that she must use the adjusted cost basis of her transferor because her acquisition was by gift. The Tax Court agreed with the Commissioner and redetermined the deficiency accordingly.

The pertinent facts are not in dispute and were found by the Tax Court as they were disclosed in the stipulation of the parties substantially as follows:

The petitioner is an American citizen who filed her income tax return for the calendar year 1938 with the Collector of Internal Revenue for the Third District of New York and in it reported sales during that year of 12,000 shares of the common stock of the S. S. Kresge Company at varying prices per share, for the total sum of $230,802.36 which admittedly was in excess of their cost to her. How much this excess amounted to for tax purposes depends upon the legal significance of the facts now to be stated.

In December 1923 when the petitioner, then unmarried, and S. S. Kresge, then married, were contemplating their future marriage, he delivered to her 700 shares of the common stock of the S. S. Kresge Company which then had a fair market value of $290 per share. The shares were all in street form and were to be held by the petitioner "for her benefit and protection in the event that the said Kresge should die prior to the contemplated marriage between the petitioner and said Kresge." The latter was divorced from his wife on January 9, 1924, and on or about January 23, 1924 he delivered to the petitioner 1800 additional common shares of S. S. Kresge Company which were also in street form and were to be held by the petitioner for the same purposes as were the first 700 shares he had delivered to her. On April 24, 1924, and when the petitioner still retained the possession of the stock so delivered to her, she and Mr. Kresge executed a written ante-nuptial agreement wherein she acknowledged the receipt of the shares "as a gift made by the said Sebastian S. Kresge, pursuant to this indenture, and as an ante-nuptial settlement, and in consideration of said gift and said ante-nuptial settlement, in consideration of the promise of said Sebastian S. Kresge to marry her, and in further consideration of the consummation of said promised marriage" she released all dower and other marital rights, including the right to her support to which she otherwise would have been entitled as a matter of law when she became his wife. They were married in New York immediately after the ante-nuptial agreement was executed and continued to be husband and wife until the petitioner obtained a final decree of absolute divorce from him on, or about, May 18, 1928. No alimony was claimed by, or awarded to, her.

The stock so obtained by the petitioner from Mr. Kresge had a fair market value of $315 per share on April 24, 1924, and of $330 per share on or about May 6, 1924, when it was transferred to her on the books of the corporation. She held all of it for about three years, but how much she continued to hold thereafter is not disclosed except as that may be shown by her sales in 1938. Meanwhile her holdings had been increased by a stock dividend of 50 per cent, declared on April 1, 1925; one of 10 to 1 declared on January 19, 1926, and one of 50 per cent, declared on March 1, 1929. Her adjusted basis for the stock she sold in 1938 was $10.66⅔ per share computed on the basis of the fair market value of the shares which she

obtained from Mr. Kresge at the time of her acquisition. His adjusted basis for the shares she sold in 1938 would have been $0.159091.

When the petitioner and Mr. Kresge were married he was 57 years old with a life expectancy of 16½ years. She was then 32 years of age with a life expectancy of 33¾ years. He was then worth approximately $375,000,000 and owned real estate of the approximate value of $100,000,000.

The Commissioner determined the deficiency on the ground that the petitioner's stock obtained as above stated was acquired by gift within the meaning of that word as used in § 113(a) (2) of the Revenue Act of 1938 [§ 1015(a), 1954 Internal Revenue Code], and, as the transfer to her was after December 31, 1920, used as the basis for determining the gain on her sale of it the basis it would have had in the hands of the donor. This was correct if the just mentioned statute is applicable, and the Tax Court held it was on the authority of *Wemyss* v. *Commissioner*, 324 U.S. 303, 65 S. Ct. 652, 89 L. Ed. 958, 156 A.L.R. 1022, and *Merrill* v. *Fahs*, 324 U.S. 308, 65 S. Ct. 655, 89 L. Ed. 963.

The issue here presented cannot, however, be adequately dealt with quite so summarily. The *Wemyss* case determined the taxability to the transferor as a gift, under §§ 1000(b) and 1002 of the Internal Revenue Code [§§ 2511(a) and 2512 (b), '54 Code], and the applicable regulations, of property transferred in trust for the benefit of the prospective wife of the transferor pursuant to the terms of an ante-nuptial agreement. It was held that the transfer, being solely in consideration of her promise of marriage, and to compensate her for loss of trust income which would cease upon her marriage, was not for an adequate and full consideration in money or money's worth within the meaning of § 1002 of the statute, the Tax Court having found that the transfer was not one at arm's length made in the ordinary course of business. But we find nothing in this decision to show that a transfer, taxable as a gift under the gift tax, is *ipso facto* to be treated as a gift in construing the income tax law.

In *Merrill* v. *Fahs*, *supra*, it was pointed out that the estate and gift tax statutes are in *pari materia* and are to be so construed. *Estate of Sanford* v. *Commissioner of Internal Revenue*, 308 U.S. 39, 44, 60 S. Ct. 51, 84 L. Ed. 20. The estate tax provisions in the Revenue Act of 1916 required the inclusion in a decedent's gross estate of transfers made in contemplation of death, or intended to take effect in possession and enjoyment at or after death except when a transfer was the result of a "bona fide sale for a fair consideration in money or money's worth." Sec. 202(b), 39 Stat. 756, 777. The first gift tax became effective in 1924, and provided *inter alia*, that where an exchange or sale of property was for less than a fair consideration in money or money's worth the excess should be taxed as a gift. Rev. Act of 1924, § 320, 43 Stat. 314, 26 U.S.C.A. Int. Rev. Acts, page 81. While both taxing statutes thus provided, it was held that a release of dower rights was a fair consideration in money or money's worth. *Ferguson* v. *Dickson*, 3 Cir., 300 F. 961, certiorari denied 266 U.S. 628, 45 S. Ct. 126, 69 L. Ed. 476; *McCaughn* v. *Carver*, 3 Cir., 19 F.2d 126. Following that, Congress in 1926 replaced the words "fair consideration" in the 1924 Act limiting the deductibility of claims against an estate with the words "adequate and full consideration in money or money's worth" and in 1932 the gift tax statute as enacted limited consideration in the same way. Rev. Act 1932, § 503. Although Congress in 1932 also expressly

provided that the release of marital rights should not be treated as a consideration in money or money's worth in administering the estate tax law, Rev. Act of 1932, § 804, 26 U.S.C.A. Int. Rev. Acts, page 642, and failed to include such a provision in the gift tax statute, it was held that the gift tax law should be construed to the same effect. *Merrill* v. *Fahs, supra.*

We find in this decision no indication, however, that the term "gift" as used in the income tax statute should be construed to include a transfer which, if made when the gift tax were effective, would be taxable to the transferor as a gift merely because of the special provisions in the gift tax statute defining and restricting consideration for gift tax purposes. *A fortiori,* it would seem that limitations found in the estate tax law upon according the usual legal effect to proof that a transfer was made for a fair consideration should not be imported into the income tax law except by action of Congress.

In our opinion the income tax provisions are not to be construed as though they were in *pari materia* with either the estate tax law or the gift tax statutes. They are aimed at the gathering of revenue by taking for public use given percentages of what the statute fixes as net taxable income. Capital gains and losses are, to the required or permitted extent, factors in determining net taxable income. What is known as the basis for computing gain or loss on transfers of property is established by statute in those instances when the resulting gain or loss is recognized for income tax purposes and the basis for succeeding sales or exchanges will, theoretically at least, level off tax-wise any hills and valleys in the consideration passing either way on previous sales or exchanges. When Congress provided that gifts should not be treated as taxable income to the donee there was, without any correlative provisions fixing the basis of the gift to the donee, a loophole which enabled the donee to make a subsequent transfer of the property and take as the basis for computing gain or loss its value when the gift was made. Thus it was possible to exclude from taxation any increment in value during the donor's holding and the donee might take advantage of any shrinkage in such increment after the acquisition by gift in computing gain or loss upon a subsequent sale or exchange. It was to close this loophole that Congress provided that the donee should take the donor's basis when property was transferred by gift. Report of Ways and Means Committee (No. 350, P. 9, 67th Cong., 1st Sess.). This change in the statute affected only the statutory net taxable income. The altered statute prevented a transfer by gift from creating any change in the basis of the property in computing gain or loss on any future transfer. In any individual instance the change in the statute would but postpone taxation and presumably would have little effect on the total volume of income tax revenue derived over a long period of time and from many taxpayers. Because of this we think that a transfer which would be classed as a gift under the gift tax law is not necessarily to be treated as a gift income-tax-wise. Though such a consideration as this petitioner gave for the shares of stock she acquired from Mr. Kresge might not have relieved him from liability for a gift tax, had the present gift tax then been in effect, it was nevertheless a fair consideration which prevented her taking the shares as a gift under the income tax law since it precluded the existence of a donative intent.

Although the transfers of the stock made both in December 1923, and in the following January by Mr. Kresge to this taxpayer are called a gift in the antenuptial agreement later executed and were to be for the protection of his prospec-

tive bride if he died before the marriage was consummated, the "gift" was contingent upon his death before such marriage, an event that did not occur. Consequently, it would appear that no absolute gift was made before the antenuptial contract was executed and that she took title to the stock under its terms, *viz:* in consideration for her promise to marry him coupled with her promise to relinquish all rights in and to his property which she would otherwise acquire by the marriage. Her inchoate interest in the property of her affianced husband greatly exceeded the value of the stock transferred to her. It was a fair consideration under ordinary legal concepts of that term for the transfers of the stock by him. *Ferguson* v. *Dickson, supra; McCaughn* v. *Carver, supra.* She performed the contract under the terms of which the stock was transferred to her and held the shares not as a donee but as a purchaser for a fair consideration.

As the decisive issue is one of law only, the decision of the Tax Court interpreting the applicable statutory provisions has no peculiar finality and is reviewable. *Bingham* v. *Commissioner,* 325 U.S. 365, 65 S. Ct. 1232, 89 L. Ed. 1670.

Decision reversed.

CLARK, Circuit Judge *(dissenting).*

The opinion accepts two assumptions, both necessary to the result. The first is that definitions of gift under the gift and estate tax statutes are not useful, in fact are directly opposed to, definitions of gift under the capital-gains provision of the income tax statute. The second is that the circumstances here of a transfer of the stock some months before the marriage showed, contrary to the conclusions of the Tax Court, a purchase of dower rights, rather than a gift. The first I regard as doubtful, the second, as untenable.

It is true that *Commissioner of Internal Revenue* v. *Wemyss,* 324 U.S. 303, 65 S. Ct. 652, 89 L. Ed. 958, 156 A.L.R. 1022, and *Merrill* v. *Fahs,* 324 U.S. 308, 65 S. Ct. 655, 89 L. Ed. 963, which would require the transactions here to be considered a gift, dealt with estate and gift taxes. But no strong reason has been advanced why what is a gift under certain sections of the Revenue Code should not be a gift under yet another section. As a matter of fact these two cases indicate that the donative intent of the common law is not an essential ingredient of a gift for tax purposes. Conversely love, affection, and the promise of future marriage will not be consideration adequate to avoid the gift tax. If that is so, it would seem that these should not be sufficient to furnish new and higher cost bases for computing capital gains on ultimate sale. The Congressional purpose would seem substantially identical—to prevent a gap in the law whereby taxes on gifts or on capital gains could be avoided or reduced by judicious transfers within the family or intimate group.

But decision on that point might well be postponed, since, to my mind, the other point should be decisive. Kresge transferred the stock to petitioner more than three months before their marriage. Part was given when Kresge was married to another woman. At these times petitioner had no dower or other rights in his property. If Kresge died before the wedding, she could never secure dower rights in his lands. Yet she would nevertheless keep the stock. Indeed the specifically stated purpose of the transfer was to protect her against his death prior to marriage. It is therefore difficult to perceive how her not yet acquired rights could be consideration for the stock. Apparently the parties themselves shared

this difficulty, for in their subsequent instrument releasing dower rights they referred to the stock transfer as a gift and an antenuptial settlement.

If the transfer be thus considered a sale, as the majority hold, it would seem to follow necessarily that this valuable consideration (equivalent to one-third for life in land valued at one hundred million dollars) should have yielded sizable taxable capital gains to Kresge, as well as a capital loss to petitioner when eventually she sold. I suggest these considerations as pointing to the unreality of holding as a sale what seems clearly only intended as a stimulating cause to eventual matrimony.

Since Judge Murdock in the Tax Court found this to be a gift, not a sale, and since this decision is based in part at least upon factual considerations, it would seem binding upon us. At any rate, it should be persuasive of the result we ought to reach.

Note

Does a wife realize taxable income when her husband supports her? Support (to the extent required by law) is not a "gift" for gift tax purposes. If the gift tax definition of "gift" were adopted for income tax purposes, would support be income to the wife? If a fond but abstemious uncle promises his nephew $5,000 if he neither drinks nor smokes before the age of 21, will the payment be income to the nephew?

Why are gifts immune from income tax? See Simons, *Personal Income Taxation* (1939) 125-147.

BAUSCH'S ESTATE v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1951
186 F.2d 313

Before L. HAND, Chief Judge and SWAN and AUGUSTUS N HAND, Circuit Judges.

AUGUSTUS N. HAND, Circuit Judge.

These petitions were to review deficiencies found by the Tax Court in the income taxes of the Estates of Edward Bausch and William Bausch. The underlying facts, as found by the Tax Court, are not in dispute. The taxpayers are the executors of these respective estates. Each of the decedents had been in the employ of Bausch & Lomb Optical Company upwards of fifty years. Edward Bausch had been vice-president for many years, and finally became president and subsequently chairman of the board. William Bausch, who was for a long time secretary of the company, in 1935 became vice-president and succeeded Edward Bausch as chairman of the board, upon the latter's death. Each was receiving a salary of $1500 per month at the time of his death. The company paid to the estate of each decedent the sum of $1500 per month for a period of twelve months following his death. Edward Bausch left as his closest surviving relatives his brother, William Bausch, his sister, and three nieces and a nephew. William Bausch left as his closest surviving relatives the same sister, nieces and nephew. Edward Bausch left a will under which, after providing specific bequests to various individuals and charitable corporations, he bequeathed the residue of his estate four-fifths to his nieces and nephew and one-fifth to the nephews and nieces of his deceased wife. William Bausch made specific bequests to various individuals and charitable corporations and gave the residue of his estate in equal shares to his nieces and nephew and to a nephew of his deceased wife.

The company had made similar payments to the heirs or estates of deceased officers in the past. There was no agreement between the company and Edward or William Bausch to make the payments in question. The decision to make them was made by the president and treasurer and other principal officers, but the board of directors adopted no resolution relating to the payments here in question. The company deducted them from its income tax returns for the years in which such payments were made.

It was found that the payments to the Estates of Edward Bausch and William Bausch were made because the company had paid a year's salary to the widow of one former vice-president, who died December 30, 1936, and to the estate of another vice-president who died in 1939. These four officers had all been with the company for over fifty years and had been largely responsible for its growth. It was therefore thought reasonable to do as well for the estates of Edward Bausch and William Bausch as in the case of the first two.

The question before us is whether the foregoing payments constituted taxable income to the petitioners under Sections 22(a) and 126 of the Internal Revenue Code, or were gifts under Section 22(b) (3), 26 U.S.C.A. §§ 22(a, b) (3), 126. The fact that they were voluntary and could not have been enforced by action did not necessarily render them gifts within the meaning of Section 22(b) (3). *Old Colony Trust Co.* v. *Commissioner of Internal Revenue,* 279 U.S. 716, 730, 49 S. Ct. 449, 73 L. Ed. 918. If they were "compensation for personal services" they were taxable under the express terms of Section 22(a). Here the payments were deducted from the income tax returns of the corporation in the years in which they were paid; it had become a practice of the company to recompense the estates or dependents of deceased founders; the payments were measured by the salary paid each decedent during the year prior to his death; from such undisputed facts there would seem to be a reasonable inference that the payments were a reward for past services, and so the determination of the Tax Court should be upheld. *Fisher* v. *Commissioner of Internal Revenue,* 2 Cir. 59 F.2d 192, 193.

The taxpayer relies on I.T. 3329, 1939-2 C.B. 153, which ruled that the salary of a deceased officer, if continued for a limited period and paid to his widow, would be deductible by the corporation as a business expense but nevertheless would be a non-taxable gift in her hands. The reason given was that "when an allowance is paid by an organization to which the recipient has rendered no service, the amount is deemed to be a gift or gratuity and is not subject to federal income tax in the hands of the recipient." I.T. 3329, has been recently modified, however, so as to apply only to the situation where no services have been rendered to the employer either by the recipient or anybody else. I T. 4027, 1950-2 Int. Rev. Bull. 9. In the case at bar the payments were a reward for services performed for the employer. That alone should be enough to render the payments taxable but in any event they were made to the executors of the deceased employees of the company who in contemplation of law continued the legal personalities of the employees and were specifically taxed under Sec. 126(a) [1] upon receipts for services by their

[1] "The amount of all items of gross income in respect of a decedent which are not properly includible in respect of the taxable period in which falls the date of his death or a prior period shall be included in the gross income, for the taxable year when received, of: (A) the estate of the decedent, if the right to receive the amount is acquired by the decedent's estate from the decedent; . . ." [See Craven, "Taxation of Income of Decedents," 102 *U. of Pa. L. Rev.* 185 (1953); Note, 65 *Harv. L. Rev.* 1024 (1952). The basic principle of § 126 of the 1939 Code is carried over by § 691 of the 1954 Code. Ed]

testators. Though the correctness of the ruling as to widows in I.T. 3329 would seem doubtful if applied to all cases, it is unnecessary to consider under what circumstances sums paid to a widow or to other persons might be mere gifts and nothing more, for the payments here were by way of compensation rather than gifts and, therefore, were properly includible in the estates of the decedents under Section 126(a). *O'Daniel's Estate* v. *Commissioner of Internal Revenue*, 2 Cir., 173 F.2d 966.

For the foregoing reasons the decisions of the Tax Court holding the payments taxable income and sustaining the deficiencies are affirmed.

Note

1. Is it possible for an employer to make a "gift" to a retiring employee "not for services . . . but out of affection, respect, admiration, charity or like impulses?" (*Robertson* v. *United States*, *infra*, p. 123.) See *Schall* v *Commissioner*, 174 F.2d 893 (5th Cir. 1949), *Abernethy* v. *Commissioner*, 211 F 2d 651 (D C Cir 1954); *Dewling* v. *United States*, 101 F. Supp 892 (Ct. Cl. 1952), Chommie, "Payments to Employees Gifts or Compensation for Services," 31 *Taxes* 620 (1953).

2. Note that Regs 118, Sec. 39.22(a)-2(a), provides that "so-called pensions awarded by one to whom no services have been rendered are mere gifts or gratuities and are not taxable." As the *Bausch* case points out, this provision of the Regulations had been interpreted to exempt payments to the widow of a deceased employee, since she had rendered no services. The later ruling cited in the *Bausch* opinion restricts the exemption to situations where neither the recipient nor anyone else rendered services to the payor. What payments will continue to enjoy the exemption?

3 Shortly after the *Bausch* case was decided, the Revenue Act of 1951 added § 22(b)(1)(B) to the Code, excluding from income amounts, not to exceed $5000, paid under stated conditions by an employer to the beneficiaries of a deceased employee. This provision now appears, somewhat modified, as § 101(b) of the 1954 Code.

4. Tips are income, *Roberts* v. *Commissioner*, 176 F.2d 221 (9th Cir. 1949), and so are "contributions" (stimulated by the fear of being accused of stinginess) to a city clerk for performing marriage ceremonies, *United States* v. *McCormick*, 67 F.2d 867 (2d Cir. 1933). The following is from the New Haven Sunday Register for March 8, 1953:

BRUNETTE HELD ON TAX CHARGES; SELDOM WORKED

Birmingham, Ala. March 7—(AP)—A pretty, 32-year-old brunette, who said, "I entertained guys," was charged with failing to file income tax returns on an income of almost $50,000.

Miss Jessie Ruth Chesnutt was arraigned before U.S Commissioner Louise O. Carlton yesterday and released under $500 bond.

Her attorney, Robert Gwin, contended "that Miss Chesnutt's income is not taxable in that the money she has was given to her in the form of gifts."

He later told reporters the funds "were given her by various individuals over a period of years."

Asked if the gifts were from men or women, Miss Chesnutt said "Gentlemen, naturally."

"I never did any kind of work much," she continued. "I did work in a cotton mill and on a farm and I entertained guys."

Miss Chesnutt said she was a native of Gadsden, Ala., and had also lived in Las Vegas, Reno and Detroit.

A Federal warrant against her charged she failed to file income tax returns on an income of $11,985 in 1949, $25,644 in 1950 and $12,144 in 1951.

The Government filed an $83,000 tax lien again Miss Chesnutt's property. Gwin said $60,000 of her property was in defense bonds.

The solicitor's office here said Miss Chesnutt has been arrested three times on disorderly conduct charges.

COMMISSIONER v. JACOBSON

Supreme Court of the U.S., 1949
336 U.S. 28

Mr. Justice Burton delivered the opinion of the Court.

This decision applies the federal income tax to gains derived by a debtor from his purchase of his own obligations at a discount and his consequent control over their discharge. It presents the specific question whether a solvent natural person, in straitened financial circumstances, must include in his gross income for federal income tax purposes the difference between (1) the face amount of his personal indebtedness as the maker of secured bonds, originally issued by him at face value for cash, and (2) a lesser amount paid by him for their purchase. The debtor's obligations were not unpaid balances of purchase prices which could be readjusted by the discharge of the obligations. The proceeds of the obligations were not traced into identifiable losses offsetting the debtor's realized gains from the discharge of these obligations. Each seller knew that the bonds he sold were being bought by or for the maker of them. In each sale the bondholder sought to minimize his probable loss by getting as much as possible, directly or indirectly, from the maker of the bonds as the one available purchaser of them. The maker of the bonds, at the same time sought to reduce his obligations as much as possible by buying the bonds as cheaply as he could. While each seller thus knew that he was receiving from the maker of the bonds less than their face amount, there is no finding that any seller intended to transfer or release something for nothing or to make a gift of any part of his claim, as distinguished from making a sale and assignment of his whole claim for the highest available price. The maker thus realized a gain from each purchase and the Commissioner of Internal Revenue found correctly that, for federal income tax purposes, the maker must include that gain in his gross income for the tax year in which he made the purchase.

The respondent, Lewis F. Jacobson, in 1938, 1939 and 1940 resided, practiced law and owned or controlled substantial property interests in Chicago, Illinois. . . .

By purchases made in 1922 and 1923 the respondent acquired a 99-year lease, running from May 1, 1914, together with a two-story store, office and apartment building on the leased premises in Chicago. On or about May 1, 1925, he borrowed $90,000 from a nearby bank and, together with his wife, executed in return 200 bonds secured by a trust deed mortgaging to that bank the leasehold and the improvements thereon. The bonds bore interest at 6½ per cent per annum and were for the total principal amount of $90,000, with $2,500 maturing semiannually up to and including November 1, 1931. The balance of the bonds, totalling $57,500, were to mature May 1, 1932. The original proceeds were used by the respondent to retire the existing encumbrance, of an undisclosed amount, on the property, pay for a $16,250 addition made by him to the building on the leasehold and pay the necessary brokerage commission of approximately 10 per cent of the loan, plus the cost of printing the bonds and other expenses in connection with the loan. . . .

The bonds due on or before November 1, 1931, were paid at or about their maturities. The debtor has never been in default on any interest payment. However, after the trustee bank closed on June 8, 1931, a committee was formed to

represent the holders of this issue of bonds. May 1, 1932, the respondent secured from the committee and individual bondholders a five-year extension of the maturity on all of the bonds and a reduction in the interest rate from 6½ to 5 per cent....

In his petition to the Tax Court the respondent stated, and it has not been disputed, that the value of the leasehold and building had sharply depreciated since his acquisition of them. The neighborhood had changed, stores were vacant or paid less than half of their previous rents, from 1932 to 1938 the value of the property was substantially less than its cost to him, conditions were getting worse and he felt certain that he would sustain a large loss in connection with the property.

The Tax Court's findings describe each bond sale that is material. Some were to the respondent personally and some to his law partner, acting on his behalf. The rest were made indirectly to the respondent through brokers or through the bondholders' committee. The Tax Court said that each sale that was made through a broker or the committee was closely akin to an open market transaction. It made no finding that any seller intended to transfer or release something for nothing. It referred to all of the respondent's acquisitions of bonds as purchases. Apparently the bonds were payable to bearer and the Tax Court referred to them as negotiable bonds. Each seller made a complete transfer to the respondent of all the seller's rights to or under the bonds. Each seller thus determined the amount of his own loss on his investment. Each knew that the maker of the bond would acquire or secure control over it and would thus be enabled to reduce his liabilities by its face amount.... At the time of the trial, the respondent apparently still held the purchased bonds "intact." The Court of Appeals repudiated any distinction made by the Tax Court for present purposes between the direct and indirect sales to the respondent. The Court of Appeals based its decision on each seller's knowledge that he was transferring his bond to the maker of it. Thus far we agree. The Court of Appeals, however, without any finding of intent by the respective sellers to transfer or release something for nothing, as distinguished from an intent to get the highest available price for their entire claims, treated the respondent's gain from each purchase as exempt from the taxation imposed by § 22(a) of the Revenue Act of 1938 and of the Internal Revenue Code, because that court felt itself obliged by precedent to classify each such gain as a "gift" under § 22(b) (3) of that Act and Code. We hold, however, that those Sections do not, in the light of the decisions of this Court, permit that result.

The first test of the taxability of such gains relates to their inclusion within the gross income of the taxpayer under § 22(a), without reference to the specific exclusions made from it by § 22(b). The other test consists of the application to such gains of any of those specific exclusions. We hold that these gains come within § 22(a) but not within any of the exclusions from gross income stated in § 22(b).

The respondent realized an immediate financial gain from his purchase of these bonds at a discount. By that acquisition he was enabled, at will, to cancel them and thus discharge himself from liability to pay them. . . . Although in straitened financial circumstances he was solvent, both before and after his acquisition of the bonds, and the bonds apparently were collectible from him in full

through appropriate enforcement proceedings. His acquisition, and consequent control over the discharge of these bonds, therefore, improved his net worth by the difference between their face amount and the price he paid for them. It also relieved him of the semiannual interest payments on them of 5 per cent per annum. His acquisition of them likewise reduced the face amount of the lien held by others upon his leasehold property. In the first instance he had received the full face amount in cash for these bonds so that his repurchase of them for 50 per cent, or less, of that amount reflected a substantial benefit which he had derived from the use of that borrowed money. These were not purchase money bonds. The gains from their cancellation were not akin to reductions in balances due on the prices of previously acquired property. The respective sellers of the bonds bore no relation to the respondent other than that of creditors. The gains derived by the respondent through these purchases were comparable to those he would have realized if he had purchased, at the same discount, like bonds issued by a third party and had resold them at full face value or had turned them in at full value as a credit upon some other indebtedness of the respondent. His gains were comparable in their nature to those which he would have realized if a third party, pursuant to a contract, had paid off his indebtedness on these bonds for him to the extent of the discount at which he purchased them. The nature of the gain derived by a debtor from his purchase of his own obligations at a discount is the same whether the debtor is a corporation or a natural person. That such a gain comes within the meaning of gross income as used in federal income tax laws was long ago recognized by the Treasury Department's Regulations and by this Court in the leading cases in this field. *United States* v. *Kirby Lumber Co.*, 284 U.S. 1, 52 S. Ct. 4, 76 L. Ed. 131; *Helvering* v. *American Chicle Co.*, 291 U.S. 426, 54 S. Ct. 460, 78 L. Ed. 891. Similar provisions appeared in the Regulations in effect in 1938–1940.

If § 22(a) stood alone, without the exclusions stated in § 22(b), the gain realized by the respondent in this case unquestionably would constitute gross income for income tax purposes. The provisions of § 22(b) and the decisions of this Court do not change that result. On the contrary, they confirm it.

A striking demonstration of the meaning given by Congress to § 22(a) appears in its Amendments to § 22(b) of the Internal Revenue Code by the Revenue Act of 1939, c. 247, 53 Stat. 862, approved June 29, 1939.* These Amendments then applied only to taxable years beginning after December 31, 1938, and only to discharges of indebtedness occurring on or after June 29, 1939. The value of these Amendments for the purposes of the instant case is not so much in the exclusions which they prescribe, as in the clear light which their own limitations shed upon §§ 22(a) and 22(b) to the extent that those Sections remain unchanged.

Unless those Sections as they stood in 1938 meant that the gains derived by a

* The 1939 amendment to § 22(b) was § 22(b)(9) of the 1939 Code, providing that a corporation might exclude from gross income the amount of any income "attributable to the discharge . . . of any indebtedness of the taxpayer or for which the taxpayer is liable evidenced by a security," providing the taxpayer consented to a reduction of the basis of its property (*i e.*, the basis of its property would be reduced, for calculating depreciation and gain or loss on a sale, by the amount of the cancelled debt) under § 113(b)(3). The corresponding sections of the 1954 Code, modified to eliminate the requirement that the debt be evidenced by a security and to include the indebtedness of an individual if incurred or assumed in connection with property used in his trade or business, are §§ 108 and 1017. [Ed.]

debtor corporation from its purchases of its own obligations at a discount resulted in gross income under § 22(a), there was no need for these 1939 Amendments. Furthermore, as the status of natural persons and corporations is not differentiated in § 22(a), the new Amendments make it equally clear that, inasmuch as they relieve only certain corporations from the taxability of gains derived from their purchases of their own obligations at a discount, it must be that similar gains derived by natural persons also remain taxable under § 22(a). The strength of this reflection of the Amendments upon the unamended Sections is emphasized by their temporary character. The Amendments expressly provide that they shall not apply to a taxable year beginning after December 31, 1942. This indicates that, for its permanent program, Congress regarded such gains as properly taxable and it indicates that the Amendments were intended to authorize temporary changes in policy and were not clarifications of existing or continuing tax policies. While the time limit originally prescribed has been subsequently extended, the extensions have been made by separate Acts, each for a period of one to three years. This repeated emphasis upon their temporary character increases the contrast which they make with the permanent policy of Congress as to the general taxability of this kind of gains under § 22(a) †

These Amendments describe gains corresponding almost precisely with those derived by the respondent from his transactions in the instant case but the Amendments apply only to corporate gains. They thus indicate that such gains were recognized as not having been excluded from gross income by § 22(b) (3) or by any other Section. If they had been so excluded there would have been no need for the new Amendments to exclude those which they did, even temporarily. Furthermore, those gains are not excluded from gross income for all purposes of the income tax laws. Section 22(b) (9) excludes them only from the ordinary income taxes for the taxable year in which the taxpaying corporation purchases its own securities at a discount. Furthermore, the exclusion under § 22(b) (9), as distinguished from other exclusions under § 22(b), is available only upon the express condition that the taxpayer makes and files at the time of filing the return its consent to the Regulations prescribed under § 113(b)(3) then in effect. That Section and such Regulations require that, where any amount is excluded by a corporation from its gross income under § 22(b) (9) on account of its discharge of its own indebtedness, the whole or a part of such amount shall be applied to the reduction of the basis of property held by the taxpayer during any portion of the taxable year in which such discharge occurs The amount to be so applied and the properties to which the reduction shall be allocated are to be determined by Regulations approved by the Secretary of the Treasury. This means that such a gain, instead of being completely excluded as exempt from taxation, is postponed, for income tax purposes, until a later date when the property is disposed of in a way which will permit another form of ascertainment of the taxpayer's gain or loss in its disposition. These provisions therefore demonstrate that Congress, at least since 1939, has prescribed that, in order for a corporate taxpayer to exclude from its gross income under § 22(a) certain gains attributable to the discharge within the tax-

† After a number of successive extensions for limited periods, the time limit was dropped. [Ed.]

able year of the taxpayer's indebtedness evidenced by bonds, the taxpayer must consent to the subsequent use of those gains in reducing the basis of property held by the taxpayer during any portion of the taxable year in which such discharge occurred. A corporate taxpayer with gains meeting these specifications but not filing the required consent would be obliged to include those gains in its gross income, unless additional facts brought them under some other exemption. *A fortiori*, a natural person, such as the respondent in the instant case, who has derived gains precisely within these specifications but who, as a natural person, is ineligible to file the required consent is obliged to include those gains in his gross income under § 22(a). It remains, therefore, to consider whether there are facts in this case which bring this respondent's transactions within any exclusion other than that stated in § 22(b) (9).

The only provision for the exclusion of these types of gains from the respondent's gross income that is presented for our consideration is the general exemption of gifts from taxation prescribed by § 22(b) (3). This was applied by this Court in favor of a taxpayer in *Helvering* v. *American Dental Co.*, 318 U.S. 322, 63 S. Ct. 577, 87 L. Ed. 785, as well as by the court below in the instant case. Both the general provision for taxation of income and this provision for the exclusion of gifts from gross income, for income tax purposes, have been in the Federal Income Tax Acts in substantially their present form since the Revenue Act of 1916. The contrast between the provisions is striking. The income taxed is described in sweeping terms and should be broadly construed in accordance with an obvious purpose to tax income comprehensively. The exemptions, on the other hand, are specifically stated and should be construed with restraint in the light of the same policy. Congress could have excluded from the gross income of all taxpayers the gains derived by debtors either from their acquisitions of their own obligations at a discount and their consequent control over them, or from their respective releases from all or part of such obligations by their respective creditors upon the debtor's payment to the creditor of something less than the full amount of the debt. Congress, especially since the Revenue Act of 1938, has been cognizant of this issue and of its power to meet it as stated, but it has chosen to extend such relief only on the above described restricted and temporary basis and only in the case of corporations. In its treatment of the issue Congress also has required the corporate taxpayer's consent to an alternative plan for a reduction of the corporation's basis of property values to be used in later determinations of its gain or losses. This special treatment is far different from the total exclusion of a gain resulting from an exempt gift. If such gains were already exempted as gifts under § 22(b) (3), as representing something transferred to the debtor for nothing, there would have been no need for § 22(b) (9). The conclusion to be drawn is that such transfers as are described in § 22(b) (9) could not, without more, qualify as exempt gifts under § 22(b) (3). The same may be said of the acquisition, by a natural person, of his own obligations as debtor. The facts in the instant case present a situation quite similar to one contemplated by § 22(b) (9) except that the taxpayer here is a natural person. This emphasizes the taxability of the gains before us.

In the instant case the relation between the bondholder and the respondent may be assumed in each transaction to have been one in which the ultimate parties were known to each other to be such. There was no suggestion in the evidence

or the findings that any bondholder was acting from any interest other than his own. Each transaction was a sale. The seller sought to get as high a price as he could for the bond and the buyer sought to pay as low a price as he could for the same bond. If the transaction had been completely on the open market through a stock exchange, the conduct and intent of each party could have been the same and there would have been little, if any, basis for any claim that the respondent's gain was not taxable income. The mere fact that the seller knew that he was selling to the maker of the bond as his only available market did not change the sale into a gift. In the absence of proof to the contrary, the intent of the seller may be assumed to have been to get all he could for his entire claim. Although the sales price was less than the face of the bond and less than the original issuing price of the bond, there was nothing to indicate that the seller was not getting all that he could for all that he had. There is nothing in the evidence or findings to indicate that he intended to transfer or did transfer something for nothing. The form of the transaction emphasized this relationship. The seller assigned the entire bond to his purchaser. The seller did not first release the maker from a part of the maker's obligation and, having made the maker a gift of that release, then sell him the balance of the bond or vice versa. If the seller actually had intended to give the maker some gift the natural reflection of that gift would have been a credit on the face of the bond or at least some record or testimony evidencing the release. This is not saying that the form of the transaction is conclusive. Assuming that the extension of the maturity of the bonds in the instant case was binding on the creditor, we do not rest this case upon the fact that the sale was made before maturity or that the seller may have received valid consideration for a total release of his claim because the debtor's payment was made before maturity. It is quite possible that a bondholder might make a gift of an entire bond to anyone, including the maker of it. The facts and findings in this case do not establish any such intent of the seller to make a gift in contradiction of the natural implications arising from the sales and assignments which he made. It is conceivable, although hardly likely, that a bondholder, in the ordinary course of business and without any express release of his debtor, might have sold part of his claims on the bonds he held at the full face value of those parts and then have made a gift of the rest of his claims on those bonds to the same debtor "for nothing." It is that kind of extraordinary transaction that the respondent asks us, as a matter of law, to read into the simple sales which actually took place and from which he derived financial gains. We are unable to do so on the findings before us. *Cf. Bogardus* v. *Commissioner of Internal Revenue*, 302 U S. 34, 58 S. Ct. 61, 82 L. Ed. 32.

The situation in each transaction is a factual one. It turns upon whether the transaction is in fact a transfer of something for the best price available or is a transfer or release of only a part of a claim for cash and of the balance "for nothing." The latter situation is more likely to arise in connection with a release of an open account for rent or for interest, as was found to have occurred in *Helvering* v. *American Dental Co., supra,* than in the sale of outstanding securities, either of a corporation as described in § 22(b) (9), or of a natural person as presented in this case. For these reasons we hold that the Commissioner was justified in finding a taxable gain, rather than an exempt gift, in each of the transactions before us. The judgment of the Court of Appeals accordingly is reversed and the

cause is remanded for further action in accordance with this opinion. It is so ordered.

Reversed and remanded.

MR. JUSTICE RUTLEDGE, although joining in the Court's judgment and opinion, is of the view that the result is essentially in conflict with that reached in *Helvering* v. *American Dental Co.*, 318 U.S. 322, 63 S. Ct. 577, 87 L. Ed. 785.

MR. JUSTICE REED with whom MR. JUSTICE DOUGLAS joins, *dissenting*.

As detailed in *Helvering* v. *American Dental Co.*, 318 U.S. 322, 63 S. Ct. 577, 581, 87 L. Ed. 785, the problems of the tax results to the debtor of the release of indebtedness have been difficult. That opinion shows that both Congress and Internal Revenue Regulations have taken varying views as to whether a taxpayer should pay an income tax on such balance sheet improvements.

We held in the *American Dental* case in 1943 that the "receipt of financial advantages gratuitously" was a gift under Int. Rev. Code § 22, 26 U.S.C.A. § 22. Congress has made no change in the law since that time, nor has it been requested to do so. For the reasons discussed at length in that case, we are of the opinion that the judgment of the Court of Appeals should be affirmed.

Note

1. No doubt if a fond uncle advances to his nephew the expenses of a college education and cancels the debt as a graduation present, the nephew has received not income but a tax-free gift. But the *American Dental Co.* case, which the court distinguishes in the *Jacobson* case, involved a business and its creditors When, in such a context, can a cancellation of indebtedness be a gift? *Marshall Drug Co.* v. *United States*, 95 F. Supp. 820 (Ct. Cl. 1951), cert. den. 341 U.S. 948; *Reynolds* v. *Boos*, 188 F.2d 322 (8th Cir. 1951).

Although any transfer "for less than an adequate and full consideration in money or money's worth" is a gift in the meaning of the gift tax law, I.R.C. § 2512(b), see *Farid-Es-Sultaneh* v. *Commissioner*, *supra*, p. 108, the regulations exclude any transaction in the ordinary course of business "which is bona fide, at arm's length, and free from any donative intent." Reg. 108, Sec. 86.8. In the only reported gift tax case involving a business transaction, the Tax Court said:

> Bad bargains, sales for less than market, sales for less than adequate consideration in money or money's worth are made every day in the business world, for one reason or another, but no one would think for a moment that any gift is involved, even in the broadest possible sense of the term "gift." *Estate of Anderson* v *Commissioner*, 8 T.C 706, 720 (1947).

2. Though not a gift, the cancellation of indebtedness may be exempt from tax on other grounds, as the Court recognizes, in certain special circumstances. When the debt was incurred on the purchase of property, a subsequent settlement for less than the face amount may be held, not always realistically, a downward adjustment of the purchase price. See *Hirsch* v. *Commissioner*, 115 F.2d 656 (7th Cir. 1940). The option which § 108 of the 1954 Code tenders to debtors who settle their obligations for less than face has a similar effect: the debtor's assets must be treated (for the purpose of computing depreciation and gain or loss on a subsequent sale) as though their cost was the cash actually laid out rather than the full purchase price. Another situation in which income is not realized on a cancellation of indebtedness is where the taxpayer was insolvent both before and after the cancellation. *Supra*, p. 69. For special provisions governing the cancellation of debts by a discharge in bankruptcy, see Regs 118, Sec. 39.22(a)-13(b), and §§ 268–270 of the Bankruptcy Act.

3. Is income realized by a debtor when his obligation becomes unenforceable because of the statute of limitations? *Securities Co.* v. *United States*, 85 F. Supp. 532 (S.D.N.Y. 1948).

4. See generally Surrey, "The Revenue Act of 1939 and the Income Tax Treatment of Cancellation of Indebtedness," 49 *Yale L.J* 1153 (1940), Note, 16 *U. of Chi. L. Rev.* 725 (1949); Wright, "Realization of Income Through Cancellations, Modifications, and Bargain Purchases of Indebtedness I and II," 49 *Mich. L. Rev.* 459, 667 (1951).

ROBERTSON v. UNITED STATES

Supreme Court of the U.S, 1952
343 U.S. 711

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

Petitioner is a musician and composer who between the years 1936 and 1939 composed a symphony. In 1945 Henry H. Reichhold, a philanthropist, established a music award offering $25,000, $5,000, and $2,500 for the three best symphonic works written by native-born composers of this hemisphere. The terms of the offer provided that none of the compositions could be published or publicly performed prior to entry in the contest and that each composition receiving an award would remain the property of the composer except that he would grant the Detroit Orchestra, Inc., (1) all synchronization rights as applied to motion pictures, (2) all mechanical rights as applied to phonograph recordings, electrical transcriptions and music rolls, and (3) the exclusive right to authorize the first performance of the composition in each of the countries whose citizens were eligible to enter the contest and to designate the publisher of the composition.

Petitioner submitted his symphony and on December 14, 1947, won the $25,000 award. He included that amount in his 1947 income tax return as gross income. . . . Thereafter he filed a claim for refund on the ground that the award constituted a nontaxable gift.[1] . . . The District Court, 93 F. Supp. 660, held that the award was a gift and not taxable by reason of § 22(b) (3) of the Internal Revenue Code, 26 U.S.C.A. § 22(b) (3). The Court of Appeals reversed. 190 F.2d 680. The case is here on certiorari because of the conflict between that decision and *McDermott* v. *Commissioner*, 80 U.S. App. D.C. 176, 150 F.2d 585, decided by the Court of Appeals for the District of Columbia. And see *Williams* v. *United States*, 84 F. Supp. 362, 114 Ct. Cl. 1.

I.

In the legal sense payment of a prize to a winner of a contest is the discharge of a contractual obligation. The acceptance by the contestants of the offer tendered by the sponsor of the contest creates an enforceable contract. See 6 *Corbin on Contracts* § 1489, *Restatement*, *Contracts*, § 521. The discharge of legal obligations—the payment for services rendered or consideration paid pursuant to a contract—is in no sense a gift. The case would be different if an award were made in recognition of past achievements or present abilities, or if payment was given not for services, see *Old Colony Trust Co.* v. *Commissioner*, 279 U.S. 716, 730, 49 S. Ct. 499, 504, 73 L. Ed. 918, but out of affection, respect, admiration, charity or like impulses. Where the payment is in return for services rendered, it is irrelevant that the donor derives no economic benefit from it. . . .

[1] Section 22(b) (3) of the Internal Revenue Code provides.
"The following items shall not be included in gross income and shall be exempt from taxation under this chapter: . . .
"The value of property acquired by gift, bequest, devise, or inheritance. . . ."

Affirmed.

MR. JUSTICE FRANKFURTER, not having heard the argument owing to illness, took no part in the disposition of this case.

MR. JUSTICE JACKSON dissents.

Note

1. See § 74 of the 1954 Code, which is patterned largely on the language of the *Robertson* case. The *McDermott* case, cited in and presumably overruled in principle by the *Robertson* case, held that a prize awarded by the American Bar Association for the best essay on a stipulated subject of scholarly interest was not taxable. One of the grounds of decision was that the Association derived no commercial benefit from the contest. Note the last sentence in the extract from the *Robertson* case, and see § 74(b)(1). In *Washburn* v. *Commissioner*, 5 T.C. 1335 (1945) decided before the *Robertson* case, it was held that a "Pot O' Gold" prize, awarded to a radio listener for being at home when the telephone rang, was not taxable, the committee reports on the 1954 Code state specifically that this decision is overruled. H. Rept p. 11, S. Rept. p. 178. After the *Robertson* case was decided, it was held in *Bates* v. *Glenn*, 114 F. Supp. 445 (W.D. Ky. 1953), that an automobile awarded as a door prize to the taxpayer after a visit to a dealer's showroom was a "gift," the *Robertson* case being distinguished because there the taxpayer had entered a contest. Although not mentioned in the committee reports, presumably this case is also overruled.

If an admiring friend enters a girl's name in a beauty or popularity contest, is the prize taxable?

2. What is the amount of taxable income if the prize is a trip to Miami, a life-time supply of fig newtons, or something else that the winner would not have purchased with his own money? See *Turner* v. *Commissioner*, ¶ 54,142 P-H Memo TC. What if the winner sells the award at a fraction of its retail value, or refuses it altogether? See McNulty, "The Jackpot," *New Yorker* (February 19, 1949).

3. Section 117 of the 1954 Code establishes statutory standards for the taxability of scholarships and fellowships. Previously, the only applicable statutory provision was § 22(b)(3) of the 1939 Code, exempting gifts. While it was generally assumed that virtually all scholarships and many fellowships were excluded from gross income, some awards of this type entailed the performance of services or at least the completion of a research project, and hence there was a possibility that the award would be taxable compensation, rather than a gift. For example, in *Banks* v. *Commissioner*, 17 T.C. 1386 (1952), a research fellowship awarded to a candidate for a Ph. D. degree was held to be taxable compensation; the taxpayer was required to work 35 hours per week, under the direction of a member of the faculty, on a project prescribed by the institution. His work was, however, submitted in partial satisfaction of the requirements for the doctorate. The payments were treated as salary on the books of the institution, and in practice, fellowships were probably ordinarily treated as taxable income or as gifts by the recipients according to whether or not the institution withheld income tax from the payments. See also *Loo* v. *Commissioner*, 22 T.C No 30 (1954). More controversial than the *Banks* case was the policy announced by the Internal Revenue Service in I.T. 4056, 1951-2 C.B. 8, involving a number of fellowship awards, apparently by the Guggenheim Foundation:

> If a grant or fellowship award is made for the training and education of an individual, either as a part of his program in acquiring a degree or in otherwise furthering his educational development, no services being rendered as consideration therefor, the amount of the grant or award is a gift which is excludable from gross income. However, when the recipient of a grant or fellowship applies his skill and training to advance research, creative work, or some other project or activity, the essential elements of a gift as contemplated by Section 22(b)(3) of the Internal Revenue Code are not present, and the amount of the grant or fellowship is includible in the recipient's gross income.

4. How is all this affected by § 117? If the taxpayer in the *Banks* case, after receiving his doctorate, had continued to work on the same project under the same terms, would he come within § 117(b)(2)? Would a non-teaching member of a university faculty qualify for the exclusion of § 117(b)(2), if the university labels his regular stipend as a "fellowship" rather than "salary?" Could a university employ its professors to teach for half their regular salaries and pay the rest to them as research fellowships? Is it possible for the Ford Foundation to make a "gift" to a scholar that will be totally exempt under § 102 instead of partially exempt under § 117? Can a business corporation or a private individual, whose grants would not qualify under § 117(b)(2)(A), make a gift to a scientist under § 102 to finance his research?

2. *Bequests*

Note: Section 22(b)(3) of the 1939 Code, which is carried over without substantive change as § 102 of the 1954 Code, was encountered in the previous section. It excludes from gross income property acquired by bequest, inheritance, and devise, as well as property acquired by gift.

Section 113(a)(5) of the 1939 Code provided that the basis to the recipient of property acquired by bequest, inheritance, or devise was its fair market value at the date of the decedent's death (or, if the decedent's estate was valued for federal estate tax purposes as of one year after death, in accordance with the privilege accorded by § 811(j) of the 1939 Code, now § 2032 of the 1954 Code, its value as of that time). Section 1014 of the 1954 Code carries over this principle, somewhat extended to embrace certain items of property that may not have been received by bequest, inheritance, or devise but that were nevertheless includible in the decedent's estate under the federal estate tax law. See S. Rept. pp. 423-424.

See Regs. 118, Secs. 39.22(b)(3)-1 and 39 113(a)(5)-1(b)(1).

LYETH v. HOEY

Supreme Court of the U. S., 1938
305 U S. 188

MR. CHIEF JUSTICE HUGHES delivered the opinion of the Court.

The question presented is whether property received by petitioner from the estate of a decedent in compromise of his claim as an heir is taxable as income under the Revenue Act of 1932, 47 Stat. 173.

Petitioner is a grandson of Mary B. Longyear who died in 1931, a resident of Massachusetts, leaving as her heirs four surviving children and the petitioner and his brother, who were sons of a deceased daughter. By her will, the decedent gave to her heirs certain small legacies and the entire residuary estate, amounting to more than $3,000,000, was bequeathed to trustees of a so-called Endowment Trust, created April 5, 1926, the income from which was payable to another set of trustees under another trust described as the Longyear Foundation. The main purpose of the latter trust was to preserve "the records of the earthly life of Mary Baker Eddy," the founder of the Christian Science religion.

When the will was offered for probate in Massachusetts there was objection by the heirs upon the grounds, among others, of lack of testamentary capacity and undue influence. After hearing, at which a statement was made by the respective

parties of their proposed evidence, the probate court granted a motion for the framing of issues for trial before a jury. In that situation a compromise agreement was entered into between the heirs, the legatees, the devisees and the executors under the will and the Attorney General of Massachusetts. This agreement provided that the will should be admitted to probate and letters testamentary issued, that the specific and pecuniary bequests to individuals should be enforced; that the bequest of the residuary estate to the Endowment Trust should be disregarded; that $200,000 should be paid to the heirs and a like amount to the Endowment Trust, and that the net residue of the estate, as defined, should be equally divided between the trustees of the Endowment Trust and the heirs. . . . The Commissioner of Internal Revenue valued [petitioner's] distributable share at $141,484.03 and treated the whole amount as income for the year 1933 in which it was received. An additional tax of $56,389.65 was assessed which petitioner paid in October, 1936, with interest. Claim for refund was then filed and on its rejection this suit was brought against the collector.

On motion of petitioner the District Court entered a summary judgment in his favor (20 F. Supp. 619) which the Circuit Court of Appeals reversed. 2 Cir., 96 F.2d 141. Because of a conflict with the decision of the Circuit Court of Appeals of the Fourth Circuit in *Magruder* v. *Segebade*, 94 F.2d 177, certiorari was granted, May 31, 1938, 304 U.S. 557, 58 S.Ct. 1060, 82 L. Ed. 1525.

The Court of Appeals overruled the contentions of petitioner that the property he received was within the statutory exemption (Section 22(b) (3) of the Revenue Act of 1932, 26 U.S.C.A. § 22(b) (3)), and, further, that the property was not income either under the statute or under the Sixteenth Amendment of the Federal Constitution. As the view of the Court of Appeals upon these questions determined the rights of the parties, it was found unnecessary to discuss certain affirmative defenses set up by the answer of the respondent and these defenses are not pressed in this court.

First.—By section 22(b) (3) of the Revenue Act of 1932, 26 U.S.C.A. § 22(b) (3), there is exempted from the income tax—

"The value of property acquired by gift, bequest, devise, or inheritance. . . ."

Whether property received by an heir from the estate of his ancestor is acquired by inheritance, when it is distributed under an agreement settling a contest by the heir of the validity of the decedent's will, is a question upon which state courts have differed. The question has arisen in the application of state laws of taxation. In Massachusetts, the rule is that when a will is admitted to probate under a compromise agreement, the state succession tax is applied to the property "that passes by the terms of the will as written and not as changed by any agreement for compromise." *Baxter* v. *Treasurer & Receiver General*, 209 Mass. 459, 463, 95 N.E. 854, 856. Although under the Massachusetts statute relating to compromise it is the practice to insert a clause in the court's decree that the estate is to be administered in accordance with the agreement, "yet the rights of the parties so far as they rest upon the agreement are contractual and not testamentary." *Ellis* v. *Hunt*, 228 Mass. 39, 43, 116 N.E. 956. See, also, *Brandeis* v. *Atkins*, 204 Mass. 471, 474, 90 N.E. 861, 26 L.R.A.,N.S., 230; *Copeland* v. *Wheelwright*, 230 Mass. 131, 136, 119 N.E. 667. Thus, when a contest was withdrawn under a compromise and the residuary estate was divided equally between the legatee and the

heirs, it was held that the tax was properly levied upon the entire residuary legacy and that the administrators with the will annexed had no right to pay out of the share transferred to the heirs one-half of the tax thus collectible from the legatee unless the compromise agreement expressly or impliedly so provided. *Brown* v. *McLoughlin*, 287 Mass. 15, 17, 190 N.E. 795. Several States have a similar rule. In other States the amount received by an heir under an agreement compromising a contest of his ancestor's will is considered to be received by virtue of his heirship and is subject to an inheritance tax unless the statute exempts him.

In the instant case, the Court of Appeals applied the Massachusetts rule, holding that whether the property was received by way of inheritance depended "upon the law of the jurisdiction under which this taxpayer received it" [page 143]. We think that this ruling was erroneous. The question as to the construction of the exemption in the federal statute is not determined by local law. We are not concerned with the peculiarities and special incidences of state taxes or with the policies they reflect. Undoubtedly the state law determines what persons are qualified to inherit property within the jurisdiction. *Mager* v. *Grima*, 8 How. 490, 493, 12 L. Ed. 1168, *Maxwell* v. *Bugbee*, 250 U.S. 525, 536, 537, 40 S. Ct. 2, 5, 63 L. Ed. 1124. The local law determines the right to make a testamentary disposition of such property and the conditions essential to the validity of wills, and the state courts settle their construction. *Uterhart* v. *United States*, 240 U.S. 598, 603, 36 S. Ct. 417, 418, 60 L. Ed. 819. The State establishes the procedure governing the probate of wills and the processes of administration. Petitioner's status as heir was thus determined by the law of Massachusetts. That law also regulated the procedure by which his rights as an heir could be vindicated. The state law authorized its courts to supervise the making of agreements compromising contests by heirs of the validity of an alleged will of their ancestor, in order that such compromises shall be just and reasonable with respect to all persons in interest. But when the contestant is an heir and a valid compromise agreement has been made and there is a distribution to the heir from the decedent's estate accordingly, the question whether what the heir has thus received has been "acquired by inheritance" within the meaning of the federal statute necessarily is a federal question. It is not determined by local characterization.

In dealing with the meaning and application of an act of Congress enacted in the exercise of its plenary power under the Constitution to tax income and to grant exemptions from that tax, it is the will of Congress which controls, and the expression of its will, in the absence of language evidencing a different purpose, should be interpreted "so as to give a uniform application to a nation-wide scheme of taxation." *Burnet* v. *Harmel*, 287 U.S. 103, 110, 53 S. Ct. 74, 77, 77 L. Ed. 199. Congress establishes its own criteria and the state law may control only when the federal taxing act by express language or necessary implication makes its operation dependent upon state law. *Burnet* v. *Harmel*, *supra*. . . . There is no such expression or necessary implication in this instance. Whether what an heir receives from the estate of his ancestor through the compromise of his contest of his ancestor's will should be regarded as within the exemption from the federal tax should not be decided in one way in the case of an heir in Pennsylvania or Minnesota and in another way in the case of an heir in Massachusetts or New York, according to the differing views of the state courts. We think that it was the intention of Congress in establishing this exemption to provide a uniform rule.

Second.—In exempting from the income tax the value of property acquired by "bequest, devise, or inheritance," Congress used comprehensive terms embracing all acquisitions in the devolution of a decedent's estate. For the word "descent," as used in the earlier acts, Congress substituted the word "inheritance" in the 1926 act and the subsequent revenue acts as "more appropriately including both real and personal property." Thus the acquisition by succession to a decedent's estate whether real or personal was embraced in the exemption. Further, by the "estate tax," Congress has imposed a tax upon the transfer of the entire net estate of every person dying after September 8, 1916, allowing such exemptions as it sees fit in arriving at the net estate. Congress has not indicated any intention to tax again the value of the property which legatees, devisees or heirs receive from the decedent's estate.

Petitioner was concededly an heir of his grandmother under the Massachusetts statute. It was by virtue of that heirship that he opposed probate of her alleged will which constituted an obstacle to the enforcement of his right. Save as heir he had no standing. Seeking to remove that obstacle, he asserted that the will was invalid because of want of testamentary capacity and undue influence. In accordance with local practice, he asked the probate court to frame these issues for a jury trial. It then became necessary for him to satisfy the court that the issues were substantial. Issues are not to be framed unless it appears from statements by counsel or expected evidence or otherwise that there is a "genuine question of fact supported by evidence of such substantial nature as to afford ground for reasonable expectation of a result favorable to the party requesting the framing of issues." *Briggs* v. *Weston*, Mass., 2 N.E.2d 466, 467; *Smith* v. *Patterson*, 286 Mass. 356, 190 N.E. 536. Petitioner satisfied that condition and the probate court directed the framing of jury issues. It was in that situation, facing a trial of the issue of the validity of the will, that the compromise was made by which the heirs, including the petitioner, were to receive certain portions of the decedent's estate.

There is no question that petitioner obtained that portion, upon the value of which he is sought to be taxed, because of his standing as an heir and of his claim in that capacity. It does not seem to be questioned that if the contest had been fought to a finish and petitioner had succeeded, the property which he would have received would have been exempt under the federal act. Nor is it questioned that if in any appropriate proceeding, instituted by him as heir, he had recovered judgment for a part of the estate, that part would have been acquired by inheritance within the meaning of the act. We think that the distinction sought to be made between acquisition through such a judgment and acquisition by a compromise agreement in lieu of such a judgment is too formal to be sound, as it disregards the substance of the statutory exemption. It does so, because it disregards the heirship which underlay the compromise, the status which commanded that agreement and was recognized by it. While the will was admitted to probate, the decree also required the distribution of the estate in accordance with the compromise and, so far as the latter provided for distribution to the heirs, it overrode the will. So far as the will became effective under the agreement it was because of the heirs' consent and release and in consideration of the distribution they received by reason of their being heirs. Respondent agrees that the word "inheritance" as used in the federal statute is not solely applicable to cases of complete intestacy. The portion of the decedent's property which petitioner obtained under the compromise did

not come to him through the testator's will. That portion he obtained because of his heirship and to that extent he took in spite of the will and as in case of intestacy. The fact that petitioner received less than the amount of his claim did not alter its nature or the quality of its recognition through the distribution which he did receive.

We are not convinced by the argument that petitioner had but "the expectations" of an heir and realized on a "bargaining position." He was heir in fact. Whether he would receive any property in that capacity depended upon the validity of his ancestor's will and the extent to which it would dispose of his ancestor's estate. When, by compromise and the decree enforcing it, that disposition was limited, what he got from the estate came to him because he was heir, the compromise serving to remove pro tanto the impediment to his inheritance We are of the opinion that the exemption applies.

In this view we find it unnecessary to consider the other questions that have been discussed at the bar.

The judgment of the Circuit Court of Appeals is reversed and that of the District Court is affirmed.

Note

1 Note the Court's statement that the taxpayer "was heir in fact" If that status were in dispute, would a payment in compromise of his claim be tax-free? In *United States* v. *Gavin*, 159 F.2d 613 (9th Cir 1947), a payment to one claiming as an illegitimate child of the deceased was held tax-free, though as part of the compromise the claimant agreed to refrain from asserting her paternity in the future and consented to a probate decree finding against the relationship.

2. When a testator names a relative or friend as executor, it is common to provide for a "bequest" in lieu of the statutory commissions to which the executor would be entitled for his services. The Supreme Court has held that if mere qualification as executor (as distinguished from the performance of services) is sufficient to entitle the individual to the payment, it constitutes a bequest rather than taxable compensation. *United States* v. *Merriam*, 263 U S 179(1923). See *Bank of New York* v. *Helvering*, 132 F.2d 773 (2d Cir. 1943), illustrating the difficulty courts have encountered in applying the Supreme Court's distinction. Query why should the testator have required the individual to qualify as executor to be eligible for the bequest? Would one really be entitled to the bequest if he qualified and promptly resigned without cause? In the *Bank of New York* case, the amount granted to the executor by the will exceeded the statutory commissions, and the executor (or rather *his* executors, since in the meantime he had died) treated only the excess as a bequest. Was this too generous to the government?

HATCH v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1951
190 F.2d 254

Before Swan, Chase and Frank, Circuit Judges

Swan, Circuit Judge.

The petitioner is the widow and sole legatee of Frederic H. Hatch, who died April 2, 1930. Among the decedent's assets was a contract, dated May 19, 1928, by the terms of which Frederic H. Hatch & Co., a corporation, agreed to employ him for ten years at an annual salary of $30,000 and, in the event of his death,

agreed to pay the annual salary to his estate for ten years beginning on the date of death. The corporation also assumed an obligation contingent on the amount of the corporation's net earnings to pay his estate an additional sum, but no payment was ever made under this provision of the contract. For purposes of the federal estate tax the contract was valued at $243,326.70.[1] By mutual consent of Mrs. Hatch and the corporation the annual salary payments were varied from time to time and less than $30,000 per year was paid, but, as of December 31, 1941, in which year she was paid $15,750, the total payments received by her exceeded the estate tax valuation of the contract by $7,923.30, and in each of the years 1942 and 1943 she received $12,000. The excess payments were not returned by her as income. The Commissioner ruled that they should have been and determined deficiency assessments which the Tax Court has sustained, with two members dissenting. 14 T.C. 237.

On this appeal the taxpayer makes three contentions· (1) that the payments in excess of the commuted value of her husband's employment contract are not taxable income to his legatee; (2) that if the difference between the face amount of the contract and its estate tax valuation is income, such income should be allocated over the life of the contract with the result that each of the payments represents part income and part return of capital; and (3) that assessment of a deficiency for the year 1941 was barred by section 275(a) of the Internal Revenue Code, 26 U.S.C.A. § 275(a).

Section 22(a) of the Code provides that gross income shall include "gains . . . derived from any source whatever . . .", but section 22(b) (3) excludes from gross income and exempts from federal income taxation "The value of property acquired by gift, bequest, devise, or inheritance." Section 111(a) provides that "The gain from the sale or other disposition of property shall be the excess of the amount realized therefrom over the adjusted basis provided in section 113(b) for determining gain. . . ." The adjusted basis provided by section 113(b) is the unadjusted basis of section 113(a) less items properly chargeable to capital account. And section 113(a) (5) deals with property transmitted at death and provides: "If the property was acquired by bequest, devise, or inheritance, or by the decedent's estate from the decedent, the basis shall be the fair market value of such property at the time of such acquisition."

Any doubt that the amounts received by Mrs. Hatch in excess of the estate tax valuation of the contract are taxable income is dispelled for this court by our decision in *Helvering* v. *Roth*, 2 Cir., 115 F.2d 239. We there held that amounts received in payment of notes valued as worthless in the estate of the recipient's testator were income to the recipient. The *Roth* case is not distinguishable, as the petitioner suggests, on the ground that payments by the corporation on her claim did not constitute a "disposition" of the claim within section 111(a), as did retirement of the Roth notes. We agree with Judge Goodrich that receipt of an amount due on a contract obligation is *pro tanto* a "disposition"—relinquishment—of the obligation.[2] But even were we to assume *arguendo*, that there were no "disposition" within section 111(a), we think it clear that payments in excess of the

[1] This was computed on the basis of the present value factor of $30,000 a year for a 10 year term-certain, in accordance with the factor which now appears in Table B of Regulations 105 No value was ascribed to the obligation contingent on the corporation's net earnings.

[2] Herbert's Estate v. Commissioner, 3 Cir., 139 F.2d 756, 758, certiorari denied 322 U.S. 753, 64 S. Ct. 1263, 88 L. Ed. 1282. See also United States v. Archer, 1 Cir., 174 F.2d 353, 356.

estate tax valuation of the contract constituted taxable income within the broad definition of section 22(a), which includes any gain not specifically excluded by other provisions of the Code. Section 22(b) (3) excludes from section 22(a) the "value" of property acquired by bequest. How property acquired by bequest is to be valued is provided by section 113(a)(5) which declares that the basis for determining gain or loss, in the case of a bequest "shall be the fair market value of such property at the time of . . . acquisition." Hence the "value" of the bequest excluded from taxation by section 22(b) (3) was $243,326.70, and anything received in excess of such value is taxable "gain" within section 22(a), as stated in the *Roth* case, 115 F.2d 239, 241. Although this conclusion appears to be contrary to that reached in *United States* v. *Carter*, 5 Cir., 19 F.2d 121, we adhere to what was said of that case in the *Roth* opinion.

We pass now to the petitioner's alternative contention, namely, that the difference between the face amount of the contract and its estate tax valuation should be allocated over the life of the contract. The Tax Court rejected this contention and held that the excess payments were 100% income. With this conclusion we are unable to agree. When Mrs. Hatch acquired the contract under her husband's will, it was obviously worth less than $300,000, the total salary payments called for by its terms, since a promisor's obligation to pay $30,000 a year for ten years is not the equivalent of an obligation to pay $300,000 forthwith. The present value of the contract was computed by discounting the future payments in accordance with the factor which now appears in Table B of Regulations 105. When the obligation shall have been discharged in full Mrs Hatch will have received a return of the acquisition value of the contract, $243,326.70 plus the discount of $56,673.30 by which the face amount of the contract was reduced. The former amount is excludible from taxation as the "value" of property acquired by bequest, the latter is taxable as "gain." When the obligation is discharged in periodic payments, "It is no more correct to say that the part payment was all a return of principal than it is to say it was all a return of income." [3] We think that each installment payment received by Mrs. Hatch should be allocated between the non-taxable bequest and the taxable gain. According to Table B, used to obtain the present worth of the contract, 81.1089 per cent. of each payment represents present worth and 18.8911 per cent. represents gain. Hence the taxpayer contends that only 18.8911 per cent. of the payments received during the years here involved is taxable. This would mean $2,975.35 for 1941 and $2,266.93 for each of the years 1942 and 1943.

The Commissioner does not contend that statutory authority is essential to the use of the allocation method in a case where the amount of future gain is definitely determinable. He denies, however, that the amount of future gain is definitely determinable in the case at bar, relying upon *Burnet* v. *Logan*, 283 U.S. 404, 51 S. Ct. 550, 75 L. Ed. 1143. We find nothing in that case to render inapplicable the views we have expressed. It was there held that the allocation method may not be applied to a contract in which the ultimate amount to be received thereunder could not be determined with reasonable certainty because the promise of the obligor was conditional on the amount of iron which it might mine. By contrast, the contract in the case at bar obligated the corporation to pay a fixed sum yearly for a ten year term, so that its present value was neither speculative nor difficult to estimate. It is true that the contract also contained a contingent obligation which

[3] The quotation is from Shafpa Realty Corp. v Commissioner, 8 B.T A. 283, 284, see also Gilbert v Commissioner, 6 T.C. 10, 13; Platt v. Bowers, D C N.Y., 13 F 2d 951, 952.

might have increased the amount to be paid by $100,000, but no value was ascribed to this contingent promise in fixing the estate tax valuation. Nor can it be inferred, as the Commissioner suggests, that the fact that the annual sums payable were varied from time to time by mutual consent indicates that the financial condition of the corporation was such as to create doubt whether the contract would be completely carried out. So far as appears the modifications agreed upon may have been made at the taxpayer's request and for her convenience. The estate tax valuation presupposed complete performance of the obligation to make the salary payments.

If as we hold, the amounts received annually should be allocated between income and return of capital—value of the bequest at date of acquisition—the Commissioner's assessment of a deficiency for the year 1941 was barred by the three year statute of limitation, section 275(a)* of the Code, unless the period was extended by section 275(c),† which provides a five year limitation if the taxpayer omits from gross income an amount properly includible therein which is in excess of 25 per cent. of the gross income stated in the return. The Commissioner has made no argument that, if the allocation method is applicable, the 1941 assessment was timely. Applying the principle enunciated in *Green* v. *Commissioner*,[4] with which we are in accord, it appears that the amount of gross income omitted from the return was not sufficient to bring into play the five year limitation of section 275(c).

For the foregoing reasons we hold that the 1941 deficiency should be expunged and the 1943 deficiency be recomputed. Decision reversed and cause remanded for further proceedings in conformity with this opinion.

Note

1. Assume that the contract had been valued at zero for estate tax purposes because of the employer's uncertain financial circumstances, because payments were contingent on insecure profits, or for some other sufficient reason. Does § 102 exclude from income only the "value" of the property at the decedent's death? Does § 1014 require this result? If so, *A* and *B*, both widows, may be treated differently with respect to identical receipts, if their contracts were valued differently: *A* pays little or no income tax, because her husband worked for a prosperous firm, *B* pays more because her payments are more precarious. The difference in income tax is not necessarily a reflection of a higher estate tax on *A*'s inheritance; both estates may have been non-taxable because of exemptions, debts, or other offsets

2. Section 102(b)(2) as it now stands codifies the holding in *Irwin* v *Gavit*, 268 U S. 161 (1925), with respect to the income beneficiary of a trust fund. There it was held that the beneficiary must report the income distributed to him, he was not allowed to exclude it on the theory that he had been given or had inherited a series of payments

3. Life Insurance

***Note:* Section 22(b)(1) of the 1939 Code excluded from gross income amounts received under a life insurance contract, paid by reason of the death of the insured. This general principle has been carried forward by §§ 101(a), 101(c), and 101(d) of the 1954**

* Section 6501(a) of the 1954 Code.

† Section 6501(e) is similar to but not identical with § 275(c) of the 1939 Code. [Ed.]

[4] 7 T.C. 263, affirmed 6 Cir., 168 F.2d 994. [Ed.]

Code, but important changes have been made in the treatment of interest paid by the insurance company where the proceeds of the policy are not paid in a lump sum.

The old statute continues to be applicable to amounts received under a life insurance contract if the insured died before the 1954 Code was enacted.

COMMISSIONER v. PIERCE

U S. Court of Appeals, Second Circuit, 1944
146 F.2d 388

Before L. HAND, AUGUSTUS N. HAND, and FRANK, Circuit Judges.

L. HAND, Circuit Judge.

Both the Commissioner and the taxpayer appeal from an order of the Tax Court, which expunged in part, and affirmed in part, a deficiency assessment for income taxes against the taxpayer for the year 1940. (The taxpayer has not pressed her appeal before us, and we understand it to be abandoned.) The taxpayer's husband died on March 18, 1940, leaving a life insurance policy in the sum of $100,000, in which he had named her as the beneficiary. The policy first contained an unconditional promise to pay to the taxpayer on the death of her husband, "the sum of $100,000," and later provided as follows

> The Insured shall have the right with the privilege of revocation and change, to elect in lieu of payment in one sum either Option "A," "B" or "C," or that the amount payable be distributed under two or more of said Options. The Beneficiary . . when this Policy becomes payable, shall have the same right and privilege if no such election effected by the Insured shall then be in force

The taxpayer's husband did not during his life elect any of the options, but after his death, in accordance with the language just quoted, the taxpayer elected to take under "Option 'C'," which gave her the right to have the net proceeds of the policy paid

> In either 10, 15, 20 or 25 stipulated installments of an amount corresponding in the Table below to the age of the Beneficiary at the death of the Insured, provided that if the Beneficiary shall survive to receive the number of installments selected, similar installments shall be continued during the lifetime of the Beneficiary

She chose to be paid in ten installments: *i.e.*, 120 monthly installments spread over 10 years. At her age each payment came to $597, and they were to continue as long as she lived. To these installments the insurer added such monthly dividends as were declared upon the policy—these being the subject of the taxpayer's appeal. For the year 1940 she received ten installments, aggregating $6,294, together with nine monthly dividends for $36 each. She did not return any of these as income, relying upon § 22(b)(1) of the Internal Revenue Code, 26 U.S.C.A. Int. Rev. Code, § 22(b)(1), which excludes from gross income and exempts from taxes the following:

> Life insurance Amounts received under a life insurance contract paid by reason of the death of the insured, whether in a single sum or otherwise (but if such amounts are held by the insurer under an agreement to pay interest thereon, the interest payments shall be included in gross income).

The Commissioner assessed a deficiency against her of $2,009.51, which he computed as follows. He divided the principal of the policy—$100,000—by the figure 19.45—that being the taxpayer's expectancy in 1940—this gave a quotient of $5,141.39, of which he took five-sixths—there being only ten monthly payments in the year 1940. The result was $4,284.49, and this he treated as the proper amortization payment of the capital sum of $100,000, the difference—$6,294 minus $4,284 49—he treated as income and taxed accordingly. Upon review by all the judges of the Tax Court, it was held, two judges dissenting, that the taxpayer was right; the deficiency was expunged, except as to the nine dividends already mentioned; and from this order the Commissioner appealed.

Four Circuit Courts of Appeals have held that § 22(b)(1) does not mean to separate such installments as are here in question into principal and interest and to include the interest in gross income; but that it exempts the whole installment. *Commissioner* v. *Winslow*, 1 Cir., 113 F.2d 418, 133 A.L.R. 405; *Commissioner* v. *Bartlett*, 2 Cir., 113 F.2d 766, *Commissioner* v. *Buck*, 2 Cir., 120 F.2d 775; *Allis* v. *La Budde*, 7 Cir., 128 F.2d 838; *Kaufman* v. *United States*, 4 Cir., 131 F.2d 854. The parenthesis applies to cases where the capital sum is retained for a season undiminished, and only the interest is paid to the beneficiary (*United States* v. *Heilbroner*, 2 Cir., 100 F.2d 379); and in economic theory there is no difference between such interest, and the interest concealed in an installment, for, when an insurer pays the beneficiary in a series of installments, it always does add something as interest upon those installments which for the time being it retains. Nevertheless, although for this reason the distinction is to some extent formal, the courts have thought that they saw adequate ground for it in the language used, and the Commissioner, after many unsuccessful efforts, has finally yielded and amended his regulations accordingly (Regulations 118, § 39.22(b)(1)-1). We are, therefore to take it as datum that, if the insured had during his life elected to take under "Option 'C'," the Tax Court would have been right. The Commissioner insists, however, that his earlier position is still valid when, as here, it was the beneficiary, not the insured, who made the choice. The argument is that, since she had the option of choosing between the principal and one of the options, it is as though she had actually received the principal and had reinvested it with the insurer, instead of upon some other security Were that done, the resulting payments would have to be broken down into earnings and amortization installments, and, qua earnings, would be taxable.

It cannot be seriously argued that, literally at any rate, the installments are not "paid by reason of the death of the insured"; they are all conditional upon that event, and they begin to be payable at once thereafter. Pro tanto, they are precisely like any other life insurance, all of which is payable "by reason of the death of the insured." We recognize, however, that that is not a final answer; for, granting that the insured's death is a condition precedent, it is not the only condition precedent to the payments in question, as it is when the insured himself makes the choice. If the words should be read. "only by reason of the death of the insured," the meaning would be as the Commissioner maintains; and our decision turns upon whether that is their right interpretation.

The policy offered the beneficiary a choice between rights already in existence, with whose creations she had had nothing whatever to do, they came to her ready made by the insured. To say that her position was the same as though, having the

principal in hand, she had exchanged it with the insurer for the option, is untrue in fact and unwarranted in law. Perhaps, if the policy had not contained the options, the beneficiary might still have been able to buy "Option 'C' " from the insurer by a direct bargain; but nothing in the record supports that assumption, and we have no right to make it. Life insurance is a technical subject, and it would be hazardous to say that it made no difference in the beneficiary's powers in dealing with the insurer that the policy contained the options. But even if it did make no difference, it is a fiction to treat the situation as though she had made such a bargain; it is as untrue as it would be to say that if the policy permitted her to be paid in dollars or pounds, and she took pounds, she had bought the pounds from the insurer with the dollars. It is as untrue as it would be to say that, if a testator gives a legatee the choice of money or a chattel and he takes the chattel, he has bought it of the executor. In such situations the beneficiary makes no bargain whatever with the decedent's representative; all that happens is that, not having the power to take both benefits, and being therefore put to a choice, he takes one of those already provided. Nothing will justify the violence to the language necessary to the Commissioner's interpretation, unless it is necessary to effectuate the underlying purpose of the statute. In this instance it would defeat that purpose.

We are to assume that Congress wished to favor the class of dependents in whose behalf life insurance is ordinarily secured—the wife and children of the insured. Although that involves an exemption from taxation and exemptions are viewed with jealousy, when the purpose is evident enough, we should not defeat or mutilate its realization. The proposed distinction does not rest upon any difference in the class who will profit by the exemption, it does not rest upon any difference in the kind of property exempted, it does not rest upon any language in the statute—on the contrary it demands that we import a word which is not there: "only." Moreover, it would make a difference which in practice would impair the underlying purpose. If the Commissioner is right, an insured who has taken out such a policy, and who wishes to give the beneficiary—ordinarily his wife—the power to decide how she will use the proceeds, must consult her in advance, and act while he lives, unless he is willing to forego the exemption. As he cannot tell when he will die, he must make sure that he keeps abreast of all changes in their financial position, and provides for them; he will be unable to give her the power after his death to adapt her means to her needs. True, that extention will be short, she cannot wait long before electing; but at least she has some time within which to act, and this may be extremely important in those cases—which are apt to be frequent—in which through inattention, or through the assumption, common to us all, that death is not at hand, the insured has failed to do what the new situation demanded. For these reasons, as we have said, to import the necessary word would positively defeat the purpose of Congress

In conclusion, we think that there are one or two analogies, which, while by no means on all fours, nevertheless look in the same direction. When a widow accepts her husband's testamentary provision in lieu of dower, she is held to take under the will, though it is only by performing the condition—releasing the dower—that she can take. *Helvering* v. *Butterworth*, 290 U.S. 365, 54 S. Ct. 221, 78 L. Ed. 365. Again, when an heir who contests a will, the contest remaining undecided, settles with the executor, he takes by inheritance, though it is again only by conforming to a condition that he gets his share *Lyeth* v. *Hoey*, 305 U.S. 188,

59 S. Ct. 155, 83 L. Ed. 119, 119 A.L.R. 410. These decisions do not of course declare that the widow, or the heir, takes "only" from the husband or the ancestor, yet they are instances in which we do think of the property as passing only "by reason of" death, although some concurring act of the transferee is necessary. And indeed it is always true of any devise, and of any legacy, that the devisee or the legatee must accept it in order to pass the property. Acceptance is a condition not always fulfilled—as for example, when the testator has attached obligations to it—; yet we should suppose that nobody would hesitate to say of such a devise or legacy that it passed "by reason of the death" of the testator.

Order affirmed.

FRANK, Circuit Judge (*dissenting*).

We are dealing here with an exemption statute. It is hornbook law that such statutes are to be construed against the person claiming the exemption, and that for a good reason: Every exemption increases the tax burden of other taxpayers, and it is not lightly to be assumed that Congress intended inequality of tax burdens. I think my colleagues, with no support from any legislative history, have here ignored that doctrine. The statute exempts "amounts received under a life insurance contract paid by reason of the death of the insured." Are the amounts here paid "by reason of" such death? Yes, in part, for the contract made by the insured provided that the beneficiary upon the death of the insured should have an option, so that the option came into being "by reason of" his death. But the death alone did not bring about such payment, it required both (a) the death of the insured and (b) the election, after that death, of the beneficiary to exercise the option. The question, then, is this: Did Congress mean (1) "paid in part by reason of the death" or (2) "paid solely by reason of the death"? Because of the doctrine as to tax exemptions, it seems to me that we should hold that Congress meant the latter, *i.e.*, "solely."

Having in mind that, concededly, the amount received by taxpayer was not paid to her solely by reason of the death of the insured, I am persuaded by the reasoning in the dissenting opinion of Chief Judge Lehman in *Latterman* v. *Guardian Life Insurance Company*, 280 N.Y. 102, 106-108, 19 N.E.2d 978, 127 A.L.R. 450. Doubtless the death of the insured conferred on the taxpayer, because of the insurance contract, a privilege to make an investment which, but for the death, would probably not have been available to her. But the money is paid by the insurance company not "by reason of the death," but because the beneficiary exercised a deliberate choice to avail herself of the privilege of making such an investment.

I think my colleagues are well advised in stating that the two decisions which they suggest as analogies are "by no means on all fours." In *Helvering* v. *Butterworth*, 290 U.S. 365, 54 S. Ct. 221, 78 L. Ed. 365, the taxpayer was defeated; the Court, referring to the familiar doctrine as to tax exemptions, said (290 U.S. at page 369, 54 S. Ct. at page 222, 78 L. Ed. 365): "Certainly, Congress did not intend any income from a trust should escape taxation unless definitely exempted." In *Lyeth* v. *Hoey*, 305 U.S. 188, 59 S. Ct. 155, 83 L. Ed. 119, 119 A.L.R. 410, to be sure, the taxpayer won. But there the question was whether the taxpayer, an heir, acquired property "by . . . inheritance," when he received it under an agreement compromising and settling his contest of the decedent's will. The Court

noted that Congress had already imposed a tax upon the transfer of the entire net estate and said (305 U.S. at page 195, 59 S. Ct. at page 159, 83 L. Ed. 119, 119 A.L.R. 410): "Congress has not indicated any intention to tax again the value of the property which legatees, devisees or heirs, received from the decedent's estate." The Court went on to say that the taxpayer obtained the property "because of his standing as an heir", pointing out that, if the will contest "had been fought to a finish" and the taxpayer "had succeeded," the property received by him would have been exempt under the statute, the Court said (305 U S. at page 196, 59 S. Ct. at page 159, 83 L. Ed. 119, 119 A.L.R. 410).

We think that the distinction sought to be made between acquisition through such a judgment and acquisition by a compromise agreement in lieu of such a judgment is too formal to be sound, as it disregards the substance of the statutory exemption. It does so, because it disregards the heirship which underlay the compromise, the status which commanded that agreement and was recognized by it . . . Respondent agrees that the word "inheritance" as used in the federal statute is not solely applicable to cases of complete intestacy The portion of the decedent's property which petitioner obtained under the compromise did not come to him through the testator's will. That portion he obtained because of his heirship and to that extent he took in spite of the will and as in case of intestacy.

It seems to me that, as thus explained by the Supreme Court, the rationale of *Lyeth* v. *Hoey* is not at all apposite here.[1]

Note

1 How is the treatment of interest altered by § 101(c) and (d) of the 1954 Code? If Judge Frank's view in the *Pierce* case had prevailed, would the $1,000 exclusion of § 101(d) have been applicable? So-called "excess interest" (amounts paid to the beneficiary by the insurer in excess of its contractual obligation because earnings are better than had been anticipated when the contract was made) were fully taxed under the 1939 Code. See Golden, "Taxation of 'Excess Interest' on Life Insurance Proceeds," 31 *Taxes* 818 (1953) What is the status of excess interest under § 101?

2. Note also that the capital sum of $100,000 includes some interest, part of each year's premium was for pure insurance protection and part constituted savings on which a return is earned. If the insured had purchased *term* insurance, the premium on which is less because there is no element of savings, and had deposited the balance in a savings account, the income earned by the deposits would have been taxed to him during his life. The interest component of "ordinary" life insurance, however, is taxed neither to the insured when it is earned nor to the beneficiary when it is paid.

3. The general principle of excluding from gross income the proceeds of life insurance received on the insured's death is qualified by § 101(a)(2), which in the case of a transfer for "a valuable consideration" taxes the transferee on the difference between the proceeds of the policy and the sum of the consideration and premiums subsequently paid by him. What is the justification for this limitation on the general rule of exclusion? The restriction will have a drastic result if a policy is transferred for a consideration that, although "valuable," is small as compared with the face amount of the policy and if the insured dies shortly thereafter. See *James F. Waters, Inc.* v *Commissioner*, 160 F.2d 596 (9th Cir. 1947), cert. den. 332 U.S. 767 (The restriction exempts several types of transfers, one of which was present in the *Waters* case.)

4. If a life insurance policy is surrendered, the tax status of the cash surrender value

---

[1] It may well be that, if my interpretation is correct, the case here would come under § 22(b)(2), for it would then be as if the beneficiary had purchased an annuity The result would be to increase the tax beyond that determined by the Commissioner. But, by his determination, he relinquished that increased amount of tax

is governed by § 72(e)(1): the excess of the cash value over the premiums paid is taxable To moderate the impact of a tax at possibly very high rates on a lump sum received in a single year, however, § 72(e)(3) provides that the tax shall be no greater than would have been paid if the cash surrender value had been received ratably over a three-year period. Is there any reason why the interest earned by the investment component of the premiums should be taxed if the policy is surrendered at a profit but excluded if the proceeds of the policy are paid to the beneficiary when the insured dies? The proceeds of a matured endowment policy (unless paid as an annuity) are also taxed like the cash surrender value of a life insurance policy, i e., the excess over the premiums paid is taxable. Why are the earnings on such a contract not excluded in the same manner as the interest component of the proceeds of a life insurance policy?

5. Section 101(b), mentioned *supra*, p. 115, excludes from gross income certain employees' death benefits, not to exceed $5,000 per employee, analogizing the benefits to the proceeds of life insurance. By virtue of § 101(b)(2)(B), the exclusion is not allowed (except in the case of certain qualified employee benefit plans) if the employee possessed just before his death a nonforfeitable right to receive the amount while living. Why?

4. *Annuities*

Note: Section 22(b)(2) of the 1939 Code, governing the taxability of annuity payments, has been entirely rewritten by § 72 of the 1954 Code. The case that follows, decided under the old statute, illustrates the reason for the change.

EGTVEDT v. UNITED STATES

U. S. Court of Claims, 1948

112 Ct. Cl. 80

Littleton, Judge, delivered the opinion of the court:

Plaintiff purchased four annuities in 1937 for $25,000 each, or a total of $100,000, entitling him to aggregate monthly payments of $407, or $4,884 a year, for the balance of his life. Each contract provided that in case of plaintiff's death prior to the receipt by him of a sum equal to the total premium paid, a further sum equal to the balance of the premium would be paid to his wife or to his estate.

Plaintiff seeks to recover income tax deficiencies and interest assessed and collected for 1938 and 1939 on account of the exaction of a tax on a portion of the annuity payments received in those years, on the asserted ground that Section 22(b) (2) of the Revenue Act of 1938 is unconstitutional. In each of the years mentioned the Commissioner of Internal Revenue, pursuant to the explicit requirements of Section 22(b) (2) of the Revenue Act of 1938 . . . , required that of the annuities totaling $4,884 received under the contracts, the amount of $3,000, being an amount equal to 3 per cent of the consideration paid for the annuity contracts, be included in gross income. Plaintiff paid the deficiencies and interest assessed and his claims for refund thereof were rejected.

It will be seen in this case that, as in other cases where the treatment of annuity payments for tax purposes has received judicial attention, the plaintiff has been required to include in gross income the annuity payments received in each year to the extent of an amount equal to 3 per cent of the aggregate consideration paid for the annuity contracts, undiminished by any payments made to the annuitant in prior years in excess of such percentage amount. Therefore, so long as Section 22(b) (2) remains unchanged, the plaintiff, aged 45 and with a normal

life expectancy, on the basis of mortality tables, of about 28 years at the time he purchased the annuities in August 1937, will be required to include in income not only $3,000 of the $4,884 received in each of the years 1938 and 1939, but a like amount in each of the subsequent years of his life, notwithstanding approximately 53 years (100,000÷1,884) will be required, on the basis of such table, for the annual amounts received by plaintiff in excess of $3,000 to aggregate the sum of $100,000 paid for the annuity contracts.

Plaintiff takes the position that the taxing of $3,000 of the $4,884 received by him in each of the years 1938 and 1939 (at which times he had received only a small fraction of the amount he had paid for the annuity policies), necessarily constitutes taxation on an amount which was not income within the meaning of the Sixteenth Amendment, and that insofar as the Revenue Act directs or permits such taxation it is unconstitutional because the tax attempted to be imposed is a direct tax on property without the apportionment required by Article I, Section 2, Clause 3, and Article I, Section 9, Clause 4, of the Constitution.

Plaintiff first contends that the full amounts of the annuities received by him in 1938 and 1939 were nothing more than the return to him of a portion of the capital invested in the purchase of the annuities, and hence that until the full purchase price of the annuities of $100,000 has been returned to him, the tax imposed by Section 22(b) (2) is a tax upon capital and not upon income derived from capital. The evidence offered by plaintiff falls far short of supporting this contention....

The evidence shows that from the standpoint of an insurance company each payment represents in part interest on the investment. We cannot, therefore, say that such part is capital, and nontaxable, in the hands of the annuitant. *Klein* v. *Commissioner*, 6 B.T.A. 617, *Guaranty Trust Co.* v. *Commissioner*, 15 B.T.A. 20, and cases cited in footnote 2 [omitted]

Plaintiff next contends that even if it be conceded that some part of each annuity payment was income and, therefore, subject to be taxed, the amount arbitrarily designated by the statute for inclusion in gross income cannot be reconciled with the best evidence available as to what portions of the annuity payments received by him in 1938 and 1939 were, and what portions of the payments received in the future will be, gain derived by plaintiff from his investment of capital in the annuity policies. This contention is based primarily upon the American Annuitants' Male Select Table of Mortality, rated down one year, under which the probability, in August 1937, that plaintiff would survive another 53 years was less than one-half of one per cent. Such mortality tables are used by insurance and annuity companies in determining rates of insurance and annuities for certain groups of people. They are based on a limited number of lives and, while reliable in connection with certain determinations, we think such evidence is not determinative of the question presented. We cannot accept such evidence as sufficient, standing alone, to establish the fact that a substantial portion of the annuity payments received by plaintiff did not constitute income, nor as sufficient evidence to show that the action of Congress in fixing, after a full investigation, the measure of the taxable income in connection with receipt of such annuities was without foundation, wholly arbitrary and, therefore, void under the Sixteenth Amendment. *Cf. Helvering* v. *Midland Mutual Life Insurance Co.*, 300 U.S. 216. . . .

The provision of the Revenue Act of 1938 with which we are here concerned was first enacted in the Revenue Act of 1934 (48 Stat. 680). In its report on H.R. 7835, which became the Revenue Act of 1934, the Ways and Means Committee of the House of Representatives gave the following explanation of its investigations and conclusions in support of the change in Section 213(b) (2) of the 1926 Act, which became Section 22(b) (2) of the 1934 Act. House Report No. 704, 73d Cong., 2d Sess., p. 21 (1939-1 Cum. Bull., Part 2, pp. 554, 569–70):

Section 22(b)(2) Annuities, etc.· The present law does not tax annuities arising under contracts until the annuitant has received an aggregate amount of payments equal to the total amount paid for the annuity. Payments to annuitants are, in fact, based upon mortality tables which purport to reflect a rate of return sufficient to enable the annuitant to recover his cost and in addition thereto a low rate of return on his investment. The change continues the policy of permitting the annuitant to recoup his original cost tax-free but requires him to include in his gross income a portion of the annual payments in an amount equal to 3 per cent of the cost of the annuity. While the per cent used is arbitrary, it approximates the rate of return in the average annuity.

Statistics show that an increasing amount of capital is going into the purchase of annuities, with the result that income taxes are postponed indefinitely The change merely places the return of this form of investment on the same basis as other forms of investment by taxing that portion of each payment which in fact constitutes income.

See, also, S. Rep. No. 558, 73d Cong., 2d Sess., p. 23 (1939-1 Cum. Bull. (Part 2) 586, 604).

Thus the formula employed by Congress in Section 22(b) (2) for taxing a portion of the payments received from the investment of funds in annuity contracts does not purport to directly charge with a tax the source from which the payments are derived. On the contrary, as stated in *Manne* v. *Commissioner*, 155 Fed(2) 304, at 307,

Congress, in providing that the return from such annuity contracts should be included in the annuitant's gross income to the extent of three per cent of the sum invested by the annuitant, may be said to have made an approximation of that portion of the annuitant's return which is received by him in the form of income from the capital invested.

In holding that the taxpayer in the *Manne* case was, under the facts in that case, in no position to question the constitutionality of Section 22(b) (2) the court stated, at page 307:

. . . A taxpayer claiming that the section of the Revenue Code in question imposes in a given case a tax upon the return of capital under the guise of a tax on income is under the burden of establishing that no income was in fact received by him from his investment, or at least that the income actually received is less than three percent upon his investment. In this case there is no evidence to show that the earnings on the taxpayer's investment were less than three per cent of its amount during the taxable years in question, or to support the inference that the payments received by him were wholly or even partly a return of capital. . . . A taxpayer alleging unconstitutionality of an act must show not only that the act is invalid, but that he has sustained some injury as a result of its enforcement.

With the above-quoted statement of the court in mind, plaintiff now urges that under the facts presented in this case he has sufficiently sustained the burden of proof suggested in the *Manne* case, to show that Section 22(b) (2), to the extent that it undertakes to define as income and tax without apportionment

$3,000 of his annual annuity payments, is unconstitutional as imposing a tax on property which is not income.

We cannot agree, for the reasons already stated, that plaintiff has sufficiently sustained the burden of proof which rests upon him. Moreover, we cannot determine from anything in the evidence what part of the payments periodically made to plaintiff during the taxable years actually represents earnings on the amounts paid by him as consideration for the policies and what part was simply a return of capital. Conceivably, so far as the evidence shows, the earnings on plaintiff's investment may have been, from the standpoint of the insurance companies, adequate to cover those portions of the 1938 and 1939 payments on which the tax in question was imposed. . . .

The weakness of plaintiff's argument lies in the premise that the taxpayer is constitutionally guaranteed the full return of whatever sums he may invest before any part of the proceeds from his investment may be taxed as income, and that until this is assured Congress does not possess the power to designate as income subject to tax without apportionment, any receipts from his invested property which may in the course of events prove to have been derived from the property itself. *Cf. Peabody* v. *Eisner,* 247 U.S. 347, *Stanton* v. *Baltic Mining Co*, 240 U.S. 103.

The view we have taken with respect to plaintiff's premise as a ground for declaring an act of Congress to be unconstitutional is not, in our opinion, contrary to the generally accepted view that in the cases of sales of property the capital must be returned before there is any income to be taxed by way of profit, nor to anything which was said by the court in *Burnet* v. *Logan,* 283 U.S. 404. In that case the court was not deciding the question of whether the income statute involved sought to impose a tax beyond the constitutional power of Congress, but rather the question whether, under the applicable provisions of the statute before the court, certain receipts from a sale were taxable in part as capital. In stating, at page 414, that

> If a sum equal to the value thus ascertained had been invested in an annuity contract, payments thereunder would have been free from income tax until the owner had recouped his capital investment

the court quite obviously was speaking of the situation as it would have existed under the Revenue Act of 1916, wherein amounts received as a return of premiums under annuity contracts were excluded from gross income.

Notwithstanding the absence of any showing of a certainty that Section 22(b)(2) levies a direct tax on capital, the plaintiff, on the strength of what was said in *Burnet* v. *Logan, supra,* and on the basis of the definition of "income" given in *Eisner* v. *Macomber,* 252 U.S. 189, 207, would have us treat the annuity payments to him as, in effect, piecemeal sales of his annuity investments, or as a gradual conversion of a capital asset from one form to another, so as to make it necessary to measure out the return of capital before arriving at any amount as gain derived therefrom. However, we think an investment of funds in an annuity is a transaction which is materially different from an ordinary business transaction entered into for profit where the concept of gain or loss might be applicable. To some extent one who has invested his money in an annuity may be said to have "spent it," that is, to have parted with it in order to obtain con-

tractual rights which are not inherent, in the same degree at least, in the mere ownership of property.

> Elements of value other than the right to receive payments for life are present in an annuity, *e.g.*, security, assurance of income, regularity of payments and relief from responsibility of attending to investment. The experience which actually develops for the annuitant, whatever that may be, extinguishes both the annuity's cost and its expected returns as a capital investment. *Evans* v. *Rothensies*, 114 Fed (2d) 958, 961 . . .

We are unwilling to say that the view of Congress, as indicated by the Committee reports on the enactment in question, that a substantial portion of amounts received under annuity contracts represents income and its finding as expressed in the statute that 3 per cent of such annual payments is a fair approximation of the income in the average annuity, were without foundation. We cannot, therefore, adjudge that Congress transcended the limits of its constitutional power in requiring that plaintiff's annuity payments be included in gross income for tax purposes to the extent provided in Section 22(b) (2) of the Revenue Act of 1938.

> In reaching this conclusion we have recognized the principle, long established and vital in our constitutional system, that the courts may not strike down an act of legislation as unconstitutional, unless it be plainly and palpably so. The statute here involved may be unwise. But an unwise enactment is not necessarily, for that reason, invalid. *Booth* v. *Illinois*, 184 U.S 425, 431.

The plaintiff is not entitled to recover and his petition is therefore dismissed. It is so ordered.

HOWELL, Judge; WHITAKER, Judge; and JONES, Chief Judge, concur.

Note

1. The basic principle of § 72 of the 1954 Code can be illustrated by two examples. Assume that $10,000 in premiums was paid for an annuity contract, and that upon maturity of the policy the obligor is to pay $1,000 annually for 15 years to the annuitant or, should he not survive, to his estate. Under § 72, 2/3 (*i e.*, $10,000 "investment in the contract") divided by ($15,000 "expected return") of each payment would be excluded from income, and the balance would be taxable. Over the contract period, the cost of the contract would be recovered tax-free, and the rest would be taxed. If the obligor under the contract promised to pay $1,000 annually for life to the annuitant, instead of guaranteeing payment for a specified number of years, the "expected return" would be calculated by reference to the annuitant's life expectancy on the annuity starting date. Assuming that his expectancy was then 18 years, the amount to be excluded from income would be 10/18 (*i.e.*, $10,000 "investment in the contract") divided by ($18,000 "expected return") of each payment. Note that in such a situation the amount to be excluded from income over the annuitant's life might be either more or less than the contract's cost. Short-lived annuitants can lose out under the new rule as they could under the 3 per cent rule; long-lived annuitants, who could never exclude more than cost under the 3 per cent rule, now get a chance to beat the government, though this may be of little comfort to those who lose.

2. In application, § 72 may be more complicated than the examples given above. Adjustments will be necessary if (a) amounts have been received under the contract that were tax-free under prior law or under other sections of the 1954 Code, (b) the contract provides for payments that are related to the annuitant's life expectancy but also guarantees that a specific amount will be paid in any event ("refund annuities"), or (c) there is more than one annuitant ("joint and several annuities"), or (d) the contract was transferred for a valuable consideration.

3. By virtue of § 72(f)(1), the annuitant can include as part of his "investment in the contract" any premiums paid by his employer for the contract, if the payments were includible in his income. See the *Drescher* case, *supra*, p 36; § 403(b).

4. See "The Income Tax Treatment of Pensions and Annuities," by the Division of Tax Research, Treasury Department, reprinted in Hearings before the House Ways and Means Committee, 80th Cong., 1st Sess., on Proposed Revision of the Internal Revenue Code, 1947, Part 5, pp. 4001-4004.

5. Compensation for Personal Injuries or Sickness

Note: Section 22(b)(5) of the 1939 Code excluded from gross income compensation for personal injuries or sickness, whether received as damages, under a workmen's compensation act, under a policy of health or accident insurance, or as a military pension or annuity.

Section 104 of the 1954 Code re-enacts § 22(b)(5), except as to amounts received by an employee, through health or accident insurance, that are attributable to contributions by the employer that were not includible in the employee's gross income. Such amounts are taxed to the employee unless they meet the requirements of § 105 of the 1954 Code, which has no counterpart in the 1939 Code.

SIMMS v. COMMISSIONER

U. S. Court of Appeals, District of Columbia Circuit, 1952
196 F 2d 238

Before EDGERTON, WILBUR K. MILLER and FAHY, Circuit Judges.

FAHY, Circuit Judge

Petitioner Joseph B. Simms seeks reversal of a decision of the Tax Court of the United States to the effect that he owes a deficiency of income tax for the year 1945 in the sum of $572.71 His position is that the income which resulted in the tax was in legal contemplation received for physical disability incurred in the line of duty as a member of the Fire Department of the District of Columbia Accordingly, he contends, it was no part of his taxable income because Section 22(b) (5) of the Internal Revenue Code exempts amounts received "under workmen's compensation acts, as compensation for personal injuries or sickness." The respondent, Commissioner of Internal Revenue, ruled that the income was paid to petitioner as a result of his retirement for age and not for disability. If this is right there is no controversy the deficiency is due. The Tax Court agreed with the Commissioner that petitioner was retired for age and therefore his retirement pay is not attributable to disability.

The District of Columbia Code, § 4-501-517, D.C Code (1940), as amended, Supp. VII (1949), provides that firemen may be retired with compensation to be paid from the Policemen and Firemen's Relief fund (1) by reason of permanent disability incurred in line of duty, or (2) after twenty-five years' service, under certain conditions, or, (3) having reached the age of sixty years, in the discretion of the Commissioners.

Petitioner was retired under an order of the Board of Commissioners of the District, dated January 31, 1942, reciting that he and others of the Fire Depart-

ment, "having reached or passed the age of 64 years" are retired, and "are granted relief . . . payable from the Policemen and Firemen's Relief of the District of Columbia. . . ." Petitioner's relief was stated to be the sum of $187.50 per month, which petitioner states was 50% of his salary, in which event it was the maximum permitted by law. § 4-507, D.C. Code (1940). On April 20, 1948, the Commissioners by a further order recited that at the time of his retirement petitioner, and others,

were suffering from physical disabilities which were incurred in the line of duty to such an extent that had they not been retired when they were, for age, they would have been retired for physical disability incurred in the line of active Fire Department duty. . . .

It appears independently that prior to retirement petitioner had suffered physical disability in line of duty. The extent of this disability, however, except that it was permanent, has never been ascertained or translated by administrative action into an award of compensation or retirement pay for disability. See footnote 1, *infra.*

Notwithstanding that both the 1942 and 1948 orders make clear that petitioner was retired not for disability but for age, he contends that since he had become permanently disabled it was the duty of the Commissioners to retire him for disability under § 4-507, D.C. Code (1940).[1] Therefore, he continues, a vested right to disability retirement accrued and the determination made in connection with his retirement that he should receive 50% of his salary is in legal effect an award of that amount for disability. We are unable to accept this view for two reasons. In the first place there has been no determination by the Commissioners of the extent of disability as a basis for fixing an amount of relief for disability. See *Waller* v. *United States,* 1950, 86 U.S. App. D.C. 93, 180 F.2d 194, 16 A.L.R.2d 1328 In the second place, even though, as petitioner argues, the Federal authorities are not bound by the interpretation of the situation made by the District authorities, namely, that he was retired for age, nevertheless it is our view that the correct interpretation for Federal purposes is that petitioner was retired for age. Therefore the income he received as a consequence was not paid to him "under workmen's compensation acts, as compensation for personal injuries or sickness," Section 22(b) (5), supra, and is not excludable from his gross income in the process of arriving at his Federal income tax.

Affirmed.

Note

1. In *Allen* v. *Spencer,* — F.2d — (D C. Cir 1954), a group of retired District of Columbia police and firemen sued the District Commissioners to substitute for their retirement orders based on age and length of service, new orders based on disability. The Court held that any objections to the original orders should have been made in accordance with the prescribed administrative procedures when the orders were issued.

[1] This section reads in pertinent part

"Whenever any member of the . . . fire department of the District of Columbia shall become so permanently disabled through injury received or disease contracted in the line of duty as to incapacitate him for the performance of duty . . ., he shall . . . be retired from the service thereof and be entitled to receive relief from the said policemen and firemen's relief fund, District of Columbia, in an amount not to exceed 50 per centum per year of the salary received by him at the date of retirement . . ."

In *Prince* v. *United States*, 119 F. Supp. 421 (Ct. Cl 1954), the court held that military retirement pay came within § 22(b) (5) of the 1939 Code, although the recipient was retired for age, where he was qualified for retirement (on the same pension) for disability in line of duty Apparently the officer had chosen to be retired for age (in 1943) so as to be eligible for recall to active duty, whereas a disability retirement would have barred a return to duty.

2. The 1954 Code includes a new provision, § 37, granting a credit for "retirement income." The credit, which will be examined further, *infra*, p. 194, is subject to a number of qualifications; the complete exclusion of disability payments, where available, will be more advantageous to the taxpayer.

3. The proceeds of many tort claims will be excluded by § 104. If the injured party recovers a lump sum for medical expenses, pain and suffering, and the loss of past and future earnings, will the entire amount be excluded? Does § 104 serve to exclude amounts paid by a tortfeasor to the taxpayer for loss of consortium or for loss of his child's earning capacity? Would compensation for personal injury be taxable in the absence of § 104? See *supra*, p. 75. A pension, even if not based on disability, may be exempt as a gift. An example is L.O. 1040, C.B. No. 3, p 120 (1920), relating to pensions paid to retired teachers by the Carnegie Foundation for the Advancement of Teaching.

4. The significance of § 104's introductory clause, relating to § 213, will become apparent when § 213 is encountered, *infra*, p. 158.

EPMEIER v. UNITED STATES

U. S. Court of Appeals, Seventh Circuit, 1952
199 F.2d 508

Before MAJOR, Chief Judge, and DUFFY and LINDLEY, Circuit Judges.

LINDLEY, Circuit Judge.

Plaintiff's action to recover an income tax paid by him for the year 1945 having resulted in judgment for defendant, he appeals. The facts are undisputed. For several years, plaintiff had been employed by the Lincoln National Life Insurance Company. During the first six months of 1945, while ill, he was paid by the company, $1800 in sickness benefits. Plaintiff did not include these payments in his income tax return, believing, as he said, that they were exempt from taxation under Section 22(b) (5) of the Internal Revenue Code then in effect. 26 U.S.C. 1946 Ed. § 22(b) (5). The Commissioner, in redetermining the tax liability, included in plaintiff's gross income the entire amount received by him for sickness benefits, resulting in a tax deficit. Plaintiff paid the additional tax assessed, filed a claim for refund, and, upon denial of the latter, brought the present suit.

The employer has statutory authority to engage in the business of insuring risks relating to life and health, and was, in the year 1945, as well as in earlier years, engaged in writing disability insurance as compensation for personal injuries or sickness. It had in effect a life and health insurance plan for its employees, pertinent provisions of which follow.

Those full-time salaried Home and Branch Office employees . . . who, . . . at the time of employment . . pass a satisfactory medical examination, are . . . eligible for free sickness and death benefits. . . Applicants . . . unable to pass . . . may in exceptional cases be engaged as temporary employees, . . . not entitled to sickness . . . benefits If at some future time such temporary employees are able to pass . . . they will be transferred to the permanent salary roll. . . . It is our general rule that an employee whose disability continues beyond expiration of his sickness benefit period, will be

removed from the payroll, and future sickness benefits will not be paid. . . . The administering of the sickness and death benefit plan rests with the Office Administration Department. . . The sickness benefits . . . shall not accrue in favor of any employee who . . . is paid compensation under any Workmen's Compensation Act for illness or disability. . . . The Company, however, will pay to such employee . . the difference between the amount of compensation . . and the amount specified herein, whenever the compensation . . is less than the amount specified herein. . . The Company has provided its employees with an unusually liberal plan of sickness benefits. The payment of these benefits presupposes that the employee is carrying out the instructions of the Company doctor or the employee's private physicians during the period of recuperation. The Company reserves the right to cancel sickness benefits being paid employees, if there is an indication that the fullest cooperation is not forthcoming from the employee . . .

The plan provided also for medical facilities, hospitalization, surgery, retirement plan and life insurance It concluded with the statement that

Constructive suggestions from employees are always welcome Suggestions of the following nature are particularly solicited: Savings in cost of operation, improvements in service to policyholders, expediting the work without decreasing the quality, an increase in business, and improvement in safety and health of employees

Payment of benefits was not required by statute. Plaintiff made no contribution by way of premium other than the labor and service he rendered in his employment.

The only question presented is whether, under Section 22(b) (5) of the Internal Revenue Code, 26 U.S.C. 1946 Ed § 22(b) (5), in effect in 1945 and under the agreed facts, the sickness benefits paid plaintiff, constituted amounts "received through . . . health insurance . . . as compensation for . . . sickness." Plaintiff claims that they are within this statutory definition, while defendant insists that they are not.

Insurance, of ancient origin, involves a contract, whereby, for an adequate consideration, one party undertakes to indemnify another against loss arising from certain specified contingencies or perils. Fundamentally and shortly, it is contractual security against possible anticipated loss. Risk is essential and, equally so, a shifting of its incidence from one to another. *Physicians' Defense Co.* v. *Cooper*, 9 Cir., 199 F. 576; *Jordon* v. *Group Health Ass'n*, 71 App. D.C. 38, 107 F.2d 239, *Old Colony Trust Company* v *Commissioner of Internal Revenue*, 1 Cir., 102 F.2d 380, *Alliance Ins. Co.* v. *City Realty Co., D.C.*, 52 F.2d 271; *Meyer* v. *Building & Realty Co.*, 209 Ind. 125, 196 N.E. 250, 100 A.L.R. 1442; 44 C.J.S., Insurance, § 1, p. 471, 29 *Am. Jur.* 47, Sec. 3, 1 Bouvier's *Law Dict.*, Rawle's Third Revision, p. 1613; Webster's *International Dictionary*, 2d Ed. 1942, p. 1289.

In determining whether the benefits under consideration are within the statute and in accord with these general principles, we observe, first, that the plan under which the payments were made is not in the physical form of ordinary formal insurance contracts sold commercially, but instead is included in a company document with other subject matters having to do with the employer-employee relationship. But we know of no reason why insurance protection must be expressed in a formal policy.

True, no money was paid by the employee for the protection, but we think full and complete consideration lay in the contract of employment, by virtue of which, when the employee entered employment and passed a medical examination,

he automatically became insured. In other words, the assumption of the risk involved and indemnity against it were part and parcel of the compensation payable to the employees by the employer. We perceive of no reason why this is not as adequate a consideration for an insurance contract as a specified cash premium. We find no implication in the language of the document that the employer was providing a gratuitous benefit but, on the contrary, the intimation is that the indemnity provided supplemented and added to the terms of employment, by assuring the employees of sickness benefits under the conditions specified.

A medical examination is a common insurance requirement. The distinction, in the plan here, between employees who did not pass and those who did is closely akin to the ordinary insurance requisites of risk measurement and assumption.

Though, as to life insurance benefits, under the plan, each employee was required to name a beneficiary, there was no such requirement for sickness benefits, obviously, however, we think, because they were to be paid only to the employee during his lifetime. The provision for termination satisfies the normal requisite of an insurance contract, by defining the risk in terms of time. Provision is made for instances of successive illnesses, thus defining within definite limitations the total benefits for which the company agrees to be liable. It is provided that in case of payment of workmen's compensation for injuries or illness the company will not pay the benefits except to the extent of any excess in them over the compensation payments The plan warrants no inference that the amount payable represents anything other than sickness benefits, payable only when wages and salaries could not be earned. It makes the basis for the benefits, the length of service and compensation of the employee, factors consistent with the ordinary provisions of a formal insurance contract. The employee is required while ill, to follow the instructions of his physician or the company's physician, a provision closely akin to features of ordinary insurance, where the insurer is interested in avoiding extension of any resulting loss beyond that which can be reasonably avoided. We find in these and other provisions attributes of and incidents to insurance in every sense of the word.

Though the benefits are described as free, if the nature of the contract be given careful consideration, it is readily apparent that the word is used not in the sense of a donation or gratuity but rather with the meaning that no premium other than that included in the employee's services is to be paid. Benefits paid out under such an agreement are obviously a part of the employer's corporate operating costs, which include social security and unemployment taxes, workmen's compensation insurance, employer's liability insurance, maintenance of satisfactory working conditions and many other elements, all of which go into the make-up of the total cost. We conclude that "free" life insurance, "free" sickness benefits, "free" medical facilities, as used here, mean simply that these matters are furnished as additional factors of the employee's compensation, free of any money advancement. The provisions of Section 22(b) (5) undoubtedly were intended to relieve a taxpayer who has the misfortune to become ill or injured, of the necessity of paying income tax upon insurance benefits received to combat the ravages of disease or accident.

As we have indicated, we know of no reason why this insurance, when provided as a part of the contract of employment between employee and employer,

must follow any stereotyped or conventional form. Surely there is no legal magic in form, the essence of the arrangement must determine its legal character. We conclude that the fact that there is no formal contract of insurance is immaterial, if it is clear, as here, that, for an adequate consideration, the company has agreed and has become liable to pay and has paid sickness benefits based upon a reasonable plan of protection of its employees.

The District Court was of the opinion that, though the plan was "an incident of the employer-employee relationship as the plaintiff points out," it did not create a contractual liability to pay "health insurance," as there was no consideration for such a promise. This conclusion, it felt, was supported by the further provision that "the contents" of the document "may be changed from time to time as better thoughts occur."

We have pointed out wherein we think adequate consideration lay in the agreement of employment Though no formal written contract of employment existed, the plan became effective, immediately and automatically, upon the employee's entering service and passing satisfactorily a medical examination. As we view it, all provisions then became binding upon the respective parties. As a consequence, if an employee became ill, he had a right to sickness benefits as a part of his contract. We do not doubt that had the employer refused payment, the employee might have enforced this liability.

The provision that the terms of the agreement may be changed does not impinge upon the soundness of this conclusion. Employment contracts are always subject to revision. If the terms of such changes are not satisfactory to the employee, he may terminate his service; he can not be forced to work under conditions repugnant to his sense of what is fair and proper. It is obvious also, we think, that no change could be made to defeat or lessen the liability, once it had attached. In the provisions lies the implicit agreement to pay the benefits until and unless the terms should be modified; no such modification could reduce the liability for sickness benefits after illness had intervened.

We conclude that the amount paid the taxpayer for sickness benefits was exempt from income tax under the statute. The judgment is reversed with directions to proceed in accord with the announcements herein contained.

Note

1. The taxability of amounts received by an employee through health and accident insurance, where the amounts are paid by the employer or are attributable to contributions by him that were not includible in the employee's gross income, has been substantially changed by § 105 of the 1954 Code. The *Epmeier* case opened up the possibility that an employer might allow executives or stockholder-employees to go to Florida on "sick leave" every winter, without reducing their regular compensation. The Treasury, conscious of this possibility, announced shortly after the case was decided that it would not be followed (Press Release, March 26, 1953, IR-047).

> The statute was originally enacted at a time when provision for compensation for personal injuries or sickness was generally made by individuals by taking out individual policies with insurance companies, the premiums on which were paid out of taxable income. In more recent years many employers have provided a similar type of protection for their employees by making direct payments to them of compensation during periods of sick leave. The Bureau deems that it was the intention of Congress that only payments which are truly "insurance" payments should be excluded from gross income under section 22(b) (5) of the [1939]Code.

In the absence of further clarification from the Congress, the Bureau does not believe that the exclusion under the statute should be extended by administrative action to amounts received by employees as sick leave where such amounts are based in whole or in part on their regular wages on which their fellow employees who are at work are taxable

2. Section 105(e) makes it clear that amounts received under a "plan" of the kind involved in the *Epmeier* case are to be treated as amounts received through accident or health insurance, and the employer need not be an insurance company to qualify. How formal must the employer's practice be to come within the term "plan?" Sections 105(b), (c), and (d) set out the extent of the exclusion of amounts received through health or accident insurance, if paid by the employer or attributable to contributions by him that were not includible in the employee's gross income. Amounts that are not within these exclusions are taxable, § 105(a). Would amounts that come within § 105(c) be taxable as "income" in the absence of this exclusion?

3. Section 106 puts on an equal footing amounts paid by an employer for individual accident and health insurance policies and amounts paid for group policies. Previously, the Internal Revenue Service took the position that payments for individual policies constituted additional compensation to the employees, but that payments for group policies did not.

6. *Tax-Free Interest*

> **Note** Section 22(b)(4) of the 1939 Code, relating to interest on federal, state, and municipal obligations, was re-enacted without substantive change by § 103 of the 1954 Code.
> See Regs. 118, Sec. 39.22(b)(4)-1

COMMISSIONER v. SHAMBERG'S ESTATE

U. S. Court of Appeals, Second Circuit, 1944
144 F.2d 998

Before Augustus N. Hand, Chase and Frank, Circuit Judges.

Augustus N. Hand, Circuit Judge.

This proceeding involves deficiencies in income taxes assessed against Alexander J. Shamberg by the Commissioner of Internal Revenue for the years 1937 and 1938. Shamberg died during the pendency of a proceeding in the Tax Court to review the assessment and his administrator was substituted as a party. The Tax Court determined that there were no deficiencies and the Commissioner filed this petition to review its decision which a majority of this court holds should be affirmed.

The question presented is whether the interest received by Shamberg in the years 1937 and 1938 on bonds of the Port of New York Authority (hereinafter called the "Authority") known as Interstate Bridge and Tunnel Bonds—Series E, and General and Refunding Bonds—First Series, is subject to income taxes. . . .

In the compact pursuant to which the Authority was created the states* agreed to make annual appropriations (not in excess of $100,000 for each state) for expenses of the Authority until revenues from its operations were sufficient to meet its expenses. These annual appropriations were discontinued in 1934 because the revenues from the bridges, the Holland Tunnel and Inland Terminal had become sufficient.

The states have vested in the Authority the power to make and enforce such rules and regulations as it may deem convenient or necessary for the operation

* New York and New Jersey. [Ed.]

and maintenance of the various bridges and tunnels within its jurisdiction. Penalties were provided for their violation, and the inferior criminal courts of the states were given jurisdiction to enforce such penalties.

The State of New York has enacted legislation giving the Authority jurisdiction over all New York residents, corporations and property owners for the purpose of its investigations or hearings in connection with its planning for port improvement, and also for the purpose of all such other action or powers as it may be empowered to exercise. Such legislation further provided that it should have the power to subpoena such persons or corporations, failure to reply being punished in contempt proceedings upon its application to the Supreme Court of New York.

The State of New York has further enacted that the Authority have power to issue orders after hearings requiring obedience of persons subjected to the jurisdiction of the Authority by the statute. The statute further provided that the Authority should have power to enforce its orders by commencing mandamus, injunction, or other appropriate proceedings in the Supreme Court of the state against violators.

In the operation of its bridges and tunnels the Authority maintains a uniformed police force, the members of which are designated by statute as regular police and peace officers of both states. The property of the Authority and the bonds and other securities issued by it are exempt from state taxation in both states. It has the power of condemnation, its employees may join the New York State Retirement System and the Authority has been held to be immune from suit. No tax or assessment is levied within the Port District by or on behalf of the Authority.

The decedent Shamberg, if alive, would have testified at the hearing that he acquired his bonds upon legal advice that the income was immune from federal income tax under the Constitution and that it was further exempt from such taxes under existing statutes and regulations. . . .

The Commissioner first argues that the interest on the bonds of the Authority is taxable under the ruling in *Helvering* v. *Gerhardt*, 304 U.S. 405, 58 S. Ct. 969, 977, 82 L. Ed. 1427.† It is really enough to answer this argument to say that Justice Stone, who wrote the opinion of the majority of the Supreme Court, said in the very last paragraph:

Expressing no opinion whether a federal tax may be imposed upon the Port Authority itself with respect to its receipt of income or its other activities, we decide only that the present tax neither precludes nor threatens unreasonably to obstruct any function essential to the continued existence of the state government.

. . . It is next argued by the Commissioner that in enacting Sec. 22(b) (4) (A) exempting "interest upon . . . the obligations of . . . a State . . . or any political subdivision thereof . . . ," Congress was only excluding from income tax such interest as could not under constitutional doctrines prevailing in 1913, when the exemption act was originally passed, be lawfully taxed. In support of this the Commissioner quotes the statement of Honorable Cordell Hull, who sponsored the measure in the House, in which he said the exemption was inserted "not desiring to raise any Constitutional question or to arouse the antagonism of any of the states." This quotation is relied upon as indicating that Congress

† In this case it was held that a federal income tax on the salaries of employees of the Port Authority was constitutional. [Ed.]

intended to limit the scope of the exemption to income thought at the time to be beyond the taxing power. It is argued in this connection that no such institutions as the Port Authority were then in contemplation of Congress, since the Port Authority (established in 1921) was the first of such bodies to exist. Doubtless it is true that Congress had no such specific form of state organization in mind, but that adds nothing to the solution of the problem. The only question is whether Congress would have intended the exemption to apply if these new forms of state activity had existed; in other words, what, in view of the general setting, is the reasonable interpretation of the words used. That there was no intention strictly to limit the exemption to what was thought to be beyond the taxing power is shown by the statement of Mr. Hull that it was the purpose of the enactment not only to avoid raising "any constitutional questions" but also to avoid arousing "the antagonism of any of the states." We think this statement involved a much broader purpose than to crystallize the constitutional doctrine of that particular time in the statute. Indeed, the existence of any such purpose is negatived by the fact that the limitations of constitutional power were by no means certain or thought to be certain at the time the act was passed. It seems to us entirely unreal to limit what we believe was the broad purpose to exempt the bonds of states and their agencies when engaged in customary governmental activity, particularly when one of the main purposes of the exemption provision was to facilitate the passage of the Sixteenth Amendment. . . .

The Commissioner also relies on *State of South Carolina* v. *United States*, 199 U.S. 437, 26 S. Ct. 110, 50 L. Ed 261, 4 Ann. Cas. 737, as indicating that the exemption should not be applied to state activities which are not wholly essential to its sovereignty. The argument is based on the claim that the exemption provision must be interpreted in the light of that decision, which it is said governed the extent of the constitutional power to tax at the time when the exemption statute was enacted. We have already said that, in our opinion, the exemption provision was not limited to cases where federal taxation was constitutionally possible in 1913, but covered a broader field where taxation of obligations was doubtful and subject to contention by the states. But even assuming the government's interpretation of the exemption provision as merely enacting the constitutional doctrine as of 1913, we do not think that the *South Carolina* case would permit taxation of such a state agency as the Port Authority. That decision related only to the power of the government to impose the usual license taxes upon dispensaries established by the state for the wholesale and retail sale of liquor. It held that such a state agency was subject to the tax, and that the constitutional limitation did not extend to instrumentalities used by the state in carrying on an ordinary private business. This was plainly a commercial business which resulted in one year of a profit of about $500,000 which was divided between the state and local municipalities. Such a holding seems to us far from indicating that it was ever applicable to agencies having customary governmental activities, such as development of roads, bridges, and waterways entered upon with no profit motive. . . .

But the regulation we have quoted [now 39.22(b)(4)-1 of Regs. 118] makes our position still clearer. It defines political subdivision as one "to which has been delegated the right to exercise part of the sovereign power of the State," and while it says it may for the purpose of exemption include "special assessment

districts . . . such as road, water, sewer, gas, light, reclamation, drainage, irrigation, levee, school, harbor, port improvement, and similar districts and divisions of the State," it does not preclude political subdivisions which do not possess the power of taxation but generally exempts interest on "Obligations issued by or on behalf of the State or Territory or a duly organized political subdivision acting by constituted authorities empowered to issue such obligations."

We think that this regulation covered bonds of such a public body as the Authority, and was within the scope of the statute. When it gave immunity to bonds issued "on behalf of" the state as well as those issued by the state itself, those words certainly meant something in addition to the words "issued by," and what can the added words refer to except bonds issued by a state agency to carry out a public purpose where the latter is not named as obligor on the bonds. We need not claim that this public purpose may be a commercial enterprise for mere profit, as distinguished from a public activity of the traditional sort in which the Authority is engaged. It has many times been held that bonds issued by municipalities are within the exemption of Sec. 22 (b) (4) (A) even though payment is to be made only out of special funds and the credit of the municipalities was not pledged....

Order affirmed

[The dissenting opinion of FRANK, Circuit Judge is omitted.]

Note

1. While § 103(a) raises troublesome questions of interpretation in such borderline circumstances as these, it points up far more important issues of constitutionality and policy. Must the federal government grant an exemption to the interest on state and municipal bonds? Rottschaefer, "Federal Taxation of State and Municipal Bond Interest," 20 *N.C.L. Rev.* 141 (1942); Rakestraw, "The Reciprocal Rule of Governmental Tax Immunity—A Legal Myth," 3 *Okla. L. Rev* 131(1950). If the exemption is a matter of grace, can it be defended? Note first that high bracket taxpayers can derive an unusual benefit by investing in "tax exempts." The table below (adapted from the Prentice-Hall Lawyer's Weekly Report, May 4, 1953) shows the rate of *taxable* interest that would be required to produce a "take-home" or after-tax yield of 2 per cent and 4 per cent for a married couple at various levels of taxable income under the 1952 rates.

Taxable income* (married couple joint return)	Tax bracket rate (1952) per cent	TAX-EXEMPT BOND YIELD 2%	4%
		Rates of taxable interest necessary to yield same amount after tax	
$4,000	22.2	2.57	5.14
$ 4,000– 8,000	24.6	2.65	5.32
16,000– 20,000	38.0	3.23	6.45
76,000– 88,000	72.0	7.14	14.29
100,000–120,000	77.0	8.70	17.39
400,000–	92.0	25.00	50.00

*After deductions and personal exemptions The table assumes that the amount of tax-exempt interest, when excluded from taxable income, would not bring the taxpayer into a lower bracket. If it did, the advantage would be slightly less than shown. In each line the bracket rate applies to amounts over the first income figure and not over the second

For the higher brackets, it is clear that no industrial or other private bonds can compete with the tax-exempts in net yield. By the same token, however, the state or

municipality is enabled to sell its securities at a lower interest cost. Whether these issuers gain as much as the Federal government loses is an open question. One writer has pointed out the possibility that federal taxation of state and municipal bond interest, while increasing the progressivity of the federal tax, might cause state and municipal agencies to rely more heavily on regressive taxes or to reduce services to lower income groups. Bronfenbrenner, "Economic Effects of the Taxation of Government Securities," 35 *Ill. L Rev.* 293 (1940). The questions of policy were vigorously debated in 1942 before the House Committee on Ways and Means, when the Treasury campaigned unsuccessfully for a repeal of §22(b)(4) Hearings on Revenue Revision of 1942, House Committee on Ways and Means, 77th Cong., 2d Sess., Vol. 2, pp. 1479–1610, Vol. 3, pp. 3079–3160; see also Hearings on H R. 7378, Senate Finance Committee, 77th Cong., 2d sess., Vol 1, pp. 539–673; Simons, *Personal Income Taxation* (1938) 170–184.

See Butters, Thompson, and Bollinger, *Effects of Taxation. Investments by Individuals* (1953), which, after a study of the holdings of tax-exempt securities by wealthy investors, concludes (p. 298) that the tax structure provides a strong incentive for such individuals to invest in tax-exempt securities but that their holdings are substantially smaller than might have been anticipated·

> Among the factors responsible for the failure of top bracket individuals to exploit fully this opportunity of receiving tax-exempt income, the following appear to have been important· the failure of these securities as a class to offer much opportunity for capital appreciation in recent years, their low yield at 1949 interest rates; the specialized knowledge which is required for intelligent investments in state and local bonds, and fear of capital loss from such investments.

At several points the Code strikes indirectly at tax-exempt bonds. Interest on loans to buy or carry such securities may not be deducted, *infra*, p. 178. Other expenses (such as safe deposit box rentals, fees for investment advice, *etc.*) related to such securities are disallowed by § 265(1). See *National Life Ins. Co.* v. *United States*, 277 U.S. 508 (1928); Powell, "The Remnant of Intergovernmental Tax Immunities," 58 *Harv. L. Rev.* 757, 796–803 (1945).

2. In recent years there has been a growing use of "industrial" municipal bonds—issued to finance the construction of factories that are then rented to private industries. Often the municipality's credit is not pledged, the bonds being payable from the rentals. An unusual provision of one such issue is that the bonds may be converted by the holder into the common stock of the lessee enterprise. Can tax immunity be defended for such bonds? See Note, 66 *Harv. L. Rev.* 898, 904–906. Private real estate investors may find it hard to compete with real estate developments that are financed by tax-exempt bonds, especially since the rentals paid to the municipality (out of which the interest and principal are to be paid) are also tax exempt. A somewhat analogous attempt to exploit the tax exemption of charitable organizations was eliminated by the Revenue Act of 1950 See Brown, "The New Restrictions on Charitable Exemptions and Deductions for Federal Tax Purposes," 13 *U. of Pitt. L Rev.* 623 (1952). The House version of the 1954 Code included a provision prohibiting the deduction of rent paid for the use of property acquired or improved by the issue of so-called industrial development revenue bonds (where the credit of the issuing authority was not pledged), but the Senate would not agree and the provision was eliminated. The Conference Report states that "it is recognized that a serious abuse may be developing where the Federal income tax exemption granted interest on State and local governmental obligations is used for purposes of attracting new industry," but that the proposal might "have had the unintended result of affecting adversely certain proper governmental functions, such as the operation of municipal wharf and storage facilities, municipal airports, and similar operations" H. Rept. No. 2543, 83d Cong., 2d sess., p 33. See Ratchford, "Revenue Bonds and Tax Immunity," 7 *Nat'l. Tax J.* 40 (1954).

3. The salaries of state and municipal officers and employees are no longer immune to federal taxation. The Port of New York Authority was the guinea pig for Treasury experimentation here too; in the *Gerhardt* case, cited above, it was held as to employees of the Authority that,

> A nondiscriminatory tax laid on their net income, in common with that of all other members of the community, could by no reasonable probability be considered to preclude the performance of the function which New York and New Jersey have undertaken, or to obstruct it more than like private enterprises are obstructed by our taxing system. Even though, to some unascertainable extent, the tax deprives the states of the advantage of paying less than the standard rate for the services which they engage, it does not curtail any of those functions which have been thought hitherto to be essential to their continued existence as states. At most it may be said to increase somewhat the cost of the state governments because, in an interdependent economic society, the taxation of income tends to raise (to some extent which economists are not able to measure, see *Indian Motorcycle Co.* v. *United States*, 283 U.S. 570, 581, 51 S. Ct. at 605, footnote 1) the price of labor and materials. The effect of the immunity if allowed would be to relieve respondents of their duty of financial support to the national government, in order to secure to the state a theoretical advantage so speculative in its character and measurement as to be unsubstantial. A tax immunity devised for protection of the states as governmental entities cannot be pressed so far. (304 U.S. 405, 420).

Thereafter the federal income tax was levied on all state and municipal officers and employees, at the same time Congress consented (by Title I, Section 4 of the Public Salary Tax Act of 1939, 53 Stat. 575) to state taxation of its officers and employees. Shaw, "The Public Salary Tax Act of 1939," 27 *Calif. L. Rev.* 705 (1939). There has never been an attempt, however, to tax the state's *own* income. See § 115. Could any part of such income be constitutionally taxed? See *New York* v *United States*, 326 U.S 572 (1946). Section 511(a)(2)(A) imposes a tax on the "unrelated business income" (*e.g.*, that derived from industrial or commercial activity) of state colleges and universities. See Chapter 7, Sec. C.

4. The interest on all obligations of the United States and its instrumentalities issued after March 1, 1941, when the Public Debt Act of 1941 was enacted, is fully subject to federal income tax. Many pre-1941 obligations, however, are exempt from the normal tax, and a few are exempt from both normal tax and surtax. Partially tax-exempt interest is responsible for the now otherwise inexplicable dual system of normal tax and surtax, a system which outlived its usefulness when the exemptions, once higher for the surtax than for the normal tax, were equalized.

Before the enactment of the 1954 Code, the statute provided that the normal tax should be computed on "normal tax net income" (including partially tax-exempt interest) and the surtax on "surtax net income" (excluding such interest). The 1954 Code achieves the same result with greater simplicity by combining the normal tax and surtax and imposing both upon "taxable income" (including partially tax-exempt interest), and then allowing (Section 35) a credit of 3 per cent (the normal tax rate) for such interest. To satisfy the terms of such obligations, it is still necessary to designate part of the income tax as normal tax (from which the obligations are exempt) and the rest as surtax This is done in § 1(a).

5. An interesting, but minor, episode in this constitutional area is the taxability of the salaries of federal judges The last sentence of § 22(a) of the 1939 Code explicitly included* all judicial salaries. Article III, Section 1, of the Constitution provides that federal judges "shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office." This injunction, it was held in 1920, prohibited the levy of a federal income tax on a judge's salary; the judge in question had been appointed in 1899, but the Court did not rest its decision on the fact that his appointment antedated the income tax. *Evans* v. *Gore*, 253 U.S. 245 (1920). The subsequent litigation on this subject is reviewed in *Baker* v. *Commissioner*, 149 F.2d 342 (4th Cir. 1945), cert. denied 326 U.S. 746, holding that "a judge who takes office under an established Congressional policy of taxing his salary becomes entitled only to the salary prescribed by statute less income taxes . . ." Such a policy was established by Congress in the Revenue Act of 1918, the court also held that a post-1918

* The clause was omitted from § 61 of the 1954 Code as unnecessary.

increase of rates, or a restoration of tax after a reduction, did not improperly diminish the salary. *Evans* v. *Gore,* therefore, could have continued vitality only for the vanishing tribe of pre-1918 judges. Referring to that case, Holmes once wrote.

This morning brings a surprise—I was notified some time ago that prepayment of tax by companies issuing bonds counted as part of my income [see *infra,* p. 75] and that a small additional tax was due from me for two past years. I wrote back that I should pay as soon as I received my bill and that I didn't know it made any difference that by the decision of our court (I dissenting) I had overpaid by some thousands, as my salary was taxed. Answer comes that if I apply for a refund of it I shall receive prompt attention—I don't quite know whether to or not. The wiley [sic] Brandeis has had overpayment credited on a tax, I believe" 1 *Holmes-Laski Letters* (1953) 335–6.

Judge L. Hand has also written on *Evans* v. *Gore.*

Again I have pondered on what it is to be a Bolshevik, and once I learned There was a time when Congress thought it could reach the salaries of my brothers and myself by an income tax, until the Supreme Court manfully came to our rescue. A judge of much experience was talking with me one day about it, I was wrong enough in my law, as it afterwards turned out, and disloyal enough in temper to my class, to say that I thought the tax valid "Do you know anything about it?" he asked with some asperity "No," said I, "not a thing." "Have you ever read Taney's letter?" "No," said I again, for I was innocent of any learning. "Why, they can't do that," said he, "they can't do that, that's Bolshevism." And so it turned out, to my personal gratification, since when, freed from that Red Peril, I have enjoyed an immunity which the rest of you, alas, cannot share. [This was written in 1930.] Far be it from me to suggest that there are graver thrusts at the structure of society than to tax a Federal judge. Properly instructed, I have recanted my heresy, and yet there hangs about "Bolshevism" a residual vagueness, a lack of clear outline, as of a mountain against the setting sun, which only goes to show, I suppose, that a fundamentally corrupt nature can never be wholly reformed. L. Hand, *The Spirit of Liberty* (Dillard ed.) (1953) 77–78

7. *Non-taxable Exchanges*

Note· Section 112(n) of the 1939 Code, somewhat modified, was carried over as § 1034 of the 1954 Code. See Regs. 118, Sec. 39.112(n)-1.

HOUSE COMMITTEE ON WAYS AND MEANS,

82D CONG., 1ST SESS., H. REPT. No. 586

(reprinted in 51-2 C B. 357, 377)

Section 303* of this bill amends the present provisions relating to a gain on the sale of a taxpayer's principal residence so as to eliminate a hardship under existing law which provides that when a personal residence is sold at a gain the difference between its adjusted basis and the sale price is taxed as a capital gain. The hardship is accentuated when the transactions are necessitated by such facts as an increase in the size of the family or a change in the place of the taxpayer's

* The recommended provision became § 112(n) of the 1939 Code, somewhat modified, it is § 1034 of the 1954 Code. The bill was amended by the Senate to allow the taxpayer 18 months to occupy a newly constructed residence, instead of the 12 month period otherwise required The reason for this change was the Senate Finance Committee's feeling that "in the case of new construction the requirement of occupancy within 1 year appears . . not to be realistic, particularly during the present period of material and labor shortages." S Rept No. 781, 51-2 C B 458, 483.

employment. In these situations the transaction partakes of the nature of an involuntary conversion. Cases of this type are particularly numerous in periods of rapid change such as mobilization or reconversion. For this reason the need for remedial action at the present time is urgent.

Section 303 of this bill provides that when the sale of the taxpayer's principal residence is followed within a period of 1 year by the purchase of a substitute, or when the substitute is purchased within a year prior to the sale of the taxpayer's principal residence, gain shall be recognized only to the extent that the selling price of the old residence exceeds the cost of the new one. Thus, if a dwelling purchased in 1940 for $10,000 is sold in 1951 for $15,000, there would ordinarily be a taxable gain of $5,000 under existing law. Under this bill no portion of the gain would be taxable provided a substitute "principal residence" is purchased by the taxpayer within the stated period of time for a price of $15,000 or more. If the replacement cost is less than $15,000, say $14,000, the amount taxable as gain will be $1,000.

This special treatment is not limited to the "involuntary conversion" type of case, where the taxpayer is forced to sell his home because the place of his employment is changed. While the need for relief is especially clear in such cases, an attempt to confine the provision to them would increase the task of administration very much.

Note

1. Is § 1034 always advantageous to the taxpayer?

2. Section 1034 is modelled to some extent on § 1033. This section, which was introduced in an earlier form by the Revenue Act of 1921, provides that gain shall not be recognized if property is "compulsorily or involuntarily converted" (*i.e.*, destroyed, stolen or taken by eminent domain) and if the proceeds (*e.g.*, from damages or insurance) are used to acquire a similar property. The gain is "postponed" rather than obliterated, however, as a result of a corresponding "basis" provision, § 1033(c). As in the case of a new residence under § 1034, the newly acquired property (assuming that it costs exactly the same as the proceeds of the old) takes over the basis of the old property. It is possible, however, that the postponed gain will never be taxed. For one such situation, look again at § 1014(a).

3. See also § 1031(a). Note that it is limited to a barter and that, unlike §§ 1033 and 1034, it provides for the non-recognition of loss as well as gain. It has had a substantial impact on real estate transactions, since it permits the taxpayer to avoid recognizing a gain on a factory, for example, that is no longer suitable if he can exchange it for another. A sale of the old followed by purchase of a new plant will not qualify.

4. There are a number of other exchanges, especially of corporate securities, that do not give rise to gain or loss because of "non-recognition" provisions. Some of them will be taken up later.

Whenever the student encounters a "non-recognition" provision, he should be alert for a related provision assigning a "substituted" basis to the property whose acquisition causes the non-recognition of gain or loss.

Section B. Personal Deductions

Chapter 1 and Section A of this Chapter have set the stage for determining the taxpayer's *gross* income. Chapter 1 demonstrated how broad is the definition of

§ 61 and how diverse are the events that may give rise to income, it also showed that there are constitutional boundaries to what may be taxed. Section A of this Chapter was concerned primarily with certain receipts that Congress has chosen to exclude from gross income, notwithstanding its power to tax them, or most of them, if it chose. Both Chapter 1 and Section A of this Chapter are illustrative rather than exhaustive.

Once the taxpayer's *gross* income is ascertained, it becomes necessary to tabulate his deductions in order to arrive at *taxable* income. For it is *taxable* income upon which the tax itself is levied.

In listing the taxpayer's deductions, the student should always keep in mind that deductions are permissible only when authorized by statute or regulations. One of the most common errors into which the tyro can fall is to assume expenses and losses are deductible unless specifically denied, just as all income is caught up by § 61 unless excluded by statute or Constitution. If you sell your home at a loss, you will look in vain for a statute or regulation forbidding you—at least in terms more specific than § 262 to deduct the loss. It is nevertheless non-deductible, for it is not specifically authorized. This is an illustration of the old stereotype of the German attitude toward liberty. whatever is not permitted by law is forbidden.

Even when a deduction is found in the Code, the taxpayer will often be confronted by the adage that deductions are to be strictly construed against him. Why? Would it be more appropriate to apply the canon of construction advocated by Mr. Justice Holmes (on circuit) in *Johnson* v. *United States*, 163 F. 30, 32 (1st Cir. 1908):

> The Legislature has the power to decide what the policy of the law shall be, and if it has intimated its will, however indirectly, that will should be recognized and obeyed. The major premise of the conclusion expressed in a statute, the change of policy that induces the enactment, may not be set out in terms, but it is not an adequate discharge of duty for courts to say: We see what you are driving at, but you have not said it, and therefore we shall go on as before.

See Griswold, "An Argument against the Doctrine that Deductions Should Be Narrowly Construed as a Matter of Legislative Grace," 56 *Harv. L. Rev.* 1142 (1943).

For purposes of pedagogical convenience, the deductions allowed by the Code have been divided into two groups:

(1) *Personal deductions.* These deductions (including such items as medical expenses, alimony, interest, certain taxes, and others) are taken up in the pages that immediately follow this Note. This group is characterized by the fact that the taxpayer need not be engaged either in business or in a profit-making transaction to qualify for the deduction.

Another point of importance about this first group of deductions is that the taxpayer is granted an option with respect to them. He can either itemize them on the tax return or elect instead to take the "standard deduction" provided by §§ 141-144. (Election of the standard deduction also entails a waiver of certain credits. See § 36.) This optional deduction is 10 per cent of the taxpayer's "adjusted gross income" (roughly speaking, gross income less most business and similar expenses) but not to exceed $1000 or, in the unusual case of a married person filing a separate return, $500. Thus, if the taxpayer's personal deductions are small, or if he does not wish to trouble himself with an

itemization, he may elect the standard deduction. The standard deduction was adopted in 1944 as a means of simplifying the tax return, it does that, and for many taxpayers who are convinced that to itemize will be profitless it does away with the need to keep a record of these personal expenses. There is some risk in such a calculus, however, since one cannot be sure until the end of the year how great one's personal deductions will be. If the Christmas tree starts a fire, giving rise to a deduction for the property loss, a taxpayer who had planned to take the standard deduction may find out—too late to substantiate personal expenses paid in earlier months—that an itemization would be more advantageous.

(2) *Business deductions.* These deductions, which will be taken up in Chapter 3, arise in the course of the taxpayer's "trade or business" (a phrase that includes professions and other occupations) or in a transaction entered into for profit. Roughly speaking, the taxpayer is allowed to deduct all ordinary expenses and losses that grow out of his business and his transactions for profit. The standard deduction mentioned above may be elected *in addition to* the taxpayer's business deductions (with some minor exceptions noted in Ch. 3, Sec C.). As already seen, election of the standard deduction displaces *all* personal deductions

The standard deduction is widely used. For the taxable year 1949, it was claimed in lieu of an itemization of deductions on 42 out of 52 million returns, or 81 per cent. The use of the standard deduction is especially prevalent on the smaller returns and declines as income rises, since it may never exceed $1,000 Even so, about two-thirds of the taxable returns reporting adjusted gross income of $10-11,000 employ the standard deduction and almost one-half of those reporting $15-20,000 of adjusted gross income do so. The fraction declines to about one-tenth for returns with $50-60,000 of adjusted gross income.

It should be noted that the availability of the standard deduction depreciates the value of the personal deductions. Before it was adopted, the taxpayer who made charitable contributions or paid interest on a mortgage or real property taxes on his home received a tax concession that another taxpayer with equal income who made no contributions and rented a home did not get. Now, however, the two taxpayers will be on a par if the former one does not have personal deductions exceeding the standard deduction; and even if his deductions do exceed the standard deduction, the disparity between them is not as great as it was. To the extent that the personal deductions are a conscious instrument of policy, designed to encourage home ownership or philanthropy, their effect is less pronounced than before the standard deduction was created.

1. *Extraordinary Medical Expenses*

> ***Note:*** **Section 23(x) of the 1939 Code, allowing a deduction for extraordinary medical expenses, has been carried over, with several modifications, by § 213 of the 1954 Code.**

OCHS v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1952
195 F.2d 692

Before Augustus N. Hand, Chase and Frank, Circuit Judges.

Augustus N. Hand, Circuit Judge.

The question raised by this appeal is whether the taxpayer Samuel Ochs was entitled under Section 23(x) of the Internal Revenue Code to deduct the sum of

$1,456 50 paid by him for maintaining his two minor children in day school and boarding school as medical expenses incurred for the benefit of his wife. . . .

The Tax Court made the following findings.

"During the taxable year petitioner was the husband of Helen H. Ochs. They had two children, Josephine age six and Jeanne age four.

"On December 10, 1943, a thyroidectomy was performed on petitioner's wife. A histological examination disclosed a papillary carcinoma of the thyroid with multiple lymph node metastases, according to the surgeon's report. During the taxable year the petitioner maintained his two children in day school during the first half of the year and in boarding school during the latter half of the year at a cost of $1,456.50. Petitioner deducted this sum from his income for the year 1946 as a medical expense under section 23(x) of the Internal Revenue Code.

"During the taxable year, as a result of the operation on December 10, 1943, petitioner's wife was unable to speak above a whisper. Efforts of petitioner's wife to speak were painful, required much of her strength, and left her in a highly nervous state. Petitioner was advised by the operating surgeon that his wife suffered from cancer of the throat, a condition which was fatal in many cases. He advised extensive X-ray treatment after the operation. Petitioner became alarmed when, by 1946, his wife's voice had failed to improve, and believed that the irritation and nervousness caused by attempting to care for the children at a time when she could scarcely speak above a whisper might cause a recurrence of the cancer. Petitioner and his wife consulted a reputable physician and were advised by him that if the children were not separated from petitioner's wife she would not improve and her nervousness and irritation might cause a recurrence of the cancer. Petitioner continued to maintain his children in boarding school after the taxable year here involved until up to the end of five years following the operation of December 10, 1943, petitioner having been advised that if there was no recurrence of the cancer during that time his wife could be considered as having recovered from the cancer.

"During the taxable year petitioner's income was between $5,000 and $6,000. Petitioner's two children have not attended private school but have lived at home and attended public school since a period beginning five years after the operation of December 10, 1943 Petitioner's purpose in sending the children to boarding school during the year 1946 was to alleviate his wife's pain and suffering in caring for the children by reason of her inability to speak above a whisper and to prevent a recurrence of the cancer which was responsible for the condition of her voice. He also thought it would be good for the children to be away from their mother as much as possible while she was unable to speak to them above a whisper.

"Petitioner's wife was employed part of her time in 1946 as a typist and stenographer. On account of the impairment which existed in her voice she found it difficult to hold a position and was only able to do part-time work. At the time of the hearing of this proceeding in 1951, she had recovered the use of her voice and seems to have entirely recovered from her throat cancer."

The Tax Court said in its opinion that it had no reason to doubt the good faith and truthfulness of the taxpayer and that his devotion and consideration for his wife were altogether admirable, but it nevertheless held that the expense of sending the children to school was not deductible as a medical expense under the provisions of Section 23(x) and Regulations 118, Sec. 39.23(x)-1.

In our opinion the expenses incurred by the taxpayer were non-deductible family expenses within the meaning of § 24(a)(1) [§ 262, 1954 Code] rather than medical expenses. Concededly the line between the two is a difficult one to draw, but this only reflects the fact that expenditures made on behalf of some members of a family unit frequently benefit others in the family as well. The wife in this case had in the past contributed the services—caring for the children—for which the husband was required to pay because, owing to her illness, she could no longer care for them. If, for example, the husband had employed a governess for the children, or a cook, the wages he would have paid would not be deductible. Or, if the wife had died, and the children were sent to a boarding school, there would certainly be no basis for contending that such expenses were deductible. The examples given serve to illustrate that the expenses here were made necessary by the loss of the wife's services, and that the only reason for allowing them as a deduction is that the wife also received a benefit. We think it unlikely that Congress intended to transform family expenses into medical expenses for this reason. The decision of the Tax Court is further supported by its conclusion that the expenditures were to some extent at least incurred while the wife was acting as a typist in order to earn money for the family. We do not think that the decisions discussed in the opinion of the Tax Court and the briefs of the parties have any real bearing upon the issues involved in this appeal.

The decision is affirmed.

FRANK, Circuit Judge *(dissenting).*

Humane considerations in revenue laws are undeniably exceptional. But there is no good reason why, when, for once, Congress, although seeking revenue, shows it has a heart, the courts should try to make it beat feebly. Here is a man earning between $5,000 and $6,000 a year. His wife was operated on for cancer three years earlier and has still not regained the use of her voice. The doctor says that she will not get any better—may indeed have a recurrence of the cancer, this time surely fatal—unless she is separated from her two children, aged six and four. The children are young, healthy, active and irrepressible; their mother cannot speak above a whisper without pain. She becomes ever more nervous and irritable when they are around, her voice does not improve when it should. The father (instead of sending her to a sanitarium) sends the children away to school and seeks to deduct the cost therefor as a "medical expense."

The Commissioner, the Tax Court, and now my colleagues, are certain Congress did not intend relief for a man in this grave plight. The truth is, of course, no one knows what Congress would have said if it had been faced with these facts. The few paltry sentences of Congressional history for § 23(x) do not lend strong support—indeed any support at all—to a strict construction theory:

> This allowance is granted in consideration of the heavy tax burden that must be borne by industry during the existing emergency and of the desirability of maintaining the present high level of public health and morale. . . . The term "medical care" is broadly defined to include amounts paid for the diagnosis, cure, mitigation, treatment, or prevention of disease, or for the purpose of affecting any structure or function of the body. It is not intended, however, that a deduction should be allowed for any expense that is not incurred primarily for the prevention or alleviation of a physical or mental defect or illness.[1]

[1] Sen. Rep. 1631, 77th Cong., 2d Sess. (1942) 95–96

I think that Congress would have said that this man's expense fell within the category of "mitigation, treatment, or prevention of disease," and that it was for the "purpose of affecting [a] structure or function of the body." The Commissioner argued, successfully in the Tax Court, that, because the money spent was only indirectly for the sake of the wife's health and directly for the children's maintenance, it could not qualify as a "medical expense." Much is made of the fact that the children themselves were healthy and normal—and little of the fact that it was their very health and normality which were draining away the mother's strength. The Commissioner seemingly admits that the deduction might be a medical expense if the wife were sent away from her children to a sanitarium for rest and quiet, but asserts that it never can be if, for the very same purpose, the children are sent away from the mother—even if a boarding-school for the children is cheaper than a sanitarium for the wife. I cannot believe that Congress intended such a meaningless distinction, that it meant to rule out all kinds of therapeutic treatment applied indirectly rather than directly—even though the indirect treatment be "primarily for the . . . alleviation of a physical or mental defect or illness." [2] The cure ought to be the doctor's business, not the Commissioner's.

The only sensible criterion of a "medical expense"—and I think this criterion satisfies Congressional caution without destroying what little humanity remains in the Internal Revenue Code—should be that the taxpayer, in incurring the expense, was guided by a physician's bona fide advice that such a treatment was necessary to the patient's recovery from, or prevention of, a specific ailment.

Indeed, a test for § 23(x) applicability, much akin to the one I have in mind, was adopted by the Tax Court in *Havey* v. *Commissioner*, 12 T.C. 409, 412:

> In determining allowability, many factors must be considered. Consideration should be accorded the motive or purpose of the taxpayer, but such factor is not alone determinative. To accord it conclusive weight would make nugatory the prohibition against allowing personal, living, or family expenses. Thus also it is important to inquire as to the origin of the expense. Was it incurred at the direction or suggestion of a physician; did the treatment bear directly on the physical condition in question, did the treatment bear such a direct or proximate therapeutic relation to the bodily condition as to justify a reasonable belief the same would be efficacious; was the treatment in proximate time so near to the onset or recurrence of the disease or condition as to make one the true occasion of the other, thus eliminating expense incurred for general, as contrasted with some specific physical improvement.

This taxpayer can, I think, meet every requirement of the *Havey* test. (1) *Motive:* Ochs could have no motive but his wife's health in sending the children away. They had never attended before—nor have they attended since—private

[2] The Commissioner has, in the past, shown more liberal tendencies in sanctioning somewhat unorthodox kinds of treatment as contemplated by the statute· He has allowed the deduction of fees paid to chiropractors and Christian Science practitioners. I T 3598, 1943 CB 157. Bureau letter, February 2, 1943. 433 CCH, Fed. Tax Rep. § 6175. He should not, in this context, lag behind the progress of the medical art. Especially in this case should the Commissioner realize the growing emphasis placed by medical practitioners upon peace of mind as a major factor in the recovery of patients from what were formerly thought to be entirely organic diseases. If the wife here had been recovering from a nervous breakdown, it could not be sensibly argued that the cure did not fit the disease. Are we ready now to discount the uncontroverted evidence of the doctor in this case that peace of mind and body (it takes not only mental but physical gymnastics to keep up with two children aged four and six) was essential to recovery from, and prevention of, a throat cancer?

schools. A man earning less than $6,000 with three dependents would not normally send his children to boarding-school. The four-year-old would most likely have stayed home; the six-year-old, if she went to school at all, would have gone to a free public school. Day school and boarding-school were indispensable only because they filled up the children's play and leisure hours—when they would have harassed their mother. The Commissioner doesn't argue that Ochs chose a more expensive school than he had to; nor even that the wife might have been more economically sent away from home. He does suggest, however, that, since the change benefitted the children as well as the mother, it cannot be considered a medical expense because not incurred solely for the mother's recovery. Congress required only that medical expenses be "primarily" for the patient's recovery. The evidence here, moreover, establishes (and the Tax Court so found) that the effect on the wife's health was the sole consideration inducing her husband's action even if it was not the sole result. (2) *Doctor's advice:* Ochs' action was precipitated by the strong warning of a physician. The doctor predicted that the wife might not recover if the children stayed at home. (3) *Relation between illness and treatment:* The physician advised sending the children away because their presence required vocal exertion on the mother's part—strain and pain in the vulnerable throat region. The advice was aimed to aid the mother's specific throat condition and not just her general well-being or disposition. The physician's warning was certainly ominous enough to instill in the taxpayer a "reasonable belief that the 'treatment' would be efficacious." (4) *Proximity in time of treatment to illness:* The children were sent away as soon as possible after the doctor's advice. They were kept in schools until the five-year danger period of cancer recurrence was over. Then they were brought home, and have never been to private schools since. It is true that the children were kept at home for three years after the cancer operation. But the doctor who counseled their separation was not consulted until 1946, when Mrs. Ochs' lack of improvement became very noticeable.[3]

In the final analysis, the Commissioner, the Tax Court and my colleagues all seem to reject Mr. Ochs' plea because of the nightmarish spectacle of opening the floodgates to cases involving expense for cooks, governesses, baby-sitters, nourish-

[3] See how these tests have been applied in other § 23(x) cases Usually when such deductions are disallowed, the taxpayers have failed to prove that the expenses were incurred primarily to alleviate a specific illness of the body or mind, i e, they have not met the motive-test or the relation-test laid down in *Havey.*

The majority of § 23(x) cases seem to have dealt, strangely enough, with Florida or Arizona winter vacations. One taxpayer closed up his business after a coronary occlusion and, in effect, retired to Florida. He wanted to deduct his year's rent and payment to a cleaning woman; Brody v. Commissioner, 8 T.C.M. 288. A second taxpayer and his wife took an extended holiday in the sunshine as an aftermath of ulcers and pneumonia, Keller v. Commissioner, 8 T C M. 685 Dobkin v Commissioner, 15 T.C. 886, concerned a heart patient who took annual Florida vacations. Havey v. Commissioner, 12 T.C. 409, involved another heart patient who returned to old vacation haunts in New Jersey and Arizona as late as two years after the attack. All these five taxpayers were halted by the same stumbling block None of them could show a direct relation between (1) the heart condition or the ulcers and (2) the Florida sunshine. The inference was unavoidable that the patient enjoyed a relief from the cold winds of winter for his general well-being, in some cases, he might very well have made the trip anyway according to his long-established vacation practices. The Commissioner and the Tax Court, on the other hand, have sanctioned deductions of funds paid for southern exposures in cases where the patients went South for relief from asthma, hay fever, or respiratory infections, i.e., where a direct relation was proved between the southern climate and treatment of the disease. Stringham v Commissioner, 12 T C 580, affirmed 6 Cir., 183 F.2d 579.

One § 23(x) case of disallowance of an alleged medical expense involved the installation of

ing food, clothing, frigidaires, electric dish-washers—in short, allowances as medical expenses for everything "helpful to a convalescent housewife or to one who is nervous or weak from past illness." I, for one, trust the Commissioner to make short shrift of most such claims.[4] The tests should be. Would the taxpayer, considering his income and his living standard, normally spend money in this way regardless of illness? Has he enjoyed such luxuries or services in the past? Did a competent physician prescribe this specific expense as an indispensable part of the treatment? Has the taxpayer followed the physician's advice in the most economical way possible? Are the so-called medical expenses over and above what the patient would have to pay anyway for his living expenses, *i.e.*, room, board, etc.? Is the treatment closely geared to a particular condition and not just to the patient's general good health or well-being?

My colleagues are particularly worried about family expenses, traditionally non-deductible, passing as medical expenses. They would classify the children's schooling here as a family expense, because, they say, it resulted from the loss of the wife's services. I think they are mistaken. The Tax Court specifically found that the children were sent away so they would not bother the wife, and not because there was no one to take care of them. Ochs' expenditures fit into the Congressional test for medical deductions because he was compelled to go to the expense of putting the children away primarily for the benefit of his sick wife. Expenses incurred solely because of the loss of the patient's services and not as a part of his cure are a different thing altogether. *Wendell* v. *Commissioner*, 12 T.C. 161, for instance, disallowed a deduction for the salary of a nurse engaged in caring for a healthy infant whose mother had died in childbirth. The case turned on the simple fact that, where there is no patient, there can be no deduction.

Thus, even here, expense attributed solely to the education, at least of the older child, should not be included as a medical expense. See *Stringham* v. *Commissioner*, *supra*. Nor should care of the children during that part of the day when the mother would be away, during the period while she was working part-time. *Smith* v. *Commissioner*, 40 B.T.A. 1038, affirmed 2 Cir., 113 F.2d 114. The same goes for any period when the older child would be away at public school during the day. In so far as the costs of this private schooling are thus allocable, I would limit the deductible expense to the care of the children at the times when they would otherwise be around the mother. If my views prevailed, this might require a remand to the Tax Court for such allocation.

Line-drawing may be difficult here as everywhere, but that is what courts are for. See *Lavery* v *Purssell*, 399 Ch. D. 508, 517: ". . . courts of justice ought not to be puzzled by such old scholastic questions as to where a horse's tail begins and where it ceases You are obliged to say, this is a horse's tail at some time."

Note

1. There has been a spate of similar borderline cases. The two most common issues are the deductibility of (a) expenses that partake of both ordinary living expenses and

an oil furnace in war-time 1944 The taxpayer had always wanted one, and with the help of his physician's certification that it was bad for his sinuses to stoke a coal furnace, he finally got authorization from the authorities for an oil furnace. "Capital expenditures of permanent benefit to a property, such as is the present item," said the Tax Court, are not deductible as current expenses. "Not every expenditure," it warned, "prescribed by a physician is to be catalogued under this term." Seymour v. Commissioner, 14 T.C. 1111.

medical treatment, like vacations, additional servants, etc. and (b) expenses of other members of the family, as in the *Ochs* case. See Hodgkin, "If You Eat to Stay Healthy—Here's New Light on the Medical Deduction," 30 *Taxes* 206 (1952).

The deductibility of travel expenses is clarified by § 213(e)(1)(B) of the 1954 Code. The Senate Report (pp. 219-220) explains this new provision as follows:

> The deduction permitted for "transportation primarily for and essential to medical care" clarifies existing law in that it specifically excludes deduction of any meals and lodging while away from home receiving medical treatment. For example, if a doctor prescribes that a patient must go to Florida in order to alleviate specific chronic ailments and to escape unfavorable climatic conditions which have proven injurious to the health of the taxpayer, and the travel is prescribed for reasons other than the general improvement of a patient's health, the cost of the patient's transportation to Florida would be deductible but not his living expenses while there. However, if a doctor prescribed an appendectomy and the taxpayer chose to go to Florida for the operation not even his transportation costs would be deductible. The subsection is not intended otherwise to change the existing definitions of medical care, to deny the cost of ordinary ambulance transportation nor to deny the cost of food or lodging provided as part of a hospital bill.

The 1954 Code also adopted a limitation with respect to the cost of medicine and drugs; these expenses may now be "taken into account" only to the extent that they exceed 1 per cent of adjusted gross income. (The amount taken into account, along with other medical expenses, is still subject to the 3 per cent limit (which before 1954 was 5 per cent) referred to in the next paragraph.) The Senate Report (p. 219) states:

> While some question has been raised under present law by taxpayers as to whether the expenditures for toiletries and sundry items may be taken into account this provision makes it clear that expenditures for medicine and drugs (whether or not requiring a prescription) are taken into account but expenditures for toiletries and sundries are not.

2. To be deductible, the expenses must be "extraordinary"—*i.e.*, in excess of 3 per cent of "adjusted gross income." (For this term, see Chapter 3, Sec. C.) If the taxpayer or his spouse is 65 years of age, however, the 3 per cent limitation is lifted for their own medical expenses, though it remains applicable to the medical expenses paid by such a taxpayer for dependents At the same time, the expenses must not be too extraordinary: the deduction may not exceed $2500 (a taxpayer without dependents), $10,000 (husband and wife filing a joint return or a head of a family), or $5,000 (others). These limitations may be avoided to a certain extent by postponing or accelerating payments. The point is illustrated by this story from *The New Yorker* (April 4, 1953, p. 26):

> During the third week of December, a baby girl was delivered at the New York Hospital—everything O.K. The father had a chat with the officiating obstetrician and emerged from his office looking annoyed. He visited his wife and child daily during the prescribed week of confinement, but then, instead of picking them up the next day, he failed to show. The interne asked the obstetrician if there were any complications, he said no. A couple more days passed, and no husband The wife, pressed by the staff for an explanation, looked glum, smoked, and offered none. Finally, on New Year's Day—five days after his family should have been home—he appeared, beaming, settled the hospital bill, and whisked his wife and child to the elevator. The nurse who was holding the baby ventured to ask him what was going on. "Young woman," he said, "I was told when the baby was born that the obstetrician's bill couldn't possibly be made up and presented for payment until sometime in January. I was damned if I'd split the medical deductions on my income tax between two years, so I waited until 1953 to take care of the hospital charges." And off he and his little family went, into a deductible taxi. (Reprinted by permission. Copyrighted 1953, *The New Yorker* Magazine, Inc.)

Was the taxi deductible?

3. Note that expenses may be deducted only if "not compensated for by insurance or otherwise." If *A* pays medical expenses in 1954, and expects to be fully reimbursed under a health or accident policy in 1955, may he deduct the expenses in 1954? If he does not, or may not, may he deduct them in 1955 if his expectation of payment is defeated?

4. See also § 104, exempting amounts received as compensation for personal injuries or sickness "except in the case of amounts attributable to (and not in excess of) deductions allowed under section 213 . . . for any prior taxable year." *Supra*, p. 143. Suppose B is injured in an automobile accident, incurring medical expenses of $1000 in 1952, of which he deducts $600, and in 1955 recovers $15,000 for his expenses, pain, and suffering. What, if anything, is taxable in 1955? Would the tax status of the recovery be altered if *B*, though entitled to a deduction of $600 under § 23(x) in 1952, had had other deductions and credits exceeding his net income and either (a) claimed the medical deduction or (b) did not claim it?

Section 105 (exempting certain amounts received under employee accident and health plans) also contains cross-references to § 213. Amounts received by the employee under § 105(c) (payments for permenant injury) or under § 105(d) (compensation during sick leave) are not to be treated as compensation for medical expenses; the employee may exclude these amounts and also may deduct his medical expenses under § 213. Where the employee is reimbursed for his medical expenses, Sections 105(a) and 105(b) operate to prevent double deductions: if the expenses were previously deducted, the reimbursement is includible in gross income; otherwise, the reimbursement is excluded from gross income, but the expenses cannot be deducted because they have been "compensated for by insurance or otherwise."

5. On rare occasions, medical expenses have been held deductible under § 162 as "ordinary and necessary expenses" of carrying on the taxpayer's occupation. Thus, Reginald Denny was allowed to deduct the cost of replacing teeth knocked out in the course of making a prize fight movie, *Denny* v. *Commissioner*, 33 B.T.A. 738 (1935). But Madge Evans' tonsillectomy was held not a deductible business expense. *Evans* v. *Commissioner*, 1939 B.T.A. ¶ 39,101 P-H Memo. Here the court said. "The operation was performed for the purpose of correcting petitioner's susceptibility to colds. There has been no showing that these colds resulted from petitioner's business activities." No doubt many individuals could prove that various ailments resulted from their occupation. Would the expenses then be deductible? What of a lawyer's hypertension? To the extent that medical expenses are deductible under § 162, they are not subject to the 3 per cent and $2500-5000-10,000 limitations.

6. On the economic effectiveness of the medical deduction, see Jensen, "Medical Expenditures and Medical Deduction Plans," 60 *J. Pol. Econ.* 503 (1952).

2. *Charitable Contributions*

Note: Sections 23(o) and 120 of the 1939 Code, relating to charitable contributions by individuals, and § 23(q), relating to contributions by corporations, have been consolidated, and somewhat modified, by § 170 of the 1954 Code.

See Regs. 118, Sec. 39.23(o)-1.

HAVEMEYER v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1938

98 F.2d 706

Before L. Hand, Swan, and Chase, Circuit Judges.

Chase, Circuit Judge. . . .

The question presented is whether the petitioner was entitled, under the pro-

visions of § 23(n)(2) of the Revenue Act of 1932 [§ 22(o), '39 Code, § 170, '54 Code], to a deduction for contributions he made in that year to an unincorporated association known as the United Special Aid Association. The Commissioner decided that he was not entitled to the deduction and determined the deficiency by adding the amount claimed to his gross income. The Board of Tax Appeals upheld the action of the Commissioner.

The United Special Aid Association was formed in 1918 by the petitioner, members of his family, and a close business associate. It was organized in compliance with the law regulating the formation of unincorporated associations and, to quote from its articles of association, "in order to unify and co-ordinate the charitable activities of themselves and other persons who may hereafter become members of this Association" and "to be operated exclusively for charitable purposes." Its members comprised the original signers of the articles of association to whom might be added such other persons as might be elected by a majority vote of the Board of Managers. A member was bound to pay annual dues of five dollars and was otherwise free to contribute or not as desired. The Board of Managers consisted of five persons to be elected at each annual meeting of the Association since its formation. Under a provision making three a quorum of the Board of Managers, the petitioner and two others have been in actual charge of its affairs. From the time it was formed and up to the year 1932, the Association had received $47,975.87 and had distributed the sum of $46,992.23. In 1932 it had nine members who contributed $3,618.85 of which the petitioner gave $2,257.60 That is the deduction he claimed which was disallowed. During 1932, the Association assisted nine indigent and deserving individuals. None of them were related to any of the members by blood or marriage and no member was under any legal or equitable obligation to contribute to the support of any of the beneficiaries who, though it was customary for a contributor to suggest the person to be aided, were all designated by the Board of Managers. They were mainly, though not entirely, old family retainers and all were needy and worthy.

The constitution of the Association provided in part that.

> The purpose of this Association shall be to collect funds and therefrom to give relief to such indigent and deserving persons as the Board of Managers may from time to time consider to be in especial need of the bounty of the Association. No payment shall be made from the funds of the Association to or for the use of any officer, manager, or member of the Association.

The provisions of the constitution have at all times been carried out in good faith and the books and records of the Association have always been kept without expense to it. The meetings of its Board of Managers have been held in the offices of Havemeyer & Elder, Inc., which is a corporation of which the members of the board who have been in active charge are officers.

The above mentioned statute relied upon in support of the deduction claimed, Sec. 23 (n) (2) of the 1932 Act, 26 U.S.C.A. § 23 note, provides that in computing the net income of an individual there shall be allowed as deductions the contributions or gifts made within the taxable year to or for the use of;

> a corporation, or trust, or community chest, fund, or foundation, organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes, or for

the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual, . . .

No claim is made that the contribution made by the petitioner to the Association exceeded the proportion of his income deductible under the above statute if made to a charitable organization therein designated but the theory on which the deduction was disallowed and its disallowance upheld by the Board was that this Association served but as a means for facilitating the bestowal of private bounties and could not be classed as a charitable association within the meaning of the statute.

It is true that the beneficiaries who were actually designated by the Board of Managers were all personally known to one or more members of the Association and were people who might perhaps have been given aid by one or more of them had the Association not been in existence but that does not change the character of the Association itself. That was as extensive in charitable scope within the ranks of the indigent and deserving public as its means and the discretion of its Board of Managers might make it. Its activities were exclusively charitable within the statutory meaning of that term. *Harrison* v. *Barker Annuity Fund*, 7 Cir., 90 F.2d 286, 289; *Gimbel* v. *Commissioner*, 3 Cir., 54 F.2d 780; *Bok* v. *McCaughn*, 3 Cir., 42 F.2d 616. And they were all of the kind it was organized to conduct as shown by the articles of association and within the limitations of its constitution. Having been organized to perform exclusively acts of charity and having performed such acts and no others, this Association in form and fact was a charitable association of the kind named in Sec. 23 (n) (2) of the Revenue Act of 1932, 26 U.S.C.A. § 23 note. It had no net earnings so far as appears and certainly no part of them, if it had any, inured to the benefit of any private shareholder or individual having a personal and private interest in the activities of the Association. See, T.R. 77; Art. 527. Consequently gifts made by individuals to the Association within the taxable year were deductible in computing the net income of the petitioner.

Reversed.

L. HAND, Circuit Judge (*dissenting*).

It seems to me that this was not the kind of charitable association that the statute had in mind. Practically, it was a pool of the charitable contributions of the Havemeyer family, distributed by two of them—the petitioner being one—helped by a business associate. True, it does not expressly appear that any member of the family could insist upon his contributions going to an especial person, and in law no doubt he could not; but I cannot believe that practically this was not the case. I am not altogether clear that a taxpayer might deduct a contribution even to a standard charitable association, if in advance he were to exact an agreement that it should be devoted to a particular person. If the association asks him for special funds, of course, he may; but I am speaking of a case where he uses it merely as a conduit. However that may be, it was an inference which the Board might make that here this association was nothing else but a conduit. While the family was to manage the pot through three managers, of whom the petitioner was only one, I cannot take seriously the possibility that, at least as to his own contributions, his two associates would have attempted to gainsay any distribution he wished. It is significant for example that his and his wife's distri-

butions for 1932 just used up his contributions. As to him anyway and to the extent of the deductions now claimed, I think this association was pro hac vice merely a conduit. In general I believe that we ought not to countenance avoidance of taxes by the perpetual device of a corporation, organized only in form, and not in reality, for the purposes intended by a statute.

Note

1. What if the beneficiaries had been needy members of the donor's family? Would a contribution to a university be deductible if given on the understanding that a particular student would receive a scholarship? See *Thomason* v. *Commissioner*, 2 T.C. 441 (1943), *Crellin* v. *Commissioner*, 46 B.T.A. 1152 (1942).

2. Note that contributions are not deductible if the organization abuses its status by engaging in various "prohibited transactions." Ch. 7, Sec. C.; Brown, "The New Restrictions on Charitable Exemptions and Deductions for Federal Income Tax Purposes," 13 *U. of Pitt. L. Rev.* 623 (1952). Section 11 of the Internal Security Act of 1950 similarly disqualifies "communist-action" organizations, a policy which the Treasury Department had previously followed as to organizations on the Attorney General's list of subversive organizations. Treasury Department, Press Service, Release No. S-613 (2/4/48). *Cf. Joint Anti-Fascist Refugee Committee* v. *McGrath*, 341 U.S. 123 (1951).

3. For many years, in the case of an individual taxpayer, the deduction could not exceed 15 per cent of the taxpayer's "adjusted gross income" (Ch. 3, Sec. C); in 1952, the ceiling was lifted to 20 per cent and the 1954 Code permits contributions up to 30 per cent of adjusted gross income if at least ⅓ of the contributions are to churches, hospitals, and educational institutions If the taxpayer is *really* generous, however, the limit is not applicable. Section 170(b)(1)(C). In the case of corporations, the limit is 5 per cent, but (as a result of a 1954 change) if a corporation exceeds the limit, it may carry over the excess and use it as a deduction in the next two years if its contributions then fall short of the allowable 5 per cent.

4. See Paulsen, "Preferment of Religious Institutions in Tax and Labor Legislation," 14 *Law & Contemp. Prob.* 144 (1949).

ESTATE OF HARRINGTON v. COMMISSIONER

Tax Court of the U. S., 1943
1943 P-H T.C. Memo. Dec., Para. 43, 369

HILL, Judge: The sole issue of this proceeding is whether or not petitioner received either capital gain or ordinary income by the transfer of stock in satisfaction of debts owed to charities. These debts were included and allowed as liabilities in the estate tax return. The facts show that petitioner discharged a debt of $5,000 owing to the Community Corporation with 25 shares of Bank stock. These shares were owned by decedent at the time of his death and their fair market value as of the date of his death [Feb. 27, 1932] was $100 each....

Petitioner discharged its obligation of $5,000 to Community Corporation by delivering to it [on Oct. 20, 1938] 25 shares of Bank stock which decedent owned at his death.* This stock had a fair market value of $100 per share at the death of decedent which was its basis in the hands of petitioner for gain or loss. Consequently, in the transaction with Community Corporation, petitioner realized a capital gain of $2,500.

*Although the 25 shares were delivered in full settlement of the unpaid pledge of $5,000, the court found that the shares were worth only $110 per share when delivered. [Ed.]

Note

1. For many years the Regulations have provided that if the contribution is made in property, its fair market value may be deducted, Regs. 118, Sec. 39.23(o)-1(g). It has always been assumed that, absent a pledge of a specific amount of money, any appreciation in the donated property goes untaxed. The taxpayer is therefore well advised to donate appreciated property. (If he holds depreciated property, it can be sold and a deductible loss obtained; thereafter, the proceeds can be donated.) Is this a defensible way to reward charitable contributions? Does this non-recognition of appreciation on property donated to charity extend to all types of property? See the articles by Griswold, Bittker, and Roehner, cited *supra*, p. 83; *White* v. *Brodrick*, 104 F. Supp. 213 (D. Kan. 1952); *Campbell* v. *Prothro*, 209 F.2d 311 (5th Cir. 1954). In *Truncale* v. *Blumberg*, 80 F. Supp. 387 (S.D.N.Y. 1948), the plaintiff sought to recover a "profit" under § 16(b) of the Securities Exchange Act of 1934, on the theory that a corporate insider who had bought securities at one price and donated them to charity at a time when their value exceeded his cost had realized a "profit," since the value at the time of the gift could be deducted for tax purposes. The Court rejected the argument, saying "The tax laws would seem to have absolutely nothing to do with the question."

2. The Bureau has ruled that the rental value of property may not be deducted by a taxpayer who allows a charitable organization to occupy it. The reason given was that § 170(a)(1) requires a "payment." "Such an arrangement does not constitute a gift of property. It is merely the granting of a privilege for which no charge is made." I.T. 3918, 1948-2 C.B. 33. Did the taxpayer realize income? The Bureau has also ruled that the fair market value of blood contributed to a charitable institution is not deductible because furnishing blood "is analogous to the rendering of a personal service by the donor rather than a contribution of 'property.'" Rev. Rul. 162, 53-2 C.B. 127. A related issue is the treatment of the performance of services by the taxpayer for the charity's benefit. See *infra*, Chapter 4, Sec. C(1).

3. Alimony

Note: Sections 23(u) and 22(k) of the 1939 Code, permitting the deduction of certain alimony and separate maintenance payments are re-enacted in somewhat broadened form by §§ 215 and 71 of the 1954 Code.

Section 171 of the 1939 Code, relating to alimony trusts, is re-enacted, with corresponding changes, by § 682 of the 1954 Code. See Regs. 118, Sec. 39.23(u)-1 and 22(k)-1.

MAHANA v. UNITED STATES

U. S. Court of Claims, 1950

88 F. Supp. 285, Cert. den. 339 U.S. 978, reh. den. 340 U.S. 847 (1950)

Before JONES, Chief Judge, and MADDEN, HOWELL, WHITAKER and LITTLETON, JJ.

MADDEN, Judge.

The plaintiff sues to recover income taxes paid by her for the years 1943, 1944 and 1945. She filed timely claims for refund which were denied by the Commissioner of Internal Revenue. The money received by her, the taxability of which receipt she contests, came to her, partly directly, and partly through payments by a trustee or depositary, from her husband whom she had divorced.

The plaintiff and George S. Mahana were married in 1893. They separated in

1922. In 1923 she brought an action in New York, where they both resided, for a legal separation and separate maintenance. While this suit was pending, the spouses on November 12, 1923, made a written agreement that the husband would transfer certain named securities to the Guaranty Trust Company of New York, in trust to pay the income to the plaintiff during her lifetime "by way of alimony and in lieu thereof and for her separate maintenance and support." If the income from the securities did not amount to $17,500 per year, the husband would make up the deficit by payments to the trustee for transmission to the plaintiff. If there was an excess of income, it was to be paid to the husband. If the plaintiff's mother survived her, she was to be paid $6,000 per year for life. Upon the death of the survivor of the plaintiff and her mother, the trust was to terminate and the securities were to be returned to the husband. If the securities did not in any one year yield at least $15,000, the husband agreed to add sufficient securities to bring the yield up to $17,500. The parties mutually released to each other all interest in the other's property and in any rights growing out of their marital relation. The agreement provided that it should in no wise prejudice any right which either party might have to institute divorce proceedings for misconduct theretofore committed, and that the payments to be made under the agreement were to be in no way affected by any decree of divorce, or by any subsequent marriage of either of the parties to a third party.

On December 1, 1923, the plaintiff signed a complaint in a New York court asking for an absolute divorce on the ground of her husband's adultery. An interlocutory decree was granted on March 8, 1924, which became final on November 6, 1924. On November 26, 1924, the former husband, George Mahana, transferred his residuary interest in the trust which he had set up for the plaintiff, in irrevocable trust for his second wife and his infant child by her.

In 1929 disputes arose between the plaintiff and her former husband as to which one should pay the state and federal income tax on the payments which the plaintiff was receiving under the 1923 agreement. The plaintiff instituted a suit in a New York court to construe and enforce the agreement of 1923 according to what she claimed to have been the intent of the parties. Her complaint alleged that her husband was to have paid the income taxes upon the payments to her to the extent that they would have been payable "if said $17,500 would have been her sole income." Her complaint raised other questions concerning the trust. This suit was settled by an agreement of June 28, 1933. By this agreement, the former husband agreed to pay the plaintiff the amounts by which her state and federal income taxes were increased by reason of her receipt of the $17,500 pursuant to the 1923 agreement. In connection with the new agreement, he deposited additional securities with the trustee, but he did not put them into the trust created in 1923. The income from them was to be used to supplement the income from the securities in the 1923 trust, if necessary, but he was to have complete power, so long as he was not in default under his agreement, to order the securities so deposited to be sold or exchanged.

The plaintiff paid federal income taxes for the year 1924 upon her income under the agreement, but these taxes were refunded to her by the Government, upon her claim for refund. She paid no such taxes from 1932 to 1942. The record does not show what happened between 1924 and 1932. In the Revenue Act of 1942, 56 Stat. 816, Section 120, added to the then existing law, Sections 22(k), 23(u),

and 171(a) of the Internal Revenue Code, 26 U.S.C.A. §§ 22(k), 23(u), 171(a). Section 22(k) provides:

In the case of a wife who is divorced or legally separated from her husband under a decree of divorce or of separate maintenance, periodic payments (whether or not made at regular intervals) received subsequent to such decree in discharge of, or attributable to property transferred (in trust or otherwise) in discharge of, a legal obligation which, because of the marital or family relationship, is imposed upon or incurred by such husband under such decree or under a written instrument incident to such divorce or separation shall be includable in the gross income of such wife, and such amounts received as are attributable to property so transferred shall not be includable in the gross income of such husband. . . .

Section 23(u) authorized a husband to deduct from his taxable income the payments made taxable to the wife by Section 22(k). Section 171(a) provided:

There shall be included in the gross income of a wife who is divorced or legally separated under a decree of divorce or of separate maintenance the amount of the income of any trust which such wife is entitled to receive and which except for the provisions of this section, would be includable in the gross income of her husband, and such amount shall not, despite section 166, section 167, or any other provision of this chapter, be includable in the gross income of such husband. . .

As shown by our findings 12, 13, and 14, the $17,500 received by the plaintiff in each of the years in question, 1943, 1944, and 1945, consisted of (1) money paid by the trust company out of the income of securities held by it under the 1923 agreement; (2) money similarly paid out of the income of securities held by it under the 1933 agreement; (3) money paid by George Mahana to the trust company to make up the deficit of income from the first two sources, which money was then paid by the trust company to the plaintiff. In addition, in each of the years George Mahana paid directly to the plaintiff the amounts by which the plaintiff's income taxes had been increased by her receipt of the $17,500. Since some of these payments were made directly by the former husband, and some were made from a trust created by him for that purpose, both Sections 22(k) and 171(a) are involved.

The plaintiff's first contention is that the legislation referred to, imposing an income tax on alimony, is unconstitutional. She says that it is not income; therefore the Sixteenth Amendment does not authorize its taxation. The argument is, at first, surprising. A large sum of money comes into the plaintiff's hands. One wonders why it is not "income" in the sense of the Sixteenth Amendment. It is income to spend, to live on, to save. Is it not also income to tax, if Congress sees fit, as it has, to tax it? But there is something to be said for the plaintiff's contention. In the case of *Gould* v. *Gould*, 245 U.S. 151, 38 S. Ct. 53, 62 L. Ed. 211, the court held that alimony paid to a divorced wife was not taxable to her as income. The legislation then in force was the Income Tax Act of 1913. It did not expressly either include or exclude alimony from its definition of what income should be taxed. The court used language which indicated that it thought that alimony was not income. The court did not purport to be deciding a constitutional question, but only a question of the interpretation of the Income Tax Act of 1913. It would have been hard to believe that Congress intended to tax the receipt of alimony by the divorced wife, when the law had already taxed the husband upon his receipt of the income from which he paid the alimony, except in the infrequent case when alimony was paid out of the husband's capital.

The plaintiff points to cases such as *Douglas* v. *Willcutts*, 296 U.S. 1, 56 S. Ct. 59, 80 L. Ed. 3, 101 A.L.R. 391, and *Helvering* v. *Clifford*, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788, in which the Supreme Court has said that Congress, in the various revenue acts, has manifested its intention to use to its fullest extent the power granted it by the Sixteenth Amendment. If we take these expressions literally, then *Gould* v. *Gould*, *supra*, would have to be regarded as a decision that alimony could not be taxed because it was not income in the sense of the Sixteenth Amendment. But we think that even the Supreme Court should not be taken so literally when the consequence would be to nullify an act of Congress, the intention of which is clear. The Supreme Court has also said that the meaning of the word "income" in the Sixteenth Amendment and in the acts of Congress pursuant to the amendment, is that given it in common speech and every-day usage. *Old Colony Railway Co.* v. *Commissioner*, 284 U.S. 552, 52 S. Ct. 211, 76 L. Ed. 484; *United States* v. *American Trucking Association*, 310 U.S. 534, 60 S. Ct. 1059, 84 L. Ed. 1345. In every-day usage the plaintiff, receiving large sums of money currently from a man who ceased to be her husband more than twenty years ago, would be regarded as having an income.

We come then to the question whether the statutes, properly interpreted, tax the plaintiff's income. The plaintiff concedes that, so far as concerns the money received by her as the yield of the securities placed in trust under the 1923 agreement, Section 171(a) is applicable, if it is constitutional. We have quoted the section, and it requires only that there be a divorce, a trust, and the receipt from the trust of income which would have been taxable to the husband if it had not been made taxable to the wife by the section. As the plaintiff properly concedes, these conditions are fulfilled as to the yield of the 1923 trust. We think they are fulfilled also as to the yield from the additional securities deposited with the trustee in 1933, to supplement the income of those previously deposited. The plaintiff says that they were not placed in trust, but only "deposited." But they were deposited "pursuant to the agreement dated November 12, 1923, . . . to be held, sold, exchanged or otherwise disposed of by you, and in case of sale, the proceeds thereof invested. . . ." The trust company was directed to pay the income from the securities to the plaintiff, if necessary to make up the agreed $17,500. The deposit of these securities was a deposit in trust. The apparent reason why they were not added to the 1923 trust was that, in the meantime, the plaintiff's former husband had conveyed his residuary interest in that trust to his second wife and his infant child by her, and he did not want the additional securities to be covered by that conveyance. The new securities were in a different trust, but it was a trust to pay alimony and was covered by Section 171(a).

As to the money which the former husband paid to the trustee to make up the deficit left when the two trusts did not yield $17,500, we think that although this money came to the plaintiff from the trustee, it was not "the income of any trust" within the meaning of Section 171(a). The trustee was a mere intermediary who accepted a deposit and paid out a similar amount to the plaintiff, not as income of a trust but merely pursuant to the agreement to perform this service. If, then, these payments were taxable to the plaintiff, it was because they were covered by Section 22(k) which we have quoted above. The plaintiff urges several reasons why they should not be regarded as covered by that section. The section applies to "periodic payments (whether or not made at regular intervals)." Although

this language is somewhat self-contradictory, we think that it is complied with when the payments are agreed to be made and are made whenever specified external or objective conditions occur. Here the payments were to be made whenever the income of the trust was less than $17,500.

Section 22(k) requires that the payments, to be taxable, must be made:

> . . . in discharge of, a legal obligation, which, because of the marital or family relationship, is imposed upon or incurred by such husband under such decree or under a written instrument incident to such divorce or separation . . . .

The plaintiff says that the written instrument by which her then husband agreed to make the payments here in question was not "incident to such divorce." We think it was so incident. The plaintiff had pending a suit for legal separation and separate maintenance at the time of the agreement. The agreement said that it was for her separate maintenance and support, that it was not to be affected by any decree of divorce obtained by her, and that it was not to prejudice the right of either party to seek a divorce for misconduct which antedated the agreement. Thirteen days after the agreement was executed, the plaintiff signed her complaint asking for a decree of divorce for her husband's adultery. We have no doubt, from the timing and circumstances of the agreement, that it was the usual settlement out of court of the property rights of the parties when a divorce is contemplated. Both the plaintiff and her former husband testified in this case and neither denied what the circumstances indicate to have been the fact. The payments made by the former husband to make up the deficit were, then, periodic payments, made pursuant to an agreement incident to the parties' divorce. The payments were taxable income to the plaintiff, under the provisions of Section 22(k).

The question remains as to whether the former husband's payments to the plaintiff by way of reimbursement to her of the amounts which she was obliged to pay as income tax on her alimony, after the enactment in 1942 of Section 22(k), were also taxable to her under Section 22(k). The plaintiff contends that they were not, because they were paid pursuant to the 1933 agreement, which was made nine years after the divorce and was not, the plaintiff says, "incident to such divorce" in the sense of the statute. We think that the 1933 agreement was incident to the divorce. We have held above that the 1923 agreement was incident to the divorce. The 1933 agreement was, as we have seen, made in settlement of a suit by the plaintiff for the construction and enforcement of the 1923 agreement. She contended, in that suit, that her former husband was, under the 1923 agreement, obligated to reimburse her for income taxes paid "as if said $17,500 would have been her sole income." In the 1933 agreement, her former husband promised to do more than that; he promised to reimburse her by the amount which her income taxes were actually increased by her receipt of the $17,500. For this concession, he received concessions from her which made him willing to enter into the 1933 agreement. But the whole agreement was made to clarify the 1923 agreement, so that the disputes as to its meaning which had, in 1933, been going on for some years, could be avoided. The plaintiff had no rights against her former husband in 1933 except those that were given her by the 1923 agreement. The rights which she got under the 1933 agreement were, with mutually satisfactory additions and subtractions, those to which she was entitled under the 1923 agreement. We think, therefore, that the reimbursements to her of her

income taxes paid by her on her alimony were made pursuant to a written instrument which was incident to her divorce.

The Government urges, as an additional reason for reaching the same conclusion, that we interpret the language of Section 22(k) as meaning that the written instrument referred to need only be incident to the fact that there had been a divorce, and not to the decree of divorce The Tax Court, in *Dauwalter* v. *Commissioner*, 9 T.C. 580, has rejected this interpretation. Compare *Commissioner* v. *Murray*, 2 Cir., 174 F.2d 816. See also *Cox* v. *Commissioner*, 3 Cir., 176 F.2d 226, for a treatment of this question, and of the history and purpose of the 1942 legislation relating to the taxation of alimony. In view of our conclusion that the 1933 agreement, through its connection with the 1923 agreement, was incident to the decree of divorce, we do not pass upon this contention of the Government as to the interpretation of Section 22(k).

The plaintiff's petition will be dismissed. It is so ordered.

JONES, Chief Judge, and HOWELL, WHITAKER, and LITTLEJOHN, JJ., concur.

Note

1. As the foregoing case indicates, prior to the statutory revision of 1942, *Gould* v. *Gould*, 245 U.S. 151 (1917), had held that alimony payments were not taxable to the wife. Nor were the payments deductible by the husband, since there was no statutory authorization for a deduction. If the husband transferred property in trust, the income of which went for alimony, that income would nevertheless be taxed to him because applied to pay his debts. The husband's only escape was to make a lump sum transfer of property to discharge his obligation of support once and for all; if under local law the husband's support obligation could be terminated in this manner, the income from the property would thereafter be taxed to the ex-wife. *Helvering* v *Fuller*, 310 U.S. 69(1940). If local law, a want of capital, the ex-wife's resistance, or other reasons made such a termination of his obligation of support impossible, the husband under the impact of rising tax rates might be left with little or no income of his own, especially if his misalliances had been lavish in number or in cost. These facts led to the 1942 revision.

2. Under § 215, the husband may deduct alimony payments only when they are taxed to the wife under § 71. Section 71's technical requirements—which thus determine when the wife is taxed on, and the husband may deduct, alimony—have engendered a surprising volume of litigation. See Rudick, "Marriage, Divorce, and Taxes," 2 *Tax L. Rev.* 123 (1947), Note, 61 *Yale L.J.* 1198 (1952). The following phrases in § 71 are especially noteworthy:

(a) "A decree of divorce or of separate maintenance." This requirement was adopted to prevent collusive separation agreements for the purpose of splitting income between husband and wife. It may have been necessary in 1942, but since enactment of the Revenue Act of 1948—as will be seen in a few pages—married couples may split their income for tax purposes by filing a joint return. Although couples separated by agreement are permitted to file joint returns, it may not be feasible for them to do so, since both must sign the return and assume liability for payment of the total tax. Until 1954, a couple that was separated, even though under a *bona fide* separation agreement, could not take advantage of the alimony deduction. The 1954 Code, by § 71(a)(2), allows payments under a "written separation agreement" to qualify, even though there was no judicial decree of separation or divorce; but because the pre-1954 law may have been taken into account in fixing support payments under such agreements, only agreements executed after the 1954 Code was enacted are covered. Section 71(a)(3) extends the same principle, with the same time limit, to support payments under court order, even though there is no decree of divorce or separate maintenance or written separation agreement.

The requirement of a "decree" of divorce or of separate maintenance was held to be satisfied by a Florida divorce, even though the divorce had been held invalid in the state of marital domicile. *Feinberg* v. *Commissioner*, 198 F.2d 260 (3d Cir. 1952).

(b) "A written instrument incident to such divorce or separation." If the husband's obligation is imposed by a decree, the payments will qualify. They will also qualify if an agreement between the spouses is incorporated in the decree. But if the agreement is made before the divorce or legal separation and not mentioned in the decree, or if it is made after the decree is rendered, the proper treatment of the payments is more debatable. As the last paragraph of the *Mahana* case indicates, the Treasury itself has taken inconsistent positions, depending upon whether the taxpayer was husband or wife. In *Lerner* v. *Commissioner*, 195 F.2d 296 (2d Cir. 1952), the Court held that payments under an agreement qualified though the decree did not refer to the agreement and the obligation imposed by the agreement was not dependent upon the obtaining of a divorce. See also *Newton* v. *Pedrick*, 212 F.2d 357 (2d Cir. 1954).

(c) "Periodic payments (whether or not made at regular intervals)." A lump sum settlement will not qualify for the deduction, even though paid in installments, unless it is to be paid over a period longer than ten years. Even then, an installment payment may be deducted only to the extent that it does not exceed 10 per cent of the principal sum. Why these restrictions on the deduction of lump sum settlements? It has been held that a payment of alimony arrears is taxable to the ex-wife, and deductible by the husband, in the year of payment, notwithstanding the effect of telescoping into a single year income that should have been received in a number of years. Thus in *Estate of Narischkine* v *Commissioner*, 14 T.C. 1128 (1950), aff'd. p.c. 189 F.2d 257 (2d Cir. 1951), about $70,000 that should have been paid in equal amounts over a period of nine years was taxed in the year it was paid. See also *Holahan* v. *Commissioner*, 21 T.C. No. 57 (1954).

(d) Amounts "payable for the support of minor children" are not deductible.

3. The alimony sections are a good example of how an entire area of legal practice may become tax-dominated.* The negotiations for alimony, especially in the higher brackets, will be governed in an important degree by the tax status of each party, and the agreement itself must be drafted with § 71's technical requirements in sight.

4. The advent of § 71 has led to some troublesome problems (a) of modifying pre-1942 divorce decrees to increase the wife's allowance in view of this unexpected expense, and (b) of interpreting old agreements to determine whether the husband promised the wife a sum net of taxes. As the *Mahana* case demonstrates, if the husband is to pay a stated sum annually, plus the ex-wife's tax thereon, the latter amount, as well as the former, will be alimony, deductible by the husband and taxable to the wife. See *Old Colony Trust Co.* v. *Commissioner*, 279 U.S 716 (1929). Under the 1933 agreement, would the husband have to pay the tax caused by the ex-wife's receipt of $17,500 no matter how much other income she received? Note that if the agreement or decree is construed to require the husband to discharge the wife's tax on the amount he paid to discharge her tax on the primary payment, there will be one more deduction for the husband and item of income for the wife. And so on. The same problem can arise, and the same principle is applicable, when an employer agrees to pay his employee's income taxes, when a lessor of property agrees to pay the lessee's taxes on the rent, etc. The Bureau has announced that it will not concern itself with the mechanics by which the parties settle such obligations *inter sese; i.e.*, it will accept their determination of the number of rounds for which the computation of reimbursement is made. Mim. 6779, 52-1 C.B. 8, as modified by IR-Mim. 51, 52-2 C.B. 65. See Brown, "Shifting the Burden of Income Taxes by Contract," 96 *U. of Pa. L. Rev.* 822 (1948); Kades, "Phantom Income Net Leases and the Clark Case," 5 *Syracuse L Rev.* 18 (1953). Section 110, new in the 1954 Code, alters the rule as to pre-1954 net leases.

* Calling attention to the fact that the husband can deduct permanent alimony but not temporary alimony, the Appellate Division, First Department, of the New York Supreme Court has said: "This difference should be kept in mind in fixing temporary and permanent alimony. The tax factor affords further reason for speeding the trial" Yudell v Yudell, 126 N.Y S 2d 163 (1953). Is temporary alimony deductible under § 71(a)(3) of the 1954 Code?

4. *Interest*

Note: Section 23(b) of the 1939 Code, permitting interest to be deducted, is re-enacted by § 163(a) of the 1954 Code.
Section 163(b) of the 1954 Code is new.
See Regs. 118, Sec. 39.23(b)-1.

HOLDEN v. COMMISSIONER

Board of Tax Appeals, 1933
27 B.T.A. 530

TRAMMELL: The sole issue in this case is whether the petitioner is entitled to deduct from his gross income for the taxable years certain amounts paid by him during said years on account of interest and taxes accruing on the cooperative apartment building in which the petitioner had leased a residential apartment. . . .

The facts were stipulated by the parties, and the issue of law presented may be resolved into the question of whether or not the payments made by the petitioner were so made on account of his liability for interest and taxes as such. This question in turn depends upon the ownership of the apartment building, since the interest accrued and the taxes were levied upon the building and real estate.

There can be no doubt that interest and taxes of the kind here involved, when liability is incurred and they are in fact paid as such by the taxpayer in the taxable year, constitute allowable deductions from gross income. Sec. 23(b) and (c), Revenue Act of 1928. However, where a taxpayer pays the interest and taxes of his creditor, or makes such payments in behalf of another person, either individual or corporate, they do not represent interest and tax obligations of the taxpayer and are not deductible as such by him.

In paragraph 4 of the stipulation of the parties, . . . it is stated that the "title to the land and building" here involved "is in the 1320 North State Street Building Corporation, an Illinois corporation," and in paragraph 5 of the same stipulation it is stated that "during the years 1928 and 1929 the petitioner owned and maintained his co-operative apartment under the terms of a certain proprietary lease between himself and 1320 North State Street Building Corporation." These are conflicting and contradictory stipulations, since the petitioner could not have "owned and maintained" his co-operative apartment if the title to the land and building was in the corporation; and the designation of the lease contract as a "proprietary lease" is a contradiction in terms, because a proprietor or owner can not at the same time be a lessee of his own property.

However, disregarding these apparent conflicts in the stipulation, we think it is clear that under the lease contract the petitioner was in no sense the proprietor or owner of the apartment which he had leased. The apartment was leased to him by the owner, the building corporation, for a period of 100 years from 1925, or until the year 2025, in consideration, among other things, of the payment by the petitioner to the corporation of certain monthly payments as rental, and other payments stated not to be rent, and also additional capital contributions, to all of which further reference will be made. Furthermore, the lease of the apartment to the petitioner was expressly conditioned upon the right of the building corporation, the owner, to sell the entire building and premises at any time, in which

event the lease contract provides, in paragraph 1(a) of Title IV, that "this lease and all the right, title and interest of the Lessee hereunder shall terminate at the expiration of ninety (90) days from and after written notice thereof."

The petitioner, in consideration of the demise and lease of said apartment, agreed to pay, specifically as rental, the sum of one dollar per year, and, specifically as additional rental, his proportionate part of the cost of maintenance and operation of the building upon the basis of his stock ownership in the corporation.

The lease contract, in paragraph 2 of Title I, provides that "In further consideration of said demise the Lessee covenants and agrees to pay to the Lessor or for its account (but not as rent), the following:". There is then set out in subparagraph (a) of said paragraph a detailed description of the interest and taxes which the petitioner agreed to pay and which are the subject matter of the controversy herein.

The petitioner in his brief lays stress upon the fact that it is provided in the lease contract that the interest and taxes were not payments of additional rent. But we think no argument or citation of authority is necessary to support the elemental proposition that, if the circumstances of the case establish that the payments of interest and taxes were made as part of the consideration for the lease of the apartment, then they constituted additional rent, and such fact is not changed and can not be disregarded because of a contrary statement contained in the lease contract between the petitioner and his lessor. However, notwithstanding said statement in the lease contract, we think a fair construction of the provisions of that contract clearly indicates that the interest and taxes paid by the petitioner constituted nothing more nor less than additional rental. The very language used in the paragraph above quoted describes the payments as "in further consideration of said demise," that is to say, as further consideration for the lease of the apartment, which is the equivalent of additional rental. The only items of rental or consideration for the demise theretofore stated in the contract consists of the cash rental of one dollar per year and the petitioner's proportionate part of the operating expenses. Subdivision (b) of paragraph 2 of the lease contract provides for the payment by the petitioner of his proportionate part of the principal amount of the funded indebtedness of the lessor, special assessments for local improvements, and the cost of improvements to the building, all of which it is provided should constitute additional capital paid to the lessor by the lessee as a stockholder. Thus it would appear that the interest and taxes in question were not intended by the parties as additional capital contributions.

If we should be in error in viewing these payments of interest and taxes as additional rental under our construction of the lease contract, they would nevertheless not constitute allowable deductions from the petitioner's gross income, for the reason that interest and taxes were the direct obligations of the building corporation which owned the apartment house, and were merely paid by the petitioner for and in its behalf. The petitioner does not contend and has not attempted to show that the payments are deductible as a business expense, or otherwise than as interest and taxes. In the circumstances disclosed, the payments are not allowable deductions from the gross income of the petitioner. *Caroline T. Kissel*, 15 B.T.A. 1270, 1274; *William Ainslee Colston*, 21 B.T.A. 396, 399; affd., 59 Fed. (2d) 867; certiorari denied, 287 U.S. 640.

Note

1. The Code was amended in 1942 to allow the tenant-stockholder of a cooperative apartment building to deduct his share of the corporation's interest and taxes and in 1954 the provision, now § 216, was broadened to include cooperative housing developments.

Interest may of course be incurred in business or in a transaction entered into for profit; and the deduction in such circumstances rests upon the same footing as any other expense of business or investment; see Ch. 3, Sec. A. But it may also be a purely personal expense, as when paid to finance the purchase of one's private residence or car. Why should such expenses be deductible when the cost of rent, food, and clothing is not?

2. Section 163(b) allows a deduction for "hidden" interest on installment purchases. Before 1954, this area was in some doubt. See *McKenzie* v. *Commissioner*, 1952, ¶ 52,126 P-H Memo TC; *cf. Hundahl* v. *Commissioner*, 118 F.2d 349 (5th Cir. 1941).

3. As to the Court's second point, expressed in the last paragraph, would it prevent the deduction of interest by a taxpayer who owns property subject to a mortgage which he did not assume and on which another party is primarily liable? *New McDermott, Inc.* v. *Commissioner*, 44 B.T.A. 1035 (1941).

4. As to the deductibility of interest on intra-family indebtedness, see Ch. 4, Sec. C(5).

5. Why the restriction in § 265(2) disallowing the deduction for interest on indebtedness "incurred or continued" to purchase tax-exempt securities? Note that it is applicable only if the interest received is *wholly* tax-exempt; the interest on some federal obligations is exempt from the normal tax but not from the surtax. How is the causal connection to be established, especially as to indebtedness "continued" for the forbidden purpose? (The parenthetical exception to the exception is of declining importance, since interest on federal obligations issued since 1941, see *supra*, p. 154, is fully taxable and, as to those issued previously, only the original subscribers are protected by the parenthetical clause.). The restriction now found in Section 265(1) was held constitutional in *Denman* v. *Slayton*, 282 U.S. 514 (1931).

6. Section 264 similarly disqualifies interest on indebtedness incurred or continued to purchase or carry "single premium" life insurance, annuity, or endowment contracts. The tax avoidance device thus frustrated is the deduction of interest on a loan taken out to pay the insurance premium without the recognition of any income from the earnings credited by the insurance company on the premium. If premiums are stretched out over four years or more, the policy is not a "single premium" one, however, and some fancy footwork may still be feasible. There is also a problem of ascertaining whether indebtedness is incurred or continued in order to purchase or carry the policy.

5. Taxes

Section 23(c) of the 1939 Code, allowing certain taxes to be deducted, was re-enacted with one minor substantive and several clerical changes by §§ 164(a), (b), and (c) of the 1954 Code.

Section 164(d) of the 1954 Code is new.

See Regs. 118, Sec. 39.23(c)-1, -2, and -3.

I.T. 3511

Bureau of Internal Revenue, 1941

1941-2 C.B. 90

Advice is requested with respect to the deductibility for Federal income tax purposes of fees paid for dog licenses, automobile inspection, and automobile title registration, assuming that such fees are not classifiable as business expenses.

As a general rule, dog license fees are collected to defray the expenses of main-

taining dog pounds, etc. Automobile inspection fees are collected primarily to cover the cost of periodical inspection of automobiles and for upkeep of inspection stations Automobile title registration fees generally represent amounts paid for title registration certificates which are required to be delivered to purchasers upon transfers of automobiles.

The primary question in determining whether the above-mentioned items are deductible from gross income for Federal income tax purposes is whether they are deductible as "taxes" under section 23(c) of the Internal Revenue Code. In general, the term "tax" includes every burden that may lawfully be laid upon the citizen by virtue of the taxing power, but its application in statutory provisions varies with the intent and purpose of the particular provision. A tax is an enforced contribution, exacted pursuant to legislative authority in the exercise of the taxing power, and imposed and collected for the purpose of raising revenue to be used for public or governmental purposes, and not as a payment for some special privilege granted or service rendered. Taxes are, therefore, distinguishable from various other charges imposed for particular purposes under particular powers or functions of government. In view of such distinctions, the question whether a particular charge is to be regarded as a tax depends upon its real nature. If it is in the nature of a tax, it is not material that it may be called by a different name; conversely, if it is not in the nature of a tax, it is not material that it may be so called.

In 26 Ruling Case Law, page 17, the general rule distinguishing taxation from regulation is stated in the following language:

> 4. Taxation distinguished from regulations.—Some governments derive a considerable revenue from a judicious exercise of the power of regulation; but since a tax is a charge imposed for the purpose of raising revenue, a charge primarily imposed for the purpose of regulation is not a tax, and is not subject to the constitutional limitations upon the power of taxation. . . . If the primary purpose of the legislature in imposing such a charge is to regulate the occupation or the act, the charge is not a tax, even if it produces revenue for the public . . .

Generally, the fees here involved are nominal in amount and are collected primarily for regulatory, not for revenue-producing purposes. The funds collected are used to defray expenses of regulation. Since the fees are usually for regulatory as distinguished from revenue-producing purposes and are not collected as "taxes," they are not ordinarily deductible as taxes under section 23(c) of the Internal Revenue Code. This conclusion is in accord with the principles of I.T. 2796 (C.B. XIII-2, 48 (1934)), involving the cost of hunting and fishing licenses in the State of North Dakota; I.T. 2999 (C.B. XV-2, 139 (1936)), involving the cost of Federal migratory bird hunting stamps and hunting licenses in the States of New York, North Carolina, and Pennsylvania; I.T. 3166 (C.B. 1938-1, 133), involving the cost of hunting and fishing licenses in the State of Ohio; and I.T. 3365 (C.B. 1940-1, 31), involving amounts deposited in parking meters in the District of Columbia.

Note

1. Would the parking meter charge become deductible if the statute were amended to provide: "The installation of parking meters is hereby declared to be a revenue-raising rather than regulatory measure?" Note that Regs. 118, Sec. 39.23(c)-1(a) provides that automobile license fees are "ordinarily" taxes.

2. If the tax is incurred in the taxpayer's trade or business or in connection with property held for the production of income, it may be deducted under § 162(a) or (in the case of a sales tax, *e.g.*) treated as part of the cost of the business asset and written off through the depreciation allowance. But what is the reason for allowing taxpayers to deduct under § 164 taxes that are purely personal? What theory underlies § 164's demarcation between deductible and non-deductible taxes?

3. Sales and similar taxes have engendered difficulty far beyond their importance to the average taxpayer. Even before 1942, when the predecessor of § 164(c) was enacted, a sales tax imposed on and paid by the purchaser of goods was deductible, even though it was collected by the vendor and by him remitted to the authorities. I.T. 2902, XIV-2 C.B. 67 (1935), involving the New York City sales tax. But it took very little to find that the tax was not merely *collected* by the vendor but was instead imposed upon and paid by him. Then, under what is now section 164(a), the tax could not be deducted by the vendee, because to him it was not a tax but part of the cost of his purchase. See, *e.g.*, G.C.M. 15101, XIV-2 C.B. 65 (1935). Presumably to put vendees in different states on a par as to such items as cigarette taxes, § 164's prototype was enacted. It is no longer necessary to show that the vendee is "the taxpayer"; if the statute's other conditions are met, the tax will be deductible though imposed on and paid by the vendor. But the chain-smoker in State A is still not on a par with his fellow slave in State B, though both pay the same price for cigarettes. For State A's tax may be imposed on the retailer, and hence deductible, while State B's tax is imposed on the wholesaler and hence will not qualify. *Commissioner* v. *Thompson*, 193 F.2d 586 (10th Cir. 1951). Sometimes a change in label has made the tax deductible. Thus, the Oklahoma tax that was held non-deductible in the case just cited was held to qualify after the Oklahoma statute was amended to provide:

> The impact of the tax levied by this Act is hereby declared to be on the vendee, user, consumer, or possessor of cigarettes in this State and when said tax is paid by any other person such payment shall be considered as an advance payment and shall thereafter be added to the price of the cigarettes and recovered from the ultimate consumer or user. . . . The provisions of this Section shall in no way affect the method of collection of such tax on cigarettes as now provided by existing law.

Rev. Rul. 54-50, 54-1 C.B. —. See also Rev. Rul. 54-132, 54-1 C.B. —, holding a similar amendment to the Massachusetts cigarette tax law to be effective, I.T. 4059, 51-2 C.B. 24. In 1951 the statute was amended to provide that in the case of gasoline, a tax upon either the wholesaler or the retailer will qualify.

Another problem of characterization that can arise under § 164(c) is whether the tax is levied on a sale, or merely on the possession of the property, albeit by one in trade who intends to sell. A tax levied on possession alone is not deductible under § 164(c), even though the tax is added to the price and separately stated and even though possession rather than sale was selected as the formal taxable event only for ease of enforcement. *Commissioner* v. *Thompson*, *supra.*

Why has there been so much difficulty here? Is there any reason for allowing taxes to be deducted if separately stated but not otherwise?

4. Suppose the real property tax on *A's* home for the year 1955 is based on its assessed value as of June 30, 1954, and must be paid in full before June 30, 1955. *A* pays the tax on June 1, 1955, but sells his house on July 1, 1955, the buyer paying the agreed price plus 50 per cent of the 1955 tax. See § 164(d), which, when applicable, overrules *Magruder* v. *Supplee*, 316 U.S. 394 (1942).

6. *Casualty Losses*

Note: **Section 23(e)(3) of the 1939 Code, allowing a deduction for casualty losses, and § 23(i), prescribing the method of determining the amount of the deduction, are re-enacted by Sections 165(a), (c)(3), and (b) of the 1954 Code.**

Section 165(e), prescribing the time for deducting losses by theft, is new.

See Regs. 118, Sec. 39.23(e)-1.

KEENAN v. BOWERS

U. S. District Court, Eastern District, South Carolina, 1950
91 F. Supp. 771

WYCHE, Chief Judge. . . .

On March 15, 1945, the taxpayers, husband and wife, filed a joint federal income tax return for the tax year 1944, and in their computation of net taxable income claimed a deduction of $1,300 under Section 23(e) (3), Internal Revenue Code, 26 U.S.C.A. § 23(e) (3), for the loss of two diamond rings not compensated for by insurance, which deduction was disallowed by the Commissioner, and an assessment made for additional taxes in the amount of $972.02, plus $180.38 interest, which was paid under protest by plaintiffs. A claim for refund was duly filed by plaintiffs and disallowed.

The stipulation by the parties and the affidavit of Mrs. Keenan, which was agreed to be considered as testimony for the plaintiff, disclose the following facts: On or about May 4, 1944, Mr. and Mrs. W. J. Keenan, the plaintiffs herein, were en route to visit their son at Grenada, Mississippi, prior to his departure overseas with the 94th Infantry, and they stopped and spent the night at the Bankhead Hotel in Birmingham, Alabama; they had never spent the night in said hotel before and the surroundings were strange to both of them; their hotel room had single beds with a small lamp table between the beds. This arrangement differed from that in their home where they had bed tables on each side. On this night, Mr. Keenan prepared for bed, and being bothered with a nose irritation, placed a box of kleenex tissues on his side of the bed table and went to sleep prior to Mrs. Keenan. Subsequent to this, his wife retired. Customarily, when retiring at home, Mrs. Keenan removed her rings and placed them on or in her bureau, but this night she did not do so. However, during the night, she found her rings uncomfortable, and recalling the box of kleenex on the table, she reached out in the dark and unbeknown to her husband, took a piece of kleenex and wrapped her rings in it, and placed them wrapped on her side of the small table; she wrapped them in kleenex tissue with the thought in mind that this would be a possible precaution against the theft of the rings; during the night, Mr. Keenan awoke several times, used pieces of kleenex tissues to blow his nose, and having no convenient waste basket at hand, placed these balls of tissue on the table, intending to dispose of them upon rising, the next morning, Mr. Keenan arose early and prior to his wife's awakening, hastily preparing for an early departure, swept the used tissues up, not knowing that some of them contained the rings, balled them up, went to the bathroom and disposed of them in the toilet, flushing it forthwith; about a half an hour after Mr. Keenan's actions, Mrs. Keenan realized what had happened and immediately communicated with the hotel manager who called in the hotel engineer. A search of the trap was to no avail and then later the City of Birmingham's engineer went into the large trap in the sewer into which the hotel refuse emptied but all efforts to recover the rings were unavailing. The value of these

rings, less the maximum amount of insurance which could be collected, was $1,300.

Section 23(e) (3) of the Internal Revenue Code, 26 U.S.C.A. § 23(e) (3), upon which the claim for deduction is based, provides as follows. In computing net income there shall be allowed as deductions. "In the case of an individual, losses sustained during the taxable year and not compensated for by insurance or otherwise— . . . of property not connected with the trade or business, if the loss arises from fires, storms, shipwreck, *or other casualty*, or from theft. . . ." (Emphasis added).

The question for decision is whether or not the phrase "other casualty" in the statute can be construed so as to cover the loss of jewelry under the foregoing agreed statement of facts. . . .

Generally, the words "other" and "any other" following an enumeration of particular classes of things in a statute, must be read as meaning "other such like" and include only words of like kind or character. . . .

The word "casualty" has been defined as follows:

> An accident or casualty, according to common understanding, proceeds from an unknown cause or is an unusual effect of a known cause. Either may be properly said to occur by chance and unexpectedly. *Chicago, St. Louis & N. O. R. Co.* v. *Pullman Co.*, 139 U.S. 79, 11 S. Ct. 490, 493, 35 L. Ed. 97.

See also, *Alice P. Bachofen Von Echt*, 21 B.T.A. 702, 709. "Casualty" has also been defined as "an event due to some sudden, unexpected, or unusual cause," *Matheson, Exec.* v. *Comm.*, 2 Cir., 54 F.2d 537, 539; and embraces losses arising through the action of natural physical forces and which occur suddenly, unexpectedly, and without design on the part of the one who suffers the loss. However, it is now recognized that a human agency can constitute or cause the sudden turn of events resulting in the loss. *Ray Durden et al.*, 3 T.C. 1; *Robert L. Stephens* v. *Commissioner*, 3 T.C. 1.

The words "other casualty" were added by the 1916 Act, and the Treasury at first took the view that "other casualty" must be an incident similar to fires, storms or shipwreck arising from a natural cause and not due to negligence. In *Shearer* v. *Anderson*, 2 Cir., 16 F.2d 995, 996, this construction was held to be erroneous and the court, in allowing a deduction for damage to the taxpayer's pleasure automobile sustained when it overturned on an icy road, stated: ". . . as 'casualty' expresses rather the result than the cause of the damage, that is, the wreck itself rather than the lightning, storm, or the negligence or fault of some person, so the 'other casualty' is at least as clearly ejusdem generis (of the same kind) with shipwreck as with fire or storm." The court's modification of the Treasury Regulations in the case of *Shearer* v. *Anderson*, 2 Cir., 16 F.2d 995, does not change the Treasury's construction that the phrase means *or other like casualty*, because the court, in allowing a deduction for the damages resulting from the automobile wreck, held that the wreck of the automobile was similar to a shipwreck and was a casualty of the same kind.

Some of the losses which have been held to be deductible as from "other casualty" are as follows: loss occasioned by freezing and bursting of water pipes in a residence during the absence of the occupant; loss occasioned by the bursting of a boiler used in heating a taxpayer's residence; damage to a factory from an earthquake; an extensive deep sinking of land caused by a subterranean disturb-

ance; damage to trees caused by a sleet and ice storm; loss from violent quarry blasting operations.

Examples of losses that have been held not to be from "other casualty" are as follows· damage to buildings caused by termites; loss of a ring when there was no evidence or testimony establishing that the ring was stolen rather than mislaid, and the taxpayer did not attempt to establish the fair market value of the ring as of the date of disappearance; loss of a ring when it slipped from taxpayer's finger and was lost in muddy water when he was trying to retrieve a decoy while duck hunting; damage to a residence caused by excavations on property adjoining that of the taxpayer, loss occasioned by rusting and corrosion of the re-enforcing steel used in the cement floor beams of a house built on an island, damage on account of injuries caused to one who trips over a wire stretched in front of the taxpayer's residence, loss of household goods either in storage or in transit, and loss of a bird dog which disappeared when released for exercise by its handler and was never seen again. Mertens, *Law of Federal Income Taxation*, § 28.57, pp. 215, 216, and the 1950 Cumulative Pocket Supplement, p. 98. . . .

In the case of *United States* v. *Rogers*, 122 F.2d 485, the Circuit Court of Appeals for the Ninth Circuit said:

The meaning of the word "casualty" as used in the statute depends upon the context. The doctrine of ejusdem generis requires the statute to be construed as though it read "loss by fires, storms, shipwrecks, or other casualty of the same kind".

See also, *Matheson* v. *Commissioner*, 2 Cir., 54 F.2d 537.

So, the question here is whether or not the loss of the two diamond rings by the taxpayers may be classified as a casualty of the same kind as a loss by "fires, storms, shipwreck."

The case nearest in point is *Stevens* v. *Commissioner*,[1] decided July 8, 1947, where the taxpayer, while duck hunting and in the act of retrieving a decoy, a ring belonging to him, slipped off his finger and dropped into muddy water several feet deep. Although he was conscious of the fact at the moment the ring slipped from his finger, it disappeared into the muddy water making all efforts to recover it futile. In this case the Tax Court disallowed the deduction and said.

The loss here was not like that resulting from the collision of an automobile, *Shearer* v *Anderson, supra; W. S. Bronson*, 9 B.T.A. 1008; or a flood, *Ferguson* v *Commissioner*, 10 Cir., 59 F.2d 893; or an ice storm, *Frederick H Nash*, 22 B.T.A. 482, or subterranean disturbances, *Harry Johnston Grant*, 30 B.T.A 1028. The petitioner merely permitted his ring to drop from his finger, by his own carelessness, we must presume, without the intervention of any sudden or destructive force. It was much the same kind of loss as might result from the loss of one's purse, or any other article of value. Certainly, if Congress had intended to allow the deduction of such losses it would have expressed its aim in language much simpler and more appropriate to that end than is to be found in section 23(e) (3).

In the instant case it may be conceded that the loss of the rings was due to an unexpected and unusual cause and was not an intentional act on the taxpayer's part, but the loss lacks the element of suddenness. The primary cause of the loss was the placing of the rings in the kleenex tissue. The loss was caused by a chain of events on the part of Mrs. Keenan and Mr. Keenan. There was no intervening sudden force, cause or occurrence which brought on the event such as would ever

[1] ¶ 47,191 P-H Memo T.C.

be present in a casualty arising from fires, storms or shipwreck. I cannot say that the event or accident resulting in the loss was of the same kind as would be caused by fire, storm or shipwreck.

Therefore, judgment must be entered for the defendant, and it is so ordered.

Note

1. If the rings had been left in the hotel room when the taxpayers departed, and could not be found by the management when the taxpayers inquired about them a day later, would the loss be deductible? What if the rings had been left on a window sill and had been damaged or lost on being accidentally brushed off by a maid? Can the damage to the taxpayer's own automobile in a collision or upset be deducted if he was driving negligently? Regs. 118, Sec. 39.23(e)-1(c). As to the required "element of suddenness," termites are sometimes like fires, storms, and shipwrecks, *Rosenberg* v. *Commissioner*, 198 F.2d 46 (8th Cir. 1952), and sometimes not, *Fay* v. *Helvering*, 120 F.2d 253 (2d Cir. 1941); *United States* v. *Rogers*, 120 F.2d 244 (9th Cir. 1941). Does § 165(c) allow the taxpayer to deduct the damage done by one snow storm but not the damage done by a cold winter? If so, why? In ruling that a drought might be a "casualty," the Internal Revenue Service has said:

> Court decisions and Internal Revenue Service rulings . . . have developed the over-all concept that the term "casualty" . . . refers to an identifiable event of a sudden, unexpected, or unusual nature. . . . Under this concept, an identifiable event which would give rise to a casualty loss is not necessarily limited to an event of a sudden nature such as a flood, hurricane or earthquake, since it can also be of an unexpected or unusual nature. Thus, in the case of an unprecedented and unusual drought in an area which normally does not have prolonged and continued dry spells, a drought of such nature would be both unexpected and unusual and, therefore, would meet the above-mentioned test of an identifiable event. . . . On the other hand, a dry spell which is normal and usual in the particular area involved, would not meet the test indicated above since a drought of that nature would be neither "unexpected or unusual" for such area. Any loss resulting under such circumstances would be attributable to progressive deterioration of the property through a steadily operating cause and therefore would not constitute a "casualty" loss. Special Ruling addressed to Sen. T. C. Higgins, Jr., printed in 54 P-H Fed. Tax Service ¶ 76,570; see also Rev. Rul. 54-85, I.R.B. 1954-10.

2. Note that only property losses are deductible under § 165(c)(3).

3. Since losses of personal property by casualty are deductible, while premiums paid for insurance against such losses are not, taxpayers in the highest brackets may find it economical to forego insurance, deducting their losses in full as they occur.

4. See generally Caplin, "Casualty Losses: Recent Developments," *12th Annual N.Y.U. Institute on Fed. Taxation* 525 (1954).

HELVERING v. OWENS
OBICI v. HELVERING

Supreme Court of the U. S., 1939

305 U.S. 468

MR. JUSTICE ROBERTS delivered the opinion of the Court.

The courts below have given opposing answers to the question whether the basis for determining the amount of a loss sustained during the taxable year through injury to property not used in a trade or business, and therefore not the subject of an annual depreciation allowance, should be original cost or value

immediately before the casualty. To resolve this conflict we granted certiorari in both cases....

In No. 180 the facts are that the respondent Donald H. Owens purchased an automobile at a date subsequent to March 1, 1913, and prior to 1934, for $1,825, and used it for pleasure until June 1934 when it was damaged in a collision. The car was not insured. Prior to the accident its fair market value was $225; after that event the fair market value was $190. The respondents filed a joint income tax return for the calendar year 1934 in which they claimed a deduction of $1635, the difference between cost and fair market value after the casualty. The Commissioner reduced the deduction to $35, the difference in market value before and after the collision. The Board of Tax Appeals sustained the taxpayer's claim and the Circuit Court of Appeals affirmed its ruling.

In No. 318 it appears that the taxpayers acquired a boat, boathouse, and pier in 1926 at a cost of $5,325. In August 1933 the property, which had been used solely for pleasure, and was uninsured, was totally destroyed by a storm. Its actual value immediately prior to destruction was $3,905. The taxpayers claimed the right to deduct cost in the computation of taxable income. The Commissioner allowed only value at date of destruction. The Board of Tax Appeals held with the taxpayers but the Circuit Court of Appeals reversed the Board's ruling.

. . . Section 23(e) (3) permits deduction from gross income of losses "of property not connected with the trade or business" of the taxpayer, "if the loss arises from . . . casualty." Sec. 23(i) [now § 165(b)] declares that "The basis for determining the amount of the deduction for losses sustained, to be allowed under subsection (e) . . . , shall be the adjusted basis provided in section 113(b)." Section 113 is entitled "Adjusted basis for determining gain or loss", in subsection (a) it provides that "The basis of property shall be the cost of such property," with exceptions not material. Subsection (b), to which 23(i) refers, is

Adjusted basis. The adjusted basis for determining the gain or loss from the sale or other disposition of property, whenever acquired, shall be the basis determined under subsection (a), adjusted as hereinafter provided. (1) *General rule.* Proper adjustment in respect of the property shall in all cases be made— . . (B) in respect to any period since February 28, 1913, for exhaustion, wear and tear, obsolescence, amortization, and depletion, to the extent allowed (but not less than the amount allowable) under this Act or prior income-tax laws."*

The income tax acts have consistently allowed deduction for exhaustion, wear and tear, or obsolescence only in the case of "property used in the trade or business." The taxpayers in these cases could not, therefore, have claimed any deduction on this account for years prior to that in which the casualty occurred. For this reason they claim they may deduct upon the unadjusted basis,—that is,—cost. As the income tax laws call for accounting on an annual basis; as they provide for deductions for "losses sustained during the taxable year"; as the taxpayer is not allowed annual deductions for depreciation of non-business property; as section 23 (i) requires that the deduction shall be on "the adjusted basis provided in section 113(b)," thus contemplating an adjustment of value consequent on depreciation, and as the property involved was subject to depreciation and of less value in the taxable year, than its original cost, we think section 113 (b) (1) (B)

* Section 113(b)(1)(B), amended in a respect not material to the problem before the court, is now § 1016(a)(2). [Ed.]

must be read as a limitation upon the amount of the deduction so that it may not exceed cost, and in the case of depreciable non-business property may not exceed the amount of the loss actually sustained in the taxable year, measured by the then depreciated value of the property. The Treasury rulings have not been consistent, but this construction is the one which has finally been adopted.

In No. 180 judgment reversed.

In No. 318 judgment affirmed.

Note

1. In allowing Owens to deduct $1,635, the Court of Appeals for the Second Circuit said "... the letter is too plain; we should have to disregard the words, and should not be interpreting them, if we refused to take them just as they read." 95 F.2d 318, 319 (2d Cir. 1938). When, in the Supreme Court's view, does § 1016(a)(2) come into play as "a limitation upon the amount of the deduction?" If by reason of inflation property damaged by casualty is worth, even after the accident, more than its cost, has the taxpayer suffered a "loss?" Suppose an imported camera purchased by the taxpayer for $150 is stolen from him when it is still as good as new. What is the amount of his loss assuming that he replaces it for $100 because (a) its regular retail price has declined, (b) he happens to be in the country of manufacture and need not pay the United States duty, or (c) his uncle's brother-in-law gets one for him wholesale? If in any of these circumstances his loss is limited to $100, would it matter that instead of replacing the camera he decided to do without? What if when the camera was stolen from the taxpayer its value because of wear and tear was $100, but because the taxpayer was on an expedition and had immediate need for a camera, he was compelled to have a replacement shipped to him by chartered plane? What is the deduction if when the camera is stolen its "fair market value" is $100 if sold by a store but only $75 if offered for sale by a private individual?

2. If the property involved in the cases had been used in the taxpayer's trade or business, would the deductions have been different in amount? See G.C.M. 6122, VIII-2 C.B. 115.

3. In *Reporter Publ. Co.* v. *Commissioner*, 201 F.2d 743 (10th Cir. 1953), the taxpayer, which had paid about $80,000 for a membership in the Associated Press, deducted $30,000 as a loss when the Supreme Court, in *Associated Press* v. *United States*, 326 U.S. 1 (1945), held that a provision giving members a veto over the admission of new members in their territory was invalid. (The taxpayer, being engaged in trade or business, was not restricted to losses caused by casualties under § 165(c)(3), but could rely instead on § 165(c)(1).) The deduction was denied, although the court conceded that the Supreme Court's decision decreased the value of the taxpayer's Associated Press membership:

> It is no doubt much less desirable since the holder thereof may no longer prevent a competitor from having such a membership. But this is a far cry from saying that it is valueless The present membership still enables the taxpayer to receive all the services therefrom that he received before the decision by the Supreme Court. . . . If the membership had no value or utility, it would be a simple matter to surrender it and eliminate it entirely from the business. Then appellant would be entitled to the claimed deduction. But so long as the membership is being retained and used in the business, in the same way, for the same purposes and with the same beneficial results, it cannot be said to have no value.

What if the automobile collision that led to the deduction in *Helvering* v. *Owens*, *supra,* had caused some body dents reducing the car's value but not interfering with its operation?

4. Assume that Jones pays $2,000 for an automobile and that when it is damaged in a collision he takes a $500 casualty loss deduction Thereafter he spends $200 to repair part of the damage and, because of an inflation in automobile prices, sells the car the next year for $2,300. What is his profit on the sale?

ALISON v. UNITED STATES
UNITED STATES v. STEVENSON-CHISLETT, Inc.

Supreme Court of the U S, 1952
344 U.S. 167

Mr. Justice Black delivered the opinion of the Court.

The questions in these two income tax cases are so much alike that they can be treated in one opinion. Both taxpayers had moneys embezzled by trusted agents and employees. As usual, the defalcations had been going on for many years before they were discovered. On discovery, efforts were made immediately to identify the takers and fix the dates and amounts of the thefts. In the *Alison* case, No. 79, the books revealed the thief and the precise amounts taken each year from 1931 to 1940. In No. 80, Stevenson-Chislett, Inc., the cover-up had been so successful that painstaking investigation failed to reveal who took the funds or the time when the unascertained person or persons took them Each taxpayer claimed a tax deduction for the year the losses were discovered and their amounts ascertained. The Government objected, claiming that the deduction should have been taken in each of the prior years during which the moneys were being surreptitiously taken. In the *Stevenson-Chislett* case, the District Court held that the uncertain circumstances of the embezzlement entitled the taxpayer to take its losses the year the loss was discovered and the amount ascertained. 98 F. Supp 252. The District Judge decided the other way in the *Alison* case and denied her declarations. D.C., 97 F. Supp. 959. His holding, however, was not in accord with his own views, but was compelled, he thought, by the Third Circuit's decision in *First National Bank of Sharon, Pa.* v. *Heiner*, 66 F.2d 925. The Court of Appeals for the Third Circuit certified to us the question of deductibility in both cases. Pursuant to 28 U.S.C. § 1254(3), 28 U.S.C.A. § 1254(3), we ordered the complete records sent up so that we might decide the entire matters in controversy.

Internal Revenue Code, § 23(e) and (f), 26 U.S.C.A. § 23(e, f), authorize deductions for " . . . losses sustained during the taxable year. . . ." The Government reads this section as requiring a taxpayer to take a deduction for loss from embezzlement in the year in which the theft occurs, even though inability to discover in time might completely deprive the taxpayer of the benefit of this statutory deduction. Only at the time the money is stolen, so it is argued, is a loss "sustained." But Treasury practice itself belies this rigid construction. For more than thirty years the Regulations have provided that "A loss from theft or embezzlement occurring in one year and discovered in another is *ordinarily* deductible for the year in which sustained." Regs. 118, Sec. 39.43-2. (Emphasis supplied.) Information contained in a letter from the Commissioner attached as an appendix to the Government's brief cites many instances in which the Treasury has allowed deductions for embezzlement losses in years subsequent to those in which the thefts occurred. Apparently the Department has felt constrained to do this in order to prevent hardships and injustice. These have been departures from the "ordinary" rule of attributing embezzlement losses to the year of theft.

This Treasury practice evidently stems at least in part from the special nature of the crime of embezzlement. Its essence is secrecy. Taxpayers are usually well aware of all the circumstances of financial losses for which tax deductions are allowed. Not so when a trusted adviser or employee steals. For years his crime

may be known only to himself. He may take money planning to return it and he may return it before there is discovery. Furthermore, the terms embezzlement and loss are not synonymous. The theft occurs, but whether there is a loss may remain uncertain. One whose funds have been embezzled may pursue the wrongdoer and recover his property wholly or in part. See *Commissioner of Internal Rev.* v. *Wilcox*, 327 U.S. 404, 66 S. Ct. 546, 90 L. Ed. 752. Events in the *Alison* case show the practical value of this right of recovery. A substantial proportion of the embezzled funds was recovered in 1941, ten years after the first embezzlement occurred. This recovery alone is ample refutation of the view that a loss is inevitably "sustained" at the very time an embezzlement is committed.

Whether and when a deductible loss results from an embezzlement is a factual question, a practical one to be decided according to surrounding circumstances. See *Boehm* v. *Commissioner*, 326 U.S. 287, 66 S. Ct. 120, 90 L. Ed. 78. An inflexible rule is not needed; the statute does not compel it. For years the Treasury has administered the tax law under regulations saying that deductions shall "ordinarily" be taken in the year of embezzlement. Ordinarily does not mean always.

We hold that the special factual circumstances found by the District Courts in both these cases justify deductions under I.R.C. § 23(e) and (f) and the long-standing Treasury Regulations applicable to embezzlement losses. See *Boston Consolidated Gas Co.* v. *Commissioner*, 1 Cir., 128 F.2d 473; *Gwinn Bros. & Co.* v. *Commissioner*, 7 T.C. 320. Accordingly, the judgment in No. 79 is reversed and the judgment in No. 80 is affirmed.

It is so ordered.

Judgment in No. 79 reversed and judgment in No. 80 affirmed.

MR. JUSTICE DOUGLAS and MR. JUSTICE BURTON dissent.

Note

1. Section 165(e), added in 1954, provides that a loss arising from theft (which according to the S. Rept., p. 198, includes "embezzlement, larceny, etc.") "shall be treated as sustained during the taxable year in which the taxpayer discovers such loss." Does a taxpayer discover a "loss" when he finds that an employee took money from the cash register or only when he finds that the employee is unable to pay it back? In order to claim the deduction, must the taxpayer show that the embezzled funds cannot be recovered from the employee? *G. M. Still, Inc.* v. *Commissioner*, 19 T.C. 1072, 1075–76 (1953). If the employer decides not to press the embezzler for payment because this would—for example—require a foreclosure of his home, has the employer sustained a loss?

2 Sometimes the amount of a loss caused by storm or similar casualty is not known in the year of the catastrophe, either because the extent of the damage is not yet ascertainable or because the taxpayer does not know how fully he will be compensated by insurance. In several cases, the loss has been held deductible when finally measured. *Barrett* v. *United States*, 102 F. Supp. 956 (W.D. Ia. 1952); *Commissioner* v. *Harwick*, 184 F.2d 835 (5th Cir. 1950). In 1942, recognizing the difficulty of ascertaining when property was lost in wartime, Congress enacted § 127 of the 1939 Code. Property under enemy control when war began was irrebutably presumed to be seized or destroyed when war was declared. Section 127(a)(2). With respect to other property, the taxpayer could select his own date, within limits. Section 127(a)(1). See *Andriesse* v. *Commissioner*, 12 T.C. 907 (1949); *Shahmoon* v. *Commissioner*, 185 F.2d 384 (2d Cir. 1950).

7. *Bad Debts*

Note: Section 23(k) of the 1939 Code, dealing with bad debts, was carried over, with some changes, by §§ 166 and 165(g) of the 1954 Code.

See Regs. 118, Sec. 39.23(k)-1, -2, and -6.

SMYTH v. BARNESON

U. S. Circuit Court of Appeals, Ninth Circuit, 1950
181 F.2d 143

Before: STEPHENS, HEALY and POPE, Circuit Judges.

STEPHENS, Circuit Judge.

The Collector of Internal Revenue is appealing from a judgment of the district court decreeing a refund to a taxpayer. The controversy arises out of the disallowance by the Commissioner of Internal Revenue of a $150,000 bad debt deduction taken by appellee on her 1941 individual federal income tax return.

The case comes to us upon stipulation of facts supplemented by the testimony of one witness for appellee and one, an Internal Revenue agent, for the Collector. The refund was decreed upon the finding that the questioned debt existed on January 1, 1941, and was then of value and that it became worthless during the ensuing year. Internal Revenue Code § 23(k) (1).

The Collector thinks the alleged debt never existed but that if it ever existed the sum of the loss cannot be taken as a bad debt deduction because the taxpayer failed to take reasonable steps to collect it.

In order to rule with appellant Collector as to the non-existence of the debt, we must determine that the court's contrary finding was clearly erroneous. In determining this point we consider all of the evidence giving the written evidence the weight we deem it entitled to *de novo* and applying the oral evidence with "due regard . . . to the opportunity of the trial court to judge of the credibility of the witnesses." Rule 52(a), Federal Rules of Civil Procedure, 28 U.S.C.A.

The facts, in brief, are: In 1928 and 1929 the taxpayer advanced to her father $150,000. He used the money, and a like amount secured from his wife, taxpayer's mother, together with some of his own personal funds, to invest in a brokerage firm. The amounts so advanced were entered in the father's books in individual loan accounts. Yearly returns from such investment were received by the father up until 1932, and divided by him with his wife and daughter in the ratio of their advancements to him. On taxpayer's tax returns for the years thus involved, such monies as she received from her father were reported as income from partnership except for one year in which it was reported as interest. In 1932 the firm failed, and the father took on his tax return for that year a loss for the total amount invested although he derived no tax benefit therefrom. Taxpayer had income tax liability for that year which would have been eliminated if she had taken as a loss the amount advanced to her father. Thereafter, the father paid nothing to taxpayer. Taxpayer was adjudged incompetent in 1936 and a brother was appointed her guardian. Shortly thereafter in 1936 the mother died and the brother was appointed executor of the mother's estate. In the same year the father voluntarily informed the executor that he owed his deceased wife

$150,000 and that he owed a like amount to taxpayer, and that he intended to pay both debts. The $150,000 thus stated by the father to be owing to his deceased wife he paid to her estate in 1937, and the loan account as to her on his books was closed out. The father died in 1941, and a claim for the $150,000 filed against his estate by taxpayer's guardian was rejected in 1941 as being barred by the statute of limitations. The father, at all material times, was financially able to pay such amount to the taxpayer. The alleged debt was never listed as an asset on any of the inventories filed with any court by taxpayer's guardian. No note or other evidence ever indicated an obligation on the part of taxpayer's father to repay to her the $150,000.

All the above facts were stipulated to except for the testimony of taxpayer's brother, her guardian, as to the conversation had with the father in 1936 in which the latter stated that he owed taxpayer $150,000.

If the trial court assumed, which it evidently did, that taxpayer's guardian spoke the truth, the father's declaration against interest as to his indebtedness to his daughter was amply sufficient to sustain the finding that the debt was existent at the time. Upon the whole record, we hold that the trial court's finding was not clearly erroneous. Compare *Orvis* v. *Higgins*, 2 Cir., 180 F.2d 537.

As a basis for argument only and after making it plain that he believes the alleged debt never existed, the Collector assumes that the debt did exist and that it became worthless in 1941. He then contends that the "taxpayer is nevertheless not entitled to a bad debt deduction . . . unless she had made a reasonable effort to collect the debt." This she did not do.

Section 23(k) (1) of the Internal Revenue Code authorizes a deduction for "Debts which become worthless within the taxable years . . ."[1] The statute requires, as the basis for a deduction, that a debt actually existed and that it became worthless within the taxable year in which the deduction is claimed. Appellant would have us add a third requisite, *i.e.*, that a reasonable effort must have been made to collect the debt.

It is true that the evidence as to efforts to collect is relevant as to the time a debt actually becomes worthless but, by and of itself, effort to collect is not an element of worthlessness. Authorities cited by the Collector do not hold contrariwise. In the instant case the death of taxpayer's father and the rejection of her claim against his estate in 1941 established its noncollectibility and therefore worthlessness. This fact alone is not conclusive of when it became noncollectible or worthless. But the trial court after consideration of all the evidence was of the opinion that the debt existed and that it might well have been paid at any time before the father's death. Notwithstanding the fact that the statute of limitations could have been pleaded as a complete bar prior to 1941, the debt was existent and at any time might have been paid voluntarily by the debtor [he paid $150,000 into his wife's estate] and could have been collected through court action up to the moment of the debtor's death, except for a special plea setting up the statute of limitations in bar. After the debtor's death, the law, California Probate Code,

[1] Internal Revenue Code § 23(k) (1) as in effect in 1941 authorized a deduction for "Debts *ascertained* to be worthless and charged off within the taxable year . . . " By the Revenue Act of 1942, § 124(a) and (d), 56 Stat. 820, 822, such section was amended to read "Debts which *become* worthless within the taxable year . . ." and as amended was made applicable retroactively to taxable years beginning after December 31, 1938.

§ 708, prevented the payment of any debt as to which the statute of limitations had run.

We discern no mistake in the findings of fact, conclusions of law, and judgment. Compare *United States* v. *United States Gypsum*, 1948, 333 U.S. 364, 68 S. Ct. 525, 92 L. Ed. 746.

Affirmed.

Note

1. Whether an intra-family transaction is a gift or a loan is frequently litigated; the Tax Court has said that transfers from husband to wife are presumed, though not irrebutably, to be gifts. *Van Anda* v. *Commissioner*, 12 T.C. 1158 (1949), aff'd w.o.op., 192 F.2d 391 (2d Cir. 1951). Section 166(d), which came into the Code in 1942, provides that "non-business" bad debts give rise to capital loss rather than to ordinary loss. The significance of this provision will be made clear in Chapter 5, but it may be noted here that capital losses are of restricted deductibility. Section 166(d) will apply to many intra-family transactions, but it embraces other non-business debts as well.

2. In 1952, Congress enacted § 271, providing that uncollectible loans to political organizations shall not be deductible, except by banks. Political *contributions* are not deductible (why not?), and § 271 puts *loans*, which might be used as disguised contributions, on a par with contributions. See *infra*, p 255.

3. As the footnote in the principal case indicates, the statute formerly permitted the deduction only if the debt was "ascertained to be worthless and charged off within the taxable year." If the taxpayer kept no books, a "mental charge-off" might do. Where books were kept, however, it was possible that the deduction would be lost altogether. For the debt might become worthless in one year but (because of unwarranted optimism) the taxpayer's ascertainment of worthlessness and charge-off might have occurred in a later year. Then the year of charge-off would be incorrect, while the earlier year of actual worthlessness could not be used because in it there was no ascertainment of worthlessness and charge-off. Since 1942 the statute has provided that the deduction shall be taken for the year of worthlessness, objectively determined. The selection of the proper year is still something of a guessing game, but since 1942 the taxpayer has been allowed seven years for claiming a refund based on a bad debt, instead of the usual three years. Section 6511(d)(1). Thus if he finds that he was unduly optimistic in waiting until a given year to take the deduction, he will often be able to claim for an earlier year without being met by a statute of limitations defense.

4. Business bad debts are taken up in Chapter 3, Sec. B(7).

Section C. Personal and Dependency Exemptions

Section 151 of the Code allows certain deductions for personal and dependency exemptions. These deductions differ from the personal deductions in that they are allowed even if the taxpayer elects to take the optional standard deduction; and they differ from business deductions in that they do not reduce adjusted gross income and hence do not affect the deductions for charitable contributions and extraordinary medical expenses.

The deductions in question are:

(1) A personal exemption of $600 for the taxpayer himself.

(2) A personal exemption of $600 for the taxpayer's spouse if (a) the taxpayer and his spouse file a joint return, or (b) the taxpayer files a separate return and if his spouse has no gross income and is not claimed as a dependent by another taxpayer.

(3) Each of the preceding exemptions is increased by $600 if the person in question (a) has attained the age of 65 before the close of the taxable year and/or (b) is blind at the close of the taxable year. Thus if both the taxpayer and his spouse are over 65 and blind, the personal exemptions will total $3600.

(4) An exemption of $600 for each "dependent." For the statutory definition of this term, the student should examine § 152.

I.T. 3834

Bureau of Internal Revenue, 1947
1947-1 C.B. 29

Advice is requested whether a veteran who is enrolled for educational training under the Servicemen's Readjustment Act of 1944 (58 Stat., 284), approved June 22, 1944, as amended, may be claimed as a dependent under section 25(b) (1) (C) of the Internal Revenue Code for the calendar year 1946.

In the instant case, the Government, through the Veterans' Administration, pays the veteran's tuition of $500 to an educational institution in accordance with the provisions of section 400(b) of the Servicemen's Readjustment Act of 1944, as amended, frequently referred to as the "G.I. Bill of Rights." While enrolled the veteran also receives from the Veterans' Administration $65 a month which, for a 9-month scholastic period, would amount to more than $500 per year. . . .

Although the benefits (exceeding $500 in value) received by the veteran under the Servicemen's Readjustment Act of 1944, as amended, do not constitute a part of his gross income for Federal income tax purposes, such benefits must be considered in determining whether the parent furnishes more than one-half of the veteran's support for the purpose of section 25(b) (3) of the Code, *supra.* The term "support," generally speaking, includes among other things the cost of education, amounts expended for subsistence, clothing, and medical care, and expenses of a similar character.

If the amount paid for the veteran by the Government to an educational institution, namely, $500, plus the subsistence allowance received by him from the Government for nine months during 1946, namely, $585, a total of $1,805, constitutes more than one-half of the veteran's support, the parent can not be allowed credit for him as a dependent under section 25(b) (1) (C) of the Code, assuming that the subsistence allowance is used by the veteran for his support.

The test to be applied in determining whether a taxpayer has furnished more than one-half of the support of a person claimed as a dependent is one of *actual support.* (See I.T. 3723, C.B. 1945, 122.) If the veteran does not use his subsistence allowance for his support, and the parent furnishes more than one-half of the veteran's actual support, the parent may claim him as a dependent.

Note

1. Note the last sentence. In I.T. 3883, 1947–2 C.B. 38, the Bureau ruled that a di-

vorced husband may claim as a dependent his child, living with the ex-wife and her second husband, where his payments to the ex-wife under court order for the child's support "constituted more than one-half of the amount expended for that purpose, even though the payments are deposited in a special account for [later] use as an educational fund"

On the meaning of "support," see Rev. Rul. 235, 53-2 C.B. 23.

2. The list of relatives set out in § 152 is exclusive. Thus, a nephew will qualify, but not the children of a deceased nephew. *Tilney* v. *Commissioner*, 182 F.2d 1009 (5th Cir. 1950). The solution is adoption. See also § 152(a)(9).

3. Before 1954, the exemption could not be taken for any dependent who had gross income of $600 or more in the taxable year. In *Rives* v. *Commissioner*, ¶ 49,287 P-H Memo T.C., the Commissioner conceded the dependency deduction for a child who earned $500 37 as a delivery boy, although at that time the gross income limitation was $500. The Bureau's generosity may have been stimulated by the fact that the boy had paid $2.50 to repair his bicycle, although the statute reads in terms of *gross*, not *net*, income. The Tax Court would probably have denied the exemption, as it did in *Cohen* v. *Commissioner*, ¶ 53,312 P-H Memo T.C., where a son had received $31.68 too much from part-time employment; although the son's net income was apparently below the statutory amount because of depreciation incurred on equipment, the Court pointed out that the statute takes account only of the dependent's gross income. See also *Gooch* v. *Commissioner*, 21 T.C. No. 60 (1954), where the alleged dependent had certain income from rentals, and the Court held that the gross rentals, rather than net income from the property, were to be used in computing the $600 ceiling.

The 1954 Code eliminated the $600 restriction for children of the taxpayer who are either under the age of 19 or students, as defined in § 151(e)(4). Moreover, § 152(d) provides that scholarships are not to be counted in determining if a child received more than half his support from the taxpayer. Does "scholarship" include amounts paid to a bright student for cutting the grass or sweeping out the gymnasium? See § 117.

Before 1954, the Code required that the taxpayer contribute "over half" of the dependent's support. The exemption was often lost because two or more taxpayers contributed in equal proportions, particularly where several children were supporting a parent. See, *e.g.*, *Russoniello* v. *Commissioner*, 21 T.C. No. 94 (1954). The 1954 Code, by § 152(c), authorizes "multiple support agreements," by which one of several persons supporting the same dependent may be designated by the others to claim the deduction, even though he did not contribute more than half the dependent's support.

4. Note § 73(c), providing that the child's earnings are taxed to him notwithstanding they were paid to the parents. This provision was adopted in 1944. Previously the taxation of such earnings depended upon whether under local law the child or the parent was entitled to them. In most states, this was the parent. See H. Rept. No. 1365, 78th Cong, 2d Sess., 1944 C.B. 821, 837–8.

5. The personal and dependency exemptions raise important issues of policy, but these are best considered in conjunction with the privilege of "income-splitting" extended to married couples and heads of households, Chapter 4, Sec. B.

Section D. Credits against Tax

1 After the tax has been computed, it is reduced by certain credits. The most important is the credit for taxes withheld from wages. Section 31. Any amounts paid as "estimated tax" (*supra*, p. 19) are also credited against the tax liability reported on the return, though these amounts are, strictly speaking, not credits but payments on account of the tax itself. If the taxpayer had any partially tax-exempt interest, he is allowed a credit of 3 per cent thereof. Section 35; *supra*, p. 154. Taxes paid to foreign countries and possessions of the United States are also allowed, to a limited extent, as credits against the federal income tax. See §§ 33 and 901.

2. Section 37 of the 1954 Code introduces a new credit for "retirement income" A qualified taxpayer may credit against his tax liability 20 per cent of his retirement income" (pensions, annuities, interest, rents, and dividends). To qualify, the individual must be over 65 (except that pensions and annuities under a public retirement system qualify even though the recipient is under 65), and he must have received "earned income" in excess of $600 in each of any ten earlier years. In computing the credit, not more than $1,200 of retirement income is taken into account, and even this amount must be reduced by any tax-free pensions or annuities (such as social security benefits) and (unless the individual is over 75) by any earned income in excess of $900 in the taxable year. The announced purpose of the credit (S. Rept. p. 8) is to adjust the differential that previously existed between persons who received federal social security benefits, which have always been tax-exempt, and those who receive taxable pensions or who have provided independently for old age. The parallel to social security is responsible for the 10-year earned income qualification and the reduction of retirement income by earned income over $900, as well as for the 65-year age requirement. The maximum credit for one individual is $240 (*i.e.*, 20 per cent of $1,200), but if a husband and wife each qualify, this may be doubled.

The retirement credit, in conjunction with the additional personal exemption of $600 available to persons over 65, can produce a considerable tax saving. Thus, if both husband and wife are over 65, and if the husband can take full advantage of the retirement credit, the tax on an adjusted gross income of $5,000 (assuming the standard deduction is taken) will be $180 ($420 of tax, less $240 retirement credit) A young couple with two children would pay $420 on the same adjusted gross income, and a young couple without dependents would pay $660.

The provision reducing the amount of qualified "retirement income" by any earned income in excess of $900 will have a curious result for a taxpayer with just $900 of earned income who is offered additional compensation. If, in the foregoing example, the $5,000 of adjusted gross income includes $900 of earned income, and if the taxpayer is offered the opportunity to earn $1200 more, he will not only have to pay the tax on that amount, but will also lose his retirement credit. Thus, an additional $1,200 of earned income will cost him $456 in tax. But the *next* $1,200 of income will cost only an additional $221.20!

3. The 1954 Code also introduced, by § 34, a credit for dividends received by individuals. The first $50 of dividends received by an individual may be excluded from income under § 116, on a joint return the exclusion may be $100 if the husband and wife each has dividends of $50 or more. Section 34 provides that a credit of 4 per cent of the remaining dividends may be taken as a credit. The credit may not exceed 2 per cent of the individual's taxable income in 1954 or 4 per cent in later years. It is allowed in addition to any retirement credit for which the individual may be eligible.

This credit, which was the most controversial aspect of the 1954 Code, will be considered again, Ch. 6, Sec. A, in conjunction with the so-called double taxation of corporate earnings, for which it was intended as a partial antidote.

CHAPTER 3

THE BUSINESS TAXPAYER

Section A. Gross Income

The determination of a business taxpayer's gross income is not radically different from determining the gross income of a non-business taxpayer. The exclusions (gifts, bequests, life insurance proceeds, *etc.*) already examined for the non-business taxpayer are equally available to the taxpayer engaged in business, although the nature of some of the exclusions means that they will ordinarily be of principal interest to non-business taxpayers. This is especially true of bequests and annuities. Gifts to persons or corporations engaged in business are also uncommon, of course, though there are a few cases dealing with subsidies by municipalities and other government agencies to attract or encourage local business. *Brown Shoe Co.* v. *Commissioner*, 339 U.S. 583 (1950); see *United States* v. *Maryland Jockey Club*, 210 F.2d 367 (4th Cir. 1954); Freeman and Speiller, "Tax Consequences of Subsidies to Induce Business Location," 9 *Tax L. Rev.* 255 (1954). See also §§ 621, 118, and 362(c).

Perhaps the most striking difference between the business and the non-business taxpayer in calculating gross income lies in accounting methods. Non-business income is almost always reported on the cash receipts and disbursements basis—that is, income is reported only as cash or its equivalent is received, and deductions are taken as the taxpayer pays cash or property. On the other hand, the gross income of a business (whether carried on by an individual, a partnership, or a corporation) is often calculated on the accrual basis: income is reported as the customers are charged for goods or services rather than when they pay, and expenses are deducted as obligations are incurred, even though payment is postponed. Moreover, if the business carries inventories of any size, it must take account of its inventories at the beginning and at the end of the taxable year in ascertaining gross income. See § 471. The use of inventories has the effect of charging the cost (or other valuation) of goods that are sold against income in the year in which they are disposed of, rather than in the year when they were purchased or manufactured. Both the cash and accrual methods of computing income and the use of inventories will be examined in more detail in Chapter 8.

Section B. Deductions

In Chapter 2 we saw that the taxpayer has been authorized by Congress to deduct certain of his expenses whether they were incurred in the pursuit of income

or not. Thus the taxpayer can deduct medical expenses, charitable contributions, interest, taxes, and bad debts, for example, even when they are exclusively personal expenses. But the bulk of personal expenses—food, clothing, and rent; wine, women, and song—are not deductible.

Now we turn to an area in which Congress has chosen to allow the deduction of substantially all expenses: those incurred in the taxpayer's trade or business or in his profit-seeking transactions. Unlike the cost of living, then, the cost of *earning* a living is ordinarily fully deductible. If Congress had chosen instead to deny or narrowly restrict the deductibility of *business* expenses, it would have imposed a sales or gross receipts tax rather than an income tax. This would have been constitutional, *supra*, p. 64, but its impact would have been very different from the income tax. What we do have is an income—more exactly, a *net* income—tax.

The statutory framework for allowing the cost of making a living to be deducted consists primarily of these three provisions:

(1) *Section 162(a)*, authorizing the deduction of all the ordinary and necessary *expenses* paid or incurred during the taxable year in carrying on any trade or business.

(2) *Section 212*, authorizing, in the case of an individual, the deduction of all the ordinary and necessary *expenses* paid or incurred during the taxable year for the production or collection of income, or for the management, conservation, or maintenance of property held for the production of income.

(3) *Section 165(a)*, authorizing the deduction of any *losses* sustained during the taxable year and not compensated for by insurance or otherwise. In the case of an individual, Section 165(c) restricts the deduction of losses to those incurred in trade or business or in a transaction entered into for profit.*

These statutory provisions, and others that are less fundamental, will be examined in this chapter. A historical note may first be in order.

Section 212—allowing an individual (including trusts, estates, and partners) to deduct the expenses of producing or collecting income or of managing, conserving, or maintaining property held for the production of income—was enacted in 1942. Previously, Section 23(a) of the 1939 Code (now § 162(a) of the 1954 Code) had permitted only the expenses of "carrying on any trade or business" to be deducted. In 1941, the Supreme Court upheld a decision of the Board of Tax Appeals that this phrase was not broad enough to cover the expenses of a wealthy investor who lived in Paris but maintained an office and staff in New York City (at an expense of $16,000 in one year and $20,000 in another) to manage under his own direction his investments in stocks and bonds. *Higgins* v. *Commissioner*, 312 U.S. 212 (1941). Section 23(e)(2) of the 1939 Code (see § 165(c)(2) of the 1954 Code), however, had for many years allowed an individual to deduct *losses* incurred "in any transaction entered into for profit," even though not connected with a trade or business. Higgins, then, could have deducted any *loss* on the sale of his securities, even though he could not deduct the *expense* of investment advice, safe deposit rental, and bookkeeping service related to the same securities. More-

* Section 165(c) also permits the deduction of casualty losses, even though unconnected with trade or business or transactions for profits. *Supra*, p. 180.

over, it was admitted by the Treasury that Higgins' *real estate* activities *did* constitute a trade or business, so that the expenses of those activities were deductible, and it has since been held that ownership of any rental property constitutes a trade or business, no matter what the taxpayer's main occupation is. *Infra,* Chapter 5, Sec. C. Since only the *net* income from renting real estate was taxable, it was not surprising that Congress decided to tax only the *net* income from investing (or speculating) in stocks or bonds or from other profit-seeking activities. Section 212 was the result.

Section 212 applies only "in the case of an individual." A similar statutory change was not required for corporations, since corporate expenses for the production or collection of income or for the management, conservation, or maintenance of property held for the production of income were presumably already deductible as expenses of the corporation's trade or business. *All* profit-seeking activities of a corporation, in other words, are within the phrase "trade or business." This is not to say that a corporation's expenses are necessarily deductible: they are not. A corporation may own property for the convenience of its stockholders rather than to make money. See, for example, *Savarona Ship Corp.* v. *Commissioner,* ¶ 42,596 P-H Memo TC, involving a yacht, and *Black Dome Corp.* v. *Commissioner,* ¶ 46,130 P-H Memo TC, involving a country estate. When the corporatin's activities are profit-directed, however, § 162(a) is board enough to accomplish what it required both §§ 162(a) and 212 to accomplish for individuals.

The issues that arise under §§ 162(a), 165, and 212—the principal business expense and loss sections—are considered in the pages that immediately follow. Thereafter, certain other business deductions are studied.

1. *Business Expenses and Losses*

> *Note:* Section 162(a) of the 1954 Code, relating to trade and business expenses, was formerly § 23(a)(1)(A).
>
> Section 212, relating to an individual's expenses for the production of income, was formerly § 23(a)(2).
>
> Section 165(a) and 165(c), relating to losses, were derived from §§ 23(f), 23(e)(1), and 23(e)(2).
>
> Section 262, relating to personal, living, and family expenses, was formerly § 24(a)(1).
>
> No substantive changes were made by any of these sections.
>
> See Regs. 118, Secs. 39.23(a), 39.23(e), 39.23(f), and 39.24(a)-1.

The issues that arise under these sections have been grouped together in the following pages under these heads·

(a) Was the expense or loss incurred in business or profit-seeking, on the one hand, or in the pursuit of pleasure, on the other?

(b) Did the taxpayer incur an expense or loss, or did he make a capital investment?

(c) Was the expense, if there was one, "ordinary and necessary? "

These compartments are not watertight, but they are satisfactory if one does not put too much pressure on them.

(a) Business or pleasure?

SMITH v. COMMISSIONER
Board of Tax Appeals, 1939
40 B.T.A. 1038

OPPER: Respondent determined a deficiency of $23.62 in petitioner's 1937 income tax. This was due to the disallowance of a deduction claimed by petitioners, who are husband and wife, for sums spent by the wife in employing nursemaids to care for petitioners' young child, the wife, as well as the husband, being employed. The facts have all been stipulated and are hereby found accordingly.

Petitioners would have us apply the "but for" test. They propose that but for the nurses the wife could not leave her child; but for the freedom so secured she could not pursue her gainful labors; and but for them there would be no income and no tax. This thought evokes an array of interesting possibilities. The fee to the doctor, but for whose healing service the earner of the family income could not leave his sickbed; the cost of the laborer's raiment, for how can the world proceed about its business unclothed, the very home which gives us shelter and rest and the food which provides energy, might all by an extension of the same proposition be construed as necessary to the operation of business and to the creation of income. Yet these are the very essence of those "personal" expenses the deductibility of which is expressly denied. I.R.C., Sec. 24(a)(1).

We are told that the working wife is a new phenomenon. This is relied on to account for the apparent inconsistency that the expenses in issue are now a commonplace, yet have not been the subject of legislation, ruling, or adjudicated controversy. But if that is true it becomes all the more necessary to apply accepted principles to the novel facts We are not prepared to say that the care of children, like similar aspects of family and household life, is other than a personal concern. The wife's services as custodian of the home and protector of its children are ordinarily rendered without monetary compensation. There results no taxable income from the performance of this service and the correlative expenditure is personal and not susceptible of deduction. *Rosa E. Burkhart*, 11 B.T.A. 275. Here the wife has chosen to employ others to discharge her domestic function and the services she performs are rendered outside the home. They are a source of actual income and taxable as such. But that does not deprive the same work performed by others of its personal character nor furnish a reason why its cost should be treated as an offset in the guise of a deductible item.

We are not unmindful that, as petitioners suggest, certain disbursements normally personal may become deductible by reason of their intimate connection with an occupation carried on for profit. In this category fall entertainment, *Blackmer v. Commissioner*, 70 Fed.(2d) 255 (C.C.A. 2d Cir.) and traveling expenses, *Joseph W. Powell*, 34 B.T.A. 655; affd., 94 Fed. (2d) 483 (C.C.A., 1st Cir.), and the cost of an actor's wardrobe, *Charles Hutchison*, 13 B.T.A. 1187. The line is not always an easy one to draw nor the test simple to apply. But we think its principle is clear. It may for practical purposes be said to constitute a distinction between those activities which, as a matter of common acceptance and universal experience, are "ordinary" or usual as the direct accompaniment of business pursuits, on the

one hand; and those which, though they may in some indirect and tenuous degree relate to the circumstances of a profitable occupation, are nevertheless personal in their nature, of a character applicable to human beings generally, and which exist on that plane regardless of the occupation, though not necessarily of the station in life, of the individuals concerned. See *Welch* v. *Helvering*, 290 U.S. 111.

In the latter category, we think, fall payments made to servants or others occupied in looking to the personal wants of their employers. *David Sonenblick*, 4 B.T.A. 986. And we include in this group nursemaids retained to care for infant children.

Note

1. This holding was recently reaffirmed, *O'Connor* v. *Commissioner*, 6 T.C. 323 (1946). If a husband's net income is $10,000, and his wife has an opportunity to earn $3,000, the additional tax (at 1954 rates and assuming two dependent children) will be about $750. Domestic help and other expenses can of course easily take the lion's share of what is left. If the husband's income is $35,000, more than half of the wife's earnings will be consumed by taxes Is the case of the working wife different from that of the small town lawyer who moves to the big city, and makes more in cash, but spends it on maintaining his new station in life?

A measure of relief is extended by § 214, added by the 1954 Code, which allows a deduction (not to exceed $600) for the expenses of caring for children under 12 and for certain other dependents "for the purpose of enabling the taxpayer to be gainfully employed" The deduction is allowed only to women and widowers. In the case of a working wife, a joint return with her husband must be filed, and the deduction is to be reduced (unless the husband is incapable of self-support because mentally or physically defective) by the amount by which their adjusted gross income exceeds $4,500. Note § 214(b)(1)(B), neighbors can get the deduction if they employ each other's teen-age children to baby-sit, but not if they employ their own children. Must the expenses be for care during working hours?

2. Somewhat analogous decisions are *Hubbart* v. *Commissioner*, 4 T.C. 121 (1944), holding the expense of travelling between house and office to be personal, and *Bruton* v. *Commissioner*, 9 T.C. 882 (1947), denying the deduction of taxi fares paid by a partially paralyzed lawyer to get from his home to his office. Is the expense of curing a disease incurred in the course of employment deductible? See *supra*, p. 165.

3. Another commonly encountered issue is the deductibility of uniforms and work clothing. Note that Regs. 118, Sec. 39.24(a)-1, though restricted to Army officers, seems to suggest that the cost of a uniform cannot be deducted if it takes the place of civilian clothing. Despite this, the Bureau has ruled that clothing that must be worn as a condition of employment and that is not suited for off-duty wear (*e.g.*, the uniforms of police officers, nurses, *etc.*) can be deducted. Mim. 6463, 50-1 C.B. 29. Special boots, gloves, protective clothing, and the like are also deductible, but not work clothes that can be worn off duty and are not required by the employer. *Roth* v. *Commissioner*, 17 T.C. 1450, 1455 (1952). See Comment, Income Tax. Deductibility of Uniform and Clothing Expenses by Employees, 36 *Calif. L. Rev.* 452 (1948).

4. In *Howard* v. *Commissioner*, 202 F.2d 28 (9th Cir. 1953), an army officer was allowed to deduct the expense of defending himself in a court martial, the charge being conduct unbecoming an officer, *viz.*, failing to pay alimony to his ex-wife. Did the court accept the "but for" argument—but for the expense of defending himself, he might have been convicted and thus might have lost his right to engage in his chosen occupation? Would the expense of successfully defending himself in a criminal case be a business expense because conviction might have been followed by a court martial and discharge from the service? In I.T. 3551, 42-1 C.B. 42, the Bureau ruled that the expense incurred by a government official in defending himself against charges under the Hatch Act (prohibiting political activities by government employees) was not

a business expense, apparently because the acts that stimulated the charges were not part of his official duties. See *Salt* v. *Commissioner, infra*, p. 249.

SCHULZ v. COMMISSIONER

Tax Court of the U. S., 1951
16 T.C. 401

ARUNDELL, Judge: The respondent has disallowed as a deduction from the petitioner's 1945 taxable income the sum of $9,304.40 claimed as entertainment expense, and a $400 item claimed as advertising expense. There is no serious dispute as to whether either of these sums was spent; the issue is whether they are deductible.

Entertainment expenses are allowed as a deduction from gross income only to the extent that they are "ordinary and necessary" in carrying on a trade or business. Section 23(a)(1) of the Internal Revenue Code. The requirements that the expense must be both ordinary and necessary must be strictly complied with, *Helvering* v. *Welch*, 290 U.S. 111, and whether contested expenditures are ordinary and necessary is primarily a question of fact. *Commissioner* v. *Heininger*, 320 U.S. 467. Proof is required that the purpose of the expenditure was primarily business rather than social or personal, and that the business in which taxpayer is engaged benefited or was intended to be benefited thereby. *Louis Boehm*, 35 B.T.A. 1106.

During 1945 petitioner elaborately entertained buyers and others connected with the jewelry business, personally spending about $7,000. In addition thereto approximately $2,000 was expended by his wife and employees on luncheons, drinks, weekend visits, conventions, suppers, theaters, and nightclubs. Approximately $3,400 of the $7,000 expended by petitioner personally was spent on suppers, theaters, and nightclubs and other forms of evening entertainment. On these occasions petitioner would bring his wife and the party or parties he was entertaining would also bring their wives. There is little to distinguish these occasions from the usual social gatherings among friends to renew acquaintanceship and enjoy a pleasant evening. They bear little semblance to the usual gatherings of business people at restaurants or other places of entertainment which serve primarily as congenial meeting places for the discussion or negotiation of business matters. Petitioner made no attempt to show that the evening entertainment he offered his guests served this purpose or that all of it was directly related to the operations of his business.

These gatherings may have been desirable and helpful to the present and future success of petitioner's business, but this is usually true of all entertaining done by business or professional people for the purpose of acquiring or retaining the favor of patrons and clients. Such expenditures are nonetheless nondeductible absent a showing that they were ordinary and necessary to the taxpayer's business within the meaning of section 23 of the Internal Revenue Code. In *Louis Boehm, supra*, we stated:

> We do not think the burden of proof is met by the petitioner's argument that in general, membership in social, political, and fraternal organizations is helpful in obtaining clients through contacts made thereby or the citing of one instance of gaining a client through acquaintance made at a political club. No evidence has been introduced to show that

any part or all of the expenditures in question were so closely related to the conduct of the petitioner's business as to have been appropriate, helpful, usual, or necessary. It is noted that in cases where expenditures of a social nature have been held to be deductible business expenses proof was presented to show that such expenditures had a direct relation to the conduct of a business or the business benefits expected. Such proof has not been presented here to show that the expenditures are deductible under section 23(a).

After taking into consideration the nature of the entertainment provided by the petitioner and the fact that it was undertaken at a time when he had more business than he could handle, we are not convinced that all of the expenditures in issue were made for purely business reasons or that the entire cost of such entertainment may be characterized as ordinary and necessary expense incident to the carrying on of the petitioner's business. An expense is deductible only if it complies with the strict requirements of section 23 and does not constitute a personal expense expressly disallowed by section 24.

Moreover, the petitioner's attempt to deduct such nondeductible items as the cost of repairing an automobile, the cost of hotel rooms, tips, and meals on two occasions when, after a night of entertaining customers, he remained in New York after missing the train home, and the inclusion of $200 which had been placed in the petty cash fund but was not expended on entertainment, all create doubt as to the accuracy of the total deduction.

On the other hand, we are convinced that some part of the expenditures was prompted by strictly business considerations and should be characterized as ordinary and necessary expenses. Applying the rule of *Cohan* v. *Commissioner*, 39 Fed.(2d) 540, we have reached an approximation after a careful consideration of the testimony of petitioner and his wife and a close examination of the memoranda and other exhibits received in evidence. From all this evidence, we have concluded that $5,500 fairly represents the amount spent by the petitioner for ordinary and necessary business entertainment in 1945 and that amount is properly deductible under section 23(a)(1) of the Internal Revenue Code.

The petitioner has included in his advertising expense the sum of $400 spent in entering his horse named "Schulztime" in a horse show and for such items as horse show programs and trophies. Petitioner has not satisfactorily shown how these expenditures were calculated to advertise or publicize his business. There is no evidence that the petitioner called the attention of those persons attending the horse shows to the fact that he was a dealer in watches by advertising in the horse show program. *Cf. Rodgers Dairy Co.*, 14 T.C. 66. There is an inference in the record that the name "Schulztime" was relied on by petitioner to publicize his business but if this be true the name chosen was so subtle and the entry of a horse in a show so far removed from the petitioner's business that it could not reasonably have been expected to publicize the business. In our opinion, the $400 so expended was not an ordinary and necessary business expense within the meaning of section 23(a)(1) of the Code and the Commissioner's disallowance of the deduction is sustained.

Note

1. In *Sutter* v. *Commissioner*, 21 T.C. 170, 173 (1953), the Court spoke of:

the stubborn thread of a single problem which has never apparently been squarely and expressly passed upon. . . . When a taxpayer in the course of supplying food

or entertainment or making other outlays customarily regarded as ordinary and necessary includes an amount attributable to himself or his family such as the payment for his own meals, is that portion of the expenditure an ordinary and necessary business expense on the one hand or a nondeductible personal item on the other? .... [W]e think the presumptive nondeductibility of personal expenses may be overcome only by clear and detailed evidence as to each instance that the expenditure in question was different from or in excess of that which would have been made for the taxpayer's personal purposes.

2. In the *Cohan* case, cited by the court, Judge L. Hand wrote:

In the production of his plays [George M.] Cohan was obliged to be free-handed in entertaining actors, employees, and, as he naively adds, dramatic critics. He had also to travel much, at times with his attorney. These expenses amounted to substantial sums, but he kept no account and probably could not have done so. At the trial before the Board he estimated that he had spent eleven thousand dollars in this fashion during the first six months of 1921, twenty-two thousand dollars, between July first, 1921, and June thirtieth, 1922, and as much for his following fiscal year, fifty-five thousand dollars in all. The Board refused to allow him any part of this, on the ground that it was impossible to tell how much he had in fact spent, in the absence of any items or details. The question is how far this refusal is justified, in view of the finding that he had spent much and that the sums were allowable expenses. Absolute certainty in such matters is usually impossible and is not necessary; the Board should make as close an approximation as it can, bearing heavily if it chooses upon the taxpayer, whose inexactitude is of his own making. [39 F.2d 540, 543-44 (2d Cir. 1930).]

No doubt in some of the cases in which the taxpayer is allowed only part of his claim under the *Cohan* case for want of substantiation, the decision penalizes lack of records or failure to prove the business connection of *bona fide* expenses; in others, however, it may be a reward for exaggerated claims which could never have been substantiated. See generally Gluck, "How *Cohan* Works. Allowance of Business Expense Deductions When No Exact Records Are Kept," 6 *Rutgers L. Rev.* 375 (1952).

3. After an extended investigation of the Bureau of Internal Revenue in 1951 and 1952, a subcommittee of the House Committee on Ways and Means, headed by Congressman Cecil R. King, reported:

A second way to reduce possible corrupt practices in the Bureau is to minimize the opportunities and temptation. For example, under a leading judicial decision, a taxpayer who claims large business deductions but has not kept any records to substantiate the claim is entitled to a reasonable allowance for the claimed expenses, which must be estimated by the Revenue Agent. Stricter requirements for keeping of reasonably detailed records by taxpayers would eliminate the necessity for discretionary determination of the proper expense deduction, and with it, any possible temptation for the Revenue Agent to allow an improperly large deduction in exchange for some private benefit extended to him by the taxpayer.

This record-keeping proposal, aside from its tendency to eliminate opportunities for corruption in the Bureau, should reduce the risk that the great multitude of taxpayers who have no substantial business deductions may feel that some persons having such opportunity to claim deductions are not paying their fair share of taxes....

Recent high tax rates have resulted in attempts by some business organizations to reward key personnel with tax-free personal benefits. These may take the form of free automobiles, airplanes, vacations, housing, or servants, all theoretically for the benefit of the employer. Of like character is the practice of allowing overly liberal expense accounts to employees whose duties involve travel or business entertainment, sometimes the employer may tolerate padding of the expense account by the employee as a way of giving him tax-free income. The opportunity for a limited segment of the taxpaying population to receive such tax-free benefits jeopardizes

> public confidence in the impartial imposition of taxes. As a basis for possible legislation, the subcommittee recommends that definite information be obtained as to the prevalence of these practices and as to the amount of revenue lost thereby. Your subcommittee has been advised that the Treasury Department will obtain these statistics and report to the Congress on the problem. (*Report to House Committee on Ways and Means,* Subcommittee on Administration of the Internal Revenue Laws (1952) 29.)

See Rev. Rul. 54-195, 54-1 C.B. —, containing instructions to internal revenue agents on the degree of proof required for traveling and entertainment expenses.

See Havemann, "The Expense Account Aristocracy," *Life,* March 9, 1953, reporting:

> In cities like New York, Washington and Chicago it is safe to say that at any given moment well over half of all the people in the best hotels, the best nightclubs and the best restaurants are charging the bill as an expense account item to their companies, which in turn are charging it to the government in the form of tax deductions.

In "Europe's Lighter Side," in the New York Herald-Tribune (July 20, 1954), Art Buchwald reported that many Europeans had been puzzled by promising business deals that, after being discussed with them by vacationing Americans, had never been closed He states:

> The only way we've been able to appease the Europeans is to explain that the Americans weren't being malicious. They were just trying to deduct their trip from their income tax. After it's explained, the European is always mollified. If there's one thing a European understands, it's tax evasion

4. Whether an abuse of the "expense account" will be discovered on audit depends to a considerable degree on the manner in which the deductions are reported. If an employee receives a salary to cover both his services and his expenses, his individual return will reflect the full amount received by him (which can be quickly compared with Form W-2, the employee's withholding statement), and any deductions he takes will be set out in his return, and may invite inquiry. On the other hand, if the employer pays a smaller salary, and defrays the expenses itself by direct payment to the restaurant, garage, *etc.*, the expenses will be buried in a vast mass of business deductions where their personal character may not be apparent upon audit. If the employer pays a salary for services plus a flat sum for expenses, the latter should be reported as income by the employee, and his deductions should be itemized; moreover, the allowance should be reported by the employer on Form 1099. Regs 118, Secs. 23(a)–2(d) and 147–2(a) Reimbursement for actual expenses should be treated in the same way as a *per diem* or other allowance: the receipt is reported as income and the expenses are deducted.

5. Where the taxpayer is an employee, claimed entertainment expenses may be disallowed because they were paid in carrying on his employer's, rather than his own, trade or business. An example is *Roach* v. *Commissioner,* 20 B.T.A. 919(1930) (where the dichotomy was especially formal because the taxpayer and his wife owned all the stock of the corporation by which he was employed), recently applied in *Jergens* v. *Commissioner,* 17 T.C. 806 (1951). This barrier can be hurdled by the taxpayer who shows that part of *his* job is the entertainment, at his own expense, of his employer's customers. In *Henricks* v. *Commissioner,* ¶ 49,268 P-H Memo TC, the taxpayer, an advertising solicitor for Time, Inc., was able to rely upon a memorandum from his employer stating:

> Mr. Luce and other Management officers have often emphasized that TIME salesmen are paid high salaries because selling is not a routine job and makes demands on a man's time and money that cannot be accounted for minute-by-minute or penny-by-penny. There are many expenses incidental to selling which the salesman is not expected to recover from the Company on top of his salary.

Often, however, less formal evidence of the employee's obligation to pay some ex-

penses himself is sufficient. See, *e.g.*, *Schmidlapp* v. *Commissioner*, 96 F.2d 680 (2d Cir. 1938).

This rule—permitting a deduction to be taken only if the expense or other item is the taxpayer's own—has been encountered previously, *Holden* v. *Commissioner*, *supra*, p. 176, and it is of general applicability. See Note, Deductibility of Expenses Incurred for the Benefit of Another, 66 *Harv. L. Rev.* 1508 (1953).

SMITH v. COMMISSIONER

Tax Court of the U. S., 1947
9 T.C. 1150

Hill, Judge: The question is whether petitioner operated the farm as a trade or business or for profit, on the one hand, or for recreational purposes or as a hobby, on the other. As is implicit or stated in the cases cited by both petitioner and respondent, the answer to this question lies in determining petitioner's intention from all of the evidence. We have concluded that the facts show that the petitioner's intent in operating the farm was primarily for the purpose of making a profit.

Respondent bases his argument that petitioner had no intent to operate the farm as a trade or business or for profit on the following points: (1) That the operation of the farm resulted in a series of uninterrupted losses, (2) that petitioner's purchase of the farm was essentially motivated by his desire to have a country estate for his home, and (3) that petitioner operated the farm in order to supply his family with food for home consumption.

It is true that the petitioner has experienced continuous annual losses from the operation of his farm since its acquisition in 1933 and through the taxable years in question. Moreover, the record discloses that after the taxable years involved here there were further losses in 1944, 1945, and 1946. The fact that the operation of the farm has resulted in a series of losses, however, is not controlling if the other evidence shows there is a true intention of eventually making a profit. See *Israel O. Blake*, 38 B.T.A. 1457. Respondent cites the case of *Thacher* v. *Lowe*, 282 Fed. 1944, to support his argument. The court in that case stated:

> . . . it is difficult to imagine how a farm which has been running the number of years which this had could be thought capable of turning a deficiency of 90 per cent into a profit.

On the facts in the instant case, however, we can not say that there is no reasonable expectation of realizing a profit.

We do not agree with the respondent that petitioner purchased the farm primarily to satisfy his desire to live on a country estate. It may be true that petitioner experienced pleasure from residing in a country home, but this fact alone does not negative his intent to operate the farm for profit. *Wilson* v. *Eisner*, 282 Fed. 38. Nor is such intent negatived by the fact assumed by respondent that petitioner, as a business executive, has received an annual salary sufficiently high to indicate no need to supplement his income by the farm operation.

We are convinced from the record that it has at all times been petitioner's intention to operate the farm for profit, and that he had reasonable expectations of accomplishing that result. His efforts to make a profit have included increasing the land in cultivation and in pasturage from 75 to 95 acres, renting the farm, em-

ploying an experienced farmer to operate it under his supervision, improving the land by reclamation practices and fertilization and soil conservation methods, and engaging at various times in a number of diversified types of farming. He spends most of his week ends working on the farm, performing such odd jobs as repairing buildings or equipment, feeding poultry, and spraying orchards. On week days he usually consults with his employee for 10 or 15 minutes each morning in connection with problems related to the operation of the farm. In addition he has expended a great deal of money in repairing farm buildings and buying farm equipment, all of which was for utilitarian rather than beautification purposes. He has always considered the farm separate from his home, he has segregated the capital and operating expenses of the residence from the farm expenses, and he has not used the farm for any social or recreational purposes, nor does it have any such facilities.

This leaves for our consideration respondent's argument that petitioner operated the farm primarily for the purpose of providing wholesome food for his family. It should be noted, first, that petitioner and his family consumed at the most only 10 per cent of the farm products on the average and that all of those used were included and reported in the farm income at regular prices. The other approximately 90 per cent of the farm produce was sold by the petitioner to local butchers and grocerymen, to purchasers stopping by the farm, and occasionally to the Delaware Packing Co. at Trenton. In addition to that, the types of products raised by petitioner included poultry, eggs, cattle, sheep, wheat, corn and hay, many of which are not readily adaptable to home consumption, and such of them as were so adaptable were produced in far greater quantities than his home consumption requirements. The petitioner's primary intention, therefore, was not to produce good food for home consumption. Consequently, the case of *Louise Cheney*, 22 B.T.A. 672, cited by respondent, is not in point.

We hold that petitioner's farm operations during the taxable period here involved were a business regularly carried on by him for profit and that the losses in question resulted from ordinary and necessary expenses paid during such taxable period in carrying on such business and, therefore, are deductible for income tax purposes.

Note

1. Commenting on the country estate and racing stable cases, Randolph Paul has said:

> The American business man has never appeared so indefatigably optimistic as in some of the cases on this point; taxpayers have earnestly contended (sometimes successfully) that they expected to reap an ultimate profit even though operating losses exceeded receipts with depressing regularity over a long period of years. Paul, Motive and Intent in Federal Tax Law, in *Selected Studies in Federal Taxation* (Second Series, 1938) 281–2.

Horse breeding and racing, though the sports of kings, have been held in a surprising number of cases to be the business of taxpayers. See, for example, *Commissioner* v. *Widener*, 33 F.2d 833 (3d Cir. 1929) (losses of more than $300,000 in four years); *Whitney* v. *Commissioner*, 73 F.2d 589 (3d Cir. 1934); *Farish* v. *Commissioner*, 103 F.2d 63 (5th Cir. 1939). In the last case, the possibility of geographical and occupational discrimination was suggested:

> The intention of the taxpayer at the outset is the dominant factor in determining whether he engaged in the venture merely for pleasure or for profit. Of course, the Board could rest its decision on the circumstantial evidence, as opposed to the sworn testimony of the taxpayer. But we think the Board was psychologically wrong in concluding that the Farishes, as men of sound business judgment, would not have engaged in the ventures with any expectation of profit. Both are actively engaged in the oil business. It is common for a man in the oil business, of sound judgment, to expend thousands of dollars in exploring the land and drilling for oil in "wild cat" territory. Sometimes this results in dry holes and the costs of drilling and development are totally lost. On other occasions, producing wells are brought in and the profits are enormous. The breeding of horses would not be considered merely a fad in Texas. It is not at all improbable that men in the oil business, having ample capital, would engage in the enterprises here involved with the hope and expectation of ultimately making a fair return on the investment. [103 F.2d at 65.]

By accident or not, gentlemen authors, though they lose money as regularly as gentlemen farmers, have apparently been less successful in proving their acquisitive intentions. *Chaloner* v. *Helvering*, 69 F.2d 571 (C.A.D.C. 1934); *Purdy* v. *Commissioner*, 12 T.C. 888 (1949). See also *Ewing* v. *Commissioner*, —F.2d—(2d Cir. 1954). In *Hempel* v. *Commissioner*, ¶ 47,183 P-H Memo TC, a formerly successful concert singer seeking to make a come-back was held to be engaged in a trade or business although she claimed expenses of $10,000–$15,000 annually for 12 years with only nominal earnings, the Tax Court rejected the Treasury's uncharitable argument that the expenses were personal expenses to continue "the illusion of a famous prima donna who could not bear to slip out of the public eye."

2. What are the prospects for a collector of art, rare books, or postage stamps who claims a deduction under § 165(c)(2) on the ground that though he enjoyed looking at his collection, his primary aim was to build up a hedge against inflation or eventually to sell at a profit?

3. Even if the taxpayer succeeds in establishing that he is engaged in a trade or business, § 270 denies him the right to deduct more than $50,000 from his other income (salary, interest, dividends, *etc.*) if the trade or business in question results in losses of $50,000 or more each year for five consecutive years. The statute of limitations is extended so as to permit the Commissioner to recompute the tax for earlier years after the trade or business has produced the required series of loss years.

4. If the activity is held to be a hobby instead of a trade or business, can the Commissioner tax the gross income therefrom without allowing the taxpayer to deduct any of the related expenses?

5. Note § 165(d). It has been held (by a divided court) that by virtue of this section wagering losses are deductible to the extent of wagering gains, whether or not the losses were incurred in transactions qualifying under § 165(c)(2). *Humphrey* v. *Commissioner*, 162 F.2d 853 (5th Cir. 1947). Ordinarily, of course, the gambling taxpayer has a profit-seeking motive. But what if he is a tourist in Las Vegas, looking only for excitement and convinced that he will lose?

6. Section 162(b) is designed to prevent avoidance of the percentage limits imposed by § 170(b) on deductions for charitable contributions by a claim that the gifts were business expenses. But if the taxpayer is able to show that the payment to the charitable organization was not a "contribution or gift," it may be deducted as a business expense. For an example, see Regs. 118, Sec. 39.23(a)–13. Presumably moderately selfish motives (such as the desire to improve employee morale or to build good will) are not enough; the payment must be motivated by direct business advantages. The prohibition of § 162(b) is also inapplicable if the organization, though having a charitable purpose, does not meet the requirements of § 170(b). See *B. Manischewitz Co.* v. *Commissioner*, 10 T.C. 1139 (1948); I.T. 3580, 1942–2 C.B. 95. Before 1954, § 162(b) was applicable only to corporations, the 1954 Code extended it to individuals as well.

GEVIRTZ v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1941
123 F.2d 707

Before SWAN, CHASE, and FRANK, Circuit Judges.

FRANK, Circuit Judge.

Taxpayer, a woman of considerable wealth, was, for some years prior to 1926, a resident of Mt. Vernon, where, at one time, she had built and later sold a garden apartment house. Conceiving the idea of constructing another garden apartment, she purchased a tract of several acres with this in view, but she became dissatisfied with the location and sold it in 1925. Shortly thereafter she advised a real estate agent at Mt. Vernon that she was interested in acquiring another tract of land upon which to build an apartment house. Early in 1926 she purchased a one-acre parcel for $32,000, paying $7,000 in cash and giving back a mortgage for $25,000. The deed contained restrictions, providing that no building could be erected on the premises for any trade, calling, or business whatever, the premises being restricted to dwelling purposes by means of homes for use or value of not less than $15,000, and built not more than one to each 75 feet of frontage, and that no building erected on the land could be used as a tenement house or apartment house. At the time of the hearing of the present proceeding by the Board, these restrictions had not been removed, although it was believed, we may assume with good reason, that they could be. Immediately following the acquisition of this property, the taxpayer learned, for the first time, that several large apartment house projects were being contemplated in Mt. Vernon, some of them not far distant from the property in question. She then decided that it would be a mistake to proceed with any plans to build an apartment house on that site, since the other projected apartment houses were more than sufficient to satisfy the demand and there would be difficulty in securing tenants at profitable rental rates.

She then erected on the property a 12-room residence costing in excess of $90,000. On the advice of her real estate agent, this residence was constructed with three separate wings, each of which could be made into a separate apartment with its own private entrance and driveway, so that the building could be converted into a 3-family dwelling. She knew at that time that it could not be rented at a profit as a private residence She lived in it from the time of its completion in 1926 until December 31, 1931. She then vacated it and endeavored to sell or rent it, but without success. In November or December, 1934, she discharged the caretaker whom she had left in charge of the property and turned the keys to the house over to the attorneys for the original mortgagees with the request that she be released from personal liability on the bond and mortgage. In the last week of 1934, those attorneys informed her that she would not be thus released, as the mortgagees wished to foreclose, although they expressed the opinion that there would be no deficiency judgment against the taxpayer as the mortgagees thought that the market value of the property was in excess of the amount of bond and mortgage. In the taxpayer's income tax return for the calendar year 1934 she claimed, on the basis of the foregoing, a deductible loss from gross income of $89,588.80 and also deductions for depreciation, cost of insurance and legal ex-

penses. The Commissioner disallowed these deductions and the Board, after hearing, sustained the deficiency as determined by the Commissioner. The taxpayer petitioned this court for review.

Taxpayer is entitled to a deduction only for a loss incurred in a "transaction entered into for profit," I.R.C., Sec. 23(e)(2). The evidence amply supports the finding of the Board that there was a "definite abandonment" by the taxpayer of her original profit motive in purchasing the land and a "definite devotion of the property to a personal residence use." The fact that the residence cost $90,000, coupled with the other facts found by the Board, answers the suggestion that the construction of the residence with three separate wings, so that it could, at some indefinite future date, be converted into three separate apartments, showed a retention of the original business purpose. That the taxpayer had in mind the possibility of later devoting the property to such a purpose is not sufficient to demonstrate that the profit motive remained dominant. Cases can be imagined where a taxpayer's motive might be mixed, with the profit motive so markedly preponderant that it should be regarded as if it were controlling. But that is not this case. Here the prospect of a future business use of the property was clearly subsidiary, only on the edge of the taxpayer's mind. Her attitude was not unlike that of the White Knight who carried a mouse-trap on his horse because, he said, "it's well to be provided for everything." At best, it was as if she had bought a residence for her personal use, intending to live in it for several years and then put it on the market.

Once the conclusion is reached that when the residence was built she did not have a business purpose, the case falls into a familiar category. There was no subsequent conversion of the property to a business use; the mere effort to rent it did not have that effect. *Morgan* v. *Commissioner*, 5 Cir., 76 F.2d 390. The claimed deductions, therefore, constituted items of personal loss and expense which are not deductible.

The judgment of the Board of Tax Appeals is affirmed.

Note

1. With respect to a possible "subsequent conversion of the property to a business use," the Supreme Court in *Heiner* v *Tindle*, 276 U.S. 582, 587 (1928), permitted the taxpayer to deduct under § 165(c)(2) his loss on the sale of a building constructed and used for a time as a residence but subsequently rented for some years:

> The loss here has resulted from the sale of property not used for residential purposes by the taxpayer, and the transaction entered into for profit and resulting in the loss was not the purchase of the property but its appropriation to rental purposes.

The deduction is the difference between (a) the cost of the building or its value when converted to rental purposes, whichever is lower, minus depreciation for the rental period, and (b) the amount realized on the sale. Regs. 118, § 39.23(e)-1, Examples (1) and (2). This means that any decline in value occurring during the period of residential use may not be deducted.

The courts have regularly refused (as in the *Gevirtz* case) to accept the mere listing of the property for rental as a sufficient conversion to satisfy § 165(c)(2); it must be actually rented or remodeled for rental. See, for example, *Rumsey* v. *Commissioner*, 82 F.2d 158, 159-60 (2d Cir. 1936).

The taxpayer argues with considerable persuasive force that the fact that a man

first rents his house before selling it is only significant as evidentiary of his purpose to abandon it as a residence and to devote the property to business uses; that renting is not the sole criterion of such purpose, as the regulations themselves imply by the words "rented or otherwise appropriated" to income producing purposes. But we think the argument cannot prevail over counter considerations. If an owner rents, his decision is irrevocable, at least for the term of the lease; and if he remodels to fit the building for business purposes, he has likewise made it impossible to resume residential uses by a mere change of mind. When, however, he only instructs an agent to sell or rent the property, its change of character remains subject to his unfettered will, he may revoke the agency at any moment. Certainly it strains the language of Article 171, Regulations 74 [now Sec. 39.23(e)-1(e) of Regs. 118], to find that the property is "appropriated to" and "used for" income producing purposes by merely listing it with a broker for sale or rental. Until instructed by the Supreme Court that its decision in *Heiner* v. *Tindle* was intended to have a broader application, we feel constrained to follow the more natural meaning of the regulation.

In *Schmidlapp* v. *Commissioner*, 96 F.2d 680, 682 (2d Cir. 1938), Judge L. Hand wrote:

> As a new matter something may no doubt be said against distinguishing between a house actually let, and one unsuccessfully put upon the market; putting the property in the hands of a broker might perhaps be regarded as itself the inception of a "transaction entered into for profit." But *Morgan* v. *Commissioner*, 5 Cir., 76 F.2d 390, and *Rumsey* v. *Commissioner*, 2 Cir, 82 F.2d 158, are the other way; they hold in effect that only an actual letting creates a "transaction," and it is true that only then does it become impossible for the owner to resume his original occupation.

2. Note that in the *Gevirtz* case, maintenance expenses and depreciation were put on the same footing as the loss on sale of the house, all were disallowed. After the enactment in 1942 of what are now §§ 212 and 167(a)(2), it was held that listing a residence for rent is a sufficient conversion to permit maintenance expenses and depreciation to be deducted under §§ 212 and 167(a)(2), even though it is not a sufficient conversion to permit the deduction of a loss on its sale under § 165(c)(2). The theory is that once the house is listed for rental, it is "held for the production of income" within the meaning of §§ 212 and 167(a)(2), even though there is no "transaction entered into for profit," the term used in § 165(c)(2). *Robinson* v. *Commissioner*, 2 T.C. 305, 308-9(1943); see also *Horrmann* v. *Commissioner*, 17 T.C. 903 (1951). Is listing it for *sale* satisfactory?

3. Suppose the taxpayer sells at a loss a residence acquired by inheritance or gift. Has there been a "transaction entered into for profit" so as to permit deduction of the loss under § 165(c)(2)? Apparently the taxpayer-heir's decision to sell property is sufficient for § 165(c)(2), even though the property was not so held by the decedent; moreover, it has been held that listing the property for rental is enough, so long as the heir has not used it as a residence himself. *Williams, Exec.* v. *Commissioner*, 1 B.T.A. 1101 (1925); *Crawford* v. *Commissioner*, 16 T.C. 678 (1951); see *Horrmann* v. *Commissioner*, 17 T.C. 903, 909–10 (1951). In another case, the disposition of property by an executor was held (by a divided court) to be a "transaction entered into for profit," although the decedent had acquired it for personal reasons and would have been unable to claim a loss had he disposed of it during his lifetime. *Waterman's Estate* v. *Commissioner*, 195 F.2d 244 (2d Cir. 1952). On the other hand, a donee of investment property was held to be entitled to deduct a loss on its sale on the theory that his donor's profit-seeking purpose should be imputed to him. *Tanzer* v. *Commissioner*, 37 B.T.A. 244(1938). The reasoning of the court is somewhat weakened by a subsequent statutory change. Could the donee alternatively assert that his own holding of the property for the production of income would constitute a "transaction entered into for profit"?

4. Is § 165(c)(2) satisfied if the taxpayer incurs the loss by selling the property for

tax purposes? In *Terry* v. *United States*, 10 F. Supp. 183 (D Conn. 1934), it was held that the loss qualified so long as the property was *acquired* in a "transaction entered into for profit." If the *sale* itself had to be such a transaction, the court argued, there could be no loss under § 165(c)(2). But the sale must be bona fide and at arm's length; see *Evans* v. *Rothensies*, 114 F.2d 958 (3d Cir. 1940), holding that property acquired for profit-making purposes will not give rise to a deductible loss if sold at an unnecessarily low price. "The disposition of property as well as its acquisition is material to the question whether the transaction was entered into for profit. . . ." 114 F.2d at 962. On the other hand, a sale below market value, if dictated by business considerations (e g., granting a proprietary interest in a business to its employees), may give rise to a § 165(c)(2) deduction. *Kress* v. *Stanton*, 98 F. Supp. 470 (W.D. Pa. 1951), aff'd. p.c. 196 F.2d 499 (3d Cir. 1952).

5. If after paying premiums on a life insurance policy for a number of years, a taxpayer surrenders or sells it for less than the premiums already paid, does he have a deductible loss from a "transaction entered into for profit?" See *London Shoe Co.* v. *Commissioner*, 80 F.2d 230 (2d Cir.), cert. den. 298 U.S. 663 (1935); *Early* v. *Atkinson*, 175 F.2d 118 (4th Cir. 1949).

BAER v. COMMISSIONER

U. S. Court of Appeals, Eighth Circuit, 1952
196 F.2d 646

Before. GARDNER, Chief Judge, and WOODROUGH and THOMAS, Circuit Judges.

GARDNER, Chief Judge:

This matter is before us on petition to review a decision of the Tax Court which sustained a finding of deficiency in petitioner's income tax return for the year of 1947 in the amount of $78,633.12. The deficiency resulted from disallowance of deductions from taxpayer's income of an item of $35,000 paid by taxpayer to his divorced wife pursuant to a property settlement, and an item of $20,000 paid to her attorney for legal fees in connection with the divorce proceedings, and an item of $16,500 paid to his own attorneys for legal fees in connection with the divorce proceedings. [The only issue in the portion of the case here reprinted is whether the payment by the taxpayer to his attorneys was deductible under § 23(a)(2) of the 1939 Code, now § 212 of the 1954 Code] The findings of the Tax Court are not challenged and may be summarized as follows:

Petitioner, a resident of St. Louis, Missouri, was married to Mary E. Baer July 27, 1936. They had one child, Mary Ann Baer, who in 1946 was about nine years old. On December 14, 1946, Mrs. Baer filed suit for divorce, and asked for alimony, custody and support of the minor child, and other relief. In that proceeding she alleged that her husband had property of several millions of dollars. While the suit for divorce was pending, on July 10, 1947, the parties executed an agreement settling their property rights and on the same date a decree of divorce in favor of Mrs. Baer was entered. . . .

Petitioner and his wife and their attorneys were negotiating from about September, 1946, until about July 10, 1947, relative to the marital rights and obligations of petitioner and his wife. At first a reconciliation was attempted but appeared hopeless and thereafter most of the negotiations were directed to the financial aspects of the matter. . . .

It was claimed by counsel for Mrs. Baer that petitioner's estate exceeded in value $6,000,000, and she made demand for payment in excess of $1,000,000 in a lump

sum. His estate consisted largely of stock of the Stix, Baer and Fuller Company and his income came mainly from the salary paid him by that company as its president and dividends received by him from that company. It was of very great importance to him to maintain in specie his stock in this company so as to retain control, which may well have meant his salary and to a certain extent the earnings of the company. The demand for $1,000,000 in a lump sum could not have been met by him without a sale of a very considerable amount of his stock in this company. It was, of course, conceded that if Mrs. Baer were granted a divorce she would be entitled to a very large sum in alimony. The controversy did not go to the question of the liability but to the manner in which it might be met by the petitioner without greatly disturbing his financial structure. It was of the utmost importance to him to maintain his control of the company and thus his stock therein which was a producer of income, and his position as president; in fact, in the circumstances here disclosed this stock had a peculiar or special value to petitioner. Payment of the $1,000,000 demand in a lump sum threatened a destruction, to a considerable extent, of his capacity to earn income. Among other controversies was the claim of Mrs. Baer to 5,000 shares of stock in the Stix, Baer and Fuller Company.* It was through the efforts of Mrs. Baer's attorneys that while this stock was turned over to Mrs. Baer, voting power of it was permanently fixed in petitioner and her right of disposing of the stock was left largely in his control, thus further protecting him in the control of the company, and it was through their efforts that the plan was worked out by which he was placed in the position to meet these obligations and yet remain in control of the company and his stock therein. In so doing they were, we think, conserving and maintaining property held by Baer for the production of income.

It was early determined that reconciliation between petitioner and his wife was not possible and he had little concern as to the divorce proceeding; in fact, he interposed no answer. There was apparently but little occasion for the services of counsel in the divorce proceeding proper. That the services of petitioner's counsel were largely so devoted was recognized by the Tax Court in its finding that to one of these attorneys he paid $10,000, of which about 90 per cent was received for services rendered in connection with the form and amount of alimony to be paid to the wife and that to the other attorney he paid $8,787.60, of which about 80 per cent was paid for services in the negotiations as to form and amount of alimony. The amount devoted to the latter named purpose amounts in the aggregate to $16,500. The services of these attorneys were certainly appropriate, and hence, the payments were necessary, and if for the conservation or maintenance of property held for the production of income, then they were deductible from his gross income.

Prior to 1942, Section 23 permitted a deduction for "ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business." It made no provision for nonbusiness expenditures. The Supreme Court, in *Higgins* v. *Commissioner*, 312 U.S. 212, held that expenses incurred by a taxpayer in looking after his income-producing property were not deductible because not incurred in carrying on any trade or business. As a result of this decision Congress added the provision 23(a)(2), above quoted. The legislative intent in

* These shares were in Mrs. Baer's name, but the certificates were in her husband's possession, and she had brought a replevin action for them. [Ed.]

enacting this Section 23(a)(2), if that may be said to be obscure, is disclosed in the report of the House Ways and Means Committee, H. Rpt. No. 2333, 77th Congress, 1st Session, 1942-2 C.B. 373, from which we quote as follows.

> The existing law allows taxpayers to deduct expenses incurred in connection with a trade or business. Dut partly to the inadequacy of the statute and partly to court decisions, non-trade or non-business expenses are not deductible, although non-trade or non-business income is fully subject to tax. The bill corrects this inequity by allowing all of the ordinary and necessary expenses paid or incurred for the production or collection of income or for the management, conservation, or maintenance of property held for the production of income.

Following this change in the law, the Supreme Court, in *Trust of Bingham v. Commissioner*, 325 U.S. 365, held that attorney fees paid by the trustee in contesting an income tax deficiency assessment and in winding up the trust after its expiration were deductible under Section 23(a)(2) of the Internal Revenue Code. In the course of the opinion in that case, referring to the decision of the Court of Appeals in the same case, it is said·

> It (the Court of Appeals) thought that the expenses of contesting the income tax had nothing to do with the production of income and hence were not deductible as expenses "for the production of income" within the meaning of the statute. The court also thought that these expenses were not deductible, because they were paid in connection with property held by the trustees "ready for distribution," and hence not "for the production of income." Similarly it held that the fees for professional services rendered in connection with the payment of legacies and the distribution of the trust fund, were not expenses relating to the management of property held for the production of income, since they were rendered after the trust term had expired and when the property was ready for distribution....
>
> We think that these objections to the deductions fail to take proper account of the plain language of Section 23(a)(2), and the purpose of the section as disclosed by its statutory setting and legislative history; ....
>
> Here the decision of the Court of Appeals was that the expenses were not deductible because they were not for the purpose of producing income or capital gain, and because the trust property, being ready for distribution, was no longer held for the production of income.

After holding that the expenses connected with the devolution of the trust property were deductible, the court said:

> What we have said applies with equal force to the expenses of contesting the tax deficiency. Section 23(a)(2) does not restrict deductions to those litigation expenses which alone produce income. On the contrary, by its terms and in analogy with the rule under Section 23(a)(1), the business expense section, the trust, a taxable entity like a business, may deduct litigation expenses when they are directly connected with or proximately result from the enterprise—the management of property held for the production of income.

Here the services, to the extent found by the Tax Court, were not to prevent the payment of the liability due Mrs. Baer but to so adjust the method of satisfying that liability as not unnecessarily to reduce petitioner's income from the property which confessedly he owned, and hence it was for the purpose of conserving and maintaining this income-producing property. This property was held by him for the production of income. In 1947, the year here involved, he received in excess of $135,000 in dividends and over $100,000 in salary from Stix, Baer and Fuller Company. If the claim for over $1,000,000 of petitioner's property were required to be paid in a lump sum, it would have forced petitioner to relinquish control of the source of his income.

It is, however, urged that the deductions were not allowable because Section 24(a)(1) of the Internal Revenue Code denies deduction for "personal living or family expenses." The mere fact that the same attorneys acted for petitioner in connection with his domestic controversy does not convert the services rendered by them in the matter of the negotiation of the agreement by which the liability to Mrs. Baer for property was so adjusted as to conserve and protect Mr. Baer's specific holdings in Stix, Baer and Fuller Company to personal living or family expenses of Mr. Baer. The Tax Court recognized the two classes of service. This expenditure had a proximate and direct relation to the conservation and maintenance of specific property, the ownership or control of which enabled petitioner to receive income. These fees did not constitute personal family expenses. *Barbara B. LeMond*, 13 T.C. 670; *Elsie B. Gale*, 13 T.C. 661. In the *LeMond* case the facts were somewhat similar to the instant case. In the course of the opinion in that case the Tax Court said·

> . . . the record indicates that the petitioner and her husband had actually separated by mutual agreement prior to negotiation of the separation agreement of July 27, 1943, and that the attorneys to whom the fees in question were paid were solely concerned with the financial aspects of the separation rather than with the settlement of the personal or marital difficulties of the petitioner and her husband. Therefore, it is our opinion that no part of the legal expenses herein constituted personal family expenses and that no allocation of the legal fees in that respect is necessary.

The case of *Lindsey C. Howard*, 16 T.C. 157, is cited as authority for the holding that the expense for the attorney fees there involved was a personal living or family expense. In that case it is to be observed that

> The litigation . . . was in no wise related to petitioner's business activity. The whole situation involved personal (as distinguished from business) relationships and personal considerations. . . . Throughout the entire history and development of income tax law there has existed a sharply defined distinction between business expenses allowable as deductions and non-allowable personal expenses.

The *Howard* case is readily distinguishable from the instant case. The question involved in this case was whether Mrs. Baer might enforce her demand for alimony in a lump sum sufficient in amount to cause a breakup of petitioner's stockholdings. The negotiations looking to the prevention of this threat had to do, we think, with the conservation and maintenance of income-producing property owned by the petitioner.

The government now relies quite strongly on the decision of the Supreme Court in *Lykes* v. *United States*, 343 U.S. 118, handed down since the submission of the instant case. In that case Lykes "gave to his wife and to each of his three children, respectively, 250 shares of common stock in Lykes Brothers, Inc., a closely held family corporation" In his Federal gift tax returns he valued the shares at $120.00 each and on that basis paid a gift tax. The Commissioner, however, revalued the stock and notified Lykes of a gift tax deficiency in a large sum. Lykes employed attorneys to contest this increase in the gift tax and ultimately secured a settlement for somewhat less than the amount claimed. In his current income tax return he made no claim for deduction on account of attorney fees which he had paid counsel but later claimed a tax refund on the ground that the attorney fees should have been deducted under Section 23(a)(2) of the Internal Revenue Code. The claim was denied, whereupon suit was brought in the District

Court and the matter in due course reached the Supreme Court. In the course of the opinion the court, among other things, said:

> Insofar as gifts to members of a donor's family are in the nature of personal or family expenses, the donor's expenditures for accounting, legal or other services incurred in making those gifts are of a like nature. The nondeductibility of such expenditures, therefore, is indicated both by the absence of any affirmative allowance of their deductibility under Section 23 and by the express denial of the deductibility of all personal or family expenses under Section 24. . . .
>
> Inasmuch as the ordinary and necessary character of the legal expenses incurred in the instant case is not questioned, their deductibility turns wholly upon the nature of the activities to which they relate. The first issue, therefore, is whether petitioner's gifts, and the legal expenses related to them, were made for the "production or collection of income" within the meaning of Section 23(a)(2). Generally a gift is the antithesis of such production or collection because it reduces the donor's resources whether income producing or not. However, petitioner suggests that although he stated in his gift tax return that the purpose of his gifts was to express his love for the donees, yet the gifts were part of a general plan to produce income for himself. In support of this, he points out that the gifts consisted of 1,000 shares of stock in a closely held family corporation of which he is the president and in which he retained personal ownership of about 2,000 like shares, and that one of the donees, his son is now actively identified with the corporation and is one of its directors.

In the *Lykes* case the court in affirming the decision of the Court of Appeals held that the transfers were gifts and that the attorney fees were not proximately related to the production of income. The services in that case were relative to property which the taxpayer had given away, and, as pointed out by the court, thereby reduced, rather than conserved, the property held by him for income-producing purposes. The activities of the attorneys in the instant case, on the other hand, were directed to the conservation and maintenance of property held by their client for income producing purposes. The facts in the *Lykes* case are so unlike those in the case at bar as to rob it of any persuasive force. Lykes made gifts to members of his family—clearly a family transaction which had nothing to do with the conservation or maintenance of specific property held by him for income producing purposes.

We conclude that petitioner was entitled to deduct from his gross income the sum of $16,500 paid to his attorneys as an expense incurred to conserve and maintain income-producing property owned by him. The judgment of the Tax Court is therefore modified and the cause remanded to that court for further proceedings consistent herewith.

WOODROUGH, Circuit Judge, *dissenting* in part. . . .

I think the attorneys worked to minimize "personal, living or family expenses" of the taxpayer and did nothing in the "production or collection of income" or in the "management, conservation or maintenance of property."

It seems to me that the decision here has gone counter to the decision handed down by the Supreme Court in *Lykes* v. *United States*, 343 U.S. 118 (1952). There attorneys' fees sought to be deducted under Section 23(a)(2) were paid to attorneys who worked to minimize expense to the taxpayer incidental to certain gifts made by him. Gifts are the antithesis of "production of income" or "conservation of property" and because the services were attributable to the gifts, the cost of the attorneys' services was held not to be deductible.

This case should turn on the same principle. The attorneys' services here were

to minimize the cost to the taxpayer of the settlement of his family difficulties. Therefore the matter to which the fees were attributable was as far removed from "production of income" or "conservation of property" as was the making of gifts in the *Lykes* case. But it is the matter to which the services are attributable that controls and I think the decision in the *Lykes* case clearly admonishes against sanctioning deduction under Section 23(a)(2) in this case.

Note

Although the *Lykes* case held that legal fees incurred in contesting a gift tax deficiency were not deductible, the regulations provided that expenses in the determination of income tax liability were deductible. Regs. 118, Sec. 39.23(a)–15(k). Section 212(3) of the 1954 Code overruled the *Lykes* case; it covers all types of taxes, state and local as well as federal.

COMMISSIONER v. FLOWERS

Supreme Court of the U. S., 1946
326 U.S. 465, reh. den. 326 U.S. 812

MR. JUSTICE MURPHY delivered the opinion of the Court.

This case presents a problem as to the meaning and application of the provision of § 23(a)(1)(A) of the Internal Revenue Code allowing a deduction for income tax purposes of "traveling expenses (including the entire amount expended for meals and lodging) while away from home in the pursuit of a trade or business."

The taxpayer, a lawyer, has resided with his family in Jackson, Mississippi, since 1903. There he has paid taxes, voted, schooled his children and established social and religious connections. He built a house in Jackson nearly thirty years ago and at all times has maintained it for himself and his family. He has been connected with several law firms in Jackson, one of which he formed and which has borne his name since 1922.

In 1906 the taxpayer began to represent the predecessor of the Gulf, Mobile & Ohio Railroad, his present employer. He acted as trial counsel for the railroad throughout Mississippi. From 1918 until 1927 he acted as special counsel for the railroad in Mississippi. He was elected general solicitor in 1927 and continued to be elected to that position each year until 1930, when he was elected general counsel. Thereafter he was annually elected general counsel until September, 1940, when the properties of the predecessor company and another railroad were merged and he was elected vice president and general counsel of the newly formed Gulf, Mobile & Ohio Railroad.

The main office of the Gulf, Mobile & Ohio Railroad is in Mobile, Alabama, as was also the main office of its predecessor. When offered the position of general solicitor in 1927, the taxpayer was unwilling to accept it if it required him to move from Jackson to Mobile. He had established himself in Jackson both professionally and personally and was not desirous of moving away. As a result, an arrangement was made between him and the railroad whereby he could accept the position and continue to reside in Jackson on condition that he pay his traveling expenses between Mobile and Jackson and pay his living expenses in both places. This arrangement permitted the taxpayer to determine for himself the amount of

time he would spend in each of the two cities and was in effect during 1939 and 1940, the taxable years in question.

The railroad company provided an office for the taxpayer in Mobile but not in Jackson. When he worked in Jackson his law firm provided him with office space, although he no longer participated in the firm's business or shared in its profits. He used his own office furniture and fixtures at this office. The railroad, however, furnished telephone service and a typewriter and desk for his secretary. It also paid the secretary's expenses while in Jackson. Most of the legal business of the railroad was centered in or conducted from Jackson, but this business was handled by local counsel for the railroad. The taxpayer's participation was advisory only and was no different from his participation in the railroad's legal business in other areas.

The taxpayer's principal post of business was at the main office in Mobile. However, during the taxable years of 1939 and 1940, he devoted nearly all of his time to matters relating to the merger of the railroads. Since it was left to him where he would do his work, he spent most of his time in Jackson during this period. In connection with the merger, one of the companies was involved in certain litigation in the federal court in Jackson and the taxpayer participated in that litigation.

During 1939 he spent 203 days in Jackson and 66 in Mobile, making 33 trips between the two cities. During 1940 he spent 168 days in Jackson and 102 in Mobile, making 40 trips between the two cities. The railroad paid all of his traveling expenses when he went on business trips to points other than Jackson or Mobile. But it paid none of his expenses in traveling between these two points or while he was at either of them.

The taxpayer deducted $900 in his 1939 income tax return and $1,620 in his 1940 return as traveling expenses incurred in making trips from Jackson to Mobile and as expenditures for meals and hotel accommodations while in Mobile.[1] The Commissioner disallowed the deductions, which action was sustained by the Tax Court. But the Fifth Circuit Court of Appeals reversed the Tax Court's judgment, 148 F.2d 163, and we granted certiorari because of a conflict between the decision below and that reached by the Fourth Circuit Court of Appeals in *Barnhill* v. *Commissioner*, 148 F.2d 913.

The portion of § 23(a)(1)(A) authorizing the deduction of "traveling expenses (including the entire amount expended for meals and lodging) while away from home in the pursuit of a trade or business" is one of the specific examples given by Congress in that section of "ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business." It is to be contrasted with the provision of § 24(a)(1) of the Internal Revenue Code, . . . disallowing any deductions for "personal, living, or family expenses." And it is to be read in light of the interpretation given it by Sec. 39.23(a)-2 of Treasury Regulations 118, promulgated under the Internal Revenue Code. This interpretation, which is precisely the same as that given to identical traveling expense deductions authorized by prior and successive Revenue Acts, is deemed to possess

[1] No claim for deduction was made by the taxpayer for the amounts spent in traveling from Mobile to Jackson. He also took trips during the taxable years to Washington, New York, New Orleans, Baton Rouge, Memphis and Jackson (Tenn.), which were apparently in the nature of business trips for which the taxpayer presumably was reimbursed by the railroad. No claim was made in regard to them.

implied legislative approval and to have the effect of law. *Helvering* v. *Winmill*, 305 U.S. 79, 59 S. Ct. 45, 83 L. Ed. 52; *Boehm* v. *Commissioner*, 326 U.S. 287, 66 S. Ct. 120. In pertinent part, this interpretation states that

Traveling expenses, as ordinarily understood, include railroad fares and meals and lodging. If the trip is undertaken for other than business purposes, the railroad fares are personal expenses and the meals and lodging are living expenses. If the trip is solely on business, the reasonable and necessary traveling expenses, including railroad fares, meals, and lodging, are business expenses. . . . Only such expenses as are reasonable and necessary in the conduct of the business and directly attributable to it may be deducted. . . . Commuters' fares are not considered as business expenses and are not deductible.

Three conditions must thus be satisfied before a traveling expense deduction may be made under § 23(a)(1)(A):

(1) The expense must be a reasonable and necessary traveling expense, as that term is generally understood. This includes such items as transportation fares and food and lodging expenses incurred while traveling.
(2) The expense must be incurred "while away from home."
(3) The expense must be incurred in pursuit of business. This means that there must be a direct connection between the expenditure and the carrying on of the trade or business of the taxpayer or of his employer. Moreover, such an expenditure must be necessary or appropriate to the development and pursuit of the business or trade.

Whether particular expenditures fulfill these three conditions so as to entitle a taxpayer to a deduction is purely a question of fact in most instances. See *Commissioner* v. *Heininger*, 320 U.S. 467, 475, 64 S. Ct. 249, 254, 88 L. Ed. 171. And the Tax Court's inferences and conclusions on such a factual matter, under established principles, should not be disturbed by an appellate court. *Commissioner* v. *Scottish American Co.*, 323 U.S. 119, 65 S. Ct. 169; *Dobson* v. *Commissioner*, 320 U.S. 489, 64 S. Ct. 239, 88 L. Ed. 248.

In this instance, the Tax Court without detailed elaboration concluded that "The situation presented in this proceeding is, in principle, no different from that in which a taxpayer's place of employment is in one city and for reasons satisfactory to himself he resides in another." It accordingly disallowed the deduction on the ground that they represent living and personal expenses rather than traveling expenses incurred while away from home in the pursuit of business. The court below accepted the Tax Court's findings of fact but reversed its judgment on the basis that it had improperly construed the word "home" as used in the second condition precedent to a traveling expense deduction under § 23(a)(1)(A). The Tax Court, it was said, erroneously construed the word to mean the post, station or place of business where the taxpayer was employed—in this instance, Mobile—and thus erred in concluding that the expenditures in issue were not incurred "while away from home." The Court below felt that the word was to be given no such "unusual" or "extraordinary" meaning in this statute, that it simply meant "that place where one in fact resides" or "the principal place of abode of one who has the intention to live there permanently." 148 F.2d at page 164. Since the taxpayer here admittedly had his home, as thus defined, in Jackson and since the expenses were incurred while he was away from Jackson, the deduction was permissible.

The meaning of the word "home" in § 23(a)(1)(A) with reference to a taxpayer residing in one city and working in another has engendered much difficulty and litigation. 4 Mertens, *Law of Federal Income Taxation* (1942) § 25.82. The Tax Court and the administrative rulings [2] have consistently defined it as the equivalent of the taxpayer's place of business. See *Barnhill* v. *Commissioner*, *supra*, 4 Cir. On the other hand, the decision below and *Wallace* v. *Commissioner*, 9 Cir., 144 F.2d 407, have flatly rejected that view and have confined the term to the taxpayer's actual residence. See also *Coburn* v. *Commissioner*, 2 Cir., 138 F.2d 763.

We deem it unnecessary here to enter into or to decide this conflict. The Tax Court's opinion, as we read it, was grounded neither solely nor primarily upon that agency's conception of the word "home." Its discussion was directed mainly toward the relation of the expenditures to the railroad's business, a relationship required by the third condition of the deduction. Thus even if the Tax Court's definition of the word "home" was implicit in its decision and even if that definition was erroneous, its judgment must be sustained here if it properly concluded that the necessary relationship between the expenditures and the railroad's business was lacking. Failure to satisfy any one of the three conditions destroys the traveling expense deduction.

Turning our attention to the third condition, this case is disposed of quickly. There is no claim that the Tax Court misconstrued this condition or used improper standards in applying it. And it is readily apparent from the facts that its inferences were supported by evidence and that its conclusion that the expenditures in issue were non-deductible living and personal expenses was fully justified.

The facts demonstrate clearly that the expenses were not incurred in the pursuit of the business of the taxpayer's employer, the railroad. Jackson was his regular home. Had his post of duty been in that city the cost of maintaining his home there and of commuting or driving to work concededly would be non-deductible living and personal expenses lacking the necessary direct relation to the prosecution of the business. The character of such expenses is unaltered by the circumstance that the taxpayer's post of duty was in Mobile, thereby increasing the costs of transportation, food and lodging. Whether he maintained one abode or two, whether he traveled three blocks or three hundred miles to work, the nature of these expenditures remained the same.

The added costs in issue, moreover, were as unnecessary and inappropriate to the development of the railroad's business as were his personal and living costs in Jackson. They were incurred solely as the result of the taxpayer's desire to maintain a home in Jackson while working in Mobile, a factor irrelevant to the maintenance and prosecution of the railroad's legal business. The railroad did not require him to travel on business from Jackson to Mobile or to maintain living quarters in both cities. Nor did it compel him, save in one instance, to perform tasks for it in Jackson. It simply asked him to be at his principal post in Mobile

[2] Section 39.23(a)-2 of Treasury Regulations 118 does not attempt to define the word "home" although the Commissioner argues that the statement therein contained to the effect that commuters' fares are not business expenses and are not deductible "necessarily rests on the premise that 'home' for tax purposes is at the locality of the taxpayer's business headquarters." Other administrative rulings have been more explicit in treating the statutory home as the abode at the taxpayer's regular post of duty. See e.g. O.D. 1021, 5 Cum. Bull. 174 (1921); I.T. 1264, I-1 Cum. Bull. 122(1922), I.T. 3314, 1939-2 Cum. Bull. 152; G.C.M. 23672, 1943 Cum. Bull. 66.

as business demanded and as his personal convenience was served, allowing him to divide his business time between Mobile and Jackson as he saw fit. Except for the federal court litigation, all of the taxpayer's work in Jackson would normally have been performed in the headquarters at Mobile. The fact that he traveled frequently between the two cities and incurred extra living expenses in Mobile, while doing much of his work in Jackson, was occasioned solely by his personal propensities. The railroad gained nothing from this arrangement except the personal satisfaction of the taxpayer.

Travel expenses in pursuit of business within the meaning of § 23(a)(1)(A) could arise only when the railroad's business forced the taxpayer to travel and to live temporarily at some place other than Mobile, thereby advancing the interests of the railroad. Business trips are to be identified in relation to business demands and the traveler's business headquarters. The exigencies of business rather than the personal conveniences and necessities of the traveler must be the motivating factors. Such was not the case here.

It follows that the court below erred in reversing the judgment of the Tax Court.

Reversed.

Mr. Justice JACKSON took no part in the consideration or decision of this case.

Mr. Justice RUTLEDGE, *dissenting.*

I think the judgment of the Court of Appeals should be affirmed. When Congress used the word "home" in § 23 of the Code, I do not believe it meant "business headquarters." And in my opinion this case presents no other question.

Congress allowed the deduction for "traveling expenses (including the entire amount expended for meals and lodging) while away from home in the pursuit of a trade or business." . . .

Respondent's home was in Jackson, Mississippi, in every sense, unless for applying § 23. There he maintained his family, with his personal, political and religious connections, schooled his children, paid taxes, voted, and resided over many years. There too he kept hold upon his place as a lawyer, though not substantially active in practice otherwise than to perform his work as general counsel for the railroad. This required his presence in Mobile, Alabama, for roughly a third of his time. The remainder he spent in Jackson at the same work, except for the time he was required to travel to points other than Mobile.

The company's principal offices were there, including one set aside for respondent's use. But the bulk of its trackage was in Mississippi and much of its legal work, with which he was concerned, was done there. His choice to keep his home in Jackson must have been affected by this fact, although it was motivated chiefly by more purely personal considerations. It is doubtful indeed, though perhaps not material, whether by not moving to Mobile he did not save the Government from larger deductions on account of traveling expense than those he claimed. . . .

Because the taxpayer elected to keep his home in Jackson, rather than move to Mobile, and because his employer did not undertake to pay these expenses, [the Tax Court] viewed the case as being the same as if he had moved to Mobile. In that event it said, he would have been required to bear the expenses of his own meals and lodging. This is obvious, even though the "as if" conclusion does not follow.

The court went on, however, to give the further reason for it: "The situation . . . is, in principle, no different from that in which a taxpayer's place of employment is in one city and for reasons satisfactory to himself he resides in another." It seems questionable whether, in so ruling, the Tax Court has not confused the taxpayer's principal place of employment with his employer's. For on the facts Jackson rather than Mobile would seem more appropriately to be found *his* business headquarters. But, regardless of that, the authorities cited and the Government's supporting argument show that the case was regarded as in essence the commuter's, excepted by the regulations.

Apart from this ruling, the Tax Court made no finding, of fact or law, that respondent was not engaged "in the pursuit of a trade or business"; that he was not "away from home"; that the expenses were not "business expenses" or "business traveling expenses"; or that they were not "ordinary and necessary." Yet by a merry-go-round argument which always comes back to rest on the idea that "home" means "business headquarters," the Government seeks to inject such issues and findings, including a *Dobson* v. *Com'r*, 320 U.S. 489, 64 S. Ct. 239, 88 L. Ed. 248, contention, into the Tax Court's determination. I think there was only one issue, a question of law requiring construction of the statute as to the meaning of the word "home" and, if that is resolved against the Government, the Tax Court's judgment has no other foundation on which to stand. Every other contention falls when this one does. All stand if it is valid.

I agree with the Court of Appeals that if Congress had meant "business headquarters," and not "home," it would have said "business headquarters." When it used "home" instead, I think it meant home in everyday parlance, not in some twisted special meaning of "tax home" or "tax headquarters." I find no purpose stated or implied in the Act, the regulations or the legislative history to support such a distortion or to use § 23 as a lever to force people to move their homes to the locality where their employer's business headquarters may be, although their own work may be done as well in major part at home. The only stated purpose, and it is clearly stated, not in words of art, is to relieve the tax burden when one is away from home on business.

The Government relies on administrative construction, by the Commissioner and the Tax Court, and says that unless this is accepted the Act creates tax inequality. If so, it is inequality created by Congress, and it is not for the Commissioner or the Tax Court, by administrative reconstruction, to rewrite what Congress has written or to correct its views of equality. Moreover, in my opinion, the inequity, if any, comes not from the statute or the regulation but from the construction which identifies petitoner with a commuter.

That word too has limitations unless it also is made a tool for rewriting the Act. The ordinary, usual connotation, *cf.* 21 I.C.C. 428; *Pennsylvania R. Co.* v. *Towers,* 245 U.S. 6, 12, 38 S. Ct. 2, 4, 62, L. Ed. 117, L.R.A. 1918C, 475, does not include irregular, although frequent journeys of 350 miles, requiring Pullman accommodations and some twelve to fifteen hours, one way.

Congress gave the deduction for traveling away from home on business. The commuter's case, rightly confined, does not fall in this class. One who lives in an adjacent suburb or city and by usual modes of commutation can work within a distance permitting the daily journey and return, with time for the day's work and

a period at home, clearly can be excluded from the deduction on the basis of the section's terms equally with its obvious purpose. But that is not true if "commuter" is to swallow up the deduction by the same sort of construction which makes "home" mean "business headquarters" of one's employer. If the line may be extended somewhat to cover doubtful cases, it need not be lengthened to infinity or to cover cases as far removed from the prevailing connotation of commuter as this one. Including it pushes "commuting" too far, even for these times of rapid transit. . . .

By construing "home" as "business headquarters"; by reading "temporarily" as "very temporarily" into § 23; by bringing down "ordinary and necessary" from its first sentence into its second; by finding "inequity" where Congress has said none exists; by construing "commuter" to cover long-distance, irregular travel; and by conjuring from the "statutory setting" a meaning at odds with the plain wording of the clause, the Government makes over understandable ordinary English into highly technical tax jargon. There is enough of this in the tax laws inescapably, without adding more in the absence of either compulsion or authority. The arm of the tax-gatherer reaches far. In my judgment it should not go the length of this case. Congress has revised § 23 once to overcome niggardly construction.[1] It should not have to do so again.

Note

1. How permanent a post must the taxpayer have before his expenses while there will be disallowed? If a business man goes to another city to see a customer, he can deduct his expenses for travel, meals, and lodging. But what is the status of a professor who teaches for a summer or a year at another university; or a man who in war-time takes a job in another city for the duration? The courts have distinguished between "temporary" employment, when the expenses will be deductible, and "indefinite" employment, where they will be disallowed. See *Coburn* v. *Commissioner*, 138 F.2d 763 (2d Cir. 1943); *Leach* v. *Commissioner*, 12 T.C. 20 (1949); *Carragan* v. *Commissioner*, 197 F.2d 246 (2d Cir. 1952); *Carroll* v. *Commissioner*, 20 T.C. 382 (1953).

Is the deduction disallowed if the taxpayer during temporary employment away from "home" takes his family along and vacates or sub-lets his house, though intending to return either to the same house or the same city at the end of the period of employment? Is a taxpayer "away from home" if he holds a job of indefinite duration in a locality to which he cannot move his family? It was held not in *Formel* v. *Commissioner*, ¶ 50,221 P-H Memo TC, involving an American engineer who worked for 2½ years in Soviet Russia, see also *Bercaw* v. *Commissioner*, 165 F.2d 521 (4th Cir. 1948), involving an Army officer. In *Mitnick* v. *Commissioner*, 13 T.C. 1 (1949), a bachelor who travelled constantly as the road manager of a theatrical company was held to have no "home" to be away from, within the meaning of § 162(a). See also *Martin* v. *Commissioner*, 44 B.T.A. 185 (1941) (seaman with no home ashore). Would a married man with similar employment be entitled to the deduction if his wife and children did not travel with him? What about a bachelor in such employment for whom a fond mother kept a room ready at all times? See *Gustafson* v. *Commissioner*, 3 T.C. 998 (1944). If a taxpayer travels on business to another city for one day, is he "away from home" so as to permit deduction of the cost of lunch? See *Amoroso* v. *Commissioner*, 193 F.2d 583 (1st Cir.), cert. den. 343 U.S. 926 (1952); *Scott* v. *Kelm*, 110 F. Supp. 819 (D. Minn. 1953).

[1] The Treasury Regulations in force in 1920 allowed deduction of only the excess of the cost of meals and lodging away from home over the cost at home; and under earlier regulations none of this expense was allowed. Congress inserted the words "all" and "entire" in the 1921 Act to overcome this ruling.

2. What if the taxpayer in the *Flowers* case had continued to practice law in Jackson after he took the Mobile railroad job? The Tax Court would apparently permit his expenses in Mobile to be deducted if the business activity in Jackson was substantial, even though the income therefrom was less than the Mobile income. *Sherman* v. *Commissioner*, 16 T.C. 332 (1951) (four judges dissenting). Suppose the taxpayer lived half-way between the two business posts? A somewhat related problem is whether, if both husband and wife work in different localities, either of them can deduct the expenses of being away from the "home." In *Wallace* v. *Commissioner*, 144 F.2d 407 (9th Cir. 1944), an actress domiciled in San Francisco (where her husband worked) was allowed to deduct the expenses of a six months' stay in Hollywood. The court's reasoning is somewhat weakened by the subsequently decided *Flowers* case, but in *Stairwalt* v. *Commissioner*, ¶ 52,261 P-H Memo TC, the Tax Court hinted (though deciding the case before it on another ground) that the wife should be allowed to deduct such expenses because of "the possible considerations of public policy inherent in creating as few inducements as possible to the maintenance of separate domiciles for husband and wife." In *Hammond* v. *Commissioner*, 213 F.2d 43 (5th Cir. 1954), where the husband worked in Baton Rouge but the wife worked and maintained the home in New Orleans, the husband's expenses were disallowed. In *Albert* v. *Commissioner*, 15 T.C. 350 (1950), a married woman who worked away from the family home (traveling by car daily during good weather and remaining away weekdays during bad) was denied traveling expenses on the theory that her employment (in a war plant) was of indefinite duration. Should this fact be important where both husband and wife (rather than only one) are working?

3. Even before the *Flowers* case was decided, it was held that the "home" of a Congressman is Washington, D. C., so that living expenses while there are non-deductible, and that the cost of the trips back "home" to keep in touch with constituents are non-deductible campaign expenses. *Lindsay* v. *Commissioner*, 34 B.T.A. 840 (1936). Congress has since provided, however, that the home of a member is in his district, but that living expenses in Washington may not be deducted in excess of $3,000 per year Section 162(a). As to members of state legislatures, see I T. 3842, 47-1 C.B. 11.

4. Since all "ordinary and necessary expenses . . . in carrying on any trade or business" are deductible under § 162(a)(1), what is added by the specific allowance of "traveling expenses?" In at least one respect, the former phrase is *broader* than the latter: a taxpayer who is not "away from home" (*e.g.*, a salesman who travels only in his home town, a traveling salesman who has no home) can deduct his automobile expenses and railroad fares as "business expenses" though they do not qualify as "traveling expenses." Note that § 212, relating to the expenses of an individual in profit-seeking activities that do not constitute a trade or business, contains no specific reference to traveling expenses. If an investor goes to another city to inspect his income-producing property, can he deduct his expenses in the same way as a business man who makes a trip to inspect his business property?

5. See generally Comment, Living Expenses While "Away From Home"; Business or Personal, 19 *U. of Chi. L. Rev.* 534 (1952), McDonald, "Travel and Entertainment Expenses," *11th Annual N.Y.U. Inst. on Fed. Taxation* 1173 (1953). On the deductibility of moving expenses, see Bittker, "The Individual as Wage Earner," *id.*, 1147, 1166–71.

(b) Expense or investment?

MIDLAND EMPIRE PACKING CO. v. COMMISSIONER

Tax Court of the U. S., 1950

14 T.C. 635

ARUNDELL, Judge: The issue in this case is whether an expenditure for a concrete lining in petitioner's basement to oilproof it against an oil nuisance created

by a neighboring refinery is deductible as an ordinary and necessary expense under section 23(a) of the Internal Revenue Code, on the theory it was an expenditure for a repair, or, in the alternative, whether the expenditure may be treated as the measure of the loss sustained during the taxable year and not compensated for by insurance or otherwise within the meaning of section 23 (f) of the Internal Revenue Code.

The respondent has contended, in part, that the expenditure is for a capital improvement and should be recovered through depreciation charges and is, therefore, not deductible as an ordinary and necessary business expense or as a loss.

It is none too easy to determine on which side of the line certain expenditures fall so that they may be accorded their proper treatment for tax purposes. Treasury Regulations 111 [q.v.] is helpful in distinguishing between an expenditure to be classed as a repair and one to be treated as a capital outlay. In *Illinois Merchants Trust Co., Executor,* 4 B.T.A. 103, at page 106, we discussed this subject in some detail and in our opinion said.

It will be noted that the first sentence of the article [now Regulations 118, Sec. 39.23(a)-4] relates to repairs, while the second sentence deals in effect with replacements. In determining whether an expenditure is a capital one or is chargeable against operating income, it is necessary to bear in mind the purpose for which the expenditure was made. To repair is to restore to a sound state or to mend, while a replacement connotes a substitution. A repair is an expenditure for the purpose of keeping the property in an ordinarily efficient operating condition. It does not add to the value of the property, nor does it appreciably prolong its life. It merely keeps the property in an operating condition over its probable useful life for the uses for which it was acquired. Expenditures for that purpose are distinguishable from those for replacements, alterations, improvements, or additions which prolong the life of the property, increase its value, or make it adaptable to a different use. The one is a maintenance charge, while the others are additions to capital investment which should not be applied against current earnings.

It will be seen from our findings of fact that for some 25 years prior to the taxable year petitioner had used the basement rooms of its plant as a place for the curing of hams and bacon and for the storage of meat and hides. The basement had been entirely satisfactory for this purpose over the entire period in spite of the fact that there was some seepage of water into the rooms from time to time. In the taxable year it was found that not only water, but oil, was seeping through the concrete walls of the basement of the packing plant and, while the water would soon drain out, the oil would not, and there was left on the basement floor a thick scum of oil which gave off a strong odor that permeated the air of the entire plant, and the fumes from the oil created a fire hazard. It appears that the oil which came from a nearby refinery had also gotten into the water wells which served to furnish water for petitioner's plant, and as a result of this whole condition the Federal meat inspectors advised petitioner that it must discontinue the use of the water from the wells and oil-proof the basement, or else shut down its plant.

To meet this situation, petitioner during the taxable year undertook steps to oil-proof the basement by adding a concrete lining to the walls from the floor to a height of about four feet and also added concrete to the floor of the basement. It is the cost of this work which it seeks to deduct as a repair. The basement was not enlarged by this work, nor did the oilproofing serve to make it more desirable for the purpose for which it had been used through the years prior to the time that

the oil nuisance had occurred. The evidence is that the expenditure did not add to the value or prolong the expected life of the property over what they were before the event occurred which made the repairs necessary. It is true that after the work was done the seepage of water, as well as oil, was stopped, but, as already stated, the presence of the water had never been found objectionable. The repairs merely served to keep the property in an operating condition over its probable useful life for the purpose for which it was used.

While it is conceded on brief that the expenditure was "necessary," respondent contends that the encroachment of the oil nuisance on petitioner's property was not an "ordinary" expense in petitioner's particular business. But the fact that petitioner had not theretofore been called upon to make a similar expenditure to prevent damage and disaster to its property does not remove that expense from the classification of "ordinary" for, as stated in *Welch* v. *Helvering*, 290 U.S. 111,

> ordinary in this context does not mean that the payments must be habitual or normal in the sense that the same taxpayer will have to make them often. . . . the expense is an ordinary one because we know from experience that payments for such a purpose, whether the amount is large or small, are the common and accepted means of defense against attack. *Cf. Kornhauser* v. *United States*, 276 U.S. 145. The situation is unique in the life of the individual affected, but not in the life of the group, the community, of which he is a part.

Steps to protect a business building from the seepage of oil from a nearby refinery, which had been erected long subsequent to the time petitioner started to operate its plant, would seem to us to be a normal thing to do, and in certain sections of the country it must be a common experience to protect one's property from the seepage of oil. Expenditures to accomplish this result are likewise normal.

In *American Bemberg Corporation*, 10 T.C. 361, we allowed as deductions, on the ground that they were ordinary and necessary expenses, extensive expenditures made to prevent disaster, although the repairs were of a type which had never been needed before and were unlikely to recur. In that case the taxpayer, to stop cave-ins of soil which were threatening destruction of its manufacturing plant, hired an engineering firm which drilled to the bedrock and injected grout to fill the cavities where practicable, and made incidental replacements and repairs, including tightening of the fluid carriers. In two successive years the taxpayer expended $734,316.76 and $199,154.33, respectively for such drilling and grouting and $153,474.20 and $79,687.29, respectively, for capital replacements. We found that the cost (other than replacement) of this program did not make good the depreciation previously allowed, and stated in our opinion:

> In connection with the purpose of the work, the Proctor program was intended to avert a plant-wide disaster and avoid forced abandonment of the plant. The purpose was not to improve, better, extend or increase the original plant, nor to prolong its original useful life. Its continued operation was endangered; the purpose of the expenditures was to enable petitioner to continue the plant in operation not on any new or better scale, but on the same scale and, so far as possible, as efficiently as it had operated before. The purpose was not to rebuild or replace the plant in whole or in part, but to keep the same plant as it was and where it was.

The petitioner here made the repairs in question in order that it might continue to operate its plant. Not only was there danger of fire from the oil and fumes, but the presence of the oil led the Federal meat inspectors to declare the basement an unsuitable place for the purpose for which it had been used for a quarter of a

century. After the expenditures were made, the plant did not operate on a changed or larger scale, nor was it thereafter suitable for new or additional uses. The expenditure served only to permit petitioner to continue the use of the plant, and particularly the basement for its normal operations.

In our opinion, the expenditure of $4,868.81 for lining the basement walls and floor was essentially a repair and, as such, it is deductible as an ordinary and necessary business expense. This holding makes unnecessary a consideration of petitioner's alternative contention that the expenditure is deductible as a business loss, nor need we heed the respondent's argument that any loss suffered was compensated for by "insurance or otherwise."

Note

1. With the foregoing, compare the following:

> We do not agree that the installation of the sprinkler system [in a hotel] constituted a repair made "for the purpose of keeping the property in an ordinarily efficient operating condition." *Cf. Illinois Merchants Trust Co.*, 4 B.T.A. 103, 106, cited by petitioner. It was a permanent addition to the property ordered by the city of New York to give the property additional protection from the hazard of fire. It was an improvement or betterment having a life extending beyond the year in which it was made and which depreciates over a period of years. While it may not have increased the value of the hotel property or prolonged its useful life, the property became more valuable for use in the petitioner's business by reason of compliance with the city's order. The respondent did not err in determining that the cost of this improvement or betterment should be added to petitioner's capital investment in the building, and recovered through depreciation deductions in the years of its useful life. *Hotel Sulgrave, Inc.* v. *Com'n*, 21 T.C. 619, 621 (1954).

2. See Shugerman, "Basic Criteria for Distinguishing Revenue Charges from Capital Expenditures in Income Tax Computations," 49 *Mich. L. Rev.* 213 (1950). Except for §§ 263(a)(1) and 263(a)(2), the Internal Revenue Code makes no attempt to define a capital expenditure. The American Law Institute in its model Income Tax Statute draws the line of distinction at three years' life and $500 value. Should frequency of purchase necessarily be conclusive on the character of the expenditure? When would a taxpayer prefer to capitalize an expenditure, assuming he had an unrestricted choice? Where the lessee of property makes improvements to the leased property, they are a capital investment. Regs. 118, Sec. 39.23(a)-10(b). The lessee may deduct the cost over the remaining years of the lease or over the estimated life of the improvements, whichever is shorter. What if the lease is of the year-to-year nature?

3. Sec. 162(a)(3) permits the deduction of rental payments for the use of trade or business property to which the taxpayer "has not taken or is not taking title or in which he has no equity." Suppose the lessee is to pay a stipulated annual rental for a period of time, at the end of which he is to receive the property in fee simple. Are the rental payments then deductible? *Benton* v. *Commissioner*, 197 F.2d 745 (5th Cir. 1952). What if the lessee has an option to purchase the property during or at the end of the period?

HOCHSCHILD v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1947
161 F.2d 817

Before SWAN, CHASE and FRANK, Circuit Judges.

CHASE, Circuit Judge.

In his income tax return for the calendar year 1939 the petitioner deducted $4,125 which he had paid in that year as attorney's fees incurred in the successful

defense of a stockholder's derivative suit brought against him and others in the state court in New York. The Commissioner disallowed the deduction in full. The Tax Court disallowed the deduction in part and this petition was brought to review that decision.

The pertinent facts were not disputed and were found in accordance with a stipulation filed by the parties. They are that the petitioner has been a director and substantial stockholder of The American Metal Company, Ltd., a New York corporation, from November 22, 1916 to at least the date of the beginning of the proceedings in the Tax Court and, since May 24, 1917 has also been one of its principal officers. In accordance with a long standing practice of The American Metal Company its directors, officers, stockholders and employees were permitted to participate in new ventures which it undertook. A syndicate, formed in November 1916 consisting of The American Metal Company and a number of its directors, officers, employees and stockholders, acquired an option upon certain molybdenum properties at Climax, Col. The option was exercised and a Delaware corporation called Climax Molybdenum Company was organized in January 1917 to which the syndicate's property was transferred in consideration for its capital stock and the petitioner then became a stockholder of Climax in proportion to his interest in the syndicate. He has remained a stockholder and has been a director and part of the time an officer of Climax at least up to the commencement of the proceedings below.

The Climax venture at length proved to be a financial success and in December 1938 a stockholder's derivative suit was brought in the New York Supreme Court, New York County, against the petitioner and others for the benefit of The American Metal Company in which the petitioner and others were charged with breaches of their fiduciary duties to the Metal Company in respect to the Climax venture. It was consolidated for trial with a similar suit thereafter commenced in the same court. The petitioner was partly successful in defending that suit in the trial court, Sup., 36 N.Y.S.2d 856, and upon appeal a judgment of the Appellate Division of the Supreme Court, 268 App. Div. 239, 50 N.Y.S.2d 800, which became final, completely vindicated him.

The plaintiffs in the above mentioned suit sought, *inter alia*, (1) to impress a trust upon the Climax stock held by the petitioner, (2) an accounting for damages and profits, and (3) an accounting for the value of any shares of Climax which the petitioner had held but was unable to transfer to The American Metal Company by reason of his sale or other disposition of them.

The petitioner had acquired 1,500 shares of Climax stock in 1918, 1,500 additional shares in 1920-21 and had surrendered 321 of them in 1926 in the settlement of litigation between Climax and the Metal Company. The Climax stock was split 10 for one in 1929 and three for one in 1935. During the period 1933 to 1939 inclusive the petitioner received dividends on his Climax stock amounting in the aggregate to $1,281,331.95.

The attorney's fees which the petitioner paid in making his successful defense of the suit in the state court were claimed to be deductible under Sec. 23(a)(1)(A) of the Internal Revenue Code, as ordinary and necessary expenses paid during the taxable year in carrying on a trade or business and, in the alternative, under Sec. 23(a)(2) of the Code as necessary expenses paid during the taxable year for the

production or collection of income, or for the management, conservation, or maintenance of property held for the production of income.

The Tax Court allocated $3,581.84 of the fees paid to the expense of defending the equitable title to the petitioner's Climax stock and held that part of it was not deductible because it was the cost of defending the title to property and thus a capital expenditure within Regs. 118, Sec. 39.24(a)-2. The remainder was allowed as a deduction on the ground that it was paid to retain income after it was collected and was to be treated for purposes of deduction as though paid for the collection of the income. In this the Commissioner acquiesced.

As there is no dispute as to any of the facts or as to the allocation already made by the Tax Court, the sole issue is one of law reviewable in this court. *Helvering* v. *Stormfeltz*, 8 Cir., 142 F.2d 982. See *Bingham* v. *Commissioner*, 325 U.S. 365, 65 S. Ct. 1232, 89 L. Ed. 1670.

The petitioner when acting as a director and officer of The American Metal Company was engaged in carrying on a trade or business within the meaning of the above statute. *Commissioner* v. *People's-Pittsburgh Trust Co.*, 3 Cir., 60 F.2d 187; *Foss* v. *Commissioner*, 2 Cir., 75 F.2d 326. The fees paid were ordinary and necessary expenses which were directly connected with such business, being paid to defend a lawsuit in which he was charged with breaches of the fiduciary duties he owed the corporation he served as a director and officer. *Commissioner* v. *Heininger*, 320 U S. 467, 64 S. Ct. 249, 88 L. Ed. 171, *Welch* v. *Helvering*, 290 U.S. 111, 54, S. Ct. 8, 78 L. Ed. 212, *Kornhauser* v. *United States*, 276 U.S. 145, 48 S. Ct. 219, 72 L. Ed. 505. He owed the corporation no duty as a fiduciary merely because he was a stockholder; his liability so alleged being solely that of a malfeasant director and officer and on that decision turned. The significance of his status as a stockholder is limited to the fact that, had the breaches of fiduciary duties been established, the state court would have had the opportunity as well as the power to deprive him of the Climax stock he still held and not have had to confine its relief to money damages.

Regardless of what effect an adverse decision might have had upon the title to his Climax stock, it was necessary for him to defend the lawsuit to protect himself from being compelled to account generally for the alleged breaches of the duties to The American Metal Company. And all the ordinary and necessary expenses which he paid in the taxable year for such defense were deductible under Sec. 23(a)(1)(A) of the Code as it has been construed in the authorities above cited.

We cannot agree that these fees which the petitioner paid in defense of the lawsuit were any the less deductible because his liability, if proved, might have destroyed his equitable title to the stock he held. His right to keep it was certainly in issue and in that sense his title to it was defended, to be sure, but the title as such was not perfected in any way by his expenditures for legal assistance. He thereby but fended off an abortive attack upon the conduct of his business as a fiduciary and by freeing himself from liability to his corporation to account for such conduct put all of his property beyond the reach of his then accusers. A similar result in this respect was attained by the expenditures allowed as a deduction in the *Kornhauser* case, *supra*. See *Rassenfoss* v. *Commissioner*, 7 Cir., 158 F.2d 764, which sufficiently distinguishes the authorities on which the respondent relies. In further support of our conclusion that these fees are not in any real

sense capital expenditures see *Commissioner* v. *Field*, 2 Cir., 42 F.2d 820 and *Levitt & Sons* v. *Nunan*, 2 Cir., 142 F.2d 795.

Decision reversed.

FRANK, Circuit Judge, *dissents* in part with opinion.

FRANK, Circuit Judge (*dissenting* in part).

To explain my reasons for partially dissenting, I must supplement my colleagues' statement of facts. The complaint in the State court suit, *Turner* v. *American Metal Company*, 268 App. Div. 239, 50 N.Y.S.2d 800 (expressly made part of the stipulation on which the instant case was tried in the Tax Court), charged that, as a result of a conspiracy in which taxpayer and other officers and directors of American Metal had joined, the following had occurred: (a) Taxpayer had himself wrongfully acquired title to certain shares of the Climax Company, and the equitable title to those shares was therefore in American Metal. (b) Taxpayer had aided others in wrongfully acquiring title to certain other Climax shares; some of those others were direct parties to the conspiracy, while still others acquired such shares with full knowledge of the conspiracy; the equitable title to all these shares was asserted to be in American Metal. (c) Taxpayer had aided in causing American Metal wrongfully to spend money for the benefit of Climax, to the damage of American Metal. On this basis, the Turner complaint prayed as follows: (a) That taxpayer be ordered to transfer to American Metal the legal title to the Climax shares which he had wrongfully obtained; (b) that he account for any dividends on those Climax shares,[1] (c) that he and the other conspirators be held liable, jointly and severally, for all damages to American Metal resulting from the conspiracy. I think that these facts call for a nicer analysis than that contained in my colleague's opinion, for the following reasons:

1. In part, the Turner suit sought to hold taxpayer liable merely for damages said to have resulted from his conduct as an official of American Metal. Here I refer to (a) the alleged damages resulting from the moneys said to have been wrongfully paid by American Metal for the benefit of Climax, and (b) the alleged damages to American Metal resulting from the fact that the taxpayer and his alleged co-conspirators aided others than himself in allegedly wrongful acquisition of Climax stock.[2] To that extent, I agree that, in the Turner suit, he was not defending the title to the Climax stock he held or to any other of his property. To rule otherwise would be to say that defense of any suit is a defense against an attack on title to property, since an adverse judgment (through levy of execution or otherwise) may diminish a defendant's property, including, for instance, stock in which he may have invested. Consequently, taxpayer's expense in defending that phase of the Turner suit was, I think, incurred as a result of "carrying on a trade or business." Up to that point, in line with the authorities cited by them, I agree with my colleagues.

2. I think, however, that the same is not true of his defense of that part of the Turner suit which charged him with having himself wrongfully obtained Climax shares and which sought an order directing him to transfer those shares to Ameri-

[1] As to expenses incurred in defending as to this item, the Tax Court decided in favor of taxpayer, and the Commissioner has not appealed.

[2] There would be no such damages if those others still have the shares and were thus able to transfer them to American Metal.

can Metal as its equitable owner. To that extent, the Turner action was a direct attack on his title to the Climax shares.

True, that attack was grounded on the alleged impropriety of his conduct as an American Metal official, coupled with alleged similar improper conduct by other such officials conspiring with him; for the theory of the Turner suit was that only by such conduct had it been possible for him to acquire the Climax shares. But, in that respect, the action was the same as if, not being himself an American Metal officer, taxpayer had obtained Climax stock through action of American Metal officers known to him to be violative of their corporate obligations; in those circumstances, his expense of defending a suit seeking to compel him to transfer the title to such stock to American Metal, as its equitable owner, would not have been incurred in "carrying on a trade or business." So it seems to me that this follows That, in order to succeed in having taxpayer ordered to transfer his Climax stock to American Metal, Turner had to prove that taxpayer's acquisition of that stock, for his own benefit, had been made possible by taxpayer's misconduct as an American Metal official, does not alter the fact that the Turner suit, as to those shares, was a direct attack on taxpayer's title to that stock. In other words, I think it immaterial that the alleged defect in that title stemmed from taxpayer's own alleged deviation from his corporate duties. Wherefore, in defending this phase of the action, taxpayer, I think, was engaged directly in protecting his title to property. See, *e.g.*, *Bowers* v. *Lumpkin,* 4 Cir., 140 F.2d 927, 151 A.L.R. 1336; *Jones Estate* v. *Commissioner,* 5 Cir., 127 F.2d 231; *Levitt & Sons* v. *Nunan,* 2 Cir., 142 F.2d 795; *Levitt & Sons* v. *Commissioner,* 2 Cir., 160 F.2d 209; *Murphy Oil Co.* v. *Burnet,* 9 Cir., 55 F.2d 17; *Moynier* v. *Welch,* 9 Cir., 97 F.2d 471. As here the "matter of title was directly involved and not merely incidental," *Rassenfoss* v. *Commissioner,* 7 Cir., 158 F.2d 764, 768 is distinguishable. For like reasons, I think that none of the other cases cited by my colleagues in support of their conclusion is apposite on this point.

However, taxpayer was, even as to that phase of the Turner suit, also in part defending the way he had functioned as a corporate officer. That part of the expense was, I believe, deductible.

3. Taxpayer made no proof of the appropriate allocation of the expenses as between the items discussed above. Since he had the burden, perhaps, if the foregoing is correct, he should fail. But I think that, in accordance with the doctrine of *Cohan* v. *Commissioner,* 2 Cir., 39 F.2d 540, 543-545, we should remand for determination of the allocation by the Tax Court.

Note

1. Bowers v. *Lumpkin,* 140 F.2d 927, 929 (4th Cir 1944), involved the deductibility under § 212 of legal expenses incurred by the taxpayer in the successful defense of a suit to invalidate a purchase by her of stock from trustees for a charity. The taxpayer argued that even though such expenses might not be deductible under § 162(a) by a person in trade or business, they were deductible under § 212·

> It is contended that the phrase "all the ordinary and necessary expenses" in the amendment [Section 212] covers more ground than it did in the original act [Section 162(a)] because the amendment expressly authorizes a deduction for expenses paid "for the management, conservation, or maintenance of property held for the production of income"; and the word "conservation" is said to be particu-

larly pertinent in the pending case where the expenses were incurred in the protection of income producing stock from adverse attack.

But the court, holding that the phrase "ordinary and necessary expenses" in § 212 must be interpreted in the light of its settled meaning under § 162(a), denied the deduction. See further *Garrett* v. *Crenshaw*, 196 F.2d 185 (4th Cir. 1952), and *Allen* v. *Selig*, 200 F.2d 487 (5th Cir. 1952). May the taxpayer add such expenditures to the basis of the stock in computing gain or loss when it is sold?

2. Would the stockholder who brought the unsuccessful suit involved in the principal case be allowed to deduct or to capitalize his expenditures?

WELCH v. HELVERING

Supreme Court of the U. S., 1933
290 U.S. 111

Mr. Justice Cardozo delivered the opinion of the Court.

The question to be determined is whether payments by a taxpayer, who is in business as a commission agent, are allowable deductions in the computation of his income if made to the creditors of a bankrupt corporation in an endeavor to strengthen his own standing and credit.

In 1922 petitioner was the secretary of the E. L. Welch Company, a Minnesota corporation, engaged in the grain business. The company was adjudged an involuntary bankrupt, and had a discharge from its debts. Thereafter the petitioner made a contract with the Kellogg Company to purchase grain for it on a commission. In order to re-establish his relations with customers whom he had known when acting for the Welch Company and to solidify his credit and standing, he decided to pay the debts of the Welch business so far as he was able. In fulfillment of that resolve, he made payments of substantial amounts during five successive years. In 1924, the commissions were $18,028.20, the payments $3,975.97; in 1925, the commissions $31,377.07, the payments $11,968.20; in 1926, the commissions $20,925.25, the payments $12,815.72; in 1927, the commissions $22,119.61, the payments $7,379.72, and in 1928, the commissions $26,177.56, the payments $11,068.25. The Commissioner ruled that these payments were not deductible from income as ordinary and necessary expenses, but were rather in the nature of capital expenditures, an outlay for the development of reputation and good will. The Board of Tax Appeals sustained the action of the Commissioner (25 B.T.A. 117), and the Court of Appeals for the Eighth Circuit affirmed. 63 F.(2d) 976. The case is here on certiorari....

We may assume that the payments to creditors of the Welch Company were necessary for the development of the petitioner's business, at least in the sense that they were appropriate and helpful. *McCulloch* v. *Maryland*, 4 Wheat. 316, 4 L. Ed. 579. He certainly thought they were, and we should be slow to override his judgment. But the problem is not solved when the payments are characterized as necessary. Many necessary payments are charges upon capital. There is need to determine whether they are both necessary and ordinary. Now, what is ordinary, though there must always be a strain of constancy within it, is none the less a variable affected by time and place and circumstance. Ordinary in this context does not mean that the payments must be habitual or normal in the sense that the same taxpayer will have to make them often. A lawsuit affecting the safety of

a business may happen once in a lifetime. The counsel fees may be so heavy that repetition is unlikely. None the less, the expense is an ordinary one because we know from experience that payments for such a purpose, whether the amount is large or small, are the common and accepted means of defense against attack. *Cf. Kornhauser* v. *United States*, 276 U.S. 145, 48 S. Ct. 219, 72 L. Ed. 505. The situation is unique in the life of the individual affected, but not in the life of the group, the community, of which he is a part. At such times there are norms of conduct that help to stabilize our judgment, and make it certain and objective. The instance is not erratic, but is brought within a known type.

The line of demarcation is now visible between the case that is here and the one supposed for illustration. We try to classify this act as ordinary or the opposite, and the norms of conduct fail us. No longer can we have recourse to any fund of business experience, to any known business practice. Men do at times pay the debts of others without legal obligation or the lighter obligation imposed by the usages of trade or by neighborly amenities, but they do not do so ordinarily, not even though the result might be to heighten their reputation for generosity and opulence. Indeed, if language is to be read in its natural and common meaning (*Old Colony R. Co.* v. *Commissioner*, 284 U.S. 552, 560, 52 S. Ct. 211, 76 L. Ed. 484, *Woolford Realty Co.* v. *Rose*, 286 U.S. 319, 327, 52 S. Ct. 568, 76 L. Ed. 1128), we should have to say that payment in such circumstances, instead of being ordinary is in a high degree extraordinary. There is nothing ordinary in the stimulus evoking it, and none in the response. Here, indeed, as so often in other branches of the law, the decisive distinctions are those of degree and not of kind. One struggles in vain for any verbal formula that will supply a ready touchstone. The standard set up by the statute is not a rule of law; it is rather a way of life. Life in all its fullness must supply the answer to the riddle.

The Commissioner of Internal Revenue resorted to that standard in assessing the petitioner's income, and found that the payments in controversy came closer to capital outlays than to ordinary and necessary expenses in the operation of a business His ruling has the support of a presumption of correctness, and the petitioner has the burden of proving it to be wrong. . . . Unless we can say from facts within our knowledge that these are ordinary and necessary expenses according to the ways of conduct and the forms of speech prevailing in the business world, the tax must be confirmed. But nothing told us by this record or within the sphere of our judicial notice permits us to give that extension to what is ordinary and necessary. Indeed, to do so would open the door to many bizarre analogies. One man has a family name that is clouded by thefts committed by an ancestor To add to his own standing he repays the stolen money, wiping off, it may be, his income for the year. The payment figures in his tax return as ordinary expenses. Another man conceives the notion that he will be able to practice his vocation with greater ease and profit if he has an opportunity to enrich his culture. Forthwith the price of his education becomes an expense of the business, reducing the income subject to taxation. There is little difference between these expenses and those in controversy here. Reputation and learning are akin to capital assets, like the good will of an old partnership. *Cf. Colony Coal & Coke Corp.* v *Commissioner* (C.C.A.) 52 F.(2d) 923. For many, they are the only tools with which to hew a pathway to success, The money spent in acquiring

them is well and wisely spent. It is not an ordinary expense of the operation of a business.

Many cases in the federal courts deal with phases of the problem presented in the case at bar. To attempt to harmonize them would be a futile task. They involve the apprecation of particular situations, at times with border-line conclusions. Typical illustrations are cited in the margin.[1]

The decree should be

Affirmed.

Note

Somewhat similar expenses have been allowed in several cases subsequent to *Welch* v. *Helvering* on a finding that they were made to "protect" and "promote" the taxpayer's existing business, rather than to "acquire" business or good will. Thus, in *Dunn & McCarthy, Inc.* v. *Commissioner*, 139 F.2d 242, 244 (2d Cir. 1943), a corporation was permitted to deduct amounts it paid to certain employees who had lent funds to its former president; he had lost the money gambling at the racetrack and had died insolvent. The Court did not think the payments were "extraordinary": "It was the kind of outlay which we believe many corporations would make, and have made, under similar circumstances." The *Welch* case was distinguished: "Welch made a capital outlay to acquire good will for a new business. In the present case the payment was an outlay to retain an existing good will, that is, to prevent loss of earnings that might result from destroying such good will by failing to recognize the company's moral obligation." In *Carl Reimers Co., Inc.* v. *Commissioner*, 19 T.C. 1235 (1953), a majority of the Tax Court betrayed some skepticism as to the validity of the distinction; in affirming, the Court of Appeals for the Second Circuit adhered to the distinction, not surprisingly in view of the fact that its own decision in the *Dunn & McCarthy* case, *supra*, had created it. 211 F.2d 66 (2d Cir. 1954).

COUGHLIN v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1953

203 F.2d 307

Before AUGUSTUS N. HAND, CHASE and CLARK, Circuit Judges.

CHASE, Circuit Judge.

The petitioner has been a member of the bar for many years and in 1944 was admitted to practice before the Treasury Department. In 1946 he was in active

[1] Ordinary expenses: Commissioner v. People's Pittsburgh Trust Co. (C.C.A.) 60 F.(2d) 187, expenses incurred in the defense of a criminal charge growing out of the business of the taxpayer; American Rolling Mill Co. v. Commissioner (C.C A.) 41 F.(2d) 314, contributions to a civic improvement fund by a corporation employing half of the wage earning population of the city, the payments being made, not for charity, but to add to the skill and productivity of the workmen (cf. the decisions collated in 30 Columbia Law Review, 1211, 1212, and the distinctions there drawn); Corning Glass Works v. Lucas, 59 App. D.C. 168, 37 F.(2d) 798, 68 A.L.R. 736, donations to a hospital by a corporation whose employees with their dependents made up two-thirds of the population of the city, Harris & Co. v. Lucas (C.C.A.) 48 F.(2d) 187, payments of debts discharged in bankruptcy, but subject to be revived by force of a new promise. *Cf.* Lucas v. Ox Fibre Brush Co., 281 U.S. 115, 50 S. Ct. 273, 74 L. Ed. 733, where additional compensation, reasonable in amount, was allowed to the officers of a corporation for services previously rendered. Not ordinary expenses: Hubinger v. Commissioner (C.C.A.) 36 F.(2d) 724, payments by the taxpayer for the repair of fire damage, such payments being distinguished from those for wear and tear; Lloyd v. Commissioner (C.C.A.) 55 F.(2d) 842, counsel fees incurred by the taxpayer, the president of a corporation, in prosecuting a slander suit to protect his reputation and that of his business; One Hundred Five West Fifty-Fifth

practice in Binghamton, N. Y., as a member of a firm of lawyers there. The firm engaged in general practice but did considerable work which required at least one member to be skilled in matters pertaining to Federal taxation and to maintain such skill by keeping informed as to changes in the tax laws and the significance of pertinent court decisions when made. His partners relied on him to keep advised on that subject and he accepted that responsibility. One of the various ways in which he discharged it was by attending, in the above mentioned year, the Fifth Annual Institute on Federal Taxation which was conducted in New York City under the sponsorship of the Division of General Education of New York University. In so doing he incurred expenses for tuition, travel, board and lodging of $305, which he claimed as an allowable deduction under section 23(a) (1) (A) I.R.C., as ordinary and necessary expenses incurred in carrying on a trade or business and no question is raised as to their reasonableness in amount. The Commission disallowed the deduction and the Tax Court, four judges dissenting, upheld the disallowance on the ground that the expenses were non-business ones "because of the educational and personal nature of the object pursued by the petitioner."

The Tax Court found that the Institute on Federal Taxation was not conducted for the benefit of those unversed in the subject Federal taxation and students were warned away. In 1946, it was attended by 408 attorneys, accountants, trust officers, executives of corporations and the like. In 1947, over 1500 of such people from many states were in attendance. It was "designed by its sponsors to provide a place and atmosphere where practitioners could gather trends, thinking and developments in the field of Federal taxation from experts accomplished in that field."

Thus there is posed for solution a problem which involves no dispute as to the basic facts but is, indeed, baffling because, as is so often true of legal problems, the correct result depends upon how to give the facts the right order of importance.

We may start by noticing that the petitioner does not rely upon section 23(a) (2) which permits the deduction of certain non-trade or non-business expenses, but rests entirely upon his contention that the deduction he took was allowable as an ordinary and necessary expense incurred in the practice of his profession. The expenses were deductible under section 23(a) (1) (A) if they were "directly connected with" or "proximately resulted from" the practice of his profession. *Kornhauser* v. *United States,* 276 U.S. 145, 153, 48 S. Ct. 219, 220, 72 L. Ed. 505. And if it were usual for lawyers in practice similar to his to incur such expenses they were "ordinary." *Deputy* v. *DuPont,* 308 U. S. 488, 495, 60 S. Ct. 363, 84 L. Ed. 416. They were also "necessary" if appropriate and helpful. *Welch* v. *Helvering,* 290 U.S. 111, 54 S. Ct. 8, 78 L. Ed. 212. But this is an instance emphasizing how dim a line is drawn between expenses which are deductible because incurred in trade or business, i. e., because professional, and those which are non-deductible because personal. Section 24(a) (1).

Street v. Commissioner (C.C.A.) 42 F.(2d) 849, and Blackwell Oil & Gas Co. v. Commissioner (C.C.A.) 60 F.(2d) 257, gratuitous payments to stockholders in settlement of disputes between them, or to assume the expense of a lawsuit in which they had been made defendants; White v. Commissioner (C.C.A.) 61 F.(2d) 726, payments in settlement of a lawsuit against a member of a partnership, the effect being to enable him to devote his undivided efforts to the partnership business and also to protect its credit.

The respondent relies upon Regs. 118, Sec. 39.23(a)-15(f), which provides that "expenses of taking special courses or training" are not allowable as deductions under section 23(a) (2). But section 23(a) (2) concerns non-trade or non-business expenses. It is not necessary to decide whether, in the light of the regulation, an expense of the nature here involved would be deductible if incurred in connection with a profit-making venture that is not a trade or business. It will suffice to say that, since the expense was incurred in a trade or business within the meaning of section 23(a) (1) (A), the regulation interpreting section 23(a) (2) is not a bar to allowance here.

In *Welch* v. *Helvering*, *supra* 290 U.S. at page 115, 54 S. Ct. at page 9, there is a dictum that the cost of acquiring learning is a personal expense. But the issue decided in that case is far removed from the one involved here. There the taxpayer paid debts for which he was not legally liable whose payment enhanced his reputation for personal integrity and consequently the value of the good will of his business, and it was held that these payments were personal expenses. The general reference to the cost of education as a personal expense was made by way of illustrating the point then under decision, and it related to that knowledge which is obtained for its own sake as an addition to one's cultural background or for possible use in some work which might be started in the future. There was no indication that an exception is not to be made where the information acquired was needed for use in a lawyer's established practice.

Regs. 118, Sec. 39.23(a)-5, makes clear that among the expenses which a professional man may deduct under Section 23(a) (1) (A) are dues to professional societies, subscriptions to professional journals, and amounts currently expended for books whose useful life is short. Such expenses as are here in question are not expressly included or excluded, but they are analogous to those above stated which are expressly characterized as allowable deductions.

This situation is closely akin to that in *Hill* v. *Commissioner*, 4 Cir., 181 F.2d 906, where the expenses incurred by a teacher in attending a summer school were held deductible. The only difference is in the degree of necessity which prompted the incurrence of the expenses. The teacher couldn't retain her position unless she complied with the requirements for the renewal of her teaching certificate; and an optional way to do that, and the one she chose, was to take courses in education at a recognized institution of learning. Here the petitioner did not need a renewal of his license to practice and it may be assumed that he could have continued as a member of his firm whether or not he kept currently informed as to the law of Federal taxation. But he was morally bound to keep so informed and did so in part by means of his attendance at this session of the Institute. It was a way well adapted to fulfill his professional duty to keep sharp the tools he actually used in his going trade or business. It may be that the knowledge he thus gained incidentally increased his fund of learning in general and, in that sense, the cost of acquiring it may have been a personal expense; but we think that the immediate, over-all professional need to incur the expenses in order to perform his work with due regard to the current status of the law so overshadows the personal aspect that it is the decisive feature.

It serves also to distinguish these expenditures from those made to acquire a capital asset. Even if in its cultural aspect knowledge should for tax purposes

be considered in the nature of a capital asset as was suggested in *Welch* v. *Helvering*, *supra*, the rather evanescent character of that for which the petitioner spent his money deprives it of the sort of permanency such a concept embraces.

Decision reversed and cause remanded for the allowance of the deduction.

Note

1. Regs. 118, Sec. 39.23(a)-15(f), disallows, presumably on the theory they are capital expenditures, the following:

> expenses in seeking employment or in placing oneself in a position to begin rendering personal services for compensation, . . . bar examination fees and other expenses in securing admission to the bar, and corresponding fees and expenses incurred by physicians, dentists, accountants, and other taxpayers for securing the right to practice their respective professions.

Yet paragraph (b) of the same regulation states that the expense of maintaining a building is deductible even though no income is being currently produced and that "income," as the term is used in § 212, comprehends income which the taxpayer "may realize in subsequent taxable years." Why is not a bar examination fee, for example, as much a cost of producing or collecting future income as is the cost of maintaining a presently unoccupied building? After admission to the bar, but before gaining any clients, may the young attorney deduct the salary of an idle stenographer?

2. For somewhat similar expenses that have been disallowed, see: *Cardozo* v. *Commissioner*, 17 T.C. 3 (1951) (professor's expense for European trip for "study and research"); *Osborn* v. *Commissioner*, 3 T.C. 603 (1944) (expenses of a professor "incident to the preparation and publication of scholarly and literary matter from which he did not, and did not expect to, derive a direct or immediate profit, but which he hoped and expected would be a means of demonstrating his ability and attainments to persons in the fields of learning and education and would thus bring him a lucrative position, perhaps as a college president"); *Lampkin* v. *Commissioner*, ¶ 52,173 P-H Memo TC (professor's expenses in connection with doctoral dissertation).

3. For many years the Regulations have provided "Commissions paid in purchasing securities are a part of the cost price of such securities" Regs. 118, Sec 39 24(a)-2(a). This provision of the Regulations was upheld in *Helvering* v. *Winmill*, 305 U.S. 79 (1938), against the contention of the taxpayer that the commissions were compensation for personal services deductible under § 162(a)(1). The Court rested its decision largely on the fact that the provision was a long-standing administrative interpretation that presumably had received Congressional sanction. Even apart from the Regulations, should the commissions have been capitalized rather than deducted? What is the status of finders' fees, brokerage commissions, and similar expenses incurred in connection with other types of property? Should the salary of a corporate purchasing agent be capitalized as part of the cost of the materials he buys? If the president of a corporation spends part of his time planning and supervising the construction of a new plant, should an appropriate portion of his salary be capitalized instead of being deducted?

4. In *Spreckels* v. *Commissioner*, 315 U.S. 626 (1942), the Court upheld another part of Regs. 118, Sec. 24(a)-2(a), providing that commissions paid in selling securities may not be deducted (except by dealers) under § 162(a), but must be treated as an offset to the sales price. (The significance of so doing is that as an offset the commission will reduce the *capital gain* or increase the *capital loss* on the sale rather than reduce ordinary income See Chapter 5.) And in *Davis* v. *Commissioner*, 151 F.2d 441 (8th Cir. 1945), selling commissions were held equally non-deductible under § 212. In *Hirshon* v. *United States*, 116 F. Supp. 135 (Ct. Cl. 1953), a "trader" in securities was allowed to deduct federal excise taxes paid on the sale of securities. The court thought the taxes in question "are so directly connected with the particular capital transactions on which they are imposed, that it would be logical to change the

law so as to require them to be capitalized." Apparently if the Treasury had amended the Regulations to require these taxes to be used as an offset, the court would have honored the amendment. A Bureau ruling, issued after some administrative uncertainty, was held to be insufficient.

(c) What is "Ordinary and Necessary"?

FRIEDMAN v. DELANEY

U. S. Court of Appeals, First Circuit, 1948

171 F.2d 269, cert. den., 336 U.S. 936 (1949)

Before MAGRUDER, Chief Judge, WOODBURY, Circuit Judge, and PETERS, District Judge.

PETERS, District Judge.

In this suit the plaintiff taxpayer seeks to recover the sum of $3,411.47, the amount by which his income tax for the year 1941 was increased by reason of the refusal of the Commissioner to allow the deduction of an item of $5,000, claimed in the income tax return to be a bad debt, but now asserted to be allowable as a business expense or a loss incurred in business. There is no dispute about the facts.

It appears that the plaintiff, Mr. Friedman, a Boston lawyer of long experience, had a valued client in whom he had confidence, one Louis H. Wax, whose proposed composition in bankruptcy required the deposit in court of the sum of $7000. The record shows that Mr. Friedman made this deposit in February, 1938, accompanying it with a caveat to the effect that no part of the money came from Wax or his estate. In November, 1939, Mr. Friedman entered a petition in bankruptcy court alleging "that the money deposited for the proposed composition, which has been abandoned," was deposited by him and was not the property of the bankrupt, and asking that it be ordered returned. The petition was denied in November, 1941, and thereupon Mr. Friedman filed an undertaking that he would not further oppose transfer of the money to the trustee in bankruptcy, at the same time alleging that slightly over $5000 of the amount deposited was his own money.

It seems that the reason Mr. Friedman furnished this money from his own funds in the bankruptcy proceeding was because, in conversations with attorneys for creditors, when he was urging the acceptance of the proposed composition, he had personally assured them that the money to carry it out would be forthcoming. He did this without informing Mr. Wax and without intending to subject him to any legal liability, presumably feeling certain that the money would be obtained from a certain life insurance policy, which he had in his possession. This policy on the life of Wax, payable to his wife, could be pledged for $5000, but when it came to that point Mr. and Mrs. Wax refused to have it so used, which left Mr. Friedman in the breach. Commendably recognizing his moral obligation, in view of the assurances he had given, he paid the money to the clerk of the bankruptcy court.

The question presented is whether the $5000, which the plaintiff in his complaint alleged was "lost by him in connection with the bankruptcy proceedings

of one Louis H. Wax," and which he claimed as a deduction from income in his return for 1941, was wrongfully disallowed by the Commissioner, the plaintiff now claiming that it should have been allowed as an ordinary and necessary expense in carrying on business under Section 23(a) (1), or a loss incurred in business under Section 23(e) (1), of the Internal Revenue Code. . . .

The parties are in agreement that the plaintiff, to recover, must show the applicability of one or the other of those Sections. We agree with the District Court that he has failed to do so.

The plaintiff contends that the loss of the amount in question was due to his keeping his word, which the ethics of his profession, as well as his own conscientiousness compelled him to do, and argues that consequently the payment was made and the loss incurred in his law business, and should have been allowed as a deduction from income under one or the other of the sections referred to. His position is illustrated by his rhetorical question: Is it not part of a lawyer's business to keep his word? It might be answered that it is everybody's business to do so, but that is wide of the mark. We are obliged to inquire whether the circumstances of this loss—no matter how creditably incurred—are clearly within the coverage of either Section referred to. Nor can equitable considerations be allowed to control. The matter of deductions from income. ". . . 'depends upon legislative grace; and only as there is clear provision therefor can any particular deduction be allowed.' " *Deputy* v. *DuPont*, 308 U S. 488, 493, 60 S. Ct. 363, 366, 84 L. Ed. 416.

It is necessary to consider the origin of the obligation under which the taxpayer considered himself to be under when he made the payment in question, in determining whether it is a permissible deduction under either Section of the statute. It arose from the gratuitous assurance given attorneys for creditors of Wax by Mr. Friedman that the money for the composition would be forthcoming if they would approve it. In effect, it was the voluntary underwriting of the obligation of another. It was, of course, the duty of the client to furnish the money, not of his attorney. Payment of the $5000. by the attorney was made as a consequence of his undertaking and in pursuance of it and was no less voluntary than the assurance which occasioned it. From any point of view his loss was caused by his voluntary action.

As was said by this Court in the very similar case of *W. F. Young, Inc.*, v. *Commissioner*, 120 F.2d 159, 166,

> Even if the credit and reputation of the taxpayer would have been improved by these payments and even though they would in any way benefit the taxpayer, voluntary payments are not deductible as ordinary and necessary business expenses or losses.

See also *Robinson* v. *Commissioner*, 8 Cir., 53 F.2d 810, 79 A.L.R. 975.

The emphasis placed by the plaintiff upon his moral obligation to keep his professional word should not obscure the fact that the transaction on his part was voluntary from the beginning.

That the circumstances of the taxpayer's payment preclude its being considered either an "ordinary and necessary expense" of his business or a loss incurred in business is clear both from the Regulations promulgated under the Internal Revenue Code and the construction Section 23(a)(1) and Section 23(e)(1) have received by the Courts.

The business expenses covered by the former Section are limited to those described as being "ordinary and necessary"; such as are directly connected with and proximately resulting from carrying it on; those normally originating in a liability created in the course of its operation. *Deputy* v. *DuPont, supra. Welch* v. *Helvering*, 290 U.S. 111, 54 S. Ct. 8, 78 L. Ed. 212.

The moral obligation which the taxpayer recognized here, to his financial detriment, was an extra-professional liability which resulted in a loss which is certainly not clearly covered by Section 23(a) (1) according to the accepted construction of that Section.

Nor is the taxpayer in any better case if he claims a deductible loss under Section 23(e) (1). His was not a business loss made in carrying on a law practice. It is obviously no part of a lawyer's business to take on a personal obligation to make payments which should come from his client, unless in pursuance of a previous understanding or agreement to do so. The voluntary nature of the action, resulting in the loss, takes it outside of this Section as well as the other. *W. F. Young* v. *Commissioner, supra. Robinson* v. *Commissioner, supra.*

It should be said that we also see no error in the finding of the District Court that the payment of the $5000—if ever a proper deduction—was deductible only in 1938, when made, and not in 1941, when the taxpayer failed in an attempt to get it back. It is admittedly not a debt due the taxpayer which became "bad." The deposit was made without restriction of destination and was, for all practical purposes, gone and lost to the owner when made.

The action of the District Court in giving judgment for the defendant on the claim in the complaint for the item of $3,411.47 is affirmed. . . .

[CHIEF JUDGE MAGRUDER, whose opinion is omitted, concurred in the result on the basis of certain additional facts that were in the record but which were not regarded as significant by either the district court or the majority of the Court of Appeals.]

Note

1. With the principal case, compare *Dunn & McCarthy, Inc.* v. *Commissioner*, summarized *supra*, p 232. In *Goedel* v. *Commissioner*, 39 B.T.A. 1 (1939), a stock broker was denied a deduction for premiums paid on insurance on the life of the President of the United States, whose death it was feared would disrupt the stock market:

> Where, as here, the expenditure is so unusual as never to have been made, so far as the record reveals, by other persons in the same business, *when confronted with similar conditions*, . . . then we do not think the expenditure was ordinary or necessary, so as to be a deductible business expense within the intendment and meaning of the statute.

See also *Levitt & Sons* v. *Nunan*, 142 F.2d 795 (2d Cir. 1944), 160 F.2d 209 (2d Cir. 1947).

2. In *Trust of Bingham* v. *Commissioner*, 325 U.S. 365, 373-374 (1945), the Supreme Court said:

> Sec. 23(a)(2) is comparable and *in pari materia* with Sec. 23(a)(1), authorizing the deduction of business or trade expenses. Such expenses need not relate directly to the production of income for the business. It is enough that the expense, if "ordinary and necessary," is directly connected with or proximately results from the conduct of the business. . . . The effect of Sec. 23(a)(2) was to provide for a class of non-business deductions coextensive with the business deductions allowed by Sec. 23(a)(1), except for the fact that, since they were not incurred in connection

with a business, the section made it necessary that they be incurred for the production of income or in the management or conservation of property held for the production of income.

. . . Section 23(a)(2) thus treats the trust as an entity for producing income comparable to a business enterprise, and like Sec. 23(a)(1) permits deductions of management expenses of the trust, even though the particular expense was not an expense directly producing income.

In *Abbott* v. *Commissioner*, 38 B.T.A. 1290 (1938), an attorney who regularly acted as a paid trustee was held to be entitled to a deduction for an amount paid in settlement of an asserted liability arising from his acts as a trustee. See also *C. L. Baumann & Co.* v. *Marcelle*, 203 F.2d 459 (2d Cir. 1953). In light of the Supreme Court's words in the *Bingham* case, should a trustee not regularly engaged in such capacity be allowed to deduct an amount paid to settle such a liability? *Commissioner* v. *Heide*, 165 F.2d 699 (2nd Cir. 1948); *Commissioner* v. *Josephs*, 168 F.2d 233 (8th Cir. 1948); *Macy* v. *Commissioner*, 19 T.C. 409 (1952).

3. Can a "gift" be a business expense? Regs. 118, Sec. 39.23(o)-1(e); *Smith* v. *Commissioner*, 3 T.C. 696 (1944); *Limerick* v. *Commissioner*, ¶ 50,144 P-H Memo. TC, *Bateman* v. *Commissioner*, 34 B.T.A. 351 (1936). What about dues to a social club? *Lee* v. *Commissioner*, ¶ 46,079 P-H Memo TC.

4. Entertainment expenses may constitute a substantial part of a company's expenses. Is there any limitation on the amount which may be deducted? May a limitation be imposed because of the character of the "entertainment"? *Haverhill Shoe Novelty Co.* v. *Commissioner*, 15 T.C. 517 (1950).

PATTON v. COMMISSIONER

U. S. Court of Appeals, Sixth Circuit, 1948
168 F.2d 28

Before HICKS, MCALLISTER and MILLER, Circuit Judges.

HICKS, Circuit Judge.

Respondent found a deficiency in the income and victory taxes for 1943 of petitioner, James F. Patton, in the sum of $16,561.12, and of petitioner, Vincent Patton, in the sum of $16,361.80 The cases were consolidated for hearing before the Tax Court and here. The Tax Court confirmed the deficiency assessments and we are asked to review its decision.

The cases arose under I.R.C, Sec. 23(a) (1) (A), which in so far as is applicable, is printed in the margin.[1]

During the calendar year 1943 petitioners were partners doing a general jobbing business under the firm name of "Patton Company, Cleveland, Ohio," and one William Kirk was an employee of the firm. The partnership claimed deductions for 1943 for compensation of $46,049.41 paid to Kirk. The Commissioner determined that $13,000 00 constituted reasonable compensation for him for that year and disallowed the deductions claimed above that amount. The Tax Court sustained the Commissioner.

---

[1] Sec 23 Deductions from gross income.

In computing net income there shall be allowed as deductions

(a) . . . Expenses,—

(1) Trade or business expenses.—

(A) In General—All the ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business, *including a reasonable allowance for salaries or other compensation for personal services actually rendered;* . . . (Italics ours.)

Kirk kept the books and records of the partnership and rendered such other clerical and routine services as the office work required. He generally worked without assistants. Petitioners complain that the Tax Court erred in finding that Kirk kept the books on a cash basis, that his duties as a bookkeeper entailed little effort, that petitioners' production was practically supervised by Government inspectors, that Kirk was paid 10% of the net sales of the partnership, that the payments to him formed a basis for tax reduction, that he was to receive 10% of net sales so long as 10% commission, plus the $2,400.00 minimum, did not exceed 22½% of net profits.

They also complain that the Tax Court erred in failing to make findings that the petitioners and Kirk were unrelated and had no common business interests other than that created by the contract, that Kirk devoted long hours to the business, that the contract was of the "profit-sharing" type and formed a measuring rod by which Kirk's earnings were to be determined; that the court failed to make findings of the educational background of petitioners and give effect thereto. . . .

At this late date it is an elementary proposition, needing no citation of authorities to support it, that this court is without power to make findings of fact. Its function [§ 7482(c)(1), '54 Code] is to determine whether the decision of the Tax Court is "in accordance with law" If it is, an affirmance is in order; otherwise the court may modify or reverse the decision. And in determining this question, the court is limited to ascertaining whether there was evidence to support the findings and decision of the Tax Court We may not make an independent determination of the issues before the Tax Court nor pass upon the weight of the evidence or consider conflicting evidence nor choose between possible inferences that may arise.

The Tax Court found the following facts: Prior to July 1, 1940, petitioner, James F. Patton, operated the machine shop as an individual, during which time his business was small. At times he had no employees and did all the work himself. At other times the work required additional help. At times his son, Vincent, assisted him, although Vincent had full time employment elsewhere. About 1937 James F. Patton employed Kirk to do his office work. Kirk had a grammar school education and a two years' commercial course in high school. From 1893 to 1919 he engaged in clerical work and following that, he operated a small trucking business until 1929. From then, until his employment by James F. Patton he had no regular employment. From 1919 to 1941 his earnings were not sufficient to require the filing of tax returns. From 1937 to 1940 Kirk's compensation was approximately as follows: For 1937, $939.00; for 1938, $1,230.00; for 1939, $1,385.00; for 1940, $1,855.00

On July 1, 1940, James F. Patton and his son Vincent formed a partnership and shortly thereafter James F. turned over the affairs of the partnership to Vincent. Up to December 17, 1940, the partnership, called The Patton Company, did job work for general customers, but on that date The General Motors Corporation began sending work to the Company in such volume that its productive capacity was absorbed by the new customer.

On January 2, 1941, petitioners contracted in writing with Kirk whereby he was to receive a minimum salary of $2,400.00 a year until such time as 22½% of the net profits exceeded $2,400.00. In such event the contract provided that Kirk

was to receive 10% of the net sales for as long as that percentage, plus the $2,400.00 basic salary, did not exceed 22½% of the net profits.

The gross sales from 1941 to 1943 were, for 1941, $179,050.00; for 1942, $365,609.53; for 1943 [the year involved here] $460,494.06. Kirk kept the books on a cash basis in a simple way. He recorded in a cash book all receipts and disbursements and at the end of each month prepared two summary sheets, one showing total receipts and disbursements of each class and the other showing materials purchased. At the end of each year the summary sheets showing totals for each month and year were used by an accountant who translated them to an accrual basis in preparing income tax returns. Kirk kept a ledger and did the billing, which required little effort because substantially all of the Company's work was for General Motors. He prepared the payrolls, kept social security records and made quarterly social security reports. He kept petitioner Vincent Patton informed of the bank balances and transmitted to shop foremen information from General Motors as to the orders it desired to be finished first. He spoke to insurance salesmen before purchases of insurance were approved by Vincent. About five times in 1942-3 he called upon the appropriate agents for approval for wage increases for employees. Kirk was not a partner in the Patton Company nor related to either of the partners.

The case strips to one question: whether, as determined by the Commissioner, $13,000.00 was reasonable compensation to Kirk for 1943. We are dealing with a pure question of fact. *Wilmington Co.* v. *Helvering*, 316 U.S. 164, 62 S. Ct. 984, 986, 86 L. Ed. 1352. In the *Wilmington* case, *supra*, the court said:

> It is the function of the Board, not the Circuit Court of Appeals, to weigh the evidence, to draw inferences from the facts, and to choose between conflicting inferences. The court may not substitute its view of the facts for that of the Board. Where the findings of the Board are supported by substantial evidence they are conclusive.

In the proceedings before the Tax Court the presumption is that the Commissioner was right and petitioners have the burden of proving that his determination was wrong. We think that the findings of the Tax Court are supported by substantial evidence and an affirmance must result. There is no hard and fast rule by which reasonableness of compensation may be determined by the Tax Court. Every case must stand or fall upon its own peculiar facts and circumstances. Among other factors to be considered by that Court are The nature of the services to be performed, the responsibilities they entail, the time required of the employee in the discharge of his duties, his capabilities and training, and the amount of compensation paid in proportion to net profits. An exclusive function of the Tax Court is the determination of the weight and credibility to be given to the witnesses.

We think that petitioners have failed to carry the burden, which the law imposes upon them, to make out their case by clear and convincing evidence. *Atlas Plaster & Fuel Co.* v. *Comm'r*, 6 Cir., 55 F.2d 802, 803; *Tracy* v. *Comm'r*, 6 Cir., 53 F.2d 575, 579; and *Guarantee Bond & Mortgage Co.* v. *Comm'r*, 6 Cir., 44 F.2d 297, 298. Probably one of the most important factors in determining the reasonableness of compensation is the amount paid to similar employees by similar concerns engaged in similar industries. The petitioners introduced no evidence upon this subject. Moreover, it occurs to us that the books of the partnership

kept by Kirk would have disclosed to a great extent the nature and volume of his work and his capabilities to perform it, but neither the books nor any verified entries therefrom were introduced by petitioners. There is of course a presumption that as between the parties to the contract the compensation agreed to be paid was reasonable. But, as between petitioners and the Commissioner, such a presumption is not controlling in a controversy of this nature before the Tax Court. *Botany Worsted Mills* v. *United States*, 278 U.S. 282, 292, 49 S. Ct. 129, 73 L. Ed. 379.

Affirmed.

McAllister, Circuit Judge (*dissenting*).

According to Section 23 of the Internal Revenue Code, to which reference has been made, petitioners are entitled to a deduction in their taxes for all "the ordinary and necessary expenses paid or incurred during the taxable year in carrying on" their business, "including a reasonable allowance for salaries or other compensation for personal services actually rendered." The issue is whether the compensation which was paid to Kirk, in accordance with his contract of employment, was a reasonable allowance. As is said in the prevailing opinion, there is a presumption that, as between the parties to the contract, the compensation agreed to be paid was reasonable. But it is declared that as between petitioners herein and the Commissioner, such a presumption is not controlling in a controversy of this nature before the Tax Court, and *Botany Worsted Mills* v. *United States*, 278 U.S. 282, 292, 49 S. Ct. 129, 133, 73 L. Ed. 379, is cited as authority to sustain this conclusion.

It does not seem to me that the *Botany Mills* case controls the controversy before us. There, the stockholders of a corporation adopted a bylaw providing for the payment of more than 50% of the annual net profits to the members of the board of directors, for their services, in addition to their regular annual salaries of $9,000 each. In 1917, the tax year there in controversy, the amount paid out of net profits to the board of directors was $1,565,739.39, or a payment to each director of $156,573.93, in addition to his salary. Under a statute, similar in phrasing to the one before us, providing for deductions of all "the ordinary and necessary expenses paid within the year in the maintenance and operation of its business," 39 Stat. 756, the court held that this amount so greatly exceeded the amounts which are usually paid to directors for their attendance at meetings of the board and the discharge of their customary duties, as to raise a strong inference that the "amount paid to the directors was *not in fact compensation for their services, but merely a distribution of a fixed percentage of the net profits* that had no relation to the services rendered." (Emphasis supplied.) The *Botany Mills* case cites three other cases, hereinafter briefly discussed, that seem to me to elucidate the reason for the court's decision.

In *Jacobs & Davies* v. *Anderson*, 2 Cir., 228 F. 505, 506, it appeared that two men, who had been partners, incorporated their business a few months before the enactment of the Corporation Tax Act of 1909, and forthwith entered into a contract with the corporation to devote their services to the business, for stated salaries, and with the further provision that the net surplus profits should be divided between them on the basis of their stock holdings. The court held that the payments of net profits to the parties on the basis of their ownership of stock

were not payments of compensation, but were merely the profits of the business, subject to tax. The court said that the amount paid out in dividends could not be deducted for the purpose of ascertaining the net income of the corporation. "The distribution of surplus profits was not an ordinary and necessary expense paid in the maintenance and operation of the business."

In *United States* v. *Philadelphia Knitting Mills Co.*, 3 Cir., 273 F 657, 658, the court said·

> As the board of directors is charged with the duty and clothed with the discretion of fixing the salaries of the corporation's officers, the Government has no right (until expressly granted by statute) to inquire into and determine whether the amounts thereof are proper, that is, whether they are too much or too little. But, while the amount of salary fixed by a board of directors is presumptively valid, it is not conclusively so, because the Government may inquire whether the amount paid is salary or something else. Admittedly the Government has a right to collect taxes on net income of a corporation based on profits after all ordinary and necessary expenses, including salaries, are paid. It has a right, therefore, to attack the action of a board of directors and show by evidence, not that a given salary is too much, but that, in the circumstances, the whole or some part of it is not salary at all but is profits diverted to a stockholding officer under the guise of salary and as such is subject to taxation.

In *Becker Bros.* v. *United States*, 2 Cir., 7 F.2d 3, 6, where the general manager of a corporation owned 240 out of 250 shares of its stock, and entered into a contract with the corporation providing that his salary should be 85% of the net annual profits, the court said:

> There can be no doubt that the corporation was entitled to deduct from the income it received all the ordinary and necessary expenses incurred in carrying on its business, including a reasonable compensation to its officers and employees. But the salaries which are paid in order to constitute an allowable deduction must be a reasonable and fair compensation for the services rendered. The expenses which can be deducted are the "ordinary and necessary expenses." If a corporation sees fit to pay its employees extraordinary, unusual, and extravagant salaries, distributing the profits of the business *in the guise of salaries to its officers, who hold the stock and control its affairs*, such salaries manifestly do not constitute the "ordinary and necessary expenses" of the business, which can be deducted under the statute. The government is not bound or concluded either by any resolution which the corporation adopts, or by its method of keeping its books, upon the question as to whether any particular payment is a salary payment or a division of surplus. (Emphasis supplied.)

In all of these cases, the amounts were paid to officers who were really the beneficial owners of the corporation and who controlled its action in contracting for and paying them the unusually high salaries based upon net profits. The reasons the courts have held such salaries were not deductible as "ordinary and necessary expenses," were because they were not, in fact, compensation, but merely a distribution of profits; that such profits, divided on the basis of stock holdings, were not payments of compensation, that the claimed salaries were not salaries at all, but profits diverted to stock holding officers under the guise of salaries; and that a distribution of profits "under the guise of salaries" to officers who held the stock of a company and controlled its affiairs, is not an ordinary and necessary expense, within the meaning of the statute.

In this case, Kirk was not an owner or part owner of the company, directly or indirectly. His contract of employment, providing for a salary, based on profits, was not a distribution of profits under the guise of a salary. There is no question that the contract of employment was bona fide. As was said in *United States* v.

Philadelphia Knitting Mills Co., supra, the Government has no right to inquire into and determine whether the amount of the salary was proper, or whether it was too much or too little, but only "whether the amount paid is salary or something else."

Although much importance is seemingly attached by the Government to the fact that, before the contract of employment was entered into between Kirk and petitioners, his salary for the preceding four years was only $939, $1,230, $1,385, and $1,855, the Commissioner finally allowed a deduction on the basis of a salary to Kirk in the amount of $13,000. It can easily be perceived from the evidence that this was a purely arbitrary allowance on the part of the Commissioner. If it was based on the previous earnings of Kirk or upon what he actually did, it was obviously excessive. If it was arrived at by taking the contract for his services into consideration, it was clearly inadequate. It is impossible to escape the conclusion that the Commissioner based his allowance on the ground that the amount of compensation provided by the contract eventually turned out to be too high, merely because the profits during the years in question were so great. No such arbitrary determinations are valid, either in administrative decisions or in court adjudications. The decision that the amount provided by the contract of employment was too high was, as has been stated by the courts, no business or concern of the Government. The decisive question is whether the amount paid to Kirk was salary or a distribution of profits paid under the guise of salary. It was not a distribution of profits, for Kirk has no interest in the company.

It is admitted in this case that the amount paid to Kirk was salary, and there is nothing in the case to overcome the presumption that such compensation was reasonable. In my opinion, the partners were entitled to deduct the payment of such salary as an ordinary and necessary expense incurred during the taxable year, and the decision of the Tax Court to the contrary should be reversed.

Note

1. Did the court find that Kirk's contract was unreasonable when made, or only that his 1943 salary (however computed and despite its contingent nature), was greater than the value of his 1943 services? Note Regs. 118, Sec. 39.23(a)-6 (b)(2). Relying on this provision of the Regulations, the Court of Claims allowed a corporation to deduct contingent compensation that came to $177,000 as a result of war contracts, although when the contract was made the previous year it had been estimated that the officer would get $40–50,000 under the contract. Having concluded that the contract was reasonable when made, the court apparently felt that the amount actually paid under it was irrelevant. *Rogers, Inc.* v. *United States*, 93 F. Supp. 1014 (Ct. Cl. 1950).

2. It has been shown that originally the phrase here involved—"including a reasonable allowance for salaries or other compensation for personal services actually rendered"—was intended not as a *limitation* on § 162(a)'s blanket allowance of "all ordinary and necessary business expenses," but rather as an authorization to deduct an additional allowance for services where the salary *actually* paid or incurred therefor was inadequate. Griswold, "New Light on 'A Reasonable Allowance for Salaries,'" 59 *Harv. L. Rev.* 286 (1945). The contrary belief, that the phrase was intended to restrict rather than to enlarge what would otherwise be deductible as a business expense, however, is apparently imbedded beyond correction. See *Walts, Inc.* v. *Commissioner*, ¶ 47,003 P-H Memo TC; and note that the 1954 Code reenacted the phrase after innumerable cases had interpreted it as a limitation on the deduction of business expenses. Its principal function has been to disallow so-called salaries that are in reality nondeductible dividends to stockholder-employees or indirect gifts by stockholders to members of their families. Such disguised dividends could of course be disallowed

without the use of the "reasonable allowance" test, on the theory that they are not "expenses" at all.

The *Patton* case is unusual in this area in that the employee whose compensation is disallowed was neither a proprietor of the enterprise nor the relative of one. Wholly extravagant salaries are unlikely to be found in such a situation except where tax rates are so high as to destroy any incentive to be economical with employees. Another occasion for wild generosity toward an employee who is neither a stockholder nor a stockholder's relative is the closely held corporation with one important "outside" executive who owns no stock. If the stockholder-executives are receiving extravagant "salaries," it may be necessary to give the outsider a slice of the melon in order to preserve intra-company harmony. See *Builders Steel Co.* v. *Commissioner,* 197 F.2d 263 (8th Cir. 1952).

One other area of possible application for the "reasonable" compensation doctrine is the publicly-held corporation whose officers have control through the proxy machinery and are unduly open-handed in compensating themselves wtih corporate funds. But the courts have been reluctant to hold compensation unreasonable in stockholders' derivative actions, see *Heller* v. *Boylan,* 29 N.Y.S.2d 653 (1941), aff'd 32 *id.* 131, and this may explain why there has apparently been no attempt to disallow for tax purposes compensation paid by publicly-held corporations. What would be the probative effect of a disallowance of compensation in a tax case on a subsequent stockholder's suit for breach of the fiduciary obligation?

3. If the compensation is paid by a corporation to a stockholder-employee, is the unreasonable part necessarily a "disguised dividend" that must be repaid if under state law the corporation was not financially able to declare a dividend? See *Leach* v. *Commissioner,* 21 T.C. 70 (1953). What are the tax consequences of returning the "excessive" portion of the compensation? Schlaudt, "Returnable Compensation Arrangements in Closely Held Corporations," *8th Annual N.Y.U. Inst. on Fed. Taxation* 724 (1950).

4. Whether a payment is "compensation" or a disguised dividend is one of the most commonly litigated tax questions, and the lack of standards makes for constant friction between taxpayer and government in this field. Almost every successful closely held corporation is a potential target for disallowance. The litigated cases, numerous as they are, undoubtedly represent only a small fraction of the disputes, since the factual nature of the question and the presumption of correctness enjoyed by the Commissioner both encourage settlements to avoid the cost and uncertainty of lawsuits. On the question of standards, see Regs. 118, Sec. 39.23(a)-6, Griswold, "The Deduction of 'A Reasonable Allowance for Salaries'—The Undefined Power of the Commissioner," 56 *Harv. L. Rev.* 997 (1943); and for details of litigated cases, see Miller, "What the Tax Court Wants to Know in a Reasonable Compensation Case," 79 *J. Acc'y* 366 (1945); Wolder, "Facts and Figures on Reasonable Compensation," 24 *Taxes* 150 (1946).

5. Section 162(a)(1) in terms requires only that compensation be "reasonable." There is no such explicit requirement for other business expenses under § 162(a), for non-trade and non-business expenses under § 212, or for losses under § 165. Must these other deductions nevertheless be "reasonable" in amount? *Commissioner* v. *Lincoln Electric Co.,* 176 F.2d 815 (6th Cir. 1949), *Place* v. *Commissioner,* 17 T.C. 199, 203, (1951), aff'd p c. 199 F.2d 373 (6th Cir. 1952), cert denied 344 U.S. 927 (1953); Kilcullen, "Is Reasonableness a Requirement of Non-Compensation Expenses? " *9th Annual N.Y.U. Inst. on Fed. Taxation* 863 (1951).

LILLY v. COMMISSIONER

Supreme Court of the U. S, 1952

343 U.S. 90

MR. JUSTICE BURTON delivered the opinion of the Court.

Petitioners, Thomas B. Lilly and Helen W. Lilly, his wife, were engaged in the optical business in North Carolina and Virginia in 1943 and 1944. Pursuant to

agreements reflecting an established and widespread practice in that industry in those localities, they paid to the respective doctors, who prescribed the eyeglasses which they sold, one-third of the retail sales price received for the glasses. The question here is whether such payments were deductible by petitioners as ordinary and necessary business expenses under § 23(a)(1)(A) of the Internal Revenue Code. For the reasons hereafter stated we hold that they were.

Petitioners owned and operated as partners the City Optical Company with offices in Wilmington, Fayetteville and Greensboro, North Carolina, and Richmond, Virginia. Petitioner Helen W. Lilly also owned and operated the Duke Optical Company in Fayetteville.

Since long before 1922 when Thomas B. Lilly established his business in Wilmington, eye doctors, in that locality and to a substantial extent throughout comparable communities in North Carolina, Virginia and elsewhere in the United States, not only examined their patients' eyes and prescribed glasses, but also sold them the glasses. The doctors bought the frames and lenses at wholesale, prepared and fitted the glasses to the patients and sold the glasses at a profit.

Lilly and other opticians offered to fill the prescriptions for the doctors and to supply and fit the frames to the patients. To compensate the doctors for their loss of profit on the sales, the opticians generally paid the doctors one-third of the retail price of the glasses. While information as to this arrangement was not volunteered to the patients, it was freely disclosed on inquiry. The doctors made it a practice to ask their patients to bring in their new glasses for verification of the prescriptions and to enable the doctors to see that the frames were properly fitted. Without further charge, they made whatever reexaminations and modifications were needed.

For income tax purposes, petitioners treated their payments to the doctors as ordinary and necessary expenses of carrying on business and deducted them from their gross incomes. The doctors, in turn, included them in their taxable gross incomes. However, in 1943 and 1944, the respondent Commissioner of Internal Revenue disallowed these deductions in petitioners' returns and thereby increased petitioners' taxable income as follows:

	City Optical Company	*Duke Optical Company*
1942	$57,063.45	
1943	61,601.95	$6,568.87
1944	60,021.65	4,798.35

The Tax Court sustained the Commissioner on the ground that the payments to the doctors were contrary to public policy. One judge dissented. 14 T.C. 1066. The resulting tax deficiencies totaled $124,107.78. The Court of Appeals affirmed. 188 F.2d 269. We granted certiorari, 342 U.S. 808, 72 S. Ct. 45, to resolve the disputed question of statutory construction and to pass upon the application to these facts of the principles announced in *Textile Mills Corp. Securities* v. *Commissioner of Internal Revenue*, 314 U.S. 326, 62 S. Ct. 272, 86 L. Ed. 249, and *Commissioner of Internal Revenue* v. *Heininger*, 320 U.S. 467, 64 S. Ct. 249, 88 L. Ed. 171.

The facts are not in dispute. The payments to the doctors were made by peti-

tioners monthly in the regular course of their business. Under the long-established practice in the optical industry in the localities where petitioners did business, these payments, in 1943 and 1944, were normal, usual and customary in size and character. The transactions from which they arose were of common or frequent occurrence in the type of business involved. They reflected a nationwide practice. Consequently, they were "ordinary" in the generally accepted meaning of that word. See *Deputy* v. *Du Pont,* 308 U.S. 488, 495, 60 S. Ct. 363, 367, 84 L. Ed. 416; *Welch* v *Helvering,* 290 U.S. 111, 114, 54 S. Ct. 8, 9, 78 L. Ed. 212.

The payments likewise were "necessary" in the generally accepted meaning of that word It was through making such payments that petitioners had been able to establish their business. Discontinuance of the payments would have meant, in 1943 or 1944, either the resumption of the sale of glasses by the doctors or the doctors' reference of their patients to competing opticians who shared profits with them. Several doctors testified that they had recommended petitioners and petitioners' competitor, the American Optical Company, simultaneously. Both were sharing profits with the doctors on substantially the same basis. If either had stopped making the payments while the other continued them, there is no reason to doubt that the doctors thereafter would have omitted their recommendation of the nonpaying optician. In 1943 and 1944 the continuance of these payments was as essential to petitioners as were their other business expenses. As has been said of legal expenses under somewhat comparable circumstances, "To say that this course of conduct and the expenses which it involved were extraordinary or unnecessary would be to ignore the ways or conduct and the forms of speech prevailing in the business world." *Commissioner of Internal Revenue* v. *Heininger,* 320 U.S. 467, 472,[1] 64 S. Ct. 249, 253, 88 L. Ed. 171.

There is no statement in the Act, or in its accompanying regulations, prohibiting the deduction of ordinary and necessary business expenses on the ground that they violate or frustrate "public policy."

The Tax Court in the instant case made no finding of fact that the payments to the doctors were not ordinary and necessary business expenses. It sustained the Commissioner's disallowance of their deductibility because it held that, as a matter of law, the contracts under which the payments were made violated public policy.[2]

We do not have before us the issue that would be presented by expenditures which themselves violated a federal or state law or were incidental to such violations. In such a case it could be argued that the outlawed expenditures, by virtue of their illegality, were not "ordinary and necessary" business expenses within the meaning of § 23(a)(1)(A).

In *Textile Mills Securities Corp.* v. *Commissioner of Internal Revenue,* 314

---

[1] ". . . Without this expense, there would have been no business Without the business, there would have been no income. Without the income, there would have been no tax. To say that this expense is not ordinary and necessary is to say that that which gives life is not ordinary and necessary." *Heininger* v. *Commissioner of Internal Revenue,* 7 Cir., 133 F.2d 567, 570

[2] "We conclude that the payments under the contracts between the two optical businesses, composed of petitioners, and the oculists are not deductible as ordinary and necessary expenses *because* the contracts under which these payments were made violated public policy." (Emphasis supplied) 14 T.C. at page 1086.

U.S. 326, 62 S. Ct. 272, 86 L. Ed. 249, this Court accepted an interpretation of that section by a Treasury Regulation which disallowed the deduction of certain expenditures for lobbying purposes. In doing so, the Court referred to the fact that some types of lobbying expenditures had long been condemned by it, and that the interpretative regulation had itself been in effect many years with congressional acquiescence. The instant case does not come within that precedent.

In *Commissioner of Internal Revenue* v. *Heininger*, 320 U. S. 467, 64 S. Ct. 249, 88 L. Ed. 171, this Court was asked to go further and to disallow certain attorneys' fees and other legal expenses. They were reasonable in amount and had been lawfully incurred by a licensed dentist (1) in resisting the issuance by the Postmaster General of a fraud order which would have destroyed the dentist's business and (2) in connection with subsequent proceedings on judicial review of the same controversy. While the services resulted in an injunction which stayed the order during the time that the taxable income in question was received, the final result of the litigation was unsuccessful for the taxpayer. Nevertheless, the expenditures were permitted to be deducted as ordinary and necessary expenses of the taxpayer's business. The opinion in that case reviews the position of the Bureau of Internal Revenue, the Board of Tax Appeals and the federal courts. *Id.*, 320 U.S. at pages 473-474, 64 S. Ct. at page 253. It refers to the narrowing of "the generally accepted meaning of the language used in Section 23(a) in order that tax deduction consequences *might not frustrate sharply defined national or state policies* proscribing particular types of conduct." (Emphasis supplied.) *Id.*, 320 U.S. at page 473, 64 S. Ct. at page 253. It concludes that the

> language of Section 23(a) contains no express reference to the lawful or unlawful character of the business expenses which are declared to be deductible. . . . If the respondent's litigation expenses are to be denied deduction, it must be because allowance of the deduction would frustrate the sharply defined policies of 39 U.S.C. §§ 259 and 732, 39 U.S.C.A. §§ 259, 732, which authorize the Postmaster General to issue fraud orders. *Id.*, 320 U.S. at page 474, 64 S. Ct. at page 254.

Neither that decision nor the rule suggested by it requires disallowance of petitioners' expenditures as deductions in the instant case.

Assuming for the sake of argument that, under some circumstances, business expenditures which are ordinary and necessary in the generally accepted meanings of those words may not be deductible as "ordinary and necessary" expenses under § 23(a)(1)(A) when they "frustrate sharply defined national or state policies proscribing particular types of conduct", *supra*, nevertheless the expenditures now before us do not fall in that class. The policies frustrated must be national or state policies evidenced by some governmental declaration of them. In 1943 and 1944 there were no such declared public policies proscribing the payments which were made by petitioners to the doctors.

Customs and the actions of organized professional organizations have an appropriate place in determining in a factual sense what are ordinary and necessary expenses at a given time and place. For example, they materially affect competitive standards which determine whether certain expenditures are in fact ordinary and necessary. Evidence of them is admissible on that issue. They do not, however, in themselves constitute the "sharply defined national or state policies" the frustration of which may, as a matter of law, preclude the deductibility of an expense under § 23(a)(1)(A).

We voice no approval of the business ethics or public policy involved in the payments now before us. We recognize the province of legislatures to translate progressive standards of professional conduct into law and we note that legislation has been passed in recent years in North Carolina and other states outlawing the practice here considered. We recognize also the organized activities of the medical profession in dealing with the subject. A resulting abolition of the practice will reflect itself in the tax returns of the parties without the retroactive hardship complained of here.[3]

The judgment of the Court of Appeals is reversed and cause remanded with directions to remand to the Tax Court with instructions to set aside its judgment insofar as it is inconsistent with this opinion.

It is so ordered.

Judgment of Court of Appeals reversed and cause remanded to Tax Court with instructions.

MR. JUSTICE DOUGLAS took no part in the consideration or decision of this case.

Note

1. Note the Supreme Court's statement that there must be "some governmental declaration" of the "sharply defined national or state" policy allegedly frustrated by the deduction The Court of Appeals for the Fourth Circuit said of the payments.

> A doctor owes the duty of undivided loyalty to his patients, and a contract which violates this duty is unenforceable and opposed to public policy. . . . Surely, the doctor is assuming an utterly inconsistent position when he recommends an optician without disclosing that he is being paid for the recommendation. This corrupt practice obviously involves, or tends to promote, serious evils: (1) the prescription by the doctor of glasses where not actually necessary; (2) more expensive lenses than really needed; (3) recommendation of an inferior optician, (4) artificial increase in the cost of glasses by the inclusion of the physician's commission, for which the physician affords no value to the patient. . . . We hold, since these kickbacks corrupt the fiduciary relationship between physicians and patient and result in a violation of the duty of loyalty, they are opposed to public policy. . . . (*Lilly* v. *Commissioner*, 188 F.2d 269, 271 (4th Cir. 1951.))

Why is this not a "governmental declaration" of a "sharply defined" state policy? Would a legislative resolution, condemning the practice but attaching no sanctions, warrant a denial of the deduction? Would a declaration by the *governor* meet the Supreme Court's requirement?

The Canons of Legal Ethics permit a "forwarding fee" to be paid only if justified by the service performed by the forwarding attorney. See Drinker, *Legal Ethics* (1953), pp. 186–188. If a violation of the Canons may lead to disciplinary action by the court, does improper fee-splitting violate a state policy evidenced by a governmental declaration?

In *Salt* v. *Commissioner*, 18 T.C. 182 (1952), a taxpayer was allowed to deduct as a business expense legal fees paid for advice in connection with a subpoena served by the House Committee on Un-American Activities. The taxpayer was a writer in the motion picture industry and was subpoenaed during the Committee's investigation of that industry. He was not called upon to testify. The Bureau argued that the deduction should be denied on the ground that the fees (part of a fund to which others, who refused to answer questions and were cited for contempt, also contributed) were "for

[3] The payments made to the doctors in the instant case, and disallowed as deductions by the courts below, amounted to between 56% and 72% of petitioners' taxable business income. The income thus taxed had been transferred long ago to the doctors and they had paid their income tax on it.

the purpose of directly opposing and resisting the actual investigative function of a Congressional committee." The court found that the taxpayer did not have this intention and allowed the deduction as a business expense on the ground that the investigation was calculated to affect the future of the motion picture industry and specifically of his employment therein.

2. After the *Lilly* case was decided, the Bureau announced that payments made by a surgeon to other physicians for referring patients to him could be deducted if customary in the profession, helpful in obtaining business, and not in violation of any governmentally declared national or state policy. I.T. 4096, 52-2 C.B. 91. The American College of Surgeons has condemned the practice of fee-splitting and has urged the Bureau to disallow deductions for such payments. The Regulations provide that the cost of illegal operations or drugs may not be deducted as medical expenses under § 213. Regs. 118, Sec. 39.23(x)-1(d)(1). Is this restriction warranted if only the physician or pharmacist, and not the patient-taxpayer, has violated the law?

3. The Court says that "the actions of organized professional organizations have an appropriate place in determining in a factual sense what are ordinary and necessary expenses at a given time and place." Suppose the local morticians officially frown on neon lights or the bankers condemn the luring of customers with free piggy banks—should a deduction be denied to the taxpayer who flouts custom on the ground that the expense is not "ordinary and necessary?"

4. See Schwartz, "Business Expenses Contrary to Public Policy. An Evaluation of the *Lilly* Case," 8 *Tax. L. Rev.* 241 (1953).

5. The status of income from an illegal activity or business has already been examined. *Supra*, p. 101. In *United States* v. *Sullivan*, 274 U.S. 259, 264 (1927), the Court (through Mr. Justice Holmes) said of the argument that if a bootlegger must file a return he would be entitled to deduct bribes as expense of his calling: "This by no means follows, but it will be time enough to consider the question when a taxpayer has the temerity to raise it." In *Comeaux* v. *Commissioner*, 10 T.C. 201 (1948), the Tax Court distinguished between the "legal" expenses of an illegal business and its "illegal" expenses. "Protection" payments were put in the latter category, salaries in the former. But should wages be deductible if under local law the employees are co-conspirators or accessories? Should rentals be deductible if the use of the premises (*e.g.*, for gambling) is itself unlawful? No doubt at least to some extent the employees and landlord are being compensated for the risks of violating the law. Would the *Rossman* case, *infra*, classify these payments in part or in whole as payments whose deductibility would frustrate sharply defined statutory policies? In *Fuller* v. *Commissioner*, 213 F.2d 102 (10th Cir. 1954), a taxpayer selling liquor illegally in Oklahoma was allowed the cost of his whiskey as part of cost of goods sold, except that the cost of whiskey confiscated by the state was eliminated. In *Clark* v. *Commissioner*, 19 T.C. 48 (1952), an operator of illegal slot machines was not allowed to deduct payments made to the city under an arrangement with the mayor by which he was required to pay $25 per machine per month.

In a speech before the American Bar Association, August 27, 1953, Attorney General Brownell said:

> It seems anomalous that a person engaged in a business which is admittedly illegal may take a deduction for "ordinary and necessary expenses" incurred in the business. As either a legal or practical matter, I can see nothing ordinary or necessary in expenses incurred in long distance phone calls made to place bets or make layoffs; automobile expenses for collecting numbers or delivering "dope," rent for houses used for gambling or other vice. But even if they are "ordinary" expense, there is certainly nothing "necessary" about them.
>
> Our policy will henceforth be to disallow all deductions for expenses incurred in illegal enterprise, and the Treasury Department has promised us its fullest cooperation. While there is some judicial confusion among the lower courts as to the right under existing law to disallow such expenses, the Supreme Court has never squarely passed on the question. In *Lilly* v. *Commissioner*, 343 U.S. 90, the Court

indicated that "it could be argued," and I believe the argument can and should be made.

But see Paul, "The Use of Public Policy by the Commissioner in Disallowing Deductions," 1954 *So. Calif. Tax Inst.* 715.

J. ROSSMAN CORP. v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1949
175 F.2d 711

Before L. HAND, Chief Judge, and CLARK and FRANK, Circuit Judges.

L. HAND, Chief Judge.

The petitioner appeals from an order of the Tax Court, in banc, seven judges dissenting, assessing a deficiency in its excess profits tax for the year 1943. Only one question is involved· whether the taxpayer was entitled to deduct a payment made to the United States during the year in question in circumstances to be stated The taxpayer was a "converter" of "greige goods," which shrink or stretch in the process of dyeing to an extent not determinable in advance. During the period in question its prices were fixed upon a "cost plus" basis by regulations promulgated under the Emergency Price Control Act of 1942, 50 U.S.C.A. Appendix, § 901 *et seq.*, of which the apposite one provided that a "converter" might fix a "working allowance shrinkage" in his contracts with his customers, but that this must be limited to a maximum, which for the purpose of this appeal it is not necessary to describe. In May, 1943, the taxpayer learned that, because it had accepted and charged the shrinkage figures given it by the "finishers" to whom it had sent the goods to be dyed, it had unwittingly overcharged its customers by claiming larger shrinkages than the regulation allowed. Although the Office of Price Administration had not started any investigation of the taxpayer's charges and had not until then undertaken to investigate them, its president asked the advice of the Office as to what he should do. The official to whom he went suggested that he return the overcharges to the customers, but this was altogether impracticable. In the first place, it involved going over more than 200 accounts, and, more important, the taxpayer's customers were not entitled to the overcharges anyway, for they had passed them on to the consumers. For these reasons the official consented that the taxpayer should settle the whole matter by paying the gross overcharge to the United States in one sum and this it did on May 17, 1943. That payment is the disputed deduction. Nobody suggests that the overcharge was deliberate; but the Tax Court did find that it was "not too clear from the evidence that the overcharges in question might not have been avoided, if the petitioner had adopted other more appropriate measures."

Three questions arise. (1) whether the payment can be regarded as a "penalty" at all, (2) supposing it can be so regarded, whether no "penalties" are deductible as "ordinary and necessary expenses" of a business under § 23(a) (1) (A); and (3) if some penalties are, and some are not, deductible, whether this "penalty" is among those which may be deducted. First, it seems apparent to us that the payment of the overcharge — which is all that is here involved — can on no theory be treated as the payment of a "penalty." Taken in its broadest sense that word has a punitive, as opposed to a remedial, meaning; it covers fines and other exactions

which are not restitution for a wrong, and are only justified, either as a deterrent, or in order to satisfy an atavistic craving for retaliation. A seller's duty to return the overcharge to the "terminal buyer" that is, to one "who buys . . . for use, or consumption other than in the course of trade or business," is so clearly not a "penalty" under this definition that no argument can make it plainer than its bare statement. The only possible excuse for confusion is that § 205(e) gave to the "terminal buyer" a claim, not only to recover the overcharge, but twice its amount in addition; and we will assume that the addition was a "penalty" (though even that is not absolutely certain). However, a recovery of three times the overcharge is no less a recovery of the overcharge because it includes the penalty along with it. Hence, if the taxpayer had been able to distribute the overcharge to the "terminal buyers," and had done so, the distribution would have been deductible. It did not make such a distribution because it could not; but in its stead it paid the overcharge to the Administrator upon his agreeing not to press for more. We agree with the Commissioner that this was not a voluntary payment, or a gratuity, § 205(e) imposed upon the taxpayer a duty to the Administrator in precisely the same terms as its duty to the "terminal buyer"; and, although that duty was conditional upon the "terminal buyer's" being "not entitled to bring suit," we will assume that in the case at bar that condition was fulfilled. However, the Administrator's claim, like the "terminal buyer's" claim for which it is a substitute, is also made up of the overcharge and an addition of twice its amount; and the Commissioner must maintain that the part of it, which is made up of the overcharge, is a "penalty" and loses its character as restitution even though the Administrator demands only the overcharges. There is no basis for such a conclusion. The taxpayer wished to abandon the overcharge; it recognized that the fund belonged to the "terminal buyers"; and, since the "terminal buyer" was inaccessible, the overcharge "was subject . . . to the right of appropriation by the sovereign as bona vacantia," even though, strictly speaking, it may not have been "the subject of escheat." Indeed, if § 205(e) had not intervened, conceivably as matter of strict theory, the overcharge might have passed to the several states.

Assuming, however, that we are wrong, and that the payment can be regarded as that of a penalty, the second question is whether in no circumstances could it be an "ordinary and necessary expense" of the business. The Revenue Act does not declare that penalties may not be deducted; the doctrine is a judicial gloss — and, for that matter, a gloss of the lower courts only, save as the Supreme Court recognized it by implication in *Commissioner* v. *Heininger*.[1] We agree that it is a proper gloss (indeed we have ourselves enforced it several times); [2] and its justification is that, when acts are condemned by law and their commission is made punishable by fines or forfeitures, to allow these to be deducted from the wrongdoer's gross income, reduces, and so in part defeats, the prescribed punishment. Obviously, to relieve the wrongdoer of a part of the tax due upon his income, in effect is to remit that much of the sanction imposed; as would at once be apparent, if we were to compare the case of a wrongdoer who has an income with that of one who has none. Hence, if one rigorously applied the doctrine, a taxpayer could never deduct the payment of fines and forfeitures; and we can

1 320 U.S. 467, 64 S. Ct. 249, 88 L. Ed. 171.

2 Burroughs Building Material Co. v. Com'r, 2 Cir., 47 F.2d 178; Gould Paper Co. v. Com'r. 2 Cir., 72 F.2d 698; National Outdoor Advertising Bureau v. Helvering, 2 Cir., 89 F.2d 878.

see no relevant distinction between them and legal expenses incurred in an unsuccessful effort to prevent their collection. Indeed, to hold otherwise would be to subsidize the obduracy of those offenders who were unwilling to pay without a contest and who therefore added impenitence to their offence; and for this reason in the decisions just cited we held that such legal expenses were never deductible. The Supreme Court overruled this doctrine in *Commissioner* v. *Heinninger, supra;* and the question is as to the scope of that decision. It is possible to read it as distinguishing between the legal expenses of an unsuccessful defence and the payment of fines or forfeitures. On the other hand, it is also possible to read it as meaning that, whether the claimed deduction be of legal expenses or of fines or forfeitures, its allowance depends upon the place of sanctions in the scheme of enforcement of the underlying act. We think that the second is the right reading; in short that there are "penalties" and "penalties," and that some are deductible and some are not. This we infer, not only because the result of denying deductibility only to legal expenses would, as we have said, put a premium upon resistance, but because of the following language, which was the kernel of the ratio decidendi: "If the respondent's litigation expenses are to be denied deduction, it must be because the allowance of the deduction would frustrate the sharply defined policies . . . which authorize the Postmaster General to issue fraud orders." 320 U.S. at page 474, 64 S. Ct. at page 254, 88 L. Ed. 171. Again: "We hold therefore that the Board of Tax Appeals was not required to regard the administrative finding of guilt . . . as a rigid criterion of the deductibility of the respondent's litigation expenses." 320 U.S. at p. 475, 64 S. Ct. at page 254, 88 L. Ed. 171. Perhaps the deduction of a fine or forfeiture after an "administrative finding of guilt," is more likely to "frustrate" the "sharply defined policies" of a statute which imposes it, than the deduction of the legal expenses of an unsuccessful defence — though that seems questionable — but certainly there is no more ground for taking as "a rigid criterion" the imposition of the fine than the incurrence of the expenses. Each may "frustrate the sharply defined policies" of a statute; that will depend upon how one views their deterrent effect. We hold therefore that in every case the question must be decided ad hoc.

This conclusion leads directly to the third question: whether, even though the overcharge was a "penalty," its allowance as a deduction would "frustrate" any "sharply defined policies" of the Emergency Price Control Act of 1942. It is impossible to find an answer in general terms; indeed any answer goes to the very root of one's theory of criminal law. Happily, in the case at bar, we are not left to speculation, for we have an answer from the best possible source — the Administrator himself. The body of regulations, by which the United States sought to control prices during the last war, was extraordinarily complicated and difficult to comprehend. That was inevitable; the innumerable varieties of commercial transactions to be covered made possible nothing simpler. One may indeed argue, as the Commissioner does, that the more unsparing and relentless was the pursuit of offenders, however innocent they may have been of any wilful violation of the regulations, the more solicitous would they become to comply, and the more effective would be the enforcement of the Act. That has been a school of penology since the time of Draco; but it has not been the only school, and, as we read *Commissioner* v. *Heininger, supra,* the Supreme Court did not accept it. The Administrator did not believe that such a rigid and uncomprising policy was the

best way to realize the purposes of the Act. When the amendment to § 205(e) was being considered in 1944, he declared in a letter to the Senate Committee "that the protection of innocent violators from excessive damages" was "obviously desirable"; and that it had been his "policy to adjust cases involving innocent violations by payment of merely the amount of the overcharge." He thought that Congress had given him discretion not to sue for "treble damages" in some instances, and he had exercised that discretion so as "to avoid undue hardship in deserving cases." In short, he did not believe that it paid to sweep into the same pool with wilful or careless violators, violators for whom the daedalian mazes of the regulations had proved too much. Moreover Congress showed in 1944 by the amendment of § 205(e) that it agreed with the Administrator. It seems to us that we should accept these expressions as evidence that in cases where the Administrator accepted the overcharge as sufficient, it did not "frustrate" any "sharply defined" policies of the Emergency Price Control Act of 1942.

Hence, we hold erroneous the order assessing the deficiency. First, we say that on no theory was the payment of the overcharge to the United States the payment of a "penalty." Second, we say that, even if it was the payment of a "penalty," that is not a "rigid criterion" of its deductibility. Third, we say that there was positive and compelling evidence that to allow such a deduction would not "frustrate" the policies of the underlying act. It is true that although the order were reversed, it would not inevitably follow that the deficiency should be expunged. The practice of the Administrator was to accept the overcharge as adequate compliance only if the seller had both acted in good faith, and had taken all "practicable precautions"; and the Tax Court found, as we said at the outset, that it was not "too clear" that in this case the taxpayer "might not have avoided" the overcharges by "more appropriate accounting." So it may be argued that the taxpayer did not carry the burden of proof of showing that the deduction would not "frustrate" the Act. It is true that this would be irrelevant to the first point; for, if the payment was only restitutionary, it could not be a penalty in any event. On the other hand, lack of proper care would be relevant to the third point: whether the allowance would "frustrate" the Act. However the Administrator's consent to accept the overcharge showed that he thought that the taxpayer had in fact used adequate care; and that was enough. We do not say that his decision was final; but it stands uncontradicted, and it was the judgment of one who was in the best possible position to make an estimate.

The deficiency determination also included adjustments not here in controversy. The order of the Tax Court is reversed; the deficiency is expunged so far as it results from disallowance of the deduction of the payment to the United States, and the cause is remanded to the Tax Court for recomputation of the taxes involved in conformity with the opinion of this court.

Note

1. See also *Commissioner* v. *Pacific Mills*, 207 F.2d 177 (1st Cir. 1953). Would public policy have been frustrated if the taxpayer had deducted the payment in a year when his marginal tax rate was higher than it was in the year of sale? If the buyer had sued for and recovered the overpayment, tripled, could the seller have deducted the entire amount? On the *Rossman* case, see Note, 59 *Yale L.J.* 561 (1950).

2. Would public policy be frustrated if the taxpayer were allowed to deduct a

fine—for example, those imposed on a taxicab or trucking company for minor traffic violations? What about commercial bribery, *i.e.*, payments to purchasing agents? Commissions to "influence peddlers?" Payments to corrupt union officers? The expense of entertaining public officials? See generally Lurie, "Deductibility of 'Illegal' Expenses," *11th Annual N.Y.U. Inst. on Fed. Taxation* 1189 (1953).

3. Lobbying expenses have been held non-deductible largely because of a long-standing administrative ruling now found in Regs. 118, Sec. 39.23(q)-1. *Textile Mills Securities Corp.* v. *Commissioner*, 314 U.S. 326 (1941); see also *American Hardware & Equipment Co.* v. *Commissioner*, 202 F.2d 126 (4th Cir. 1953). Should such expenses be deductible if related to the taxpayer's trade or business? As already noted, *supra*, p. 191, uncollectible loans to political organizations may not be deducted as bad debts. Campaign expenses of the candidate himself (an unsuccessful one) were disallowed, by a divided court, in *McDonald* v. *Commissioner*, 323 U.S. 57 (1944), and a successful candidate got the same treatment in *Mays* v. *Bowers*, 201 F.2d 401 (4th Cir. 1953), where the court also refused to allow the expenses to be amortized over the officer's term. The court expressed the view that *allowing* a deduction would subsidize wealthy candidates, while the dissenting Justices in the *McDonald* case felt that *denying* the deduction would favor the "independently wealthy." In 1952 the Treasury announced its view that a Congressman might deduct the cost of printing and mailing a report on his official activities together with a "brief personal message" to his constituents·

> It is often difficult to determine the line of demarcation between deductible business expenses and non-deductible campaign expenses of a Congressman. The mere fact, however, that it might be politically expedient for a Congressman to incur an otherwise deductible expense would not ordinarily convert that expense into a non-deductible campaign expense. (I.T 4095, 52-2 C.B. 90.)

See Note, 67 *Harv. L. Rev.* 1408 (1954).

4. What about legal expenses? If the taxpayer is convicted of a criminal offense, the legal expense is not "ordinary and necessary." *Thomas* v. *Commissioner*, 16 T.C. 1417 (1951); *Bloom* v. *Commissioner*, ¶ 48,138 P-H Memo TC (1948). Legal expenses incurred in civil proceedings, however, have been allowed as deductions even though fraud or similar conduct was charged and regardless of the outcome. *Commissioner* v. *Heininger*, 320 U S. 467 (1943) (mail fraud; taxpayer lost in proceeding to regain right to use mails), *Longhorn Portland Cement Co.* v. *Commissioner*, 3 T.C. 310 (1944) (state anti-trust proceedings, taxpayers consented to entry of judgment against them without admitting violation); *Greene Motor Co.* v *Commissioner*, 5 T.C. 314 (1945) (compromise of civil tax fraud case). See, however, *Stralla* v. *Commissioner*, 9 T.C. 801 (1947), disallowing legal expenses incurred in civil proceedings and in the successful defense of criminal proceedings because the enterprise itself (gambling ship operated off California coast) was illegal. Does Judge L Hand's opinion indicate that the "frustration of public policy" approach of the *Rossman* case will be applied to legal expenses? If the deduction claimed in that case had been denied (on a finding that the violation of the price regulation was avoidable or deliberate), would the taxpayer also have been denied the right to deduct the legal fees he incurred in the controversy with the Price Administrator? The legal fees incurred in the tax case itself? See generally Moser, "Deductibility of Legal and Tax Advice Fees," *11th Annual N.Y.U. Inst. on Fed. Taxation* 1217 (1953); Magill, "The Income Tax Aspects of Antitrust Litigation," 30 *Taxes* 210 (1952).

2. *Bad Debts*

Note: **Section 2(k)(1) of the 1939 Code, setting out the general rule for the deduction of bad debts, is rewritten, but without substantive change, by §§ 166(a) and 166(c) of the 1954 Code.**

Section 166(b) of the 1954 Code, relating to the basis for determining the amount of the deduction, is carried over without substantive change from § 23(i) of the 1939 Code.

Section 23(k)(4) of the 1939 Code, relating to "nonbusiness debts," is carried over, somewhat modified, by §§ 166(d) and (e) of the 1954 Code.

Sections 23(k)(2), 23(k)(3), and 23(k)(5), relating to worthless securities, have been consolidated with § 23(g)(2)-(4), relating to worthless stock, and with minor changes these sections appear as § 165(g) of the 1954 Code.

Section 166(f) of the 1954 Code, relating to guarantors of certain obligations, is new.

See Regs. 118, Sec. 39.23(k).

It has already been seen that bad debts are deductible, whether incurred in business or not. *Supra*, p. 189. Some problems connected with bad debts (*e.g.*, ascertaining the year of worthlessness) are common to business and non-business bad debts. Similarly, whether the taxpayer is engaged in business or not, he may not (if he is on the cash basis) deduct an uncollectible claim for unpaid salary, for goods sold on credit, *etc.*, since the claim has not been taken into income. (This restriction would not apply to a claim which, if collected, would not constitute income to the taxpayer, *e.g.*, a bad debt arising from a loan of his capital.) An accrual basis taxpayer, however, may deduct (or set up a reserve to provide for) bad debts under these circumstances, since the items were reported as income when accrued. See Regs. 118, Sec. 23(k)-2.

There are other problems, however, that are not common to both types of debts. Thus, the use of a reserve for bad debts, instead of a direct deduction of them, is common business practice; a reserve, though not forbidden to non-business taxpayers, would rarely if ever be employed by them. This method of providing for bad debts starts with an estimate each year of the amount of accounts then on the taxpayer's books that will prove to be uncollectible. In making this estimate, the taxpayer may "age" his accounts receivable, *i.e.*, classify them according to the due date, taking a larger percentage of those that are seriously delinquent than of those that are only slightly in arrears. If his existing reserve (built up by deductions in previous years and reduced by debts that have actually proved uncollectible) is insufficient to provide for the estimate, the taxpayer adds an amount to the reserve to build it up to the estimate. The amount thus added to the reserve is deducted in the taxable year. See *Mill Factors Corp.* v. *Commissioner*, 14 T.C. 1366 (1950).

It will be noted that unduly pessimistic estimates of bad debts made in earlier years are corrected by reducing the additions to the reserve in later years. Thus, if on December 31, 1952 the taxpayer had $100,000 in accounts receivable outstanding, against which a reserve of $5,000 had been provided, and if $2,000 of these accounts proved uncollectible during the year 1953, his bad debt reserve will have a balance of $3,000 at the end of 1953. If at that time he has $90,000 of accounts, of which $4,000 can be expected to prove uncollectible, the addition to the reserve in 1953 need be only $1,000 to give full protection against the anticipated losses. Conversely, an unduly optimistic estimate in an earlier year will be corrected by making a larger addition to the reserve in a later year.

It has already been noted that "non-business bad debts" are treated as capital losses (*supra*, p. 191), which means that their deductibility is limited. There has been a substantial volume of litigation on the issue of categorizing bad debts for this purpose, of which the following case is an illustration.

COMMISSIONER v. SMITH

U. S. Court of Appeals, Second Circuit, 1953
203 F.2d 310

Before SWAN, Chief Judge, and CHASE and CLARK, Circuit Judges.

CLARK, Circuit Judge.

In this case the taxpayer Weldon D. Smith sought restoration of a deduction of $38,220 in his income tax return for 1945 which the Commissioner had disallowed. The taxpayer claimed this deduction as a business debt which became worthless during the year as authorized by I.R.C. § 23(k)(1). The Commissioner challenged the deduction on several grounds. A majority of the Tax Court sustained the taxpayer's claim in an opinion by Judge Rice, 17 T.C. 135. Six of the judges dissented, however, Judge Disney writing a dissenting opinion in which four of his colleagues concurred. The Commissioner now petitions for review, contending that the amount in question is a non-business debt and hence is only a loss of a capital asset within the more limited deductibility of I.R.C. § 23(k)(4). The sole question therefore is whether this worthless debt arose from a trade or business in which the taxpayer was engaged.

A summary of the pertinent findings of fact by the Tax Court will suffice here. Respondent, a resident of Buffalo, N. Y., became interested in 1936 in Llenroc Farm, located on the Canadian side of the Niagara River and then operated as a dairy farm and for the raising of prize cattle by the Houck family—a mother and three sons. The Houcks sought someone to assume business management of the farm; and accordingly respondent joined them in January, 1937, in forming a Canadian corporation—Llenroc Farms, Ltd.—of which respondent became treasurer and general manager in addition to being a 20 per cent stockholder. In his managerial capacity, respondent supervised such matters as personnel, purchasing, seeding plans, and crop gathering, attending to these activities in the evenings and on Saturdays and Sundays. Since the new corporation displayed a persistent, if disheartening, propensity to sustain operating losses, respondent extended to it numerous loans which, by 1945, totalled $38,220. In that year the corporation filed a general assignment of its assets for the benefit of creditors, rendering worthless the debt respondent now seeks to deduct.

Aside from this agrarian venture, respondent was interested at one time or another in numerous other business enterprises and had investigated possibilities of investing in many more. Until January 1, 1945, his regular work day was apparently spent at the offices of Adam, Meldrum & Anderson Co., a Buffalo department store, of which he had been general manager for the preceding ten years, as well as a substantial stockholder. He had also lent money to this company by leaving some of his earnings with it, collecting 6 per cent interest thereon. Another enterprise in which respondent was interested was Adam, Meldrum & Anderson

Cleaning Corp. (not connected with the department store) in which he held 49 per cent of the stock and served as an officer and director until the business was sold in 1944 or 1945, here, too, he left some of the salary credited to him with the corporation. In addition, respondent was a stockholder and director of Adam, Meldrum & Anderson State Bank and of Central Cleaning Plant, both of which merely involved attending board meetings. His other business ventures consisted of a partnership with his brother operating a garage in whose management he participated and to which he lent money, ownership and management of a business building in Buffalo; and, subsequent to 1945, serving as president and manager of the Oliver Gear Work, of which he was a 99 per cent stockholder and where he also left part of his salary to collect interest. Neither the Tax Court's findings nor the evidence upon which they rest indicate explicitly the extent to which these businesses occupied respondent's time and attention during 1945. The majority of the Tax Court found, however, that "Petitioner [respondent here] was in the business of giving financial aid and personal services to business ventures and, therefore, the $38,220 represented a bad debt which arose from a business regularly engaged in by petitioner which became worthless in 1945."

Whether a particular loss or expense is incurred in a taxpayer's trade or business is a question of fact in each particular case. *Higgins* v. *C. I. R.*, 312 U. S. 212, 61 S. Ct. 475, 85 L. Ed. 783, Treas. Reg. 118, § 39.23(k)-6. But insofar as this determination involves interpretation of the statutory language, it raises an issue of law on which the Tax Court's decision is subject to review here. *Washburn* v. *C. I. R.*, 8 Cir., 51 F.2d 949, 951. In the instant case we think the court below employed an erroneous view of the applicable Code provisions—§§ 23(k)(1) and 23(k)(4)—in arriving at its ultimate finding that respondent's bad debt loss was incurred in his trade or business.

Although Congress has never defined the term "trade or business," it is clear that this concept as used in § 23(k) does not encompass all activities engaged in for profit. The nature and congressional history of the more restricted meaning of "trade or business" is carefully analyzed by Judge Disney in his able dissent in the Tax Court and we need only allude to it briefly here. When in 1942 Congress amended § 23(k) to provide for different treatment of nonbusiness bad debts from that accorded such losses when incurred in a trade or business, the committee reports in both houses stated that the determination whether a debt is incurred in a trade or business "is substantially the same as that which is made for the purpose of ascertaining whether a loss from the type of transaction covered by section 23(e) is 'incurred in trade or business' under paragraph (1) of that section." 1942-2 Cum. Bull. 573. Section 23(e), dealing in general with losses sustained by individuals, explicitly establishes a distinction between losses incurred in trade or business and those stemming from "any transaction entered into for profit, though not connected with the trade or business." With this guide to the interpretation of § 23(k), it becomes apparent that Congress did not adopt the broad definition of "business" in *Flint* v. *Stone Tracy Co.*, 220 U.S. 107, 171, 31 S. Ct. 342, 357, 55 L. Ed. 389, on which respondent relies. The Court there said: " 'Business' is a very comprehensive term and embraces everything about which a person can be employed. Black's Law Dict. 158, citing *People ex rel. Hoyt* v. *Tax Com'rs*, 23 N.Y. 242, 244. 'That which occupies the time, attention, and labor of men for the purpose of a livelihood or profit.' 1 Bouv. Law Dict. [Rawles Third Revision]

p. 273." The *Flint* definition was subsequently rejected by the Supreme Court in interpreting the term "trade or business" as used in I.R.C. § 23(a) providing for deduction of ordinary and necessary expenses incurred in carrying on a trade or business. *Higgins* v. *C. I. R.*, *supra*. We deem the definition equally inapplicable here.

The cases interpreting the statutory phrase in particular situations of course do not chart its precise limits, but they do lead us to the conclusion that in the present case respondent's bad debt loss was not incurred in any trade or business. The full-time management of one's investments does not constitute a trade or business. *Higgins* v. *C. I. R.*, *supra*. Nor does serving as an officer of a corporation of which the taxpayer is a stockholder and creditor. *Van Dyke* v. *C. I. R.*, 23 B.T.A. 946, affirmed per curiam, 9 Cir., 63 F.2d 1020, affirmed per curiam, *Van Dyke* v. *Helvering*, 291 U.S. 642, 54 S. Ct. 437, 78 L. Ed. 1040, see *McGinn* v. *C. I. R.*, 9 Cir., 76 F.2d 680, 681, 99 A.L.R. 564 Affirmance of the *Van Dyke* case in both the court of appeals and the Supreme Court was based on the authority of *Burnet* v. *Clark*, 287 U.S. 410, 53 S. Ct. 207, 77 L. Ed. 397, and *Dalton* v. *Bowers*, 287 U.S. 404, 53 S. Ct. 205, 77 L. Ed. 389. The *Clark* case held that an officer and majority stockholder of a corporation could not treat the loss sustained by endorsing the corporation's notes to protect his investment as incurred in a trade or business. Respondent's activities in the case at bar were essentially similar to those of the taxpayer in the *Clark* case, except that respondent here was interested as an investor, manager, and creditor in a number of business enterprises. But since each of these activities separately does not constitute a business, we cannot see how a combination of them spread over various businesses can alter the result. Of course, if respondent were regularly engaged in lending money to business enterprises, bad debt losses resulting therefrom would be incurred in his business. But respondent himself testified that he was never in the money lending business, and the other evidence in the record supports this conclusion.

Accordingly, the decision of the Tax Court is reversed for recomputation of the tax in accordance with this opinion.

Note

1. Would the taxpayer's tax status have been better if, instead of lending on open account, he had taken the corporation's bonds as evidence of the indebtedness? Examine § 166(e) and § 165(g). How would the taxpayer's losses have been treated if the farm had been operated as a partnership, and the taxpayer had advanced funds to pay its expenses, his partners agreeing that these advances would be paid off before any distribution of profits or of capital?

Compare the court's statement in the last paragraph about corporate officers with the *Hochschild* case, *supra*, p. 225.

2. Another consequence of treating a debt as a "non-business" one is that it cannot be deducted until entirely worthless; only business debts qualify under § 166(a)(2)'s provision that "when satisfied a debt is recoverable only in part, the Commissioner may allow such debt, in an amount not in excess of the part charged off within the taxable year, as a deduction." Regs. 118, Sec. 23(k)-6(a).

3. Note the definition of "non-business debt" in § 166(d)(2). Before 1954, the statute included clause (B) of this definition, but clause (A) is new in the 1954 Code. It overrules the position taken in Regs 118, Sec. 39.23(k)-6(c), Example (2), that even though a claim arose in connection with the taxpayer's trade or business, it is a non-business debt if he is no longer engaged in a trade or business when it becomes worthless.

4. See generally Justis, "Is It a Debt? Is It a Bad Debt? Is It a Business Bad Debt?" *10th Annual N.Y.U. Inst. on Fed. Taxation* 183 (1952); Friedman, "Bad Debts: Business or Non-Business?" *5 Tax L. Rev.* 412 (1950).

FOX v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1951
190 F.2d 101

Before SWAN, AUGUSTUS N. HAND, and CLARK, Circuit Judges.

CLARK, Circuit Judge.

Agnes I. Fox, the taxpayer and petitioner for review, in 1935 entered into a written guaranty of certain debts of her husband and now seeks to deduct as a loss from her 1944 income the sum of $15,000 paid by her on the guaranty in that year. The Tax Court treated the payment as a "non-business" bad debt, subject to deduction only to the extent of a short-term capital loss, *viz.*, $1,156.25. 14 T.C. 1160 (one judge dissenting). We agree with the taxpayer, however, that she has brought herself within the statutory definition of a loss from a "transaction entered into for profit" and hence is entitled to the deduction in full.

The statute upon which petitioner relies is I.R.C. § 23(e), which permits an individual taxpayer to deduct

> losses sustained during the taxable year and not compensated for by insurance or otherwise—
> (1) if incurred in trade or business; or
> (2) if incurred in any transaction entered into for profit, though not connected with the trade or business.

In assessing the deficiency the Tax Court relied on a new provision effective with the 1934 tax — see Act Oct. 21, 1942, § 124(a) — entitled "Non-business debts" and providing, in the case of a non-corporate taxpayer, that "if a non-business debt becomes worthless within the taxable year, the loss resulting therefrom shall be considered a loss from the sale or exchange, during the taxable year, of a capital asset held for not more than 6 months." It also provided that the term "non-business debt" meant one "other than a debt the loss from the worthlessness of which is incurred in the taxpayer's trade or business." I.R.C. § 23(k)(4). The respondent Commissioner originally relied on this statute, but appears later to have taken and held the position that the transaction was a gratuity, preventing the allowance of any deduction at all.

The facts were stipulated and disclosed the following: Prior to December, 1932, petitioner owned some securities which she lent to her husband, William J. Fox. Fox was trading on the New York Stock Exchange through his brokers, Hilson & Neuberger, and prior to December 31, 1932, he had deposited these securities with the firm as collateral for his indebtedness to them on open account. On that day the Hilson firm liquidated and went out of business. Earlier in the month Fox had been told that this was going to happen and that the accounts of the Hilson firm would be taken over by another, Wertheim & Company, but that Wertheim would not assume his account without more collateral. Thereupon Fox tried to get petitioner to lend him more securities. She refused. But Fox pointed out that she would lose what she had already invested if she did not protect it.

So she executed a guaranty to Wertheim on December 16, 1932. This, in the language of the Tax Court,

> recited that in consideration of that company opening, or continuing, an account or accounts with or otherwise giving credit to Fox on such terms as that company might deem best, the petitioner unconditionally promised to pay the company on demand any debit balance or balances, and all losses, then, or which might thereafter, be owing to the company by reason of said account or accounts. The instrument further provided that the guaranty therein was a continuing one and should cover the period of existence of said account or accounts, and that said account or accounts might be changed from time to time by the purchase or sale of securities or other property or by payments or deliveries of securities or other property to Fox without notice to the petitioner.

At this time Fox owed his brokers $91,043.52; and the value of all securities in the account was only $71,633, of which $33,263 represented the value of those supplied by petitioner. So the Tax Court found that

> the petitioner executed the guaranty because she did not want to lend any more securities to Fox and because she thought she would protect the securities she had theretofore loaned him.

In 1935, Fox transferred his brokerage account to another firm, Engel & Company, "for the purpose of saving interest"; and on August 16, 1935, petitioner executed to this firm another instrument of guaranty similar in its terms to the one previously given Wertheim. When the transfer to Engel was made, Fox's debit balance was $152,357.04. On October 19, 1937, Fox died, being then indebted to his brokers in the sum of $155,478.17. The sale of the securities pledged in the account brought in $14,212.03, thus reducing the indebtedness to Engel to $141,266.14. But Fox's estate was insolvent and his executors were discharged by the surrogate's court on July 31, 1940. Petitioner has therefore been forced to make payments to Engel and its successors yearly since 1937 — usually in the sum of $15,000 — which have totaled some $121,269.50. Only the payment of $15,000 in 1944 is here in issue.

For most of the payments made by petitioner this question could not be raised. Not until Congress changed the statute to make a deduction labeled a worthless "non-business debt" so much less advantageous to the taxpayer than one labeled a "loss" in a non-business transaction "for profit" did the need for making this narrow line of demarcation become insistent. True, it had been ruled that the categories were mutually exclusive; what was a bad debt could not be a loss and vice versa. *Spring City Foundry Co.* v. *C. I. R.*, 292 U.S. 182, 54 S. Ct. 644, 78 L. Ed. 1200. When petitioner filed her 1944 return, she reported the $15,000 payment as a "miscellaneous" deduction, describing it as "Payment on guaranty —Wm. J Fox brokerage a/c." At the hearing she claimed the deduction as a loss in a transaction entered into for profit, but was met with the contention that it was only a bad debt because on payment she would have a claim for reimbursement against her guarantor. Although this is the basis upon which a majority of the Tax Court found against her, she has steadily objected to it for its illusory character, since at the time of her payment her husband had been dead and his insolvent estate closed for several years. She argues that the court's theory of a debt against her husband's estate amounts to a subrogation forced upon her, con-

trary to the equitable spirit of the doctrine, to yield her an utterly worthless claim and a very real tax liability.

Although no authorities seem directly decisive, we think her argument persuasive. Of course we may say, as does respondent, that the taxpayer claiming the benefit of a deduction has the burden of proving it; but that does not mean that a statute limiting a deduction must be given a broad meaning beyond its terms. Here petitioner may have been acting gratuitously when she originally allowed her husband to pledge her securities. But we need not go back that far, for when in 1932 she refused further pledge and then reluctantly signed the guaranty (renewed in 1935) she was in fact securing the release of her securities. Whether she was well or ill advised in so doing, her act, on the Tax Court's finding as to her purpose, was a transaction entered into with the hope of profit or perhaps more specifically of cutting her losses. *Cf. Weir* v. *C. I. R.*, 3 Cir., 109 F.2d 996, 997, certiorari denied 310 U.S. 637, 60 S. Ct. 1080, 84 L. Ed. 1406. Moreover, her then present intent would control, whatever had been her earlier purpose. *Heiner* v. *Tindle*, 276 U.S. 582, 48 S. Ct. 326, 72 L. Ed. 714; *Evans* v. *Rothensies*, 3 Cir., 114 F.2d 958, 962. Clearly, too, the transaction was not then one involving a bad debt, since she had not even made the payment which alone would give rise to a claim in her favor. Nor could payment ten years later create a debt out of something less than even the proverbial stone. It is utterly unrealistic to consider the payment as one made in any expectation of recovery over or of any legal claim for collection. Actually it was merely the fulfillment of her contractual obligation of the earlier date. The bad-debt provision thus had no direct application; only by straining the statutory language can we erect here a disembodied debt against an insolvent and long dead debtor. . . .

We agree further with the dissenting judge below, who held that the payment cannot be translated into a debt which "compensated" for the payment within the meaning of I.R.C. § 23(e) where recourse to the original debtor's estate was now obviously out of the question. This conclusion actually accords with that reached by the Tax Court in cases involving debtors who have gone out of existence or been reorganized so that a claim may no longer be enforced against them. *Abraham Greenspon*, 8 T.C. 431; *Frank B. Ingersoll*, 7 T.C. 34. And it does no violence to the theory that a debt might arise upon payment by a guarantor where the principal debtor remains still in existence. *D. W. Pierce*, 41 B.T.A. 1261; *Daniel Gimbel*, 36 B.T A. 539. Deduction of the payment should therefore have been allowed in full.

The decision of the Tax Court is accordingly reversed.

Note

1. In *Pollak* v. *Commissioner*, 209 F.2d 57 (3d Cir. 1953), the taxpayer paid under a guaranty the debts of a corporation that was insolvent when he paid. The Commissioner argued that the *Fox* case was not in point because there the principal debtor had died, his estate was insolvent, and his executor had been discharged, while in the *Pollak* case the corporation was still in existence. The court said:

> We see no legal significance in this difference, however. For in each case the payments were made in fulfillment of a pre-existing legal obligation and not because of any present expectation of repayment by the principal debtor. And in each case the debt arising under the doctrine of subrogation was substantially uncollectible

from the time it arose. Moreover, for this very reason the loss was not "compensated for" within the meaning of Section 23(e) of the Internal Revenue Code, by the acquisition of an equivalent asset, a collectible debt. And by the same token the loss could not be a debt which, within the meaning of Section 23(k)(4), "becomes worthless within the taxable year." For the debt, if we call it such, was worthless when acquired, and, therefore, did not and could not become worthless at any time thereafter.

See also *Allen* v. *Edwards*, 114 F. Supp. 672 (M.D Ga. 1953). Would the taxpayer in *Commissioner* v. *Smith, supra*, p. 257, have been better off if he had guaranteed the corporation's obligations instead of advancing funds to it?

2 See § 166(f), which is new in the 1954 Code. What is it intended to do? The Senate Report (p. 200) states

> If the requirements of this section are not met, the taxpayer will, as under present law, be treated taxwise under whatever provisions of the code are applicable in the factual situation. However, if the requirements are met, he will obtain a deduction from ordinary income and the nonbusiness bad-debt rules of subsection (d) [of Section 166] (treating the loss as a short-term capital loss) will not be applicable.

3. *Depreciation and Obsolescence*

> ***Note*· Section 167 of the 1954 Code, relating to depreciation, is derived from § 23(1) of the 1939 Code, but with substantial modifications.**

BULLETIN "F"

Bureau of Internal Revenue, 1942, pp 1–5

DEPRECIATION — OBSOLESCENCE — DEFINITIONS

The Federal income tax in general is based upon net income of a specified period designated as the taxable year. The production of net income usually involves the use of capital assets which wear out, become exhausted, or are consumed in such use. The wearing out, exhaustion, or consumption usually is gradual, extending over a period of years. It is ordinarily called depreciation, and the period over which it extends is the normal useful life of the asset.

It is elemental that in determining the net income derived from the operation of a trade or business, all operating costs and expenses allowable as deductions must be determined and deducted from the gross income. The consumption of trade or business capital represented by depreciation is an operating cost the deduction of which in computing net income is specifically provided for in the Internal Revenue Code and several prior Revenue Acts, as follows

> *Depreciation.* A reasonable allowance for the exhaustion, wear and tear of property used in the trade or business, including a reasonable allowance for obsolescence.

The factors of wear and tear and decay cause physical exhaustion, or deterioration, ultimately resulting in retirement of the property, while those retirements due to obsolescence are caused by forces ordinarily unrelated to physical condition.

Obsolescence may be defined as the process of becoming obsolete due to progress of the arts and sciences, changed economic conditions, legislation, or

otherwise, which ultimately results in the retirement or other disposition of property. As said by the Supreme Court in *United States Cartridge Co.* v. *United States* (1932) (284 U.S. 511, 516, Ct. D. 460, C.B. XI-1, 282, 283 (1932),

> Obsolescence may arise from changes in the art, shifting of business centers, loss of trade, inadequacy, supercession, prohibitory laws and other things which, apart from physical deterioration, operate to cause plant elements or the plant as a whole to suffer diminution in value.

With respect to any property for which past experience indicates a gradual lessening of useful value due to inadequacy or obsolescence and when the effects of such factors can be expected to continue without substantial variation, the annual diminution in useful value is considered ordinary or normal obsolescence to be included in depreciation. Much of the discussion hereinafter having specific reference to depreciation only is in fact equally applicable to normal obsolescence.

Some property, however, may become obsolete or inadequate due to revolutionary or radical changes unforeseen and unpredictable by their nature when the property was acquired. To distinguish from the allowance for what is considered normal obsolescence, this type is usually termed extraordinary or special obsolescence, allowances for which will be dealt with more specifically hereinafter. . . .

Allowance for Depreciation and Obsolescence

The proper allowance for exhaustion, wear and tear, including obsolescence, of property used in trade or business is that amount which should be set aside for the taxable year in accordance with a reasonably consistent plan (not necessarily at a uniform rate) whereby the aggregate of the amounts so set aside, plus the salvage value, will, at the end of the useful life of the property in the business, equal the cost or other basis of the property. In no instance may the total amount allowed be in excess of the amount represented by the difference between the cost or other allowable basis and the salvage value which reasonably may be expected to remain at the end of the useful life of the property in the trade or business.

The allowance in any given year must be determined in accordance with the conditions existing at the end of the year, and a taxpayer is not permitted under the law to take advantage in later years of his prior failure to take any depreciation deduction or of his action in taking deductions plainly inadequate under the known facts in prior years.

Probable Useful Life — Rate of Depreciation and Obsolescence

In general. The amount of the annual deduction allowable for depreciation is ordinarily dependent upon the expected useful life of the asset. The factors which determine the useful life of property in a trade or business have already been discussed briefly in the Introduction. These factors are wear and tear and decay or decline from natural causes; and also various forms of obsolescence attributable to the normal progress of the art, economic changes, inventions, and inadequacy to the growing needs of the trade or business. Two principal forms or types of obsolescence are generally recognized, that is, normal obsolescence and extraordinary or special obsolescence.

Normal obsolescence is caused by factors which can be anticipated with substantially the same degree of accuracy as other ordinary depreciation factors, such as wear and tear, corrosion or decay. Accordingly, it is included in estimating the normal useful life of depreciable property, the effect of which is to include the allowance for normal obsolescence in the depreciation deduction.

Extraordinary or special obsolescence rarely can be predicted prior to its occurrence. However, this does not necessarily imply that the asset already must have been completely discarded or become useless, but merely that a point has been reached where it can be definitely predicted that its use for its present purpose will be discontinued at a certain future date. Deductions for obsolescence of this type may be taken over the period beginning with the time such obsolescence is apparent and ending with the time the property will become obsolete. In every case the burden of proof is entirely upon the taxpayer to establish a claim for obsolescence by facts and evidence that are definite and indisputable. No amount may be charged off in any year merely because, in the opinion of the taxpayer, property may become obsolete a number of years later. The allowance will be confined to such items or such portion of the property on which obsolescence is definitely shown to be sustained, and cannot be held applicable to an entire property unless all portions thereof are affected by the conditions to which the obsolescence is found to be due. Nor can obsolescence be allowed retrospectively in the light of subsequent events or happenings not anticipated during the period for which the obsolescence is claimed. In no case may the deduction for obsolescence be extended to include shrinkage in value due to other causes, as, for instance, a general drop in the price of commodities.

Past experience, which is a matter of fact and not of opinion, coupled with informed opinion as to the present condition of the property, and current developments within the industry and the particular trade or business, furnish a reliable guide for the determination of the useful life of the property. Such a determination should reflect all the peculiar circumstances of the use or operation of the property, such as the purpose for which it is utilized, the conditions under which it is used or operated, the policy as to repairs, renewals, and improvements, and the climatic and other local conditions.

Unusual conditions; abnormal depreciation. It is recognized that the useful life of some depreciable property, or items thereof, may be affected by a radical increase or decrease in plant activity, or diversion in use, extending over a period of time so that depreciation in excess of, or less than, the amounts allowable under normal operating conditions or use may be sustained. Such increase or decrease in depreciation is dependent upon the decrease or increase, respectively, in the normal useful life resulting from the exceptional operating conditions or use. However, where factors of obsolescence and inadequacy and decay control the useful life of property, no increase or decrease from normal depreciation will be allowed. Any modification of normal depreciation, therefore, must be confined to those items the useful lives of which are controlled by the factor of use or wear and tear. Moreover, since accelerated use of property is almost invariably accompanied by an increase in maintenance and repair charges, accelerated depreciation is allowable only to the extent that such maintenance and repair fail to arrest acceleration or depreciation.

Methods of Apportionment

The capital sum to be replaced by allowances for depreciation over the useful life of the property may either be deducted in equal annual installments or in accordance with any other recognized trade practice, such as apportionment to units of production. While no specific method is prescribed, whatever plan or method of apportionment is adopted must be reasonable and cannot be changed in a later year without the consent of the Commissioner. The methods in general use by taxpayers are the "straight-line" and the "unit of production," the latter being used for the most part by taxpayers owning natural resource property. These, with other methods used to a lesser extent, are described below.

Straight-Line Method

Under this method, the cost or other basis of the property, less its estimated salvage value, is deducted in equal annual installments over the period of its estimated useful life. Ordinarily, the depreciation deduction is computed by applying a depreciation rate expressed as a percentage to the cost or other basis to be recovered, but it also may be computed by dividing that cost or other basis by the estimated useful life. The estimated useful life is subject to modification in the light of conditions known to exist at the end of each taxable period. Ordinarily, depreciation computed by this method represents the actual diminution in service value from year to year as closely as the depreciation computed by any other method. The practical simplicity in accounting records required and the ease and facility by which revisions or changing life estimates may be applied tend to make this method the most acceptable one for general use.

Unit of Production Method

This method is peculiarly applicable in determining depreciation for property used in the exploitation of natural resources, such as mineral deposits or timber, the available reserves of which limit the useful life of the depreciable property. Under such circumstances, the rate of exhaustion of the natural resource measures the useful life of the physical property. By dividing the cost or other basis less estimated salvage value by the estimated available reserves of raw material, a unit cost is obtained which, when multiplied by the units produced during a given year, gives the depreciation sustained for that year. Depreciation, at least to the extent of that based upon decay and normal obsolescence, is allowable and should be deducted during the period when property is idle or is producing at a rate below normal.

In the case of depreciable property the useful life of which is not limited by sources of supply, however, uncertain and unpredictable factors arise to such an extent as to make application of the method very difficult, if not impossible. Use of the method must be confined to those items in the property account whose lives are determined by the factors of wear and tear or where the extent of use or the rate of production measures the rate of exhaustion of the property. When such a separation can be made, it is then necessary to forecast for those items the useful lives of which are controlled by extent of use the total number of units to be produced during their useful lives, in order to obtain a cost factor to be applied

against units produced each year in arriving at the depreciation allowance. For most property it is not possible to obtain this information with any reasonable degree of accuracy and, therefore, the method is not considered an acceptable one for general application to the machinery account of industrial concerns, or to the property of those companies exploiting a natural resource with reserves sufficient to extend operations beyond the physical life of the original plant.

Declining Balance Method

Under this method the amount of depreciation is subtracted annually from the cost or other basis of the property and the rate applied only to the resulting balances. Depreciation on any single item is largest in amount the first year and declines each year thereafter. This method gives satisfactory results for accounts that are being constantly replaced in substantially equal amounts, provided the rate used is somewhat higher than that applicable under the straight-line method. Its best application is to those accounts for property in which the greater proportion of the production is confined to the early part of the useful life.

Retirement Accounting

In this form or method of accounting for a depreciable property, the cost of property retired each year is credited to the capital asset account and, less net salvage (actual or estimated), charged to expense in lieu of annual provisions for depreciation. . . .

Note

1. Bulletin "F" goes on to give probable useful lives for the assets used in a wide assortment of industries "based on the usual experience of property owners." For example, farmers are advised that farm buildings have a 50-year average life and farm machinery and equipment a 15-year average life. Moreover, separate estimates are given for each type of machinery and equipment (beehives, 10 years; cisterns, 33 years; milking machines, 20 years, tractors, 10 years; *etc.*) for those farmers who wish to keep a separate account for each class instead of a composite account. Although not binding on the taxpayer, these official estimates are likely to be influential with Bureau employees despite the admonition in Bulletin "F" that "in the determination of the depreciation allowance in each case, due consideration should be given the maintenance and replacement policy of the taxpayer and the accounting practice regarding the same."

2. The straight-line method of computing depreciation is by far the most commonly employed. The retirement method is largely restricted to railroads, where it has long been sanctioned by regulatory bodies for fixing rates. See, for an example of its use, *Commissioner* v. *Union Pacific R.R.*, 188 F.2d 950 (2d Cir. 1951). The declining balance method, or at least a peculiar variation of it, was authorized by the Bureau in 1946 as a method of encouraging post-war building construction, since it would permit larger than normal (*i.e.*, than straight line) deductions during the early years after construction when taxes were (it was thought) higher than they would be later. Mayer, "Declining Balance Depreciation," 25 *Taxes* 162 (1947)

The 1954 Code carries over without change the general provision of earlier law that the depreciation deduction shall be a "reasonable allowance" for exhaustion and wear and tear. It also provides that for certain property acquired or constructed after December 31, 1953, the term "reasonable allowance" shall include (but is not limited to) an allowance computed under certain specified methods; these are the straight line

method, the declining balance method, the "years-digit" method, and any other consistent method that will not during the first two-thirds of the property's life produce aggregate allowances greater than the declining balance method. The point of § 167(b) is to give statutory sanction to the use of several methods (in addition to any methods that are acceptable by virtue of the general provision for a "reasonable allowance") that will afford larger depreciation allowances during the earlier years of the property's life. To encourage new investment, this privilege is limited to post-1953 property. The declining balance method that is specifically allowed by § 167(b)(2) will permit approximately 40 per cent of an asset's cost to be depreciated in the first quarter of its service life, and two-thirds in the first half of its life. Section 167(b)(4), sanctioning any other consistent method that for the first two-thirds of the asset's life will not yield aggregate allowances greater than the declining balance method, permits the taxpayer to avoid certain technical drawbacks in the declining balance method that are explained in the Senate Report, pp. 26-27. The "years-digit" method can be best explained by illustration: assuming property with a useful life of 6 years, the taxpayer would take the sum of 1 + 2 + 3 + 4 + 5 + 6, or 21, and would take a deduction of 6/21 of the property's cost for the first year, 5/21 of its cost for the second year, *etc.* This method yields deductions that are comparable to the declining balance method.

3. Because of the difficulty of showing that one estimate of useful life is right and another wrong, and because disagreement in these estimates will affect only the year in which deductions will be taken, taxpayers have often urged that the Bureau accept whatever depreciation rate they select or at least that the taxpayer's rate be rejected only on the clearest proof that it is improper. The Bureau has felt to the contrary that manipulation would be encouraged if it were supine, so long as tax rates and income levels are fluctuating variables. In 1944 the Bureau did announce, however, that once a depreciation rate was investigated and adjusted by agreement with the taxpayer for a given year, it would ordinarily be accepted for at least five years. I.T. 3639, 1944 C.B. 123.

In 1953, the Bureau announced

> The determination of the amount of the [depreciation] deduction is largely a matter about which there may be reasonable differences of informed judgment, but the impact on the revenues resulting from these differences may be negligible one way or the other over the years involved. Accordingly, . . . it shall be the policy of the Service generally not to disturb depreciation deductions, and revenue employees shall propose adjustments in the depreciation deduction only where there is a clear and convincing basis for a change. (Rev. Rul. 90, 53-1 C.B. 43.)

Bureau employees were then advised that:

> Among the factors which should be given careful consideration in order to give full force and effect to the announced policy are the following:
>
> (a) Whether depreciation rates used by the taxpayer are fair and reasonable under the circumstances;
> (b) Whether the taxpayer has followed a consistent practice in arriving at the amount of depreciation deductions;
> (c) Whether in considering all factors, including reasonable tolerances, any adjustments proposed are substantial. (Rev. Rul. 91, 53-1 C.B. 44.)

It is of course too early to say how much effect an announcement of this kind will have on Bureau practice, or whether it will encourage taxpayers to use generally shorter lives in calculating depreciation deductions. It is interesting to recall, however, that as a result of precisely the opposite policy in the early 1930's taxpayers were compelled by the Bureau to employ longer lives for depreciable assets, and thereby succeeded against their will in saving some of their deductions for use when much higher tax rates came into effect during World War II.

The House version of the 1954 Code also provided that unless the government's estimate of the useful life of depreciable property differed from the taxpayer's estimate

by more than 10 per cent, the taxpayer's estimate could not be disturbed. The Senate eliminated this provision, stating (S. Rept. p. 28) that it

> would be considered inadequate and unsatisfactory by some taxpayers, and might be a substantial source of misunderstanding and distortion. The practical effect of eliminating this provision in assuring flexibility in administrative policy should not be great since policies already announced by the Internal Revenue Service under recent rulings should afford taxpayers freedom from annoying minor changes which would disturb the original estimate of service life.

Section 167(d), added by the 1954 Code, permits the government and the taxpayer to enter into written agreements relating to the useful life and rate of depreciation of any property, which "shall be binding on both the taxpayer and the Secretary in the absence of facts or circumstances not taken into consideration in the adoption of such agreement."

4. The corollary of higher depreciation deductions is more gain (or less loss) if the property is disposed of before it is fully depreciated. Thus, if equipment costing $1000 has given rise to $400 in depreciation deductions, the taxpayer will realize $100 in gain if he sells it at $700, or $500 loss if he sells it to a junkman for $100. This is because the property's "adjusted basis" for determining gain or loss on a sale or other disposition is cost less depreciation; the property in question would have had an "adjusted basis" of $600. If the depreciation deductions had totalled $600, the adjusted basis would be only $400, and the taxpayer's gain on a sale at $700 would be $300, while the loss on a sale at $100 would be $300.

A bird in the hand is not necessarily better than two in the bush. Can a taxpayer, recognizing this, forego current depreciation deductions in order to retain a higher "adjusted basis" against the year when the asset is ultimately sold? No, because in computing the "adjusted basis" he must reduce his cost by any depreciation that was "allowable" in past years, whether he took it or not. Section 1016(a)(2). Moreover, if he took more than he was entitled to, that too must be applied against the cost of the asset unless the excessive depreciation was of no "tax benefit" when taken. This last qualification is a legislative overruling of *Virginian Hotel Corp.* v. *Helvering*, 319 U.S. 523 (1943), see § 1016(a) (2) (A) and (B) and § 1020.

One of the factors of importance in this area, the full significance of which will appear more clearly after Chapter 5 has been studied, is that depreciation deductions are applied against ordinary income, whereas the countervailing profit on a sale (assuming the property is sold for more than its "adjusted basis") will often be taxed as capital gain, at a more lenient rate. Thus the taxpayer may be tempted to "trade" deductions against ordinary income for capital gain even when it is recognized that high current depreciation may have the effect of increasing profit (or decreasing loss) on the property's disposition.

5. In recent years, especially since the end of World War II, there have been a number of proposals for acknowledging in corporate financial statements that depreciation reserves based upon cost are inadequate to cover the replacement cost of equipment and plant as they are retired or scrapped. One method is to make an appropriation of earned surplus to a reserve for the excess of replacement cost over depreciation reserves based on cost. Another, more controversial, is to increase the depreciation deductions themselves, thus reflecting a smaller earned income in reports to stockholders, employees, government agencies, and the public. The income tax return, however, must still be prepared with depreciation based upon cost, and thus taxable income will exceed the income reported for other purposes. Finally, not surprisingly, it has been urged that taxable income should be adjusted to reflect replacement costs. This drastic proposal is extensively discussed in Brown, *Depreciation Adjustments For Price Changes* (1952). For a consideration of this and other problems in the relation of depreciation to investment, see Joint Committee on the Economic Report, *Factors Affecting Volume and Stability of Private Investment,* 81st Cong., 1st sess. (1949) 158–97.

COPIFYER LITHOGRAPH CORP. v. COMMISSIONER

Tax Court of the U. S., 1949
12 T.C. 728

[The taxpayer, which had customarily computed depreciation on its printing presses and equipment on a straight line basis, deducted depreciation in the amount of about $6,750 in 1942 and $9,400 in 1943 (in addition to straight line depreciation) because its plant was operated substantially longer hours in those years, mainly on war work. The additional depreciation was disallowed by the Commissioner.]

ARUNDELL, Judge: Petitioner contends in this proceeding that it is entitled to the increased deductions claimed in its tax returns for 1942 and 1943 to compensate for abnormal depreciation suffered by various items of its printing equipment in producing maps and other printed material for the armed forces during those years The deficiencies herein result from the respondent's refusal to allow any additional depreciation for either year.

Petitioner had in prior years depreciated its items of equipment on the straight line basis, assigning to each unit an estimated life of 10 years, with the exception of 2 trucks, which were assigned a 5-year period.

The straight line method of depreciation assumes a uniform annual rate over the life of the asset and, under ordinary circumstances, no adjustments are made to reflect the increased or decreased usage of the asset during any taxable year. This method contemplates the setting aside in each year of a sufficient sum in order that at the end of the useful life of the asset the aggregate of the annual amounts of allowed depreciation, plus its salvage value, will equal its original cost. *United States* v. *Ludey*, 274 U.S. 295; *Graves, Cox & Co.*, 27 B.T.A. 546. The straight line method having been uniformly applied by petitioner in prior years, it should not be abandoned for the years in question unless there is a cogent reason for a change. *Lake Charles Naval Stores*, 25 B.T.A. 173 (petition to review dismissed, C.C.A., 5th Cir.). However, petitioner contends that such factors as the excessive use of its machinery, its operation by inexperienced personnel, the demand of war work which prevented the normal stoppage of the machinery for repairs, and the increased amounts expended for repairs, replacements, and maintenance during the years involved, evidence the fact that the remaining useful life of such equipment was reduced and that petitioner is entitled to claim the additional depreciation involved herein. Essentially, the petitioner argues that the only plausible method of determining the extent of the increased wear and tear on its equipment during 1942 and 1943 was the approximate ratio between the usage in those years and the usage in prior years. The burden of showing the reasonableness of the rates of accelerated depreciation claimed rests upon the petitioner.

Had petitioner previously depreciated its equipment on a "unit of production" basis, this case would present little difficulty, as petitioner has clearly shown the increased usage of its various items of equipment during the years involved, which is the principal consideration in computing depreciation under that system. However, under the straight line basis, the principal question is whether the useful life of the equipment has been diminished, and usage is merely one factor to be

considered in making such a determination. Moreover, we believe that the straight line method contemplates reasonable variations from year to year in the use of depreciable assets, so long as the remaining useful life of the assets is not reduced below or extended beyond the term of years originally selected as its normal useful life.

Therefore, to prevail herein, the petitioner must justify the increased rate of depreciation it claims by showing not only that there were increased usage and other conditions which would normally tend to accelerate the exhaustion of its equipment, but that in fact such factors actually did materially reduce its useful life. *Woodside Cotton Mills*, 13 B.T.A. 266. In our opinion, petitioner has wholly failed to present satisfactory evidence that the useful life of its printing equipment was so reduced by usage in 1942 and 1943 as to warrant the substitution of accelerated rates in lieu of the normal rates it has previously used in computing depreciation.

Petitioner's general manager testified that when the rates of abnormal or accelerated depreciation were selected it had no way of determining how long its machinery would last and that no effort was made in either 1942 or 1943 to determine the remaining useful life of each of the various items of equipment involved. The only witness produced by petitioner who testified on the subject stated that under normal operations the 6 second-hand presses had an estimated useful life of from 10 to 15 years. As respondent has allowed petitioner to depreciate this equipment at a normal rate of 10 per cent on a straight line basis over a 10-year period, the minimum life estimate, respondent's disallowance of accelerated depreciation does not on its face appear to have been arbitrary or unreasonable. As far as we can ascertain from the record, the machines were never thoroughly examined to determine exactly the extent of actual exhaustion during the years in question, nor is there any specific evidence as to the effect of the use of inexperienced or incompetent help on the normal wear of such equipment. In fact, no evidence of any signficance has been presented by petitioner relative to items other than the photo composing machine and the 6 presses.

Petitioner points to the increased amounts expended by it on repairs, replacements, and maintenance as proof of the actual abnormal wear suffered by its machinery during 1942 and 1943. The untoward expenditures for repair do not necessarily demonstrate the deterioration of equipment, but may, on the contrary, be evidence that such repairs adequately compensated for the increased wear and tear to which the machines were subjected. This may well be the case here, as the record shows that the cost of repairs of the equipment in question rose from \$702.97 in 1941 to \$3,944.55 in 1942 and \$5,036.63 in 1943. Although there is some suggestion that this increase possibly was due to a rise in the cost of parts and labor, there is no evidence as to the extent of increased costs, and certainly there is no basis for assuming that these factors alone were responsible for so marked an increase in the cost of repairs

In this connection, it is also interesting to note that this equipment was at the time of hearing still being used in the petitioner's business. Although petitioner points out that it has been unable to get delivery of new machinery ordered in 1943, there is no indication that the old equipment does not still produce work of quality acceptable to its customers.

Finally, the various rates of accelerated depreciation selected by petitioner on its different pieces of equipment were not based upon actual examination of the machinery, nor were they computed by any uniform method. The rates appear to have been determined by petitioner's general manager, following discussions with its accountant and the manufacturer's representative, and to be the result of a general appraisal of such factors as the increased usage and repairs, untrained personnel, and the other factors previously mentioned.

Petitioner requests that, if we decide that it is not entitled to the accelerated depreciation claimed, we should determine what amount or rate of accelerated or abnormal depreciation should be allowed for the years 1942 and 1943. In our opinion, the record provides no adequate basis for the computation of rates of depreciation which would be more reasonable than those which were used by petitioner in prior years under the straight line method and have been allowed by respondent for the years involved Moreover, the computation of depreciation must be an intelligent estimate, not a mere guess. *Lake Charles Naval Stores*, *supra*.

After careful consideration of all the evidence herein, we are of the opinion that the petitioner has failed to sustain the burden of showing that it is entitled to the accelerated depreciation claimed by it in its 1942 and 1943 Federal tax returns. Therefore, respondent's determination of the deficiencies herein is sustained.

Note

Section 168 (the "cold" war's counterpart of § 124, in force during World War II) permits the taxpayer to amortize over a period of sixty months any "emergency facility," defined as an asset certified by an appropriate governmental office as necessary in the interest of national defense. War production equipment can thus be constructed or acquired with assurance that its cost can be written off during a period of high profits and tax rates, even though it may continue to be useful when the sixty-month period is over. See Schlaifer, Butters, and Hunt, "Accelerated Amortization," 29 *Harv. Bus. Rev. No. 3*, p. 113 (1951).

Canada has employed the depreciation deduction for precisely the opposite purpose: to discourage certain classes of capital investment. Unless the taxpayer obtains a certificate from the Ministry of Trade and Commerce, no depreciation on assets acquired after April, 1951 may be taken for a period of four years. See McGurran, "Deferred Depreciation," 4 *Nat'l. Tax J.* 299 (1951).

ADDA, INC. v. COMMISSIONER

Tax Court of the U. S., 1947
9 T. C. 199

JOHNSON, Judge: . . .

3. The third issue involves the deductible amount to which the petitioner is entitled as depreciation on its building. To determine this, two questions must be decided: (1) The cost of the building to the petitioner to be used as a basis in computing depreciation, and (2) the useful economic life of the building. Both questions are in dispute.

To ascertain what the building cost petitioner it is necessary to determine what amount of the total purchase price of $5,800,000 paid for the building and lot was attributable to the building alone. On the hearing petitioner offered evidence

that the reasonable amount of such total consideration for the building only was $1,500,000, while respondent's evidence fixed same at $1,150,000. It was evidently difficult for petitioner to determine the cost of the building, for in its income tax returns for both 1941 and 1942 it placed the cost of the building at $1,150,000, while in its petition for redetermination the cost of the building was alleged "to be not less than $1,740,000," and in its evidence and also in its brief filed herein such cost was placed at $1,500,000. After considering all the evidence upon this subject, we find that respondent's determination of the base value to be used in such computation, to wit, $1,150,000, is correct and the proper base. Such was the amount claimed by petitioner's own determination in its income tax returns for two years, and the evidence at the hearing fails to convince us that the valuation so determined by respondent was erroneous.

The other phase of this issue is whether the useful economic life of the building from the date of petitioner's acquisition was 36½ years as determined by respondent, or 20 years, as contended by petitioner.

There was evidence supporting both contentions, but, without reviewing it in detail, from all the facts and circumstances we have reached the conclusion that, while the structural integrity of the building is such that it may last for 40 years or more, as of August 5, 1940, it had an economic and useful life of not to exceed 21 years. Situated on Broadway near Times Square, it is one of the most valuable business sites in New York City, and the assessed taxable value of the building and lot for New York real estate taxes for 1941–1942 was $6,725,000, an increase in value of about one million dollars within a year after petitioner became its owner. The total floor space of the building is not sufficiently large to produce revenue commensurate with the value of the lot, and this disproportion will likely increase rather than diminish. When the building was constructed in 1935, its then owners realized its inadequacy to produce sufficient revenue for the valuable lot, but New York had not then recovered from the 1930 depression, there were fifteen million square feet of vacant office space in New York, and it was deemed inexpedient to erect a taller building, there being no demand then for additional space, and it would have been difficult to finance such construction at that time, so its builders determined to erect the present two-story structure, which is known in New York parlance as a "taxpayer," since it was designed to pay the real estate taxes plus some slight revenue, with the expectation that later it would be removed and a taller building erected. That such was in contemplation is evidenced by the fact that the leases to the various tenants of the building, with one exception, contained cancellation clauses at the option of the owner, two of the leases expressly providing for their cancellation "if landlord should decide to demolish the building." Not only the location, but the large size of the lot made it very desirable for the erection of a very tall building, the lot having a frontage of 203 feet on Broadway, extending from 44th to 45th streets, with a frontage on each of these streets of 183 feet and 256 feet, respectively. The building was so constructed that additional stories could not be added.

While it is impossible to forecast the future, we think it reasonable under the evidence to determine that, within a period of 21 years from the date of petitioner's purchase of the property, the present building will be removed and a much taller one erected that will produce revenue more in keeping with the value of the lot. Petitioner's contention is 20 years, but since the lease to Bond, the largest tenant,

covers 21 years from the date of purchase, we think it reasonable that the period of depreciation should be sufficiently long to cover the duration of this lease.

There was considerable evidence as to the expanding business of Bond Stores, Inc., the tenant which occupied most of the building, and the inadequacy of space for Bond's business. Respondent claimed that petitioner in effect was urging that, because petitioner was a 100 per cent subsidiary of Bond and owned by Bond, their interests should be treated in common, and respondent urged that, since they were two separate and distinct corporations, they should be so treated, regardless of ownership.

We find it unnecessary to pass upon these questions, since under the evidence we think that, regardless of who were the tenants of the building and their respective needs, the owner of the building, for economic reasons as was heretofore pointed out, will be required to demolish the building and erect another within the time indicated, designed to produce revenue more nearly commensurate with the value of the lot.

Note

If the owner of a building proves that a change in the neighborhood or other circumstances have substantially and permanently reduced the value of the building (although it will not be demolished), can he take a deduction for "extraordinary obsolescence?" Where property continues in use, despite diminution in its value, taxpayers have not been very successful in obtaining obsolescence deductions. See, for example, *Southeastern Building Corp.* v. *Commissioner*, 148 F.2d 879 (5th Cir. 1945). A deduction was allowed in *Hazeltine Corp.* v. *Commissioner*, 89 F.2d 513 (3d Cir. 1937), upon a showing that certain patents had "ceased to have any further practical utility or substantial earning power" prior to the end of their legal lives, by reason of a change in the art. What if the patents continued to have minor value by protecting the taxpayer's monopoly in manufacturing repair parts for equipment, although new equipment was no longer being manufactured because of technological changes? Is there any justification for demanding a very high degree of proof, or even of insisting upon total loss of utility, as a condition to the allowance for "extraordinary obsolescence" when ordinary depreciation and "normal obsolescence" are granted upon less proof? See generally Green, "What Deductions for Obsolescence?" *9th Annual N.Y.U. Inst. on Fed. Taxation* 701 (1951).

NACHMAN v. COMMISSIONER

U. S. Court of Appeals, Fifth Circuit, 1951
191 F.2d 934

Before HUTCHESON, Chief Judge, and HOLMES and STRUM, Circuit Judges.

STRUM, Circuit Judge.

These are two consolidated petitions to review decisions of the Tax Court which modified as to amount, but otherwise sustained, deficiency assessments in income taxes entered by the Commissioner of Internal Revenue against petitioners Nachman and Tobias for their fiscal tax year 1944–45.

Desiring to enter the retail liquor business as partners in Jacksonville, Florida, petitioners on April 25, 1944, purchased from one Baker Bryan for $8,000 an existing liquor license, good until September 30, 1944, issued to Bryan by the City of Jacksonville for $750, the fee fixed by ordinance therefor. The difference

between the official fee of $750 and the purchase price of $8,000 was a premium which Bryan was enabled to exact from petitioners because these licenses were restricted by law to approximately 76 for the entire City of Jacksonville, all of which were then issued. Many more persons desired them than could obtain them directly from the city, so they were in great demand, even at a premium. These licenses were assignable, and carried with them valuable renewal privileges, as it was the established practice in issuing renewal licenses from year to year to prefer the holders of existing licenses over other applicants. Because of this known practice, and the limited number of licenses available, persons wishing to enter the liquor business in Jacksonville were willing to pay a substantial premium in order to acquire a license from an existing licensee.

In making their income tax returns for the tax year involved, petitioners deducted as an ordinary and necessary business expense, the entire $8,000 paid for the license. The Commissioner disallowed all except 5/12th of the $750 annual fee, representing the unexpired portion of the license extending from April 25, 1944, the date of purchase, to September 30, 1944, when it expired. The Commissioner entered a deficiency assessment accordingly. On appeal, the Tax Court held that petitioners were entitled to deduct as ordinary business expense the entire $750 official fee, but no more, and reduced the deficiency accordingly. It is the latter determination by the Tax Court that petitioners bring here for review.

Of course it was necessary for petitioners to have a license before they could commence business. None could be procured directly from the City, as the maximum number allowed by law had already been issued. Like other scarce commodities, they commanded a premium on a seller's market. The license carried with it by established custom, if not by law, a valuable renewal privilege indispensable to petitioners' continuance in business in subsequent years. In purchasing the license, petitioners bought not only the operating right for the current year but also renewal privileges for future years. This privilege, entitling petitioners to preference over non-license holders in the issuance of renewal licenses, was of substantial value, of which the seller and the purchasers of this license were well aware. No one would pay $8,000 for a $750. license having only five months to run, unless the purchaser was reasonably sure it carried with it appurtenant privileges of substantial future value to the purchaser. It was these considerations that prompted petitioner to pay $8,000 for a $750 license, of which only 5/12ths remained.

Of the $8,000 paid for the license in question, the official cost of issuance, $750, was an ordinary and necessary business expense. The remaining $7,250 was the expenditure of capital in the acquisition of a capital asset reasonably expected to serve petitioners through future years, the cost of which is not deductible as an ordinary expense. . . . The Supreme Court of Florida has recently recognized a liquor license as "property," often having an actual value far in excess of the official fee charged for it. *House* v. *Cotton*, 52 So.2d 340.

Petitioners further contend that if the $7,250 in question be regarded as the purchase price of a capital asset and therefore not deductible as ordinary business expense, they are entitled to an amortized depreciation allowance on such capital asset under I.R.C. § 23, and Treasury Regs. 118, Sec. 39.23(l)–3, relating to depreciation of intangible property. Depreciation allowance on intangibles, however, is confined to those definitely limited in duration, such as patents, franchises,

copyrights, licenses for fixed periods, and the like, the partial exhaustion of which may be computed with reasonable certainty.

It is clear that the renewal privilege appurtenant to this license extends beyond, and was actually exercised beyond, the taxable year in question. Presumably the petitioners may continue to exercise their renewal privileges as long as they desire, as there is no indication that the City will depart from its custom of renewing existing licenses. How long petitioners may wish to continue exercising their renewal privileges is indeterminable. It might be for one year, or many. It was exercised by them at least as late as 1949. The basis for depreciation of an intangible capital asset is partial exhaustion due to lapse of time. This renewal privilege being of indefinite duration, dependent upon petitioners' wishes as well as upon the City's future course of action, there is no rational basis for prediction as to duration.

Moreover, if petitioners elect to discontinue the exercise of their renewal rights, it is reasonable to assume that they will sell them, just as did their predecessor Bryan, either recouping their investment or sustaining a deductible loss. We conclude therefore, as did the Tax Court, that the renewal privilege incident to the license is a nondepreciable capital asset. *Clark Thread Co.* v. *Commissioner*, 3 Cir., 100 F.2d 257.

We have examined the cases cited by the petitioners in support of their contensions, but consider them inapposite here.

Affirmed.

Note

1. The Court's treatment of the cost of the license is in line with the usual treatment of expenses to acquire goodwill. the theory has been that the goodwill continues to serve the taxpayer as long as he remains in business and, if it is worthless when the business is wound up, its cost will be deductible at that time. Regs. 118, Sec. 39.23(1)-3; see generally Note, An Inquiry Into the Nature of Goodwill, 53 *Col. L. Rev.* 660(1953). Almost always, of course, the taxpayer would prefer to amortize the capitalized cost of goodwill during his successful years if he were permitted to do so, rather than wait for a large deduction in what may be a loss year. See *X-Pando Corp* v. *Commissioner*, 7 T.C. 48(1946), Note, 62 *Yale L.J.* 640(1953). In *Williams* v. *McGowan*, 152 F.2d 570(2d Cir. 1945), Judge L. Hand, despite the regulations, adhered to an earlier announced view that good will is depreciable. Even if in theory it is depreciable, however, in practice it may be impossible to prove a limited useful life.

2. So long as taxpayers are unable to depreciate goodwill, either because of the blanket disapproval of the regulations or because of the difficulty of proving a limited life, they will be particularly eager to deduct advertising expenses, for if these expenses are capitalized, they may never be recovered out of income. Much advertising is, of course, devoted to creating goodwill; this is especially true of "institutional advertising" and of publicity for a new trade name or product. It may be noted that for excess profits tax purposes taxpayers were permitted to capitalize certain advertising expenditures [those that "may be regarded as made for the purpose of increasing the taxpayer's earning capacity over a substantial period subsequent to the taxable year in which such expenditure was made," see Regs. 130, Sec. 40.451-2 (a)] in order to increase the excess profits credit. If this option was exercised, the taxpayer was required to pay the additional income tax that resulted from eliminating the deducted expenditures. Except in unusual circumstances, the Bureau seems to acquiesce in the deduction of advertising expenses, even though capitalizing them might theoretically be more appropriate. See I.T. 3581, 42-2 C.B. 88. See also § 173, on expenses "to establish, maintain, or increase" the circulation of a newspaper or periodical.

The expenses of organizing a corporation, which would not be deductible because they represent a long-term investment and which would not be depreciable unless the corporation had a limited existence, may now be written off over a period of five years or more if the corporation elects to do so. Section 248, added by the 1954 Code.

3. A related problem is the treatment of research and development expense. Before 1954, these items were not specifically dealt with by the statute, but the government apparently allowed them to be deducted so long as that was the taxpayer's accounting practice. 53-2 P-H Fed. Tax Serv. ¶ 11,095. If instead they were capitalized, the investment could be depreciated if allocable to patents or other intangibles of limited life or written off if the project was a failure, but if the investment was represented by industrial "know-how," the taxpayer would probably be unable to prove that it had a limited life. See *Hart-Bartlett-Sturtevant Grain Co.* v. *Commissioner*, 182 F.2d 153 (8th Cir. 1950).

See Section 174 of the 1954 Code, specifically authorizing research and experimental expenses to be deducted and permitting the taxpayer to amortize certain expenditures of this type. What is the significance of § 174(b)(1)(C)?

See also § 175, allowing farmers to deduct, within specified limits, expenditures for soil and water conservation and the prevention of erosion.

4. The Commissioner has long conceded the propriety of depreciating the cost of patents, copyrights, contracts, and other intangibles with a limited legal life. But what if the taxpayer buys a patent having 10 years to run with the well-founded expectation that within 5 years its position in the industry will be impregnable, so that the patent will have been just as useful as though its life had been unlimited?

4. Depletion

> ***Note:*** **Sections 23(m) and 114(b) of the 1939 Code, relating to depletion, have been reenacted, with some modifications, by §§ 611 and 613 of the 1954 Code.**

Although the *Baltic Mining Co.* case, *supra*, p. 64, held that an allowance for depletion of natural resources was not a constitutional necessity, Congress has allowed depletion to be deducted since 1913.

Originally, the deduction was based upon the cost of the property being depleted, and "cost depletion" is still authorized. When this method is employed, the taxpayer allocates his adjusted basis (cost, value as of March 1, 1913, or basis otherwise determined) equally among the estimated recoverable units and deducts an appropriate amount as the units are mined. Thus, if the cost to be allocated is $100,000 and there are 100,000 recoverable tons, the depletion allowance will be $1 per ton, deducted as the ore is mined. The provision considered in the *Baltic Mining Co.* case, providing that the depletion allowance might not in any circumstances exceed 5 per cent of gross income, was repealed in 1916.

Until 1954, a second authorized method of computing depletion was to use "discovery value" as the amount to be recovered tax-free by the taxpayer. This method, first granted as an incentive to exploration in 1918, permitted the taxpayer to take the fair market value of the mine at the time of discovery or within 30 days thereafter and to allocate this amount (no matter how much it exceeded his cost) among the recoverable units to find the depletion allowance per unit. See *Holloway* v. *Commissioner*, 21 T.C. 40 (1953). Although popular at one time, this method was seldom encountered in recent years, because it was not allowed for

deposits entitled to percentage depletion, and these constituted an ever-widening group. The 1954 Code makes percentage depletion generally available, and thus discovery value depletion is no longer authorized.

The percentage depletion method ignores both the taxpayer's cost and the number of recoverable units. Instead, the taxpayer is permitted to deduct a given percentage of his gross income (but not to exceed 50 per cent of taxable income calculated before depletion is taken) as a depletion allowance. This method avoids the problem, common to both cost and discovery value depletion, of estimating the number of recoverable units in the deposit in question, an estimate that may be only the wildest of guesses. For the taxpayer, percentage depletion has the special attraction of increasing the depletion allowance when income rises, which ordinarily is when the deduction will save most in taxes. Even more important, percentage depletion just keeps rolling along, even after the taxpayer's full cost or discovery value has been recovered. This feature is not an essential of percentage depletion, since the taxpayer *could* be restricted in his total life-time recoveries to the cost or discovery value of the deposit, but the statute does not now contain such a limitation. Percentage depletion is of particular importance in the petroleum industry (27½ per cent being the figure applicable to oil and gas), but it is now generally available.

There are a number of technical problems in calculating percentage depletion, including the determination of which of the extraordinarily varied interests in oil and gas are entitled to take depletion. See Beveridge, *Federal Taxation of Income from Oil and Gas Leases* (1948), Baker, "The Nature of Depletable Income," 7 *Tax L. Rev.* 267 (1952). The hotly debated issues of policy posed by this allowance are acutely summarized by Dean Griswold and Mr. Rex G. Baker in "Percentage Depletion—A Correspondence," 64 *Harv. L. Rev.* 361 (1951); see also Eldridge, "Tax Incentives for Mineral Enterprise," 58 *J. Pol. Econ.* 222 (1950); Galvin, "Federal Income Tax—Percentage Depletion of Oil and Gas Wells," 21 *Texas L. Rev.* 410 (1943), Jackson, "Federal Income Tax Percentage Depletion of Oil and Gas Wells—Another View," *id.* 798, Note, 60 *Harv. L. Rev.* 606 (1947). For a proposal to make everyone rich, see Blum, "How to Get All (But All) the Tax Advantages of Dabbling in Oil," 31 *Taxes* 343 (1953).

In 1951, some of the extractive industries gained the unusual option of capitalizing or "expensing," as the taxpayer chooses, certain costs of exploration and development that would otherwise have to be capitalized. Sections 615 and 616. Ordinarily, of course, a taxpayer who writes off items to expense simply accelerates a tax benefit that he would otherwise obtain (if he capitalized them) through increased depreciation or depletion or an increased basis for calculating gain or loss on sale. But if percentage depletion is used, since it is not geared to the basis of the property, the right to "expense" an item is unusually advantageous. See Alexander and Grant, "Mine Development and Exploration Expenditures," 8 *Tax L. Rev.* 401 (1953).

The 1951 amendments did not include the oil and gas industry. But for some years, the Regulations have permitted the oil and gas taxpayer either to expense or to capitalize intangible drilling and development costs. Regs. 118, Sec. 39.23(m)–16. Drilling and development costs that are reflected in tangible equipment are not included in this option; they must be capitalized and recovered

by depreciation deductions. But the *intangible* costs would ordinarily be attributed to the cost of the oil and gas and thus be recovered through the depletion allowance. Since percentage depletion is not limited by the deposit's cost, the taxpayer will usually prefer to "expense" his intangible costs. Consternation was created in the industry in 1945 when the Court of Appeals for the Fifth Circuit, in *F.H.E. Oil Co.* v. *Commissioner*, 147 F.2d 1002 (5th Cir. 1945), held that the regulations were invalid in permitting the taxpayer to deduct a capital expenditure. The opinion was somewhat modified on rehearing, after briefs had been filed by thirty counsel for other oil producers, appearing *amici curiae*, alleging that a billion dollars of deductions were imperiled by the opinion. *F.H.E. Oil Co.* v. *Commissioner*, 149 F.2d 238 (5th Cir. 1945). A few weeks later Congress passed a concurrent resolution declaring that it had approved the questioned regulations by reenacting § 23 of the 1939 Code with knowledge of the Treasury's interpretation of it. 59 Stat. (Part 2) 844 (1945). What is the effect of such a resolution? *F.H.E Oil Co.* v. *Commissioner*, 150 F.2d 857 (5th Cir. 1945); Gibson, "Congressional Concurrent Resolutions An Aid to Statutory Interpretation?" 37 *A.B.A.J.* 421 (1951).

5. *The Optional Standard Deduction*

> **Note: Section 23(aa) of the 1939 Code, relating to the standard deduction, is reenacted without substantive change by §§ 141-144 of the 1954 Code.**
>
> **Section 22(n) of the 1939 Code, defining "adjusted gross income," is reenacted with two substantive changes by § 62 of the 1954 Code.**
>
> **See also Section 36 of the 1954 Code, corresponding to § 23 (aa)(2) of the 1939 Code.**

The optional standard deduction, *supra*, p. 157, displaces all personal deductions if elected. It also displaces certain of the deductions considered in this chapter.

1. Trade or business expenses. These expenses are allowed in addition to the optional standard deduction, except that if they are incurred by the taxpayer "in connection with the performance by him of services as an employee," they can be deducted only if they consist of (a) expenses paid by him under a reimbursement or other expense allowance arrangement with his employer, (b) expenses of travel, meals, and lodging while away from home, (c) expenses of transportation, or (d) trade or business expenses of an "outside salesman."

A surprising volume of litigation, considering the small amounts ordinarily involved, has been required as a result of this treatment of the employee. In the first place, when is a taxpayer an independent contractor, not an employee, so as to be entitled to deduct all trade and business expenses in addition to the standard deduction? *Kershner* v. *Commissioner*, 14 T.C. 168 (1950); *Meisinger* v. *Commissioner*, ¶ 52,178 P-H Memo TC.

Secondly, what is a "reimbursement or other expense allowance arrangement?" *McKinney* v. *Commissioner*, ¶ 48,265 P-H Memo TC. Apparently an employee can get the benefit of all of his trade or business expenses, as well as the optional

standard deduction, if his employer will only reimburse expenses separately from the salary, instead of paying a larger salary and expecting the employee to pay the expenses himself.

The 1954 Code liberalized this area somewhat by allowing items (c) and (d) above to be deducted; previously, only items (a) and (b) were allowable. Item (c) takes care of automobile expenses incurred by employees who return home every night; and item (d) allows "outside salesmen" (as defined by § 62(2)(D) to deduct telephone and telegraph, secretarial, and entertainment expenses in addition to the standard deduction.

2. *Expenses of profit-seeking transactions.* By electing the optional standard deduction, the taxpayer forfeits certain of the deductions otherwise available under §§ 212 and 165. Deductions attributable to property held for the production of rents and royalties are still allowable. But expenses attributable to other property held for income (e.g., securities) are not allowed, nor are losses on transactions entered into for profit if there is no sale or exchange of property.

Upon what theory—or theories—did Congress promulgate these rules governing the deductions* that must be foresworn if the standard deduction is elected?

Note the link between the standard deduction and "adjusted gross income"; the deductions that are used to convert gross income into adjusted gross income are the same ones that may be deducted in addition to the standard deduction.

---

* Certain credits are also denied if the standard deduction is taken. § 36

CHAPTER 4

THE SPLITTING OF INCOME

Section A. The Advantages of Community Property

POE v. SEABORN

Supreme Court of the U. S., 1930
282 U.S. 101

MR. JUSTICE ROBERTS delivered the opinion of the Court.

Seaborn and his wife, citizens and residents of the State of Washington, made for the year 1927 separate income tax returns. . . .

During and prior to 1927 they accumulated property comprising real estate, stocks, bonds and other personal property. While the real estate stood in [the husband's] name alone, it is undisputed that all of the property real and personal constituted community property and that neither owned any separate property or had any separate income.

The income comprised Seaborn's salary, interest on bank deposits and on bonds, dividends, and profits on sales of real and personal property. He and his wife each returned one-half the total community income as gross income and each deducted one-half of the community expenses to arrive at the net income returned.

The Commissioner of Internal Revenue determined that all of the income should have been reported in the husband's return, and made an additional assessment against him. Seaborn paid under protest, claimed a refund, and on its rejection, brought this suit.

The District Court rendered judgment for the plaintiff [32 F.(2d) 916]; the Collector appealed, and the Circuit Court of Appeals certified to us the question whether the husband was bound to report for income tax the entire income, or whether the spouses were entitled each to return one-half thereof. This Court ordered the whole record to be sent up. 281 U.S. 704, 50 S. Ct. 459, 74 L. Ed. 1128.

The case requires us to construe sections 210(a) and 211(a) of the Revenue Act of 1926,* and apply them, as construed, to the interests of husband and wife

* These sections provided that the normal tax and the surtax "shall be levied, collected, and paid for each taxable year upon the net income of every individual" Substantially the same language now appears in Section 1(a) of the Code [Ed]

in community property under the law of Washington. These sections lay a tax upon the net income of every individual. The Act goes no farther, and furnishes no other standard or definition of what constitutes an individual's income. The use of the word "of" denotes ownership. It would be a strained construction, which, in the absence of further definition by Congress, should impute a broader significance to the phrase.

The Commissioner concedes that the answer to the question involved in the cause must be found in the provisions of the law of the State, as to a wife's ownership of or interest in community property. What, then, is the law of Washington as to the ownership of community property and of community income including the earnings of the husband's and wife's labor?

The answer is found in the statutes of the State, and the decisions interpreting them.

These statutes provide that, save for property acquired by gift, bequest, devise or inheritance, all property however acquired after marriage, by either husband or wife, or by both, is community property. On the death of either spouse his or her interest is subject to testamentary disposition, and failing that, it passes to the issue of the decedent and not to the surviving spouse. While the husband has the management and control of community personal property and like power of disposition thereof as of his separate personal property, this power is subject to restrictions which are inconsistent with denial of the wife's interest as co-owner. The wife may borrow for community purposes and bind the community property. *Fielding* v. *Ketler*, 86 Wash. 194, 149 P. 667. Since the husband may not discharge his separate obligation out of community property, she may, suing alone, enjoin collection of his separate debt out of community property. *Fidelity & Deposit Co.* v. *Clark*, 144 Wash. 520, 258 P. 35. She may prevent his making substantial gifts out of community property without her consent. *Parker* v. *Parker*, 121 Wash. 24, 207 P. 1062. The community property is not liable for the husband's torts not committed in carrying on the business of the community. *Schramm* v. *Steele*, 97 Wash. 309, 166 P. 634.

The books are full of expressions such as "the personal property is just as much hers as his" (*Marston* v. *Rue*, 92 Wash. 129, 159 P. 111, 112); "her property right in it [an automobile] is as great as his" (*Id.*, 92 Wash. 133, 159 P. 111, 113); "the title of one spouse therein was a legal title, as well as that of the other" (*Mabie* v. *Whittaker*, 10 Wash. 663, 39 P. 172, 175).

Without further extending this opinion it must suffice to say that it is clear the wife has, in Washington, a vested property right in the community property, equal with that of her husband; and in the income of the community, including salaries or wages of either husband or wife, or both. A description of the community system of Washington and of the rights of the spouses, and of the powers of the husband as manager, will be found in *Warburton* v. *White*, 176 U.S. 484, 20 S. Ct. 404, 44 L. Ed. 555.

The taxpayer contends that if the test of taxability under Sections 210 and 211 is ownership, it is clear that income of community property is owned by the community and that husband and wife have each a present vested one-half interest therein.

The Commissioner contends, however, that we are here concerned not with

mere names, nor even with mere technical legal titles; that calling the wife's interest vested is nothing to the purpose, because the husband has such broad powers of control and alienation, that while the community lasts, he is essentially the owner of the whole community property, and ought so to be considered for the purposes of sections 210 and 211. He points out that as to personal property the husband may convey it, may make contracts affecting it, may do anything with it short of committing a fraud on his wife's rights. And though the wife must join in any sale of real estate, he asserts that the same is true, by virtue of statutes, in most States which do not have the community system. He asserts that control without accountability is indistinguishable from ownership, and that since the husband has this, quoad community property and income, the income is that "of" the husband under sections 210, 211 of the income tax law.

We think in view of the law of Washington above stated this contention is unsound. The community must act through an agent. This Court has said with respect to the community property systems (*Warburton* v. *White*, 176 U.S. 494, 20 S. Ct. 404, 408, 44 L. Ed. 555) that "property acquired during marriage with community funds became an acquêt of the community and not the sole property of the one in whose name the property was bought, although by the law existing at the time the husband was given the management, control, and power of sale of such property. This right being vested in him, not because he was the exclusive owner, but because by law he was created the agent of the community."

In that case, it was held that such agency of the husband was neither a contract nor a property right vested in him, and that it was competent to the legislature which created the relation to alter it, to confer the agency on the wife alone, or to confer a joint agency on both spouses, if it saw fit—all without infringing any property right of the husband. See, also, *Arnett* v. *Reade*, 220 U.S. 311, at page 319, 31 S. Ct. 425, 55 L. Ed. 477, 36 L. R. A. (N.S.) 1040.

The reasons for conferring such sweeping powers of management on the husband are not far to seek. Public policy demands that in all ordinary circumstances, litigation between wife and husband during the life of the community should be discouraged. Law-suits between them would tend to subvert the marital relation. The same policy dictates that third parties who deal with the husband respecting community property shall be assured that the wife shall not be permitted to nullify his transactions. The powers of partners, or of trustees of a spendthrift trust, furnish apt analogies.

The obligations of the husband as agent of the community are no less real because the policy of the State limits the wife's right to call him to account in a court. Power is not synonymous with right. Nor is obligation coterminous with legal remedy. The law's investiture of the husband with broad powers, by no means negatives the wife's present interest as a co-owner.

We are of opinion that under the law of Washington the entire property and income of the community can no more be said to be that of the husband, than it could rightly be termed that of the wife.

[The Court then held that certain Congressional actions were not intended to forbid the division of community income between husband and wife.]

The Commissioner urges that we have, in principle, decided the instant question in favor of the Government. He relies on *United States* v. *Robbins*, 269 U.S.

315, 46 S. Ct. 148, 70 L. Ed. 285; *Corliss* v. *Bowers,* 281 U.S. 376, 50 S. Ct. 336, 74 L. Ed. 916, and *Lucas* v. *Earl,* 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731.

In the *Robbins* Case, we found that the law of California, as construed by her own courts, gave the wife a mere expectancy and that the property rights of the husband during the life of the community were so complete that he was in fact the owner. Moreover, we there pointed out that this accorded with the executive construction of the Act as to California.

The *Corliss* Case raised no issue as to the intent of Congress, but as to its power. We held that where a donor retains the power at any time to revest himself with the principal of the gift, Congress may declare that he still owns the income. While he has technically parted with title, yet he in fact retains ownership, and all its incidents. But here the husband never has ownership. That is in the community at the moment of acquisition.

In the *Earl* Case a husband and wife contracted that any property they had or might thereafter acquire in any way, either by earnings (including salaries, fees, etc.), or any rights by contract or otherwise, "shall be treated and considered, and hereby is declared to be received, held, taken, and owned by us as joint tenants. . . ." We held that assuming the validity of the contract under local law, it still remained true that the husband's professional fees, earned in years subsequent to the date of the contract, were his individual income, "derived from salaries, wages, or compensation for personal service," under sections 210, 211, 212 (a) and 213 of the Revenue Act of 1918 (40 Stat. 1062–1065). The very assignment in that case was bottomed on the fact that the earnings would be the husband's property, else there would have been nothing on which it could operate. That case presents quite a different question from this, because here, by law, the earnings are never the property of the husband, but that of the community.

Finally the argument is pressed upon us that the Commissioner's ruling will work uniformity of incidence and operation of the tax in the various states, while the view urged by the taxpayer will make the tax fall unevenly upon married people. This argument cuts both ways. When it is remembered that a wife's earnings are a part of the community property equally with her husband's, it may well seem to those who live in states where a wife's earnings are her own, that it would not tend to promote uniformity to tax the husband on her earnings as part of his income. The answer to such argument, however, is, that the constitutional requirement of uniformity is not intrinsic, but geographic. *Billings* v. *United States,* 232 U.S. 261, 34 S. Ct. 421, 58 L. Ed. 596; *Head Money Cases,* 112 U.S. 580, 5 S. Ct. 247, 28 L. Ed. 798, *Knowlton* v. *Moore,* 178 U.S. 41, 20 S. Ct. 747, 44 L. Ed. 969. And differences of state law, which may bring a person within or without the category designated by Congress as taxable, may not be read into the Revenue Act to spell out a lack of uniformity. *Florida* v. *Mellon,* 273 U.S. 12, 47 S. Ct. 265, 71 L. Ed. 511.

The District Court was right in holding that the husband and wife were entitled to file separate returns, each treating one-half of the community income as his or her respective incomes, and its judgment is affirmed.

The Chief Justice and Mr. Justice Stone took no part in the consideration or decision of this case.

Note

1. In common law property states, if the husband makes an outright gift of property, such as securities or real estate, to the wife, the income subsequently produced by the property is taxed to her. If he transfers the property into a joint tenancy or a tenancy in common with his wife, the income will be divided between them for tax purposes; and the same result will follow if the property is transferred into a tenancy by the entirety unless under local law the husband is entitled to all the income. See Rudick, "Federal Tax Problems Relating to Property Owned in Joint Tenancy and Tenancy by the Entirety," 4 *Tax L. Rev.* 3, 25–29(1948). But ordinarily the common law couple cannot split up the husband's *earned* income for tax purposes, as will be seen *infra*, p. 298 and splitting of investment income will be jeopardized if the husband retains control over either the transferred property or the income. With respect to both earned and unearned income, then, there was a world of difference between the Northeast and the Southwest.

2. As income tax rates rose just before and during World War II, the community property system spread. In 1939 Oklahoma enacted an optional system and Oregon did the same in 1943; both had community property neighbors and were to a degree concerned about migration for tax advantages. These statutes were repealed, however, when the Supreme Court held in *Commissioner* v. *Harmon,* 323 U S. 44 (1944), that an optional system, not "dictated by State policy, as an incident of matrimony," could not claim the mantle of *Poe* v. *Seaborn,* and were later replaced by mandatory systems. During this period Hawaii, Nebraska, Michigan, and Pennsylvania * also adopted the community property system, despite their lack of historical or geographical connection with Spanish law, and adoption was under discussion in several other states, including New York. Against this background Congress enacted the "income-splitting" provisions of the Revenue Act of 1948.

Section B. Income-Splitting Under the Revenue Acts of 1948 and 1951

Note: **Section 6013 of the 1954 Code prescribes the qualifications for and method of filing a joint return, and § 2 states how the tax is to be computed. Section 1(b) gives the rates for a "head of a household," and defines this term. See also the tax table in Section 3.**

These sections of the 1954 Code carry over the basic principles of §§ 51(b), 12(d), and 12(c)(3)-(5) of the 1939 Code, with some modifications.

See Regs. 118, Secs. 39.51-1, 39.12-3, and 39.12-4.

SURREY
FEDERAL TAXATION OF THE FAMILY— THE REVENUE ACT OF 1948

61 Harv. L. Rev. 1097, 1103–11 (1948).
(Reprinted by Permission)

Background. The Revenue Act of 1948 permits a husband and wife to split their combined income in half for the purpose of computing their federal in-

* Pennsylvania's statute was held unconstitutional. Willcox v. Penn Mutual Life Insurance Co., 357 Pa. 581, 55 A.2d 521(1947).

come tax. To the long history of the treatment of family income, the Act thus adds a chapter which is likely to be the last for many years. The preceding chapters are familiar even to non-tax experts, for this phase of federal taxation has been widely discussed. Writing in 1946 and urging consideration of the split-income plan, I summarized the situation that existed prior to the new Act.

The present treatment of family income is vulnerable to indictment on at least two serious counts. It is a fertile breeding ground of costly, difficult and wasteful litigation. It is sadly lacking in tax equity, since it involves both geographical discrimination between families in community property states and those in non-community property states and qualitative discrimination between families receiving earned income and those possessing investment income. These discriminations dollarwise are highly inequitable at present tax rates. Judicial safeguards devised to protect the progressive surtax have not provided a rational system. The alternative legislative solutions to these difficulties are mandatory joint returns or per capita division between husband and wife. At the level of the family, the latter solution of per capita division appears politically feasible. Considered relative to the treatment of single persons, the adoption of the per capita system may perhaps involve some discrimination in favor of the family unit. But the extent of the discrimination so created is difficult of positive proof and measurement. At any event, it does not appear to be as serious as the present admitted inequalities among married couples. The double need of eliminating both these inequalities and the excessive litigation they promote would appear to outweigh the possible claims of single persons.[1]

Against this background, four main factors emerged in 1946 and 1947 to lead to the adoption in the new Act of splitting of income between husband and wife for federal tax purposes (1) Four states, Oregon, Nebraska, Michigan, and Pennsylvania, emulated Oklahoma in adopting the community property system solely to reduce taxes for their residents. Other states were willing to follow if the step became necessary. It was recognized that such resort overnight to unfamiliar and complicated property relationships should not be forced upon the states as the remedy for a defect in the federal tax structure. (2) The Treasury Department indicated that the split-income solution was an acceptable answer to the problem. (3) Tax-wise married citizens in the middle and upper brackets suddenly perceived the application to tax reduction of Shakespeare's aphorism respecting the rose. Split income would not only give them even more than the widely publicized but politically impossible Knutson 20% slash, but could also be respectably defended as tax reform. (4) Politically astute legislators recognized that split income, plus a hastily picked-up companion, split estates and gifts, would assure the votes necessary for victory in the running tax battle with the President.

Thus, a far-reaching change in the income taxation of the family was accomplished. Those who preferred other solutions were not realists, or rather not presently realistic. As Chairman Millikin replied to a witness who urged mandatory joint returns:

I may refresh your memory; we tried it several times. The only difference [difficulty?] with it is that you can not get the votes to make a law out of it.

And to a witness who urged the legislative reversal of *Poe* v. *Seaborn* so as to tax the earner of community property income, a solution that would not meet

[1] Surrey, *Family Income and Federal Taxation*, in National Tax Association, Proceedings of 39th National Conference 357, 368 (1946), reprinted in 24 *Taxes* 980, 987 (1946).

the noncommunity earned-versus-unearned-income aspect of the problem, he stated:

> The difficulty is that it is not a novel thought. It has been tossed in the hopper around here a number of times. But legislatively it has not been possible to do it

While adoption of the split-income solution means a significant tax reduction for most middle-and upper-bracket taxpayers, this aspect must be judged in a broader setting. Reliance solely on the percentage-of-tax method of reduction, the alternative in these brackets to the split-income reduction, would have meant as large a reduction for these brackets considered as a group. But many community property families, non-community property families with split investment income, and single persons, would have shared equally in such a reduction. In short, these brackets as a group would have received the same tax reduction, but the inequitable discriminations among families therein—the entire problem—would have remained. If tax reduction of this magnitude was to be afforded these brackets, it was wise tax policy to use the dollars of tax reduction to accomplish needed reform and build an improved tax structure. The best chance for a more equitable and economically more effective tax system lies in the intelligent allocation of any tax reduction. The adoption of a presently acceptable solution to the family income problem represents the one bright spot in the Revenue Act of 1948.

Technical Operation. An examination of the technical operation of the split-income plan reveals that fortunately it has not added to the complexity of the federal tax system. The plan revolves entirely around the utilization of a familiar device, the voluntary joint return filed by husband and wife. If such a return is filed, the combined net income is computed in the customary manner under that return. The items of income and deduction and the credits of each spouse are aggregated. Then—and this is the departure from the joint return as it formerly existed—the net income and the credits are divided by one-half, and a preliminary tax computed on the basis of the resulting figures. This preliminary tax is then multiplied by two to produce the final total tax for husband and wife.*

Accompanying this change in computation are related statutory changes in the allowance of two deductions. The maximum limitation on the 10% standard deduction is increased from $500 to $1000, thereby permitting, for a joint return, the total amount hitherto obtainable through two separate returns in community property states.† To prevent continued advantage in the latter case, the $500 limitation is retained for a married individual filing a separate return. Similarly, the maximum allowable medical expense deduction is increased to $5,000 for a joint return (available in the case of a married couple with at least two dependents), but restricted for a separate return to the present limitation of $2500 (available in the case of a taxpayer with at least one dependent).‡

One other change pertaining to the standard deduction may be noted. The increased maximum limitation of $1000 is also made available to unmarried taxpayers, the reason being stated in the Senate Report as follows: "The fact that married couples in all States may receive a maximum standard deduction of $1000

* Sections 6013 and 2(a). [Ed.]

† Section 141. [Ed.]

‡ These limits were doubled by the 1954 Code and a head of a household is now on a par with a married couple. [Ed.]

presents a problem of equalizing the treatment accorded married persons with single individuals. To provide equality of tax treatment it is necessary to raise the maximum standard deduction for single persons to $1000."

This ratiocination will not pass muster. It would have been equally applicable to the medical expense deduction where the single person is restricted to the former $2500 limitation. And, obviously, equality between single persons and married couples at the same income level is just what the split-income plan of necessity eliminates. Formerly, except for the extra $500 exemption, the tax of a married couple (where one spouse had all the income) was the same as that of a single person possessing the same amount of income. But under the split-income plan, if we except the standard deduction, the income tax of the married couple is now equal only to twice that of a single person possessing one-half of their income. Under progressive rates, the tax is considerably less when computed according to the latter method, and this was the crux of the whole community property, assigned-investment-income problem. Equality among married couples at the same income level—and not equality in tax dollars with single persons at that level—is the essence of the split-income plan. As has already been mentioned, this plan accepts the view that tax equity is satisfied, relative to single persons, by regarding the married couple as equal to two single persons each with one-half the combined income. Under these premises, the standard deduction for single persons should have remained limited to $500.

This provision increasing the unmarried taxpayer's standard deduction, however, may be supported on other grounds. It can be argued that consumption economies present in marriage, as in rent and furniture, might justify a tax on the married couple higher than that of twice the tax on a single person with one-half the combined income, though not approaching that of a single person with the same income, which was the former situation. These economies cannot yet be determined with precision. The allowance of the second $500 standard deduction to the single person can therefore be accepted as a device roughly to compensate for these economies. . . . Since the joint return will become almost universal for married couples, the Act and the accompanying Committee Reports contain a fairly detailed set of rules respecting its use. Some of the rules are familiar; others are innovations. The Senate Committee Report states the basic tenet: "Although there are two taxpayers on a joint return, there is only one net income." Hence, without express statutory provision, two personal exemptions are available but only one standard deduction. The Act defines the marriage status necessary for resort to the joint return,[2] limits the use of joint returns in the case of husband and wife with different taxable years,[3] permits their use under prescribed conditions in the event of the death of one or both spouses,[4] provides that the tax liability shall be

[2] Section 6013. The status is to be determined, except in cases of death, at the close of the taxable year. It is provided that an individual who is legally separated from his spouse under a decree of divorce or of separate maintenance shall not be considered as married. This standard, taken from the alimony provision, § 71(a), is also used in connection with the status for personal exemptions, § 153, and the standard deduction, § 143, so as to produce uniformity. There is no "living together" requirement. If one spouse is a nonresident alien at any time during the year, a joint return may not be filed. § 6013(a)(1).

[3] Section 6013(a)(2).

[4] Section 6013(a)(3).

joint and several,[5] and adapts [the tax table] to use on a split-income basis by joint-return filers with adjusted gross income less than $5000.[6]

The Senate Report describes the method of computation in detail.[7] It indicates that since the filing of a joint return is elective, an election to file, and more important a failure to elect through filing a separate return, cannot be changed after the time for filing has expired.[°] The Report also elaborates on the rules applicable in the case of the death of a spouse.[8]

Note

1. Married couples will almost invariably file joint returns. Exceptions will occur when one of the spouses refuses to sign the return; when the income of the spouses is about equally divided and both have net capital losses (on a joint return, only $1,000 of ordinary income can be offset by capital losses; on separate returns, each spouse would have a $1,000 offset); and where both have about equal amounts of income and one has substantial medical expenses (since "adjusted gross income" will be smaller on the separate returns, more of the medical expenses can be deducted).

2. What *is* a joint return? This question is important not only because the benefits of income-splitting are available only if a joint return is filed, but also because both spouses become liable on a joint return for the tax and for fraud penalties if applicable. See *McCord* v. *Granger*, 201 F.2d 103 (3d Cir. 1952); *Manton* v. *Commissioner*, 11 T.C. 831 (1948). See also *Floyd Estate* (No. 2), 76 Pa. Dist. & Co. 597 (1951) (Orphans' Court, Delaware County, Pa.), reprinted in 51-4 P-H Federal Tax Service ¶ 72,559, ordering a co-executrix to sign a joint return in order to obtain the benefits of income-splitting for the estate of a deceased taxpayer with respect to income prior to his death.

3. Once the privilege of income-splitting was extended to couples in common law states, the "new" community property states lost their taste for Spanish law and repealed their statutes. See Note, Epilogue to the Community Property Scramble: Problems of Repeal, 50 *Col. L. Rev.* 332 (1950).

4. The 1954 Code permits a "surviving spouse" to file a joint return for two years after the death of his or her spouse, provided he or she has not remarried and maintains a home for a dependent child.

H. REPT. NO. 586, 82D CONG., 1ST SESS.

House Committee on Ways & Means, 1951

51–2 C.B. 357, 362–365

1. *Description*

The bill provides a new surtax table applicable, for taxable years beginning after August 31, 1951, to persons who qualify as a "head of household." . . . The new surtax table is constructed to give heads of households approximately one-half of the benefits of income splitting. The brackets and rates are adjusted so that it is unnecessary for persons using this table to divide their income by two and then multiply the tax by two as is presently required of married persons filing joint returns, who receive the full benefit of income splitting. . . .

[5] Section 6013(a)(4)(C).

[6] Section 3. The withholding system is now based entirely on the first bracket rate, thereby reflecting the split-income computation.

[7] Sen. Rep. No. 1013, pt. I at 52–54.

[°] This rule was changed by the 1951 Revenue Act. See § 6013(b). [Ed.]

[8] Sen. Rep. No. 1013, pt. I at 56–58.

3. *Reasons for adopting the head-of-household provision*

It is believed that taxpayers, not having spouses but nevertheless required to maintain a household for the benefit of other individuals, are in a somewhat similar position to married couples who, because they may share their income, are treated under present law substantially as if they were two single individuals each with half of the total income of the couple. The income of a head of household who must maintain a home for a child, for example, is likely to be shared with the child to the extent necessary to maintain the home, and raise and educate the child. This, it is believed, justifies the extension of some of the benefits of income splitting. The hardship appears particularly severe in the case of the individual with children to raise who, upon the death of his spouse, finds himself in the position not only of being denied the spouse's aid in raising the children, but under present law also may find his tax load heavier.*

However, it was not deemed appropriate to give a head of household the full benefits of income splitting because it appears unlikely that there is as much sharing of income in these cases as between spouses. In the case of savings, for example, it appears unlikely that this income will be shared by a widow or widower with his child to the same extent as in the case of spouses. As a result only one-half of the benefits of income splitting are granted to heads of households.

In defining the relationship to the taxpayer of an individual who enables the taxpayer to claim the head-of-household status, the relationships provided in section 25(b)(3) of the Code for claiming a dependency credit have been followed. In all cases except those in which unmarried children, stepchildren, and their descendants share the household the taxpayer must supply over half of the support of the individual and the individual must have gross income of less than $500.† These limitations are deemed desirable to prevent abuse of the head-of-household status. However, they are not believed necessary in the close relationships existing in the case of children, stepchildren, or their descendants, in view of the requirement that such individuals must live in the same household as the taxpayer, except for the temporary absences previously described, and the requirement that the taxpayer must supply over half the cost of maintaining the household. However, these limitations are applied where the children or grandchildren are married. This will prevent extending the benefits of a head of household to a parent while the child is himself obtaining the benefits of income splitting with his spouse.

Note

The Senate took the position that the head of a household should be granted only 25 per cent of the benefits of income-splitting, pointing out that the taxpayer was not required to include the income of minor children in his return. S. Rept. No. 781, 82d Cong., 1st sess, 51-2 C.B. 458, 464. But the House view carried.

In 1954, the House proposed to extend to heads of households the same income-splitting benefits that are provided for married couples. The Senate refused to accept this change, and the House receded. The 1954 Code expands the definition of a head of a household to include a taxpayer who maintains a household for his father or

* See paragraph (4), Note, p. 289. [Ed.]

† Now $600. [Ed.]

mother, even though it is separate from his own household. Previously the parent would confer head of household status on the taxpayer only if they lived together.

The effects of income-splitting for married couples and heads of households, taken in conjunction with the standard deduction and the personal exemptions, may be seen in the table that follows

COMPARATIVE TAX BURDENS—SINGLE PERSONS, HEADS OF HOUSEHOLDS, MARRIED COUPLES

THE TAX TREATMENT OF FAMILY INCOME

Division of Tax Research, Treasury Department, 1947
pp. i, 4-7

This study examines alternative procedures for reducing tax differences which result from the present treatment of family income under the individual income tax. Present law * discriminates between families on the basis of residence, by enabling couples in community-property States to divide their earned and investment community income between separate tax returns thereby reducing their taxes through the double use of the lower rates of the progressive tax rate schedule. It discriminates also on the basis of the nature of income, by requiring earned income in noncommunity-property States to be taxed to the earner, but affording recipients of investment income numerous opportunities for splitting that income with members of their family. Finally, it discriminates between recipients of investment income by favoring families who avail themselves of opportunities to split income by gift and such devices as family trusts, corporations, and partnerships. . . .

Proposals for the elimination of the inequities inherent in the tax differences resulting from the present tax treatment of family income under the individual income tax have been considered by the Congress on several occasions in the past. These proposals reflect the different points of view from which the problem can be approached.

At one extreme is the doctrine that taxpaying ability is determined by total family income regardless of the distribution of the ownership of such income among the members of the family. Those holding this view propose that the family's total income be taxed as a unit in order that families with equal incomes

* 1947 — *i.e.*, before adoption of income-splitting by the Revenue Act of 1948. [Ed.]

and equal exemptions be subjected to equal taxes. They would require that all married couples having the same amount of net income pay the same amount of tax, regardless of whether husband or wife is the income receiver or whether both contribute to the family income in varying proportions. One procedure for giving effect to this theory is to make joint returns mandatory. to apply the graduated rates of the individual income tax against the combined income of the spouses, after requiring them to file a joint return. An alternative procedure is to continue to give married couples the option of filing joint or separate returns, but to require those filing separate returns to use a new rate schedule employing smaller brackets which would in effect take the profit out of separate returns and tend to equalize the tax on all married couples with equal incomes. Another alternative, which has recently received considerable attention and therefore is treated in this memorandum at some length, is to tax each spouse on one-half of the couple's combined income, giving each the benefits of lower rates in the graduated surtax schedule.

Another approach to this problem and one which is diametrically opposed to any of the aforementioned procedures for the handling of family income proceeds from the assumption that the family as a unit has no combined taxpaying ability *per se;* that its taxpaying ability is composed of the separate taxpaying abilities of its individual members; and that the taxpaying ability of each of these is determined by the amount of income of which he or she is the owner without reference to the income of the other members of the family. This approach sanctions the tax effects of income-splitting within the family provided that the transferer actually parts with title to and control of the property. This, in substance, is the rationale underlying the present income tax practice which accords each spouse the privilege of filing a separate return covering only his or her separate income. However, even those who favor basing taxes on individual legal rights to income, differ on its specific application. The large volume of litigation involving the recognition for tax purposes of income-splitting by means of trusts, assignments, etc., attests to the differences in opinion as to the degree of separation of ownership and control needed before the tax reduction effects of income-splitting can be accepted. Some deny that the differences in the matter of title to income between the community-property systems are sufficiently real to justify the present differentiation in the tax treatment of married couples with the same combined incomes. They therefore propose to tax personal-service income to the earner and to tax income derived from community-property to the spouse exercising management and control. This approach is an attempt to reconcile the tax effects of automatic division of community income practiced in community-property States with the situation in noncommunity-property States when property and control are actually transferred from one spouse to the other.

The issue involved in these alternatives—basing tax liabilities on total family income vs. basing them on individual legal rights to income—relates primarily to the choice of the basic tax units under the individual income tax. Since the identification of the taxpayer unit under present law is unsatisfactory to many taxpayers, the objective is to find an alternative method of identifying the taxpayer unit which will be better fitted to the application of the doctrine that taxpayers equally situated as to income and size of family should pay equal taxes. However, when this issue is resolved, there still remains the problem of determining the

taxpaying abilities of single persons and families of varying size, all with equal incomes.

It is generally agreed that the relative taxpaying abilities of families of different size cannot be determined merely with reference to their incomes. In practice this requires an adjustment for size of family to provide equitable relative tax loads on equal-income families of varying size. The present income tax [1947] resolves this problem by assuming that the uniform per capita exemption allowed for each member of the family, regardless of their number, is adequate adjustment for size of family, and that income remaining after such adjustment is homogeneous in all respects except as to size of income. It, therefore, applies to this homogeneous income one rate schedule which relates taxpaying ability to size of income. At the lower levels of income (those falling entirely within the first surtax bracket), present law imposes on married couples twice the tax paid by single persons with half their income. At the upper income levels it imposes on married couples filing joint returns (and also on those filing separate returns covering substantially unequal incomes) more than twice the tax paid by single persons with half their income, whereas married couples reporting equal incomes on separate returns pay twice the tax incurred by a single person with one-half the income.

The information now available does not cast adequate light on the problem of the relative taxpaying abilities of families of varying size at all income levels. One criterion would be to impose relative tax burdens in accordance with ratios indicated by the relative incomes needed by families of different size to obtain the same standard of living. Although the available information respecting standards of living by size of family is at best fragmentary and representative only of the lower income families, it indicates, for example, that a single person living alone needs about two-thirds the money income of a married couple to maintain the same standard of living; and that a married couple with two dependents needs only about 50 percent more money income than one without dependents and only somewhat more than twice the money income of a single person to attain the same standard of living.

The use of these ratios for the purpose of appraising alternative methods of solving the family income problem is subject to several important limitations. It appears, for example, that a married couple does not need twice the money income of a single person to attain the same standard of living because the housewife contributes a substantial amount of real income to the family. However, the income tax applies largely to money incomes and not real incomes. The determination of the relative taxpaying abilities in accordance with the above-indicated ratios would seem to involve the taxation of the real income added by the housewife. Another limitation stems from the fact already mentioned that the data used to obtain the above relative income ratios pertain to relatively low-income groups (primarily under $5,000), whereas the family income problem under consideration pertains primarily to middle-and upper-income groups. Finally, the proportion of income used for consumption purposes tends to decrease and savings tend to increase as income increases. Thus, the ratios of relative income needed to obtain comparable levels of living would have less and less applicability, as an index of relative taxpaying abilities, as a larger and larger proportion of income is saved.

The quantitative information on the effects of a change in the size of families on taxpaying ability is incomplete and provides little basis for choosing among the alternative methods of treating family income for tax purposes. . . .

INDIVIDUAL INCOME TAX EXEMPTIONS

Division of Tax Research, Treasury Department, 1947
pp. i, v–vi, viii

1. *Wartime reduction in exemptions*

One of the most striking features of the war finance program was the reduction in personal exemptions under the individual income tax. At the low point reached under the Individual Income Tax Act of 1944, all persons with net income above a flat $500 exemption were subject to normal tax. Under present law [1947] the taxpayer is allowed an exemption of $500 each, for himself, his wife, and dependents for both normal tax and surtax. . . .

Taking the exemptions which prevailed in the income year 1939 as a basis of comparison, the present exemption, without adjustment for price changes, is 50 per cent of the 1939 figure in the case of single individuals, 40 per cent for married couples, and 125 per cent for dependents. The net result of exemption revisions since 1939 has been a sharp decrease in exemptions for single persons and married couples, but a substantial increase in the dependent exemption.

2. *Exemptions and the increase in living costs*

To appreciate fully the extent of the wartime reduction in exemption levels it is necessary to take into account not merely the dollar decrease in exemptions but the even greater decrease in the value of the exemptions when expressed in terms of goods and services. The rise in the cost of living has sharply reduced the command of the dollar exemptions over goods and services. While this development may have imposed income tax at real income levels not necessarily intended when the present exemptions were adopted, it is in accord with the view of those who held that the income tax base should have been further broadened. . . . The amount to which a $500 exemption would have to be adjusted upward merely to offset the effect of price increases since 1939, 1942 and 1944 is indicated [chart omitted] as being $824, $703, and $653, respectively. This chart also compares present exemptions with 1939 exemptions adjusted upward to provide the same purchasing power as in 1939. Thus, 1939 exemptions for single persons, married couples, and dependents had the same purchasing power, respectively, as $1,648, $4,120 and $659 had in September 1947.

3. *Specific problems and issues*

The individual income tax exemptions are related to the role of the individual income tax in the revenue system as a whole and its overall strength. In addition to the basic policy questions involved in determining over-all revenue goals and the relative emphasis on individual, business, and excise tax sources, the question of exemption revision raises the following more specific issues:

(a) The question of an immediate adjustment of the exemptions to take account of higher living costs,

(b) the postwar level of exemptions consistent with adequate revenues and the extent of reliance on the individual income tax as compared with other taxes,
(c) the choice between rate and exemption adjustments,
(d) the question of the relative amounts of exemption for single persons, married couples, and dependents, and,
(e) the timing of exemption changes in relation to economic and fiscal conditions.

Other questions which may call for consideration include (1) the possibility of a substitute for higher exemptions, such as a special low starting rate or special deductions for hardship cases, (2) proposals for a basic change in exemption method, involving the adoption of tax credits or other devices in lieu of exemptions; and (3) stability versus flexibility of exemptions in the postwar tax structure.

4. *Exemptions compared with family budgets*

In legislative and other discussions of income tax exemptions, reference is generally made to the objective of relieving some minimum standard of living from direct tax. Concepts of such a minimum standard differ, ranging from a bare subsistence to a comfortable standard of life. From the standpoint of sound social policy, it has been held that an income tax exemption below the maintenance budget requirements of a manual worker and his family is undesirable because it would tend to result in lower economic vitality, less production, and possibly higher Government expenditures for social purposes.

In [the table below], existing exemptions are compared with the latest information (September 1947) available for a maintenance budget level, a modest but currently adequate standard of living for a city worker's family, and a so-called health and decency budget level. These comparisons indicate that present exemp-

PRESENT EXEMPTIONS COMPARED WITH ESTIMATED FAMILY BUDGET LEVELS
(Sept 1947 Prices)

	1947 Gross Exemptions [1]	ESTIMATED BUDGET LEVELS [2]		
		Maintenance	City Worker's Budget [3]	Health and Decency
Single Person	$ 550	$ 955	$1,495	$1,686
Married Couple	1,125	1,364	2,136	2,408
Married Couple, Two Dependents	2,225	2,080	3,257	3,672

[1] Minimum level of adjusted gross income subject to tax under 1946 Form 1040 tax table. (1954 equivalents, see tax table in Section 3, 1954 Code, are $675, $1,325, and $2,675. [Ed.])
[2] Exclusive of Federal income tax and adjusted to Sept 1947 prices on the basis of B L S consumers' price index (The B L S index stood at 163 8 in Sept 1947. It had risen to 192.3 by May 1954. Monthly Labor Review, Vol. 65, No. 6 (1947), Vol. 77, No. 7 (1954). [Ed.])
[3] A modest but currently adequate budget for a city worker's family.

tions are substantially below maintenance requirements for a single individual with no dependents, and for a married couple with no dependents. However, the present $500 dependent exemption apparently exceeds the maintenance requirements for a dependent, so that present exemptions are perhaps within the range of adequacy for married couples with one or two dependents and are more than adequate to cover a maintenance standard for a married couple with more than two dependents. Present exemption levels are substantially below the requirements for the other two higher levels of living for all family sizes.

Family budget data are also useful in throwing light on the question of what relative amounts of exemption should be allowed for single persons, married couples, and dependents, as distinguished from the issue of the dollar amounts or the general level of exemptions. On the basis of the available information with respect to comparable living requirements for different-sized families, summarized in the following table, the [1947] per capita exemption appears to allow relatively too little exemption for single individuals living alone, and relatively too much for dependents, taking the married couple with no dependents as the standard of reference.

PRESENT EXEMPTIONS COMPARED WITH BUREAU OF LABOR STATISTICS ESTIMATES OF INCOMES NEEDED TO ACHIEVE COMPARABLE LEVELS OF LIVING
(Relatives: married couple, no dependents = 100)

Exemption	Bureau of Labor Statistics estimates	Exemptions for single persons, married couples and dependents, respectively, of		
		$ 500, 1,000, 500	$ 800, 1,600, 400	$ 800, 1,200 400
Single, no dependents	70.0	50	50	67
Married, no dependents	100.0	100	100	100
Married, 1 dependent	128.0	150	125	133
Married, 2 dependents	152.5	200	150	167
Married, 3 dependents	174.0	250	175	200
Married, 4 dependents	194.5	300	200	233

5. *Revenue, number of taxpayers, and tax base*

As shown [chart omitted] exemption changes exert a powerful leverage on individual income tax revenue, tax base, and taxpayers. According to estimates assuming $166 billion of national income payments in 1947, on which [the chart] is based, an increase in the exemption from $500 to $600 per capita would reduce (a) individual income tax revenue by about $1.6 billion or almost 10 per cent, (b) the number of individual income taxpayers by about 5 million or almost 10 per cent, and (c) the surtax net income base by about $8 billion or 12 per cent, as compared with present law.

On the same assumptions, an increase in exemptions from $500 to $700 per capita would decrease (a) individual income tax revenue by about $3 billion or 18 per cent, (b) the number of individual income taxpayers by about 11 million or 22 per cent, and (c) the surtax net income base by $15 billion or 22 per cent.*

Section C. Income-Splitting By Private Arrangement

Before 1948, when Congress granted to married couples the privilege of splitting their income for tax purposes by filing joint returns, every conceivable method of accomplishing the same result by private arrangement was essayed by taxpayers. The materials that follow illustrate the most popular of these plans and the judicial, administrative, and legislative responses that they evoked.

* In 1954 the Treasury estimated that, at current levels, an increase in the per capita exemptions of $100 would result in a revenue loss of $2 4 billion and that an increase of $200 would result in a revenue loss of $4.5 billion. To recoup this loss by a proportional increase in all tax rates, increases of 9 per cent and 19 per cent respectively would be required. Alternatively, all income (after exemptions and deductions) above $19,000 ($38,000 on joint returns) or $11,000

Although the pressure to devise a private arrangement for income-splitting was greatly reduced when Congress enacted the income-splitting provision of 1948 and the head-of-household provision of 1951, tax advantages can still be enjoyed if income can be split with children or others. The greater the number of individuals among whom a given amount of income can be divided, the greater the tax savings. Moreover, the optional standard deduction may lend additional enchantment to income-splitting. Thus, a married couple with two dependents is entitled to a maximum optional standard deduction of $1000 on a joint return; if income is divided so that husband and wife file a joint return and the two dependents each file a separate return, the aggregate standard deduction may rise to $3000. The amount of tax that may be saved by a married couple with two dependents by splitting various amounts of adjusted gross income equally among all members of the family is shown by this table:

EFFECT OF INCOME-SPLITTING—1954 RATES

ADJUSTED GROSS INCOME	MARRIED COUPLE WITH 2 DEPENDENTS			
	Income on joint return		Income split—3 or 4 returns[2]	
	Taxable income[1]	*Tax*	*Taxable income*[1]	*Tax*
$ 10,000	$ 6,600	$ 1,372	$ 6,600	$ 1,320
25,000	21,000	5,888	20,350[3]	4,491
50,000	46,600	18,294	44,600[4]	12,208
100,000	96,600	51,192	94,600[5]	37,414
250,000	246,600	176,114	244,600[6]	140,868

[1] Taxable income· adjusted gross income less optional standard deduction and exemptions

[2] Result would be the same where income is split equally among four members of family whether husband and wife file separate returns (making 4 returns in all) or joint return (3 returns in all)

[3] Husband and wife, $5150 each; dependents, $5025 each. The disparity results from § 141's limitation of the standard deduction to $500 in the case of a married person filing a separate return, if a joint return were filed instead, the $1000 ceiling on the standard deduction would have the same effect A slight tax savings could be effected by splitting the income so as to give the dependents a little more than the husband and wife.

[4] Husband and wife, $11,400 each, dependents, $10,900 each.

[5] Husband and wife, $23,900 each, dependents, $23,400 each

[6] Husband and wife $61,400 each; dependents, $60,900 each.

Somewhat less important areas in which intra-family income-splitting remains a lively subject include pre-1948 returns, which will continue in dispute and litigation for some years; taxpayers who have dependent relatives but who are not entitled to the head-of-household privilege, and married taxpayers who do not wish to have their returns signed by their spouses, as is required for joint returns.

Beyond all this, however, the impact of thirty years' of income-splitting tactics upon the law of federal income taxation is incalculable. The judicial doctrines worked out during this period have penetrated to every crevice of our tax structure, so that the relationships of employer and employee, of parent corporation and subsidiary, of corporation and stockholder, of philanthropist and charity, and of landlord and tenant are all influenced by the cases that follow.

($22,000 on joint returns) respectively would have to be confiscated to recoup the revenue loss. Hearings on Internal Revenue Code of 1954, Senate Finance Committee, 83d Cong., 2d sess., Part 1, p. 139. [Ed.]

1. Gifts

LUCAS v. EARL

Supreme Court of the U. S., 1930
281 U.S. 111

MR. JUSTICE HOLMES delivered the opinion of the Court.

This case presents the question whether the respondent, Earl, could be taxed for the whole of the salary and attorney's fees earned by him in the years 1920 and 1921, or should be taxed for only a half of them in view of a contract with his wife which we shall mention. The Commissioner of Internal Revenue and the Board of Tax Appeals imposed a tax upon the whole, but their decision was reversed by the Circuit Court of Appeals, 30 F.(2d) 898. A writ of certiorari was granted by this court.

By the contract, made in 1901, Earl and his wife agreed

> that any property either of us now has or may hereafter acquire . . . in any way, either by earnings (including salaries, fees, etc.), or any rights by contract or otherwise, during the existence of our marriage, or which we or either of us may receive by gift, bequest, devise, or inheritance, and all the proceeds, issues, and profits of any and all such property shall be treated and considered, and hereby is declared to be received, held, taken, and owned by us as joint tenants, and not otherwise, with the right of survivorship.

The validity of the contract is not questioned, and we assume it to be unquestionable under the law of the State of California, in which the parties lived. Nevertheless we are of opinion that the Commissioner and Board of Tax Appeals were right.

The Revenue Act of 1918 . . . imposes a tax upon the net income of every individual including "income derived from salaries, wages, or compensation for personal service . . . of whatever kind and in whatever form paid," § 213(a). . .* A very forcible argument is presented to the effect that the statute seeks to tax only income beneficially received, and that taking the question more technically the salary and fees became the joint property of Earl and his wife on the very first instant on which they were received. We well might hesitate upon the latter proposition, because however the matter might stand between husband and wife he was the only party to the contracts by which the salary and fees were earned, and it is somewhat hard to say that the last step in the performance of those contracts could be taken by anyone but himself alone. But this case is not to be decided by attenuated subtleties. It turns on the import and reasonable construction of the taxing act. There is no doubt that the statute could tax salaries to those who earned them and provide that the tax could not be escaped by anticipatory arrangements and contracts however skilfully devised to prevent the salary when paid from vesting even for a second in the man who earned it. That seems to us the import of the statute before us and we think that no distinction can be taken according to the motives leading to the arrangement by which the fruits are attributed to a different tree from that on which they grew.

Judgment reversed.

THE CHIEF JUSTICE took no part in this case.

* Now § 61. [Ed.]

Note

1. Was Mrs. Earl also taxable on the income in question?

2. Suppose Mrs. Earl, or a third party, had paid for Mr. Earl's legal education, his law library, etc. in return for an assignment of 50 per cent of his professional earnings either for a stated period or for life. Would the income then be taxed to Mr. Earl?

G.C.M. 27026

Bureau of Internal Revenue, 1951
51-2 C.B. 7

An opinion is requested as to the treatment for Federal income tax purposes of the proceeds derived from public entertainments conducted for the benefit of charitable organizations.

It is a common practice for those engaged in the business of promoting sporting events, or other forms of public entertainment, to designate events conducted on certain days as "charity" events, the net proceeds being turned over to specific charitable organizations.

It is a well-established principle, based on decisions of the Supreme Court of the United States, that an assignment of income by the person who earns it, or is otherwise entitled to it, does not relieve him from tax on such income. When a person who is in the business of promoting sporting events, or other public entertainments, enters into an agreement with a charitable organization under the terms of which the facilities of the former are operated by him as agent for the charitable organization, and all the proceeds from the event less expenses are received by or on account of the latter, the promoter is in effect assigning to the charitable organization earnings derived by him from the operation of the event. To allow the promoter in these circumstances to exclude such amounts from his gross income would be to give effect to form rather than substance, and would permit circumvention of the specific statutory limitations, contained in section 23(o) and (q) of the Internal Revenue Code,* on the amount of charitable contributions which is deductible in computing net income. This office is accordingly of the opinion that if a professional promoter would, in the absence of an agreement between the parties, be entitled to the proceeds of an event, such agreement will not operate to permit him to exclude the proceeds of the event from his income for Federal income tax purposes.

It is recognized, however, that there are instances in which a charitable organization is itself the promoter of an event designed to produce income to be used for its purposes. Bazaars, amateur productions, and sporting events are, of course, frequently promoted by such organizations. If the charitable organization is actually the promoter of an event, the fact that services and property are contributed or facilities loaned to the organization does not, of itself, result in tax to the contributor or lender.

Determination of whether the charitable organization is in substance the beneficiary of profits earned by a professional promoter of an event, or whether it is itself the promoter, must depend on the particular facts in each case, considering the realities of the situation.

---

* Now § 170. [Ed.]

Note

1. Note what Mr. Justice Holmes said of "attenuated subtleties" in *Lucas* v. *Earl*, *supra*. How would you conduct negotiations on behalf of a promoter to avoid imputation of the income to him?

2. Is the principle set out above applicable only to promoters, or does it embrace all performers? See Regs. 118, Sec. 39.22(a)-2(c). A few years before this regulation was issued there was a spirited exchange between Assistant Attorney General (now Mr. Justice) Jackson and several members of a joint Congressional committee over a Treasury ruling that the proceeds of Mrs. Roosevelt's radio broadcasts, which were paid to charities, were not taxable to her. The basis of the ruling was thus stated by Mr. Jackson:

> One who earns a salary or wages or has income from invested property cannot assign that income nor order it to be paid to a person or corporation so as to avoid a tax merely by routing his income so as not to pass through his hands. But this doctrine of constructive receipt of income cannot be used to create income when there is no income, and has never been used to justify a tax on services devoted to charity. Mrs. Roosevelt declined to work for money and was only willing to serve for charity's sake. It was and is my opinion that such benefit broadcasts do not result in taxable income. (Hearings before the Joint Committee on Tax Evasion and Avoidance, 75th Cong., 1st sess., Part 4, 426(1937).)

Are similar practices prevented by the subsequently-issued regulation cited above? See Rev. Rul. 71, 53-1 C.B. 18.

3. See § 114, added in 1952.

BLAIR v. COMMISSIONER

Supreme Court of the U. S., 1937
300 U.S. 5

MR. CHIEF JUSTICE HUGHES delivered the opinion of the Court.

This case presents the question of liability of a beneficiary of a testamentary trust for a tax upon the income which he had assigned to his children prior to the tax years and which the trustees had paid to them accordingly.

The trust was created by the will of William Blair, a resident of Illinois who died in 1899, and was of property located in that State. One-half of the net income was to be paid to the donor's widow during her life. His son, the petitioner Edward Tyler Blair, was to receive the other one-half and, after the death of the widow, the whole of the net income during his life. In 1923, after the widow's death, petitioner assigned to his daughter, Lucy Blair Linn, an interest amounting to $6,000 for the remainder of that calendar year, and to $9,000 in each calendar year thereafter, in the net income which the petitioner was then or might thereafter be entitled to receive during his life. At about the same time, he made like assignments of interest, amounting to $9,000 in each calendar year, in the net income of the trust to his daughter Edith Blair and to his son, Edward Seymour Blair, respectively. In later years, by similar instruments, he assigned to these children additional interests, and to his son William McCormick Blair other specified interests in the net income. The trustees accepted the assignments and distributed the income directly to the assignees.

[After holding that a judgment in an earlier proceeding involving the same trust was not conclusive in this proceeding as res judicata and that the assign-

ments were valid under local law, the Supreme Court turned to the third issue in the case.]

Third. The question remains whether, treating the assignments as valid, the assignor was still taxable upon the income under the federal income tax act. That is a federal question.

Our decisions in *Lucas* v. *Earl,* 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731, and *Burnet* v. *Leininger,* 285 U.S. 136, 52 S. Ct. 345, 76 L. Ed. 665, are cited. In the *Lucas* Case the question was whether an attorney was taxable for the whole of his salary and fees earned by him in the tax years or only upon one-half by reason of an agreement with his wife by which his earnings were to be received and owned by them jointly. We were of the opinion that the case turned upon the construction of the taxing act. We said that "the statute could tax salaries to those who earned them and provide that the tax could not be escaped by anticipatory arrangements and contracts however skilfully devised to prevent the salary when paid from vesting even for a second in the man who earned it." That was deemed to be the meaning of the statute as to compensation for personal service and the one who earned the income was held to be subject to the tax. In *Burnet* v. *Leininger, supra,* a husband, a member of a firm, assigned future partnership income to his wife. We found that the revenue act dealt explicitly with the liability of partners as such. The wife did not become a member of the firm, the act specifically taxed the distributive share of each partner in the net income of the firm, and the husband by the fair import of the act remained taxable upon his distributive share. These cases are not in point. The tax here is not upon earnings which are taxed to the one who earns them. Nor is it a case of income attributable to a taxpayer by reason of the application of the income to the discharge of his obligation. . . . There is here no question of evasion or of giving effect to statutory provisions designed to forestall evasion; or of the taxpayer's retention of control. *Corliss* v. *Bowers,* 281 U.S. 376, 50 S. Ct. 336, 74 L. Ed. 916, *Burnet* v. *Guggenheim,* 288 U.S. 280, 53 S. Ct 369, 77 L. Ed. 748.

In the instant case, the tax is upon income as to which, in the general application of the revenue acts, the tax liability attaches to ownership. See *Poe* v. *Seaborn, supra; Hoeper* v. *Tax Commission,* 284 U.S. 206, 52 S. Ct. 120, 76 L. Ed. 248.

The Government points to the provisions of the revenue acts imposing upon the beneficiary of a trust the liability for the tax upon the income distributable to the beneficiary. But the term is merely descriptive of the one entitled to the beneficial interest. These provisions cannot be taken to preclude valid assignments of the beneficial interest, or to affect the duty of the trustee to distribute income to the owner of the beneficial interest, whether he was such initially or becomes such by valid assignment. The one who is to receive the income as the owner of the beneficial interest is to pay the tax. If under the law governing the trust the beneficial interest is assignable, and if it has been assigned without reservation, the assignee thus becomes the beneficiary and is entitled to rights and remedies accordingly. We find nothing in the revenue acts which denies him that status.

The decision of the Circuit Court of Appeals turned upon the effect to be ascribed to the assignments. The court held that the petitioner had no interest in the corpus of the estate and could not dispose of the income until he received it.

Hence it was said that "the income was *his*" and his assignment was merely a direction to pay over to others what was due to himself. The question was considered to involve "the date when the income became transferable." 83 F.(2d) 655, at page 662. The Government refers to the terms of the assignment—that it was of the interest in the income "which the said party of the first part now is, or may hereafter be, entitled to receive during his life from the trustees." From this it is urged that the assignments "dealt only with a right to receive the income" and that "no attempt was made to assign any equitable right, title or interest in the trust itself." This construction seems to us to be a strained one. We think it apparent that the conveyancer was not seeking to limit the assignment so as to make it anything less than a complete transfer of the specified interest of the petitioner as the life beneficiary of the trust, but that with ample caution he was using words to effect such a transfer. That the state court so construed the assignments appears from the final decree which described them as voluntary assignments of interests of the petitioner "in said trust estate," and it was in that aspect that petitioner's right to make the assignments was sustained.

The will creating the trust entitled the petitioner during his life to the net income of the property held in trust. He thus became the owner of an equitable interest in the corpus of the property. . . . By virtue of that interest he was entitled to enforce the trust, to have a breach of trust enjoined and to obtain redress in case of breach. The interest was present property alienable like any other, in the absence of a valid restraint upon alienation. . . . The beneficiary may thus transfer a part of his interest as well as the whole. See Restatement of the Law of Trusts, §§ 130, 132 *et seq.* The assignment of the beneficial interest is not the assignment of a chose in action but of the "right, title, and estate in and to property." . . . See Bogert, *Trusts and Trustees*, vol. 1, § 183, pp. 516, 517; 17 *Columbia Law Review*, 269, 273, 289, 290.

We conclude that the assignments were valid, that the assignees thereby became the owners of the specified beneficial interests in the income, and that as to these interests they and not the petitioner were taxable for the tax years in question. The judgment of the Circuit Court of Appeals is reversed and the cause is remanded with direction to affirm the decision of the Board of Tax Appeals.

It is so ordered.

HELVERING v. HORST

Supreme Court of the U. S., 1940

311 U.S. 112

MR. JUSTICE STONE delivered the opinion of the Court.

The sole question for decision is whether the gift, during the donor's taxable year, of interest coupons detached from the bonds, delivered to the donee and later in the year paid at maturity, is the realization of income taxable to the donor.

In 1934 and 1935 respondent, the owner of negotiable bonds, detached from them negotiable interest coupons shortly before their due date and delivered them as a gift to his son who in the same year collected them at maturity. The Commissioner ruled that under the applicable § 22 of the Revenue Act of 1934, 48 Stat.

680, 686, 26 U.S.C.A. Int. Rev. Acts, page 669, the interest payments were taxable, in the years when paid, to the respondent donor who reported his income on the cash receipts basis. The circuit court of appeals reversed the order of the Board of Tax Appeals sustaining the tax. 2 Cir., 107 F.2d 906; 39 B.T.A. 757. We granted certiorari, 309 U.S. 650, 60 S. Ct. 807, 84 L. Ed. 1001, because of the importance of the question in the administration of the revenue laws and because of an asserted conflict in principle of the decision below with that of *Lucas* v. *Earl*, 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731, and with that of decisions by other circuit courts of appeals. See *Bishop* v. *Commissioner*, 7 Cir., 54 F.2d 298; *Dickey* v. *Burnet*, 8 Cir., 56 F.2d 917, 921; *Van Meter* v. *Commissioner*, 8 Cir., 61 F.2d 817.

The court below thought that as the consideration for the coupons had passed to the obligor, the donor had, by the gift, parted with all control over them and their payment, and for that reason the case was distinguishable from *Lucas* v. *Earl*, *supra* and *Burnet* v. *Leininger*, 285 U.S. 136, 52 S. Ct. 345, 76 L. Ed. 665, where the assignment of compensation for services had preceded the rendition of the services, and where the income was held taxable to the donor.

The holder of a coupon bond is the owner of two independent and separable kinds of right. One is the right to demand and receive at maturity the principal amount of the bond representing capital investment. The other is the right to demand and receive interim payments of interest on the investment in the amounts and on the dates specified by the coupons. Together they are an obligation to pay principal and interest given in exchange for money or property which was presumably the consideration for the obligation of the bond. Here respondent, as owner of the bonds, had acquired the legal right to demand payment at maturity of the interest specified by the coupons and the power to command its payment to others which constituted an economic gain to him.

Admittedly not all economic gain of the taxpayer is taxable income. From the beginning the revenue laws have been interpreted as defining "realization" of income as the taxable event rather than the acquisition of the right to receive it. And "realization" is not deemed to occur until the income is paid. But the decisions and regulations have consistently recognized that receipt in cash or property is not the only characteristic of realization of income to a taxpayer on the cash receipts basis. Where the taxpayer does not receive payment of income in money or property realization may occur when the last step is taken by which he obtains the fruition of the economic gain which has already accrued to him. *Old Colony Trust Co.* v. *Commissioner*, 279 U.S. 716, 49 S. Ct. 499, 73 L. Ed. 918, *Corliss* v. *Bowers*, 281 U.S. 376, 378, 50 S. Ct. 336, 74 L. Ed. 916, *Cf. Burnet* v. *Wells*, 289 U.S. 670, 53 S. Ct. 761, 77 L. Ed. 1439.

In the ordinary case the taxpayer who acquires the right to receive income is taxed when he receives it, regardless of the time when his right to receive payment accrued. But the rule that income is not taxable until realized has never been taken to mean that the taxpayer, even on the cash receipts basis, who has fully enjoyed the benefit of the economic gain represented by his right to receive income, can escape taxation because he has not himself received payment of it from his obligor. The rule, founded on administrative convenience, is only one of postponement of the tax to the final event of enjoyment of the income, usually the receipt of it by the taxpayer, and not one of exemption from taxation where the enjoyment

is consummated by some event other than the taxpayer's personal receipt of money or property. *Cf. Aluminum Castings Co.* v. *Routzahn,* 282 U.S. 92, 98, 51 S. Ct. 11, 13, 75 L. Ed. 234. This may occur when he has made such use or disposition of his power to receive or control the income as to procure in its place other satisfactions which are of economic worth. The question here is, whether because one who in fact receives payment for services or interest payments is taxable only on his receipt of the payments, he can escape all tax by giving away his right to income in advance of payment. If the taxpayer procures payment directly to his creditors of the items of interest or earnings due him, see *Old Colony Trust Co.* v. *Commissioner, supra; Bowers* v. *Kerbaugh-Empire Co.,* 271 U.S. 170, 46 S. Ct. 449, 70 L. Ed. 886; *United States* v. *Kirby Lumber Co.,* 284 U.S. 1, 52 S. Ct. 4, 76 L. Ed. 131, or if he sets up a revocable trust with income payable to the objects of his bounty, §§ 166, 167, Revenue Act of 1934, 26 U.S.C.A. Int. Rev. Code, §§ 166, 167, *Corliss* v. *Bowers, supra; cf. Dickey* v. *Burnet,* 8 Cir., 56 F.2d 917, 921, he does not escape taxation because he did not actually receive the money. *Cf. Douglas* v. *Willcuts,* 296 U.S. 1, 56 S. Ct. 59, 80 L. Ed. 3, 101 A.L.R. 391; *Helvering* v. *Clifford,* 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788.

Underlying the reasoning in these cases is the thought that income is "realized" by the assignor because he, who owns or controls the source of the income, also controls the disposition of that which he could have received himself and diverts the payment from himself to others as the means of procuring the satisfaction of his wants. The taxpayer has equally enjoyed the fruits of his labor or investment and obtained the satisfaction of his desires whether he collects and uses the income to procure those satisfactions, or whether he disposes of his right to collect it as the means of procuring them. *Cf. Burnet* v. *Wells, supra.*

Although the donor here, by the transfer of the coupons, has precluded any possibility of his collecting them himself he has nevertheless, by his act, procured payment of the interest, as a valuable gift to a member of his family. Such a use of his economic gain, the right to receive income, to procure a satisfaction which can be obtained only by the expenditure of money or property, would seem to be the enjoyment of the income whether the satisfaction is the purchase of goods at the corner grocery, the payment of his debt there, or such non-material satisfactions as may result from the payment of a campaign or community chest contribution, or a gift to his favorite son. Even though he never receives the money he derives money's worth from the disposition of the coupons which he has used as money or money's worth in the procuring of a satisfaction which is procurable only by the expenditure of money or money's worth. The enjoyment of the economic benefit accruing to him by virtue of his acquisition of the coupons is realized as completely as it would have been if he had collected the interest in dollars and expended them for any of the purposes named. *Burnet* v. *Wells, supra.*

In a real sense he has enjoyed compensation for money loaned or services rendered and not any the less so because it is his only reward for them. To say that one who has made a gift thus derived from interest or earnings paid to his donee has never enjoyed or realized the fruits of his investment or labor because he has assigned them instead of collecting them himself and then paying them over to the donee, is to affront common understanding and to deny the facts of

common experience. Common understanding and experience are the touchstones for the interpretation of the revenue laws.

The power to dispose of income is the equivalent of ownership of it. The exercise of that power to procure the payment of income to another is the enjoyment and hence the realization of the income by him who exercises it. We have had no difficulty in applying that proposition where the assignment preceded the rendition of the services, *Lucas* v. *Earl*, *supra; Burnet* v. *Leininger*, *supra*, for it was recognized in the *Leininger* case that in such a case the rendition of the service by the assignor was the means by which the income was controlled by the donor and of making his assignment effective. But it is the assignment by which the disposition of income is controlled when the service precedes the assignment and in both cases it is the exercise of the power of disposition of the interest or compensation with the resulting payment to the donee which is the enjoyment by the donor of income derived from them.

This was emphasized in *Blair* v. *Commissioner*, 300 U.S. 5, 57 S. Ct. 330, 81 L. Ed. 465, on which respondent relies, where the distinction was taken between a gift of income derived from an obligation to pay compensation and a gift of income-producing property. In the circumstances of that case the right to income from the trust property was thought to be so identified with the equitable ownership of the property from which alone the beneficiary derived his right to receive the income and his power to command disposition of it that a gift of the income by the beneficiary became effective only as a gift of his ownership of the property producing it. Since the gift was deemed to be a gift of the property the income from it was held to be the income of the owner of the property, who was the donee, not the donor, a refinement which was unnecessary if respondent's contention here is right, but one clearly inapplicable to gifts of interest or wages. Unlike income thus derived from an obligation to pay interest or compensation, the income of the trust was regarded as no more the income of the donor than would be the rent from a lease or a crop raised on a farm after the leasehold or the farm has been given away. *Blair* v. *Commissioner*, *supra*, 300 U.S. 12, 13, 57 S. Ct. 333, 81 L. Ed. 465 and cases cited. See also *Reinecke* v. *Smith*, 289, U.S. 172, 177, 53 S. Ct. 570, 572, 77 L. Ed. 1109. We have held without deviation that where the donor retains control of the trust property the income is taxable to him although paid to the donee. *Corliss* v. *Bowers*, *supra*. *Cf. Helvering* v. *Clifford*, *supra*.

The dominant purpose of the revenue laws is the taxation of income to those who earn or otherwise create the right to receive it and enjoy the benefit of it when paid. See, *Corliss* v. *Bowers*, *supra*, 281 U.S. 378, 50 S. Ct. 336, 74 L. Ed. 916; *Burnet* v. *Guggenheim*, 288 U.S. 280, 283, 53, S. Ct. 369, 370, 77 L. Ed. 748. The tax laid by the 1934 Revenue Act upon income "derived from . . . wages, or compensation for personal service, of whatever kind and in whatever form paid . . . ; also from interest . . . " therefore cannot fairly be interpreted as not applying to income derived from interest or compensation when he who is entitled to receive it makes use of his power to dispose of it in procuring satisfactions which he would otherwise procure only by the use of the money when received.

It is the statute which taxes the income to the donor although paid to his donee. *Lucas* v. *Earl*, *supra; Burnet* v. *Leininger*, *supra*. True, in those cases the service which created the right to income followed the assignment and it was arguable that in point of legal theory the right to the compensation vested instantaneously

in the assignor when paid although he never received it; while here the right of the assignor to receive the income antedated the assignment which transferred the right and thus precluded such an instantaneous vesting. But the statute affords no basis for such "attenuated subtleties." The distinction was explicitly rejected as the basis of decision in *Lucas* v. *Earl.* It should be rejected here, for no more than in the *Earl* case can the purpose of the statute to tax the income to him who earns, or creates and enjoys it be escaped by "anticipatory arrangements . . . however skilfully devised" to prevent the income from vesting even for a second in the donor.

Nor is it perceived that there is any adequate basis for distinguishing between the gift of interest coupons here and a gift of salary or commissions. The owner of a negotiable bond and of the investment which it represents, if not the lender, stands in the place of the lender. When, by the gift of the coupons, he has separated his right to interest payments from his investment and procured the payment of the interest to his donee, he has enjoyed the economic benefits of the income in the same manner and to the same extent as though the transfer were of earnings and in both cases the import of the statute is that the fruit is not to be attributed to a different tree from that on which it grew. See *Lucas* v. *Earl, supra,* 281 U.S. 115, 50 S. Ct. 241, 74 L. Ed. 731.

Reversed.

The separate opinion of MR. JUSTICE MCREYNOLDS.

The facts were stipulated. In the opinion of the court below [107 F.2d 907], the issues are thus adequately stated:

> The petitioner owned a number of coupon bonds. The coupons represented the interest on the bonds and were payable to bearer. In 1934 he detached unmatured coupons of face value of $25,182.50 and transferred them by manual delivery to his son as a gift. The coupons matured later on in the same year, and the son collected the face amount, $25,182.50, as his own property. There was a similar transaction in 1935. The petitioner kept his books on a cash basis. He did not include any part of the moneys collected on the coupons in his income tax returns for these two years. The son included them in his returns. The Commissioner added the moneys collected on the coupons to the petitioner's taxable income and determined a tax deficiency for each year. The Board of Tax Appeals, three members dissenting, sustained the Commissioner, holding that the amounts collected on the coupons were taxable as income to the petitioner.

The decision of the Board of Tax Appeals was reversed and properly so, I think.

The unmatured coupons given to the son were independent negotiable instruments, complete in themselves. Through the gift they became at once the absolute property of the donee, free from the donor's control and in no way dependent upon ownership of the bonds. No question of actual fraud or purpose to defraud the revenue is presented.

Neither *Lucas* v. *Earl,* 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731, nor *Burnet* v. *Leininger,* 285 U.S. 136, 52 S. Ct. 345, 76 L. Ed. 665, support petitioner's view. *Blair* v. *Commissioner,* 300 U.S. 5, 11, 12, 57 S. Ct. 330, 332, 333, 81 L. Ed. 465, shows that neither involved an unrestricted completed transfer of property.

Helvering v. *Clifford,* 309 U.S. 331, 335, 336, 60 S. Ct. 554, 556, 557, 84 L. Ed. 788, decided after the opinion below, is much relied upon by petitioner, but involved facts very different from those now before us. There no separate thing was absolutely transferred and put beyond possible control by the transferror,

The court affirmed that Clifford, both conveyor and trustee, "retained the substance of full enjoyment of all the rights which previously he had in the property." "In substance his control over the corpus was in all essential respects the same after the trust was created, as before." "With that control in his hands he would keep direct command over all that he needed to remain in substantially the same financial situation as before."

The general principles approved in *Blair* v. *Commissioner*, 300 U.S. 5, 57 S. Ct. 330, 81 L. Ed. 465, are applicable and controlling. The challenged judgment should be affirmed.

THE CHIEF JUSTICE and MR. JUSTICE ROBERTS concur in this opinion.

Note

1. One commentator has argued that a basis of the decision was that the gift was incomplete on the ground that the father could—up to the time the coupon became due and was presented for payment by the son or his assignee—have revoked by instructing the obligor of the bond to pay the interest to him and not to the holder of the coupon. See Miller, "Gifts of Income and of Property: What the Horst Case Decides," 5 *Tax L. Rev.* 1 (1949). Is this suggestion persuasive to you? In the Court of Appeals opinion in the *Horst* Case, 107 F.2d 906, 907, Judge Patterson said:

> The petitioner could not interfere in any way with the donee's control and right to receive the money when the coupons matured. . . . Generally liability to income tax attaches to ownership of the income, *Blair* v. *Commissioner*, 300 U.S. 5, 59 S. Ct. 530, 81 L. Ed. 465, and we see nothing to take the case out of the general rule. The case is not one where the assignor had power over the income after the assignment, as in *Corliss* v. *Bowers*, 281 U.S. 376, 50 S. Ct. 336, 74 L. Ed. 916. (107 F.2d 906, 907 (2d Cir. 1939)).

2. Was the father taxed on the value of the coupons at the time of gift or on the full amount of the interest? What if the interest had been paid in the year after the gift? Was it crucial to the decision that the father retained the bond? If so, why? What if he had given the coupon to his son and the bond to his daughter?

3. If the father, retaining the bond, had given all the interest coupons to his son, would the income be taxable to him? Compare the *Blair* case, *supra*, with *Harrison* v. *Schaffner*, 312 U.S. 579 (1941).

STRAUSS v. COMMISSIONER

U S. Court of Appeals, Second Circuit, 1948
168 F.2d 441, cert. den. 335 U.S. 858, reh den. 335 U.S. 888 (1948)

Before AUGUSTUS N. HAND, CHASE and FRANK, Circuit Judges.

CHASE, Circuit Judge.

The inventors of a process known as "Kodachrome," which is used in the manufacture of colored film, became entitled under a licensing agreement to receive royalties from the Eastman Kodak Company. On November 1, 1930, they assigned those royalties, except certain so-called flat royalties which may now be disregarded, to Kuhn, Loeb & Company as trustee to collect and pay them to those having the right to receive them.

The taxpayer was, on December 20, 1935, one of those who had a right to receive a certain percentage of such royalties from the trustee. He had acquired that right by performing certain personal services in connection with the financing

of the Kodachrome process. On December 20, 1935, the petitioner assigned all his "right, title and interest in Kodachrome, manufactured by the Eastman Kodak Company," to his wife and the trustee was duly advised that he had done so. During 1938, the trustee paid $10,209.50 to the taxpayer's wife and during 1939 $14,183.94 which would, but for the assignment to her, have been paid to the taxpayer as his share of the royalties. The wife reported such payments in the respective years they were received and paid income taxes thereon. The commissioner, holding that the assignment was of future payments to the taxpayer for personal services performed by him, included them in his gross income for the proper years and determined deficiencies accordingly. The taxpayer then petitioned the Tax Court to redetermine the deficiences, alleging, among other things, that in 1935 he was "the owner of an interest in the Kodachrome process of manufacturing color film." This was admitted in the respondent's answer and the Tax Court, three judges dissenting, expunged both deficiencies on the ground that the taxpayer had assigned property to his wife who received the payments from the trustee as income from that property and not as the assigned earnings of the taxpayer from his previously rendered personal services. This issue is reviewable as one of law, since it turns upon the proper construction of § 22(a) of the Internal Revenue Code, 26 U.S.C.A. Int. Rev. Code, 22(a), in the light of undisputed facts. *Cf. Trust of Bingham* v. *Commissioner,* 325 U.S. 365, 65 S. Ct. 1232, 89 L. Ed. 1670, 163 A.L.R. 1175.

It is of little significance that the taxpayer in his petition in the Tax Court chose to call his right to receive part of the royalties paid by the Eastman Kodak Company "an interest in the Kodachrome process" and the Commissioner accepted that definition of it in his answer. It now appears that the "interest" was only the right to receive a percentage of the royalties. And the tax consequences of the assignment of that right are, needless to say, dependent upon the real nature of what was assigned, not upon the label attached to it by the parties.

It has been well settled since *Lucas* v. *Earl,* 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731, that compensation derived from personal services is taxable to the one who performs the service whether or not he actually receives the compensation or transfers the right to receive it before it is earned. *Burnet* v. *Leininger,* 285 U.S. 136, 52 S. Ct. 345, 76 L. Ed. 665; *Commissioner of Internal Revenue* v. *Tower,* 327 U.S. 280, 66 S. Ct. 532, 537, 90 L. Ed. 670, 164 A.L.R. 1135. In *Helvering* v. *Eubank,* 311 U.S. 122, 61 S. Ct. 149, 85 L. Ed. 81, the principle was extended to cover the assignments of compensation due in the future for personal services performed in the past. We think the last mentioned case controlling in this instance. These payments were the result of personal services performed in the past by the taxpayer. The taxpayer did not receive for those services any part of the Kodachrome process itself or any right to control the disposition of that process. Rather, he obtained the enforceable promise of the owners of the process that he would be paid for his services a definite portion of the royalties they had the right to receive from the Eastman Kodak Company. That is to say, his "interest in the process" was never greater than a contract right to be paid certain ascertainable sums of money. From first to last his pay for his services was to be only in money determinable in amount by reference to a royalty agreement covering the process. This taxpayer's right to receive royalties, we think, is indistinguishable from the right, which was considered in *Helvering* v. *Eubank,*

supra, to receive part of past earned commissions on future premiums on insurance contracts. There also the assignment was of the taxpayer's right, title, and interest in the contract as well as the renewal commissions. As was said in *Commissioner of Internal Revenue* v. *Tower*, *supra*,

> A person may be taxed on profits earned from property, where he neither owns nor controls it. *Lucas* v. *Earl*, *supra*. The issue is who earned the income . . . 327 U.S. at page 289, 66 S. Ct. at page, 90 L. Ed. 670, 164 A.L.R. 1135.

The decision on the *Kodachrome* issue is reversed with directions to reinstate the deficiency for each year.

Note

Could one of the inventors have shifted his royalty income or a portion of it to a member of his family by an assignment of "the process itself" or of a fractional interest in it? Would it be relevant whether this was done after rather than before Kodak had been licensed to use the process? See *Dreymann* v. *Commissioner*, 11 T.C. 153 (1948); *Wodehouse* v. *Commissioner*, 177 F.2d 881 (2d Cir. 1949), *Wodehouse* v. *Commissioner*, 178 F.2d 987 (4th Cir. 1949).

2. *Trusts*

In the foregoing cases the courts had to determine which of *two* parties should be taxed on the income. We now turn to situations in which three parties are potential taxpayers: the owner of property transfers it to a trustee to administer, with instructions for distributing the income, now or hereafter, to a beneficiary. Who—the grantor, the trustee, or the beneficiary—is taxed on the income?

We may approach the answer by noting at the outset that the trust is a taxable entity, separate from both the grantor and the beneficiary, and that the trustee must file a return reporting its income. § 6012(b)(4). The trust's tax is computed in about the same way as an individual's, § 641(b),* with one major and several minor exceptions. Of the *minor* exceptions, those of chief interest are that (a) in lieu of the personal exemption and exemption for dependents allowed to individuals the trust gets a deduction of $100 ($300 for some trusts)† and (b) the deduction for charitable contributions is not restricted, as for individuals, to amounts actually paid during the taxable year not in excess of 20 or 30 per cent of adjusted gross income, but is instead unlimited and includes both amounts paid and those "permanently set aside" for charitable purposes. See §§ 642(b) and 642(c). The *major* exception is that, as a general principle, all distributions by the trust (to the extent of its current income) are deductible by the trust and taxable to the beneficiaries. §§ 651-663 Thus, all income earned by the trust property must be reported, but the beneficiaries are taxed on the amounts distributed to them and the trust is actually taxed only to the extent that its current income exceeds its distributions to the beneficiaries. When a trust distributes amounts in excess of its

* Special rules are prescribed, however, for employee's pension and similar trusts, § 501(e); for certain tax-exempt organizations in trust form, § 501(c), for alimony trusts, § 682, and for certain other trusts.

† It is occasionally necessary to determine whether a single indenture creates several trusts or only one, since each trust is entitled to its own deduction and to an individually calculated tax. See United States Trust Co. v. Commissioner, 296 U.S. 481 (1936), Hale v. Dominion National Bank, 186 F.2d 374 (6th Cir. 1951), cert. den. 342 U.S. 821; McHarg v. Fitzpatrick, 210 F.2d 792 (2d Cir. 1954).

current income, however, the beneficiaries are not taxed on the excess distributions, except that in general if within the previous five years the trust had undistributed income, the later excess distributions will be treated as belated distributions of trust income under a "throwback" rule and will be taxed accordingly to the beneficiaries. Since the trust will have been taxed on these amounts, the tax previously paid by the trust is credited to the beneficiaries.

Overriding this scheme, however, are certain rules requiring the income to be taxed to the grantor‡ of the trust where he has retained for himself either control over the trust or the benefits of the income. Some of these rules are set out in the Code itself, but the most spectacular developments in this area have been of judicial and administrative origin. When these rules are applicable, they take precedence and neither the trust nor the beneficiary is taxed.

As background for what follows, the student should examine §§ 676 and 677 with care. They are derived from, but are not identical with, §§ 166 and 167 of the 1939 Code.

CORLISS v. BOWERS

Supreme Court of the U. S., 1930
281 U.S. 376

MR. JUSTICE HOLMES delivered the opinion of the Court.

This is a suit to recover the amount of an income tax paid by the plaintiff, the petitioner, under the Revenue Act of 1924. The complaint was dismissed by the District Court, 30 F.(2d) 135, and the judgment was affirmed by the Circuit Court of Appeals, 34 F.(2d) 656. A writ of certiorari was granted by this Court.

The question raised by the petitioner is whether Sec. 219(g)* of the Revenue Act of 1924 can be applied constitutionally to him upon the following facts. In 1922 he transferred the fund from which arose the income in respect of which the petitioner was taxed, to trustees, in trust to pay the income to his wife for life with remainder over to their children. By the instrument creating the trust the petitioner reserved power "to modify or alter in any manner, or revoke in whole or in part, this indenture and the trusts then existing, and the estates and interests in property hereby created," etc. It is not necessary to quote more words because there can be no doubt that the petitioner fully reserved the power at any moment to abolish or change the trust at his will. The statute referred to provides that "where the grantor of a trust has, at any time during the taxable year, . . . the power to revest in himself title to any part of the corpus of the trust, then the income of such part of the trust for such taxable year shall be included in computing the net income of the grantor." Section 219(g) with other similar provisions as to income in § 219(h). There can be no doubt either that the statute purports to tax the plaintiff in this case. But the net income for 1924 was paid

‡ It should be noted that a person may be the grantor of a trust in substance though he was not the one who formally established it. For example, a husband may give property to his wife with a tacit understanding that she will create a trust. The husband will then be regarded as the grantor. Or, Smith may create a trust for the benefit of Jones' children and Jones, by prearrangement, may create a trust of equal value for the benefit of Smith's children. Each may be regarded as the creator of the other's trust. See generally Colgan and Molloy, "Converse Trusts—The Rise and Fall of a Tax Avoidance Device," 3 *Tax L. Rev* 271 (1948).

* The predecessor of § 166 of the 1939 Code and § 676 of the 1954 Code. [Ed.]

over to the petitioner's wife and the petitioner's argument is that however it might have been in different circumstances the income never was his and he cannot be taxed for it. The legal estate was in the trustee and the equitable interest in the wife.

But taxation is not so much concerned with the refinements of title as it is with actual command over the property taxed—the actual benefit for which the tax is paid. If a man directed his bank to pay over income as received to a servant or friend, until further orders, no one would doubt that he could be taxed upon the amounts so paid. It is answered that in that case he would have a title, whereas here he did not. But from the point of view of taxation there would be no difference. The title would merely mean a right to stop the payment before it took place. The same right existed here although it is not called a title but is called a power. The acquisition by the wife of the income became complete only when the plaintiff failed to exercise the power that he reserved. *Saltonstall* v. *Saltonstall*, 276 U.S. 260, 271, 48 S. Ct. 225, 72 L. Ed. 565; *Chase National Bank* v. *United States*, 278 U S. 327, 49 S. Ct. 126, 73 L. Ed. 405, 63 A.L.R. 388; *Reinecke* v. *Northern Trust Co.*, 278 U.S. 339, 49 S. Ct. 123, 73 L. Ed. 410. Still speaking with reference to taxation, if a man disposes of a fund in such a way that another is allowed to enjoy the income which it is in the power of the first to appropriate it does not matter whether the permission is given by assent or by failure to express dissent. The income that is subject to a man's unfettered command and that he is free to enjoy at his own option may be taxed to him as his income, whether he sees fit to enjoy it or not. We consider the case too clear to need help from the local law of New York or from arguments based on the power of Congress to prevent escape from taxes or surtaxes by devices that easily might be applied to that end.

Judgment affirmed.

The CHIEF JUSTICE took no part in this case.

Note

1. As the case indicates, originally the income of a trust was taxed to the grantor if he had a power to revest "at any time *during the taxable year*." This rule could be avoided, with little loss of control, by a provision in the trust instrument allowing the grantor to revest the corpus in himself only if he had given noitce of his intention to do so during the previous year; if he had not signified his intent to exercise the power before the beginning of the taxable year, it could be argued that he had no power to revest "at any time during the taxable year." For this reason, the statute was amended in 1934 so that the grantor is taxable if he has a power to revest "at any time."

But the new phraseology also raised a question. Suppose the trust was irrevocable for 20 years, but revocable thereafter. The pre-1954 regulations appeared to tax the income to the grantor, see Regs. 118, Sec. 39.166-1(b)(1)(ii) and (iii), and *cf. Helvering* v. *Dunning*, 118 F.2d 341 (4th Cir. 1941), cert. den. 314 U.S. 631. But it was held in *Helvering* v. *Wood*, 309 U.S. 344 (1940), that a reversion is not equivalent to a "power to revest." That suggested the possibility that the income of a trust the corpus of which would automatically revert to the grantor at the end of 20 years would not be taxed to him, but that the income of a trust irrevocable for twenty years with a power in the grantor to revoke thereafter would be taxed to him.

A change in the 1954 Code eliminates this anomaly. Section 676 provides that in those circumstances where the income of a trust to terminate at the end of a given period is not taxed to the grantor, the income of a trust that is not revocable until the end of

the same period will also be taxed to the grantor, *i.e.*, if a reversionary interest will not count against the grantor, neither will a power to revoke that is postponed for the same period.

2. The Regulations state that a power to revest calls the statute into play even though "the exercise of such power is conditioned . . . on the happening of a specific event." Regs. 118, Sec. 39.166-1(b)(1)(ii). What if the corpus can revest in the grantor only if he is in extreme need, or if a named person dies? Section 166 of the 1939 Code spoke of a power to revest that "is vested" in the grantor. Relying on this phrase of § 166, in *Commissioner* v. *Betts*, 123 F.2d 534, 538 (7th Cir. 1941), a power to revest the corpus was held not to be "vested in the grantor" where his power "was remote, contingent, and uncertain with no assurance of its ever coming into existence." The legislative history of § 166 does not bear out the court's view that "vested" was used in contrast to "contingent" or that, when the word came into the statute in 1932, it was intended to be narrower than the pre-1932 language. H. Rept. No. 708, 72d Cong., 1st sess., 39-1 C.B. (Part 2) 457, 474; S. Rept No. 665, 72d Cong., 1st sess., *ibid.* 496, 520-521. The 1954 Code speaks of a power to revest that is "exercisable" by the grantor. Is the change material?

JOSELOFF v. COMMISSIONER

Tax Court of the U. S., 1947, 8 T.C. 213

HARLAN, Judge: The respondent justifies the taxation of the income of the two trusts involved herein to the settlor on two propositions:

(1) The settlor retained dominion and control over the trust property and remained in substance the owner thereof, and

(2) The trust is revocable by the settlor's wife, who does not have a substantial adverse interest in the disposition of the corpus or the income thereof.

[The court held that the settlor was not taxable on the trust income under the first of the government's two contentions.]

The second reason which respondent advances as to why the income of this trust should be taxed to the grantor is that the trust is revocable during the life of the grantor and before the beneficiary reaches the age of twenty-five by direction of the grantor's wife. The Commissioner contends that, under the trust instrument and the conditions surrounding it, the grantor's wife has no interest in the preservation of the trust adverse to that of the grantor and that therefore the corpus of the trust may be revested in the grantor, and under the provisions of section 166 of the Internal Revenue Code the income thereof is taxable to him.

It therefore becomes necessary for us to determine precisely what the interests of Lillian L. Joseloff, the wife of the grantor, are in the preservation of the trusts. Petitioner enumerates these interests as follows:

1. A legal interest, with pecuniary value, consisting of a contingent remainder in each trust.

2. A non-legal interest, with possible pecuniary value, consisting of (a) her right to receive income distributed to her by the Trustee without any duty to account therefor, (b) to receive principal advances free of supervision by the Trustee, and (c) to exercise her dominant position on the Committee of Control to procure a termination of either or both trusts.

The question of the substantial value of a remote contingent remainder such as exists in this case has frequently been decided, not only by this Court, but in other

tribunals. It must be remembered that if neither of these trusts is revoked, Lillian Joseloff, in order to realize on her contingent remainder, would be required to survive both of her daughters and the issue of both of her daughters. In the first taxable year Lillian was 44 years of age, Joan 13, and Carol 11. In a case almost identical with the one at bar, *Claire R. Savage*, 4 T.C. 286, the Court speaks of such a contingent remainder and says:

> We fail to see any substantial adverse interest in the respective grantor's spouse . . . which would deter his or her use of the power to amend for the grantor's benefit. . . . The interest of the spouse is that of a contingent remainderman, and it will vest, if at all, only upon the termination of the trust under almost impossible circumstances. . . . In order for her to benefit from either of these trusts she would have to outlive the survivor of the two minor children and their issue, if any. To hold that such a remote possibility of receiving benefit constitutes a 'substantial adverse interest' would do violence to the meaning of the word 'substantial' and to the intent of Congress. . . .

In *Cushman* v. *Commissioner*, 153 Fed.(2d) 510, the grantor of a trust for the benefit of his two minor children and their living issue, failed to divest himself of the possibility of reversion by operation of law. The court says:

> If all the grantor's children were to die without issue and if the last of them failed to exercise a valid appointment by will, the grantor, if living, might inherit some of the trust estate . . . but where the chance that the grantor will ever get anything is so remote as it is here, it certainly cannot be considered an economic benefit closely retained by the grantor.

To the same effect see *Frances Biddle Trust*, 3 T.C. 832; *Estate of Harris Fahnestock*, 4 T.C. 1096.

If it be contended that grantor's wife could at least remove the primary estate of one of her children and her living issue by revoking one of the trusts, her reversionary interest would still be contingent on surviving one minor daughter and the issue of this daughter and it could certainly not be contended that in revoking the trust to accomplish this very doubtful advantage to herself her act would be "adverse" to the interest of the grantor. Petitioner, however, argues that the grantor's wife has other interests in the preservation of this trust beside her contingent remainder, to wit, her right to receive income from the trustee without any duty to account therefor. The trust instrument, however, provides that all money so received shall be used for the "support, maintenance and education" of the beneficiary. For the wife to obtain any economic benefit from this money it would be necessary for her to misappropriate the funds and violate the terms of the trust. It could hardly be said that it would be to her interest to preserve a trust, the very terms of which prevent her from procuring any benefit from such income.

Petitioner says that the wife also has the right "to receive principal advances free of the supervision by the trustee." Such advances are those advanced from the principal recommended by the advisory committee to the trustee, but it is to be noted that the grantor himself, as long as he is living, has a very definite check on such advances, as the trust provides: "The trustee shall be under no obligation to act without the approval of said Morris Joseloff during his life." Thus the wife, without the consent of the grantor, in spite of the recommendation of the committee, would receive nothing from the trustee from the principal of the

trust. Her interest in such funds is certainly not adverse to the grantor, who is in a position to authorize or disapprove such advancements.

Petitioner further says that the wife, through her dominant position in the committee of control, could procure a termination of either or both trusts. This contention is far from clear. The committee has no power to terminate the trusts except by distributing portions of the corpus and, as shown above, this cannot be done without the approval of the settlor of the trusts. Furthermore, all of such disbursements must be "for her [the beneficiary's] benefit." Any benefit to Lillian Joseloff would be in the nature of an embezzlement under the terms of the trust.

Offsetting these speculative adverse interests of the wife in the preservation of the trust, it is at once evident that the wife possesses some very substantial interests, from a purely selfish viewpoint, in the revocation of the trusts. The grantor of this trust in 1938 was sixty years of age. If the corpora of these trusts had been revested in her husband in 1941, when he was sixty-three years of age, his estate would have been enriched by $666,201.2. The income of one-third of this, under the laws of Connecticut, would have inured to Mrs. Joseloff for life at the death of her husband. Furthermore, and from a practical viewpoint, if Morris Joseloff really desired the revocation of these trusts at any time, it would be much to Morris Joseloff's advantage to compensate his wife if necessary for any pecuniary interest she might think she would be losing by the revocation of the trusts. Furthermore, this trust is entirely a family affair. Both the settlor and his wife have but one interest, and that is the interest of the family unit. The fact that Mrs. Joseloff would deposit in these trust estates 2,000 shares of Sycamore Corporation common stock having a value of $61,174.49 and thereby make it possible for that stock, in the case of the revocation of the trust, to vest in her husband, without even requiring any agreeement other than a receipt therefor, given not to her, but to Morris, certainly is ample evidence that there is no adversity of interest between this settlor and his wife. If, in the face of adversity, the family interest required that these trusts be revoked and these trust funds revested in the head of the family for the purpose of creating a new family income, it would require a mind wholly aloof from human affairs to imagine for a minute that Mrs. Joseloff would not revoke these trusts, even though her husband, the grantor of the trusts, would not compensate her for her lost "adverse" interest. As was said in the case of *Fulham* v. *Commissioner*, 110 Fed.(2d) 916, at page 918, in judging the adversary interest of the person having the power of revocation where a family trust is involved, "realistic appraisal" is called for rather than a purely legalistic one. See also *Commissioner* v. *Casperson*, 119 Fed.(2d) 94.

The tenuous interests that Mrs. Joseloff has, if any, in the preservation of these trusts, as compared with the obvious tangible and immediate interests which she would achieve by the revocation of the trusts, in our opinion, require that her selfish interests in the trust be wholly on the side of their revocation and that those interests are not at all adverse to the interests of the settlor. It is, therefore, our opinion that the contentions of the respondent in this case should be sustained, but in view of certain other issues not mentioned herein which have been conceded by the respondent,

Decision will be entered under Rule 50.

Note

1. See the comment of Judge Magruder, in *Commissioner* v. *Prouty,* 115 F.2d 331, 335 (1st Cir. 1940), a gift tax case, on the "element of unreality in the inquiry whether a beneficiary's interest is substantially adverse to the grantor." Suppose the trust corpus is worth $100,000, and the beneficiary whose consent to a revocation must be procured by the grantor is wholly independent, and has an interest worth $50,000. Is the grantor required to report half the income, or none at all?

2. Note that § 676 taxes the income of a trust to the grantor if a power to revest is exercisable by the grantor himself, by a "non-adverse party" (defined in § 672), or by the grantor in conjunction with such a person. The corpus of a trust will be included in the grantor's *estate* for estate tax purposes, however, if he retained a right to revest, either alone or in conjunction with *any* other person. Section 2038(a)(1); *Helvering* v. *City Bank Farmers Trust Co.,* 296 U.S. 85 (1935). Is there any reason why the corpus of a trust should be included in the grantor's estate even if the person whose consent is required has a substantial adverse interest when the income of the trust was not taxed to the grantor during his lifetime? In another respect, the estate tax is less exacting the corpus will not be part of the grantor's estate if the power to revest is entrusted to a third party alone, even if he does not have a substantial adverse interest. Why should such a trust insulate the grantor from estate tax but not from income tax?

The completeness of a transfer for *gift* tax purposes is governed by yet another set of rules. A transfer is subject to gift tax if the power to revest is entrusted to a third party alone, whether or not he has a substantial adverse interest. In this respect, the gift tax law resembles the estate tax law. At another point, however, the gift tax rule parallels the income tax, rather than the estate tax, rule· where the grantor retains the power to revest only with the consent of a person having a substantial adverse interest, the transfer is complete for gift tax purposes, as it is for income tax, although the trust will still be part of the grantor's estate. See Regs. 108, Sec. 86.3(a) (fifth paragraph), *Camp* v. *Commissioner,* 195 F.2d 999 (1st Cir. 1952). See generally Advisory Committee to Treasury Department and Office of Tax Legislative Counsel, *Federal Estate and Gift Taxes. A Proposal for Integration and for Correlation with the Income Tax* (1947), pp. 9-12.

3 The foregoing cases concerned powers to revest the *corpus* of a trust in the grantor If the power embraces only the *income* of the trust, § 677 is called into play. The grantor is taxed

(a) if the income is or may be* distributed to the grantor or held or accumulated for future distribution to him. §§ 677(a)(1) and 677(a)(2). It was held in *Helvering* v. *Stuart,* 317 U.S. 154 (1942), that this language would include any trust income that a trustee having no substantial adverse interest could apply for the support and education of the grantor's minor children, since he would be thereby relieved *pro tanto* of his parental obligations Section 677(b), added in 1943 as a result of the *Stuart* case, changes this rule as to income that could be, but is not, so applied, the grantor is now charged only with the income *actually* applied or distributed for support of his dependents.

(b) if the income is or may be* applied to the payment of premiums for life insurance on the grantor's life. Section 677(a)(3). The constitutionality of this provision was upheld in *Burnet* v. *Wells,* 289 U.S. 670 (1933). If the grantor has irrevocably assigned the policies, and has relinquished all rights to them, what is the reason for taxing him on income used to preserve or increase the value of property he no longer owns or controls?

If a power over income is to come into play only at the expiration of a period of time, it does not come within § 677 unless a reversionary interest at the end of the same period would cause the grantor to be taxed on the income.

---

* In the discretion of the grantor, a "non-adverse party," or both.

HELVERING v. CLIFFORD

Supreme Court of the U. S, 1940
309 U.S. 331

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

In 1934 respondent declared himself trustee of certain securities which he owned. All net income from the trust was to be held for the "exclusive benefit" of respondent's wife. The trust was for a term of five years, except that it would terminate earlier on the death of either respondent or his wife. On termination of the trust the entire corpus was to go to respondent, while all "accrued or undistributed net income" and "any proceeds from the investment of such net income" was to be treated as property owned absolutely by the wife. During the continuance of the trust respondent was to pay over to his wife the whole or such part of the net income as he in his "absolute discretion" might determine. And during that period he had full power (a) to exercise all voting powers incident to the trusteed shares of stock; (b) to "sell, exchange, mortgage, or pledge" any of the securities under the declaration of trust "whether as part of the corpus or principal thereof or as investments or proceeds and any income therefrom, upon such terms and for such consideration" as respondent in his "absolute discretion may deem fitting"; (c) to invest "any cash or money in the trust estate or any income therefrom" by loans, secured or unsecured, by deposits in banks, or by purchase of securities or other personal property "without restriction" because of their "speculative character" or "rate of return" or any "laws pertaining to the investment of trust funds"; (d) to collect all income, (e) to compromise, etc., any claims held by him as trustee; (f) to hold any property in the trust estate in the names of "other persons or in my own name as an individual" except as otherwise provided. Extraordinary cash dividends, stock dividends, proceeds from the sale of unexercised subscription rights, or any enhancement, realized or not, in the value of the securities were to be treated as principal, not income. An exculpatory clause purported to protect him from all losses except those occasioned by his "own wilful and deliberate" breach of duties as trustee. And finally it was provided that neither the principal nor any future or accrued income should be liable for the debts of the wife; and that the wife could not transfer, encumber, or anticipate any interest in the trust or any income therefrom prior to actual payment thereof to her.

It was stipulated that while the "tax effects" of this trust were considered by respondent they were not the "sole consideration" involved in his decision to set it up, as by this and other gifts he intended to give "security and economic independence" to his wife and children. It was also stipulated that respondent's wife had substantial income of her own from other sources; that there was no restriction on her use of the trust income, all of which income was placed in her personal checking account, intermingled with her other funds, and expended by her on herself, her children and relatives; that the trust was not designed to relieve respondent from liability for family or household expenses and that after execution of the trust he paid large sums from his personal funds for such purposes.

Respondent paid a federal gift tax on this transfer. During the year 1934 all income from the trust was distributed to the wife who included it in her individual return for that year. The Commissioner, however, determined a deficiency in

respondent's return for that year on the theory that income from the trust was taxable to him. The Board of Tax Appeals sustained that redetermination. 38 B.T.A. 1532. The Circuit Court of Appeals reversed. 8 Cir., 105 F.2d 586. We granted certiorari because of the importance to the revenue of the use of such short term trusts in the reduction of surtaxes. 308 U.S. 542, 60 S. Ct. 139, 84 L. Ed. 457.

Sec. 22(a) of the Revenue Act of 1934, 48 Stat. 680, 686, 26 U.S.C.A. Int. Rev. Acts, page 669, includes among "gross income" all

> gains, profits, and income derived ... from professions, vocations, trades, businesses, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in such property; also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever.

The broad sweep of this language indicates the purpose of Congress to use the full measure of its taxing power within those definable categories. *Cf. Helvering* v. *Midland Mutual Life Insurance Co.*, 300 U.S. 216, 57 S. Ct. 423, 81 L. Ed. 612, 108 A.L.R. 436. Hence our construction of the statute should be consonant with that purpose. Technical considerations, niceties of the law of trusts or conveyances, or the legal paraphernalia which inventive genius may construct as a refuge from surtaxes should not obscure the basic issue. That issue is whether the grantor after the trust has been established may still be treated, under this statutory scheme, as the owner of the corpus. See *Blair* v. *Commissioner*, 300 U.S. 5, 12, 57 S. Ct. 330, 333, 81 L. Ed. 465. In absence of more precise standards or guides supplied by statute or appropriate regulations, the answer to that question must depend on an analysis of the terms of the trust and all the circumstances attendant on its creation and operation. And where the grantor is the trustee and the beneficiaries are members of his family group, special scrutiny of the arrangement is necessary lest what is in reality but one economic unit be multiplied into two or more by devices which, though valid under state law, are not conclusive so far as § 22(a) is concerned.

In this case we cannot conclude as a matter of law that respondent ceased to be the owner of the corpus after the trust was created. Rather, the short duration of the trust, the fact that the wife was the beneficiary, and the retention of control over the corpus by respondent all lead irresistibly to the conclusion that respondent continued to be the owner for purposes of § 22(a).

So far as his dominion and control were concerned it seems clear that the trust did not effect any substantial change. In substance his control over the corpus was in all essential respects the same after the trust was created, as before. The wide powers which he retained included for all practical purposes most of the control which he as an individual would have. There were, we may assume, exceptions, such as his disability to make a gift of the corpus to others during the term of the trust and to make loans to himself. But this dilution in his control would seem to be insignificant and immaterial, since control over investment remained. If it be said that such control is the type of dominion exercised by any trustee, the answer is simple. We have at best a temporary reallocation of income within an intimate family group. Since the income remains in the family and since the husband retains control over the investment, he has rather complete assurance that the trust will not effect any substantial change in his economic

position. It is hard to imagine that respondent felt himself the poorer after this trust had been executed or, if he did, that it had any rational foundation in fact. For as a result of the terms of the trust and the intimacy of the familial relationship respondent retained the substance of full enjoyment of all the rights which previously he had in the property. That might not be true if only strictly legal rights were considered. But when the benefits flowing to him indirectly through the wife are added to the legal rights he retained, the aggregate may be said to be a fair equivalent of what he previously had. To exclude from the aggregate those indirect benefits would be to deprive § 22(a) of considerable vitality and to treat as immaterial what may be highly relevant considerations in the creation of such family trusts. For where the head of the household has income in excess of normal needs, it may well make but little difference to him (except income-tax-wise) where portions of that income are routed—so long as it stays in the family group. In those circumstances the all-important factor might be retention by him of control over the principal. With that control in his hands he would keep direct command over all that he needed to remain in substantially the same financial situation as before. Our point here is that no one fact is normally decisive but that all considerations and circumstances of the kind we have mentioned are relevant to the question of ownership and are appropriate foundations for findings on that issue. Thus, where, as in this case, the benefits directly or indirectly retained blend so imperceptibly with the normal concepts of full ownership, we cannot say that the triers of fact committed reversible error when they found that the husband was the owner of the corpus for the purposes of § 22(a). To hold otherwise would be to treat the wife as a complete stranger; to let mere formalism obscure the normal consequences of family solidarity; and to force concepts of ownership to be fashioned out of legal niceties which may have little or no significance in such household arrangements.

The bundle of rights which he retained was so substantial that respondent cannot be heard to complain that he is the "victim of despotic power when for the purpose of taxation he is treated as owner altogether." See *Du Pont* v. *Commissioner,* 289 U.S. 685, 689, 53 S. Ct. 766, 767, 77 L. Ed. 1447.

We should add that liability under § 22(a) is not foreclosed by reason of the fact that Congress made specific provision in § 166, 26 U.S.C.A. Int. Rev. Code, § 166, for revocable trusts, but failed to adopt the Treasury recommendation in 1934, *Helvering* v *Wood,* 309 U.S. 344, 60 S. Ct 551, 84 L. Ed. 796, that similar specific treatment should be accorded income from short term trusts Such choice, while relevant to the scope of § 166, *Helvering* v. *Wood, supra,* cannot be said to have subtracted from § 22(a) what was already there. Rather, on this evidence it must be assumed that the choice was between a generalized treatment under § 22(a) or specific treatment under a separate provision[1] (such as was accorded revocable trusts under § 166); not between taxing or not taxing grantors of short

[1] As to the disadvantage of a specific statutory formula over more generalized treatment see Vol I, Report, *Income Tax Codification Committee* (1936), a committee appointed by the Chancellor of the Exchequer in 1927. In discussing revocable settlements the Committee stated, p. 298: "This and the three following clauses reproduce section 20 of the Finance Act, 1922, an enactment which has been the subject of much litigation, is unsatisfactory in many respects, and is plainly inadequate to fulfill the apparent intention to prevent avoidance of liability to tax by revocable dispositions of income or other devices We think the matter one which is worthy of the attention of Parliament."

term trusts. In view of the broad and sweeping language of § 22(a), a specific provision covering short terms trusts might well do no more than to carve out of § 22(a) a defined group of cases to which a rule of thumb would be applied. The failure of Congress to adopt any such rule of thumb for that type of trust must be taken to do no more than to leave to the triers of fact the initial determination of whether or not on the facts of each case the grantor remains the owner for purposes of § 22(a).

In view of this result we need not examine the contention that the trust device falls within the rule of *Lucas* v. *Earl,* 281 U.S. 111, 50, S. Ct. 241, 74 L. Ed. 731, and *Burnet* v. *Leininger,* 285 U.S. 136, 52 S. Ct. 345, 76 L. Ed. 665, relating to the assignment of future income, or that respondent is liable under § 166, taxing grantors on the income of revocable trusts.

The judgment of the Circuit Court of Appeals is reversed and that of the Board of Tax Appeals is affirmed.

It is so ordered.

Reversed.

Mr. Justice Roberts.

I think the judgment should be affirmed.

The decision of the court disregards the fundamental principle that legislation is not the function of the judiciary but of Congress.

In every revenue act from that of 1916 to the one now in force a distinction has been made between income of individuals and income from property held in trust. It has been the practice to define income of individuals, and, in separate sections, under the heading "Estates and Trusts," to provide that the tax imposed upon individuals shall apply to the income of estates or of any kind of property held in trust. A trust is a separate taxable entity. The trust here in question is a true trust.

While the earlier acts were in force creators of trusts reserved power to repossess the trust corpus. It became common also to establish trusts under which, at the grantor's discretion, all or part of the income might be paid to him, and to set up trusts to pay life insurance premiums upon policies on the grantor's life. The situation was analogous to that now presented. The Treasury, instead of asking this court, under the guise of construction, to amend the act, went to Congress for new legislation. Congress provided, by § 219(g) (h) of the Revenue Act of 1924, that if the grantor set up such a life insurance trust, or one under which he could direct the payment of the trust income to himself, or had the power to revest the principal in himself *during any taxable year,* the income of the trust, for the taxable year, was to be treated as his.

After the adoption of these amendments taxpayers resorted to the creation of revocable trusts with a provision that more than a year's notice of revocation should be necessary to termination. Such a trust was held not to be within the terms of § 219(g) of the Revenue Act of 1924, 43 Stat. 277, because not revocable within the taxable year.

Again, without seeking amendment in the guise of construction from this court, the Treasury applied to Congress, which met the situation by adopting § 166 of the Revenue Act of 1934, 26 U.S.C.A. Int. Rev. Code, § 166, which provided that, in the case of a trust under which the grantor reserved the power

at any time to revest the corpus in himself, the income of the trust should be considered that of the grantor.

The Treasury had asked that there should also be included in that act a provision taxing to the grantor income from short term trusts. After the House Ways and Means Committee had rendered a report on the proposed bill, the Treasury, upon examination of the report, submitted a statement to the Committee containing recommendations for additional provisions; amongst others, the following:

> (6) The income from short-term trusts and trusts which are revocable by the creator at the expiration of a short period after notice by him should be made taxable to the creator of the trust.

Congress adopted an amendment to cover the one situation but did not accept the Treasury's recommendation as to the other. The statute, as before, clearly provided that the income from a short term irrevocable trust was taxable to the trust, or the beneficiary, and not to the grantor. . . .

The fact that the petitioner is in truth asking us to legislate in this case is evident from the form of the existing regulation and from the argument presented. The important portion of the regulation reads as follows:

> In determining whether the grantor is in substance the owner of the corpus, the Act has its own standard, which is a substantial one, dependent neither on the niceties of the particular conveyancing device used nor on the technical description which the law of property gives to the estate or interest transferred to the trustees or beneficiaries of the trust. In that determination, among the material factors are The fact that the corpus is to be returned to the grantor after a specific term; the fact that the corpus is or may be administered in the interest of the grantor; the fact that the anticipated income is being appropriated in advance for the customary expenditures of the grantor or those which he would ordinarily and naturally make, and any other circumstance bearing on the impermanence and indefiniteness with which the grantor has parted with the substantial incidents of ownership in the corpus.

In his brief the petitioner says:

> On the other hand, the income of a long term irrevocable trust which committed the possession and control of the corpus to an independent trustee *would not likely* be taxed to the settlor merely because of a reversionary interest. The question here, as in many other tax problems, *is simply one of degree.* The grantor's liability to tax must depend upon whether he retains so many of the attributes of ownership as to require that he be treated as the owner for tax purposes, or whether he has given up the substance of his dominion and control over the trust property.
>
> Under these circumstances, the question of *precisely where the line should be drawn* between those irrevocable trusts which deprive the grantor of command over the trust property and those which leave in him the practical equivalent of ownership is, in our view, *a matter peculiarly for the judgment of the agency charged with the administration of the tax law.* (Italics supplied.)

It is not our function to draw any such line as the argument suggests. That is the prerogative of Congress. As far back as 1922, Parliament amended the British Income Tax Act, so that there would be no dispute as to what short term trust income should be taxable to the grantor, by making taxable to him any income which, by virtue of any disposition, is payable to, or applicable for the benefit of, any other person for a period which cannot exceed six years.

If some short term trusts are to be treated as non-existent for income tax purposes, it is for Congress to specify them.

MR. JUSTICE MCREYNOLDS joins in this opinion.

Note

1 In *DuPont* v. *Commissioner*, 289 U.S. 685, 688-89 (1933), the Court had unanimously agreed that the income from a three-year trust should be taxed to the grantor, on the ground that he

> did not divest himself of title in any permanent or definitive way, did not strip himself of every interest in the subject-matter of the trust estate. . . . The situation in its legal effect would not be greatly different if the trusts had been created for a month or from day to day.

The holding in the *Clifford* case was even more clearly foreshadowed by *Douglas* v. *Willcuts*, 296 U.S. 1, 9-10 (1935), deciding that a husband was taxable on the income of an "alimony trust" and saying.

> We do not regard the provisions of the statutes as to the taxation of trusts, fiduciaries and beneficiaries [§§676-677, 1954 Code], as intended to apply to cases where the income of the trust would otherwise remain, by virtue of the nature and purpose of the trust, attributable to the creator of the trust and accordingly taxable to him. . . . [W]e find no warrant for a construction which would preclude the laying of the tax against the one who through the discharge of his obligation enjoys the benefit of the income as though he had personally received it.

See Paul, *Selected Studies in Federal Taxation*, Third Series (1940) 166, 200 ff; Surrey, "The Supreme Court and the Federal Income Tax. Some Implications of the Recent Decisions," 35 *Ill. L.Rev.* 779, 794-816 (1941).

2. The vagueness of the Court's criteria and the fertility of the tax advisor's imagination conspired to monopolize the time of the lower courts for years after the *Clifford* case was decided Countless cases involving application of the *Clifford* "doctrine" to trust income were decided between 1940 and 1946.

3. On December 29, 1945, the Treasury issued T.D. 5488, the so-called "Clifford Regulation," which, with minor modifications, appears as § 39.22(a)-21 of Regulations 118. The regulation, instead of relying on a judicial balancing of all the circumstances, laid down mechanical rules for determining when the grantor should be regarded as the owner in substance of the trust and hence taxable on its income. If the trust was to last for less than ten years (sometimes the period could be extended to fifteen years), *or* if the grantor had the power to determine or control the beneficial enjoyment of the income or corpus, *or* if he had administrative control over the trust that could be exercised primarily in his own interest, the income was taxable to him under the regulation. (The circumstances just summarized are defined and qualified in the regulation in some detail, as an examination of it will disclose.) The rules embodied in the regulation were derived from the *Clifford* line of cases, but it was not a restatement of the law, and it singled out a number of individual factors and made them alone responsible for imputing the income to the grantor, where the courts had ordinarily relied on the combined effect of several factors. See Alexandre, "A Case Method Restatement of the New Clifford Regulations," 3 *Tax L. Rev.* 189 (1947). In promulgating the regulation, the Treasury announced that it would be applied prospectively only. Where its terms were more favorable to the taxpayer than the case law, however, the Bureau announced that it would follow the regulation even as to pre-1946 years if no inconsistent claims were asserted by the trustees or beneficiaries. Mim. 5968, 46-1 C.B. 25; Mim. 6156, 47-2 C.B. 13.

4. For a lively debate on the *Clifford* regulation, see Pavenstedt, "The Treasury Legislates: The Distortion of the Clifford Rule"; Eisenstein, "The Clifford Regulations and the Heavenly City of Legislative Intention", with a "reply" and a "supplemental reply" by Pavenstedt, and a "postscript" by Eisenstein, all to be found in 2 *Tax L. Rev.* 7, 327, 476, 569, and 578 (1946-47).

5. The 1954 Code enacted statutory rules, based largely on the *Clifford* regulation, to govern this area:

(*a*) § 673 provides that the grantor shall be treated as the owner of a trust if he has a reversionary interest in either the corpus or the income that will or may reasonably be expected to take effect in possession or enjoyment within ten years. There are two

exceptions. One is that a reversionary interest to take effect after the death of the income beneficiary, no matter what his life expectancy, does not count against the grantor. The other exception is a reversionary interest if the income is irrevocably payable for at least two years to a single designated church, hospital, or educational institution. As the bill was originally proposed by the House Committee on Ways and Means, the income was excluded from the grantor's gross income, and he also would have been entitled to a charitable deduction for the present value of the income when the trust was established. It was pointed out in the minority report on the bill (H. Rept. pp. B10-11) that.

> Accordingly, the taxpayer who owns income-producing property and whose highest tax rate is greater than 50 percent can actually make money by supposedly satisfying his philanthropic desires.
>
> For example, if the taxpayer's highest tax rate is 90 percent and he owns property producing a yearly income of $5,000, over 2 years he will have $10,000 in income, pay $9,000 in taxes, and retain $1,000 after taxes. However, if the taxpayer desires to increase his retained income from the property 800 percent, he need only make a gift of the 2-year income in trust for a charity. The charitable deduction of approximately $10,000 to which he thereby becomes entitled will reduce the taxes he would otherwise pay by $9,000. Thus, by giving up, through the charitable gift, the $1,000 which he would have retained after taxes, he will receive in exchange a $9,000 reduction in taxes. The result is an increase of $8,000 in his income after taxes (the saving in taxes of $9,000 less the net gift, after taxes, of $1,000 of income).
>
> Similarly, a taxpayer in the 75-percent bracket will double his retained income from the property through the 2-year gift in trust; the taxpayer in the 60-percent bracket will increase his retained income by 50 percent; and the taxpayer in the 50-percent bracket will be able to make the "gift" without giving up any money.
>
> Obviously, the only charitable impulses that are involved in this provision are those toward the upper-income taxpayer. If it becomes law such 2-year trusts will mushroom and be, in time, a severe blow to the revenue.
>
> We are pleased that the majority have agreed to offer a floor amendment which will eliminate this loophole.

The bill was amended on the floor of the House to disallow the charitable deduction with respect to such trusts. See § 170(b)(1)(D).

(*b*) § 674 provides that the grantor shall be taxed upon the income of the trust if the beneficial enjoyment of the corpus or the income is subject to control by him, by a "nonadverse" party, or by both, without the approval or consent of an adverse party. A power to add new beneficiaries would ordinarily, and a power to reshuffle the interests of the named beneficiaries would sometimes, be embraced in this section. A number of more or less restricted powers to affect the interests of the beneficiaries are excepted. Moreover, while in general a power that would be charged against the grantor is equally fatal if it is held by a "nonadverse" party, § 674(c) excepts certain powers if they are vested in trustees who are not "related or subordinate parties who are subservient to the wishes of the grantor." See § 672(c). Section 674(d) allows certain other more restricted powers to be vested in anyone other than a grantor or a spouse living with him.

(*c*) § 675 provides that the grantor shall be treated as the owner of a trust if he, a nonadverse party, or both, may exercise certain administrative powers over the corpus or income.

6. The argument in the *Clifford* case over whether the sections specifically requiring the income of certain trusts to be taxed to the grantor (§§ 166 and 167 of the 1939 Code, now §§ 676 and 677 of the 1954 Code) precluded resort to the more general language of §22(a) of the 1939 Code is echoed in § 671 of the 1954 Code. It provides that the grantor shall not be taxed on the income of a trust "solely on the grounds of his dominion and control over the trust under section 61 (relating to definition of gross income) or any other provision of this title, except as specified in this subpart." Suppose the corpus of a trust consists of cash, and the grantor supervises the use of the funds in

business transactions where his personal skill is great. Could the profits be taxed to him under the general language of § 61? See S. Rept. p. 365.

COMMISSIONER v. CLARK

U. S. Court of Appeals, Seventh Circuit, 1953
202 F.2d 94

Before MAJOR, Chief Judge, and FINNEGAN and SWAIM, Circuit Judges

MAJOR, Chief Judge.

These are petitions to review a decision of the Tax Court holding that the income of certain charitable trusts for the year 1946 was not properly taxable to the respondents, as asserted by the Commissioner. The two cases were considered together by the Tax Court inasmuch as each presented identical questions for decision. They are similarly presented to this court and will be treated accordingly.

There is no dispute concerning the facts as found by the Tax Court, which follow a stipulation entered into by the parties. However, even though only a question of law is involved, we think a statement of the facts is material.

Respondents (sometimes referred to as petitioners) are sisters. Forest Park Home Foundation (called the Foundation) was organized as an Illinois not-for-profit corporation in 1939. It is a donee, contributions to which are deductible under § 23(o)(2) of the Internal Revenue Code [§ 170, 1954 Code]. The purpose of the Foundation was to meet the need in the Peoria, Illinois, community for the care, maintenance and establishment of a home for the aged. Under its charter and bylaws, gifts could not revert to the donors and, in the event of the dissolution of the Foundation, its assets were distributable to other charities. The Foundation was organized by three Peoria citizens, of whom one, W. H. Sommer, was the father of petitioners. Petitioners being interested in the Foundation's program, each, on December 1, 1941, executed separate and identical deeds of trust. Such trusts contained the following provisions (in the language of the Tax Court):

> Each petitioner transferred 15,000 shares of the common stock of the Keystone Steel and Wire Company of Peoria, Illinois, to the Foundation which was trustee and beneficiary. Each trust was to be irrevocable for five years, though it could be extended. At the expiration of the term, the corpus of each trust, but no accumulation of income, would be returned to the settlor. The trust agreements expressly provided that all income from the trust estate was to be applied to the general charitable purposes of the Foundation and was not in any way to be retained as part of the trust corpus. During the period of the trusts, the trustee was to have "full and complete control of the trust assets, and all the powers and rights in and in connection with said trust assets, to the same extent as though the stock had been transferred to the name of Forest Park Home Foundation on the books of the Corporation." In the event of dissolution of the Foundation, the trusts' assets were to go to other charities, expressly prohibiting return to the grantors. The trust agreements provided that the trusts could be extended, but forbade any shortening The trusts further provided that only a currently equivalent number of shares of Keystone stock were to be returned to the settlors at the end of the trust term without accruals or additions because of income or profits.

Six days after the creation of the trusts came the attack upon Pearl Harbor. It shortly became apparent that the original schedule of five years for establishing the home was inadequate. The rising costs of construction and the war economy made it evident that more funds, as well as more time, would be necessary. Accordingly, on December 1, 1942, petitioners extended the irrevocable period of the trusts for

at least five additional years to December 1, 1951, all other provisions remaining unchanged. In the taxable year 1946, the Foundation was directed by a board of directors of nine members representing a cross-section of the Peoria community. Neither of the petitioners was a director, but three of their relatives were.

Also (in the language of the Tax Court):

> Under the terms of the trusts petitioners had no power with respect to the administration of the trusts or the distribution of the income therefrom. Moreover, the petitioners did not and have not attempted, either directly or indirectly, to influence or control the decisions of the board of directors of the Foundation as trustee or beneficiary under the trusts.
>
> The program contemplated by the Foundation has been carried out during the 10-year period in that a 125-bed home has been built and is occupied by inmates and the charity is functioning as intended by its founders.
>
> During the taxable year 1946, the Foundation received dividends of $42,750 on the 15,000 shares of stock transferred originally by each petitioner to the trusts dated December 1, 1941.

Further (in the language of the Tax Court):

> Petitioners received no benefits directly or indirectly from the trusts. Under the terms of the trusts petitioners retained no powers of disposition of income or corpus by revocation, alteration, or otherwise.

For the year 1946, petitioner Clark returned a net taxable income of $13,585.83, and petitioner Rutherford returned a net taxable income of $14,903.92. The Commissioner assessed a deficiency on the basis of $42,750.00 additional income to each petitioner, which represented the income received by the Foundation from dividends on the shares of stock transferred by the trust indentures to the Foundation. A deficiency was assessed against petitioner Clark for $27,946.62, and against petitioner Rutherford for $28,801.93. In view of the discussion to follow, it is interesting and perhaps of some pertinency to note that the Commissioner determined deficiencies against each of the petitioners for the years 1944 and 1945, upon the same basis that deficiencies were determined for the year 1946. However, as pointed out by the Tax Court, it was stipulated that there were no deficiencies for those years. Also, each of the petitioners created a trust indenture dated June 29, 1943, which was irrevocable until June 29, 1953, or for a period of ten years. These indentures contained the same provisions and were for the same purpose as the trusts created December 1, 1941 and now in dispute. The Commissioner determined deficiencies on the income from these 1943 trusts but, as the Tax Court stated:

> The respondent [Commissioner] now concedes that the dividends . . . are not taxable to petitioners because each trust had a duration of 10 years.

The Tax Court stated the question of law before it as:

> . . . whether the settlor-petitioners should be taxed on the charitable trust income solely because the duration of the trust is nine instead of 10 years, since the settlors have given up all other economic and legal aspects of ownership. Respondent [Commissioner] concedes in his brief that if the trusts in question were for a period of 10 years, the income therefrom is not taxable to petitioners.

The Tax Court stated:

> Respondent contends that under the Clifford regulations, Regulations 111, section 29.22(a)-21 [now Regs. 118, Sec. 39.22(a)-21], these trusts are nine year trusts and taxable.

The Tax Court, after pointing out that the trusts were irrevocable, were to run for a period of at least nine years as extended on December 1, 1942, and that petitioners during such time retained no power or control over either the corpus or the income, none of which was to be applied for the benefit of any member of petitioners' family group, concluded.

We hold that the income of the trusts for the taxable year in question was not taxable to petitioners under section 22(a) of the Internal Revenue Code or *Helvering* v *Clifford*, *supra*, [309 U.S 331, 60 S.Ct 554, 84 L Ed. 788] or Treasury Regulations 111, section 29.22(a)-21. We do not think *Helvering* v. *Clifford*, *supra*, or section 29.22(a)-21 of Regulations 111 were intended to or do apply to the income of a trust such as we have here.

It is not clear on what basis the Tax Court refused to give effect to the regulation relied upon by the Commissioner. It could have been because the court treated the duration of the trusts as of ten years, in which case the regulation was inapplicable; it could have been because the court thought the regulation should not be given effect retroactively, and it is possible that the court regarded the regulation as unreasonable and, therefore, void as beyond the power of the Treasury to promulgate.

Obviously, the question for decision here is whether the Tax Court erred in rejecting Commissioner's determination of a deficiency in the income tax returns of the petitioners for the year 1946 and in holding that the income of the trusts for said year was not taxable to petitioners.

Section 22(a) of the Internal Revenue Code, 26 U.S.C.A. § 22, generally defines "gross income" as follows:

"Gross income" includes gains, profits, and income derived from . . . interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever. . . .

The full sweep of this provision has been often explored by courts and others and we suspect the process will continue indefinitely. Particularly is this so when the income in question is derived from property held in trust, as in the instant situation. Whether such income is that of the settlor, the trustee, or the beneficiary is oftentimes difficult to ascertain. The many cases furnish numerous guides to be employed in making such determination but the adjudicated law can hardly be said to be settled. In *Helvering* v. *Stuart*, 317 U.S. 154, 168, 63 S. Ct. 140, 148, 87 L. Ed. 154, the court stated:

Economic gain realized or realizable by the taxpayer is necessary to produce a taxable income under our statutory scheme. That gain need not be collected by the taxpayer. He may give away the right to receive it as was done in *Helvering* v. *Horst*, 311 U.S. 112, 61 S. Ct. 144, 85 L. Ed. 75, *Helvering* v. *Eubank*, 311 U.S. 122, 125, 61 S. Ct. 149, 150, 85 L. Ed. 81, and *Harrison* v. *Schaffner*, 312 U.S. 579, 61 S. Ct. 759, 85 L. Ed. 1055. But the donor nevertheless had the "use [realization] of his economic gain." 311 U.S. at 117, 61 S. Ct. at page [144], 147. In none of the cases had the taxpayer really disposed of the res which produced the income.

The cases disclose that many factors have been utilized by courts in ascertaining whether a trust-settlor has from the trust income realized an economic gain. The most important case perhaps and certainly the most controversial is that of *Helvering* v. *Clifford*, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788. There, the court sustained the decision of the Tax Court which had held that the settlor was the owner

of the corpus after the trust was created and was, therefore, chargeable with its income. The court mentions numerous factors which led to this conclusion, such as the short duration of the trust, the fact that the wife was the beneficiary, and the control which the settlor retained over the corpus. The court pointed out, 309 U.S. at page 335, 60 S. Ct. at page 556.

> In substance his control over the corpus was in all essential respects the same after the trust was created, as before. . . . We have at best a temporary reallocation of income within an intimate family group. Since the income remains in the family and since the husband retains control over the investment, he has rather complete assurance that the trust will not effect any substantial change in his economic position. It is hard to imagine that respondent felt himself the poorer after this trust had been executed or, if he did, that it had any rational foundation in fact.

The court further stated, 309 U.S. at page 336, 60 S. Ct. at page 557.

> Thus, where, as in this case, the benefits directly or indirectly retained blend so imperceptibly with the normal concepts of full ownership, we cannot say that the triers of fact committed reversible error when they found that the husband was the owner of the corpus for the purposes of § 22(a).

It was the "bundle of rights" retained by the settlor from which the court concluded that the husband remained the owner of the trust property and, therefore, chargeable with its income.

Many cases have been decided since *Clifford*. A reading of these cases reveals that the doctrine there announced has led to some confusion and that its application has been found difficult in particular cases. We shall not attempt to discuss these many cases but we think it can be rather firmly asserted that they all in the main employ the factors enumerated in *Clifford*. The Commissioner appears to so recognize because he concedes that his determination of deficiencies in petitioners' tax returns for 1944 and 1945 was erroneous.

The Commissioner, in support of his determination of deficiencies for 1946, relies solely upon Treasury Regulation 111, promulgated under the Internal Revenue Code on December 29, 1945, and applicable to taxable years commencing January 1, 1946. The pertinent portion of this regulation is § 29.22(c)–21, which provides:

> Income of a trust is taxable to the grantor where the grantor has a reversionary interest in the corpus or the income therefrom which will or may reasonably be expected to take effect in possession or enjoyment—
> (1) within ten years commencing with the date of the transfer. . . .

Petitioners attack the regulation upon three grounds: (1) its application to the instant situation would give it a retroactive effect and, in any event, the trusts are not merely for nine years, as asserted by the Commissioner, but are ten-year trusts; (2) the regulation is unreasonable and arbitrary and, therefore, void, and (3) it is unconstitutional inasmuch as it deprives petitioners of their property without due process, that is, without a hearing on the issues existing between the taxpayer and the Commissioner and which arise because of the deficiencies asserted by the Commissioner.

We agree with the petitioners in all three contentions. Assuming that the regulation is valid, it is not discernible on what basis it should be applied to the income of trusts which had been in existence for some four or five years prior to its promulgation. By such application, income from the trust property which the

Commissioner concedes was not that of petitioners prior to 1946 becomes that of the petitioners in 1946 and thereafter. Moreover, we think the trusts were for the duration of not less than ten years, and certainly this was so on January 1, 1946, when the regulation became effective, and for that reason the regulation cannot be properly applied.

More important, the regulation is void because it is unreasonable and arbitrary. Our conclusion in this respect is closely intertwined with our view that it is also unconstitutional, and the two issues can be treated together. We recognize that courts have indulged in considerable liberality in sustaining regulations adopted by administrative agencies. But, as was stated in *Manhattan General Equipment Co.* v. *Commissioner*, 297 U.S. 129, 134, 56 S. Ct. 397, 400, 80 L. Ed. 1010:

> The power of an administrative officer or board to administer a federal statute and to prescribe rules and regulations to that end is not the power to make law—for no such power can be delegated by Congress—but the power to adopt regulations to carry into effect the will of Congress as expressed by the statute. A regulation which does not do this, but operates to create a rule out of harmony with the statute, is a mere nullity.

Under the relevant section of the Revenue Act, the question as to whether the income from the trusts was that of petitioners was one of fact. It has been so treated and regarded from time immemorial. It was a factual issue upon which the Tax Court was charged with hearing all relevant testimony and making its findings. As was stated in *Hormel* v. *Helvering*, 312 U.S. 552, 556, 61 S.Ct. 719, 721, 85 L. Ed. 1037.

> And the basic reasons which support this general principle applicable to trial courts make it equally desirable that parties should have an opportunity to offer evidence on the general issues involved in the less formal proceedings before administrative agencies entrusted with the responsibility of fact finding

And again, 312 U S on page 560, 61 S. Ct. 723, the court stated

> Congress has entrusted the Board with exclusive authority to determine disputed facts. Under these circumstances we do not feel that petitioner should be foreclosed from all opportunity to offer evidence before the Board on this issue, however remote may be his chance to take his case out of the *Clifford* rule

In the *Clifford* case, 309 U.S. 331, at page 336, 60 S. Ct. 554, 557, the court stated:

> Our point here is that no one fact is normally decisive but that all considerations and circumstances of the kind we have mentioned are relevant to the question of ownership and are appropriate foundations for findings on that issue.

It must be kept in mind that the regulation does not merely create a rebuttable presumption; it is conclusive. When it appears that the trust is for a period of less than ten years, that *ipso facto* determines that the income is that of the settlor. If this regulation is to stand, it means that in reality there is no issue for the Tax Court to determine. There could be no purpose in the taxpayer offering or in the Tax Court hearing evidence as to the factors involved in the situation. In the instant case, if the Tax Court had given effect to this regulation, as the Commissioner urged, there would have been no occasion and no reason for it to consider the facts and make findings. They would have been immaterial.

Petitioners, after the creation of these trusts, rested secure in the belief that they were not the owners of the income derived therefrom and that it was of no eco-

nomic benefit or gain to them. Every adjudicated case of which we are aware would have sustained that belief and we doubt if a competent lawyer could have been found who would have disagreed. The Commissioner tacitly concedes as much because he admits that the income was not that of petitioners for the years 1944 and 1945. Without any alteration in the trust indentures and without any change in the relation of any of the parties thereto, that which was not income of petitioners in 1944 and 1945 became such in 1946. This remarkable transformation results, according to the Commissioner, from the regulation under discussion. It is a result based upon fiction rather than the actualities of the situation. The result is so unreasonable and unfair as to be shocking. The regulation is in conflict with § 22(a) and with all adjudicated cases. We think it is void.

As noted, the regulation which decrees that the income from a trust is that of the settlor for the sole reason that its duration is for a period of less than ten years creates a conclusive or irrebuttable presumption. Such a presumption states a rule of substantive law. This is in contrast to a rebuttable presumption which only states a rule of evidence and which the opposing party is entitled to overcome by proof. *United States* v. *Jones*, 9 Cir., 176 F.2d 278, 288. And the Supreme Court has held that a statute which creates a conclusive presumption under circumstances closely akin to those of the instant case contravenes the Fourteenth Amendment if enacted by state legislature and the Fifth Amendment if enacted by Congress.

In *Schlesinger* v. *State of Wisconsin*, 270 U.S. 230, 46 S. Ct. 260, 70 L. Ed. 557, the Supreme Court struck down as violative of the Fourteenth Amendment a statute of the State of Wisconsin which provided in effect that gifts of a decedent's estate made within six years of his death were made in contemplation thereof. The court, 270 U.S. at page 239, 46 S. Ct. at page 261, stated:

> The challenged enactment plainly undertakes to raise a conclusive presumption that all material gifts within six years of death were made in anticipation of it and to lay a graduated inheritance tax upon them without regard to the actual intent. The presumption is declared to be conclusive and cannot be overcome by evidence. It is no mere prima facie presumption of fact.

In *Heiner* v. *Donnan*, 285 U.S. 312, 52 S. Ct. 358, 76 L. Ed. 772, the court likewise struck down a congressional enactment which created a conclusive presumption that gifts made within two years prior to the death of the donor were made in contemplation of death, on the ground that the provision violated the Fifth Amendment of the Constitution. The court pointed out, 285 U.S. at page 324, 52 S. Ct. at page 360, that Congress had the power to create a rebuttable presumption, and stated:

> But the presumption here created is not of that kind. It is made definitely conclusive —incapable of being overcome by proof of the most positive character.

The court discussed the *Schlesinger* case, 270 U.S. 230, 46 S. Ct. 260, and pointed out, 285 U.S. at page 325, 52 S. Ct. 358, that the only difference between the two cases was that the former considered an enactment of the Wisconsin legislature which violated the Fourteenth Amendment, while the case under consideration involved a congressional enactment which violated the Fifth Amendment. The court, 285 U.S. at page 327, 52 S. Ct. at page 361, stated:

> The presumption here excludes consideration of every fact and circumstance tending

to show the real motive of the donor. The young man in abounding health, bereft of life by a stroke of lightning within two years after making a gift, is conclusively presumed to have acted under the inducement of the thought of death, equally with the old and ailing who already stand in the shadow of the inevitable end.

And further the court stated, 285 U.S. at page 329, 52 S. Ct. at page 362:

This court has held more than once that a statute creating a presumption which operates to deny a fair opportunity to rebut it violates the due process clause of the Fourteenth Amendment.

In *Hoeper* v. *Tax Commission of Wisconsin*, 284 U.S. 206, 52 S. Ct. 120, 76 L. Ed 248, a statute of the State of Wisconsin which authorized an assessment of tax against a husband computed on the combined total of his and his wife's income was held unconstitutional, in violation of the Fourteenth Amendment. The court reaffirmed its holding in the *Schlesinger* case, 270 U.S. 230, 46 S. Ct. 260. The court stated, 284 U.S. at page 215, 52 S. Ct. at page 122:

That which is not in fact the taxpayer's income cannot be made such by calling it income.

It thus appears that even Congress would be without power to create the conclusive presumption which the Treasury has done in the regulation under attack. It is even more certain that an administrative agency is without authority to promulgate such a regulation. We conclude it is void because it violates the Constitution and, in any event, is in conflict with the congressional enactment on the subject and is arbitrary and unreasonable.

The decision of the Tax Court is Affirmed.

Note

Is § 673(a) of the 1954 Code unconstitutional?

On the question of calculating the term of a trust under § 673(a) when its period has been extended, see § 673(d).

FALK v. COMMISSIONER

U. S. Court of Appeals, Third Circuit, 1951
189 F.2d 806, cert. den. 342 U.S. 861

Before McLaughlin, Staley, and Hastie, Circuit Judges.

McLaughlin, Circuit Judge.

The only issue before us is whether the income of a trust (created by the petitioner's father in 1927) over and above the amounts payable thereunder to petititioner's sister, is includible in the taxpayer's gross income for the taxable year 1943. . . .

Most of the facts are stipulated and the balance are established by the evidence at the Tax Court hearing. Petitioner is forty-eight years old. He was born in Pittsburgh, Pennsylvania. For the last fifteen years he has been active there in philanthropic and community affairs. On November 11, 1927, his father, Leon Falk, executed a deed of trust with himself as donor and his brother, Maurice, as trustee. Leon Falk died October 20, 1928 without having terminated the trust. Maurice Falk served as trustee until his death March 18, 1946. Since that time his successor trustee, Fidelity Trust Company of Pittsburgh, has so served. During the period from the creation of the trust until his death, Leon Falk, as empowered by the deed of trust, directed his brother as trustee to pay from the income of the

trust estate a total of $23,250 to certain charitable, benevolent and educational institutions. Those monies were duly paid. From the date of the death of his father to the date of the death of Maurice Falk, it appears that the petitioner, as authorized by the trust, directed certain charitable and philanthropic payments to be made from the trust estate. Those payments were made and, exclusive of certain payments to the University of Pittsburgh, totalled $318,004.31. They were deducted by the trust estate from its gross income during the respective years in which the contributions were made. In 1943 the trust estate paid out a total of $51,318.75 to various charitable, benevolent and educational institutions. All of those payments were at the written direction of petitioner. The amount of the payments was deducted by the trust estate from its 1943 gross income. The Tax Court upheld the Commissioner in determining that the net income of the trust (which excluded certain sums paid petitioner's sister) was to be included in petitioner's income and that the above mentioned disbursements constitute gifts to charity by the petitioner under his voluntary designations.

The governing language of the November 11, 1927 deed of trust is Article Second which provides:

Second· The Trustee shall pay over the dividends, interest and income from the trust estate, remaining after payment thereout of the expenses of maintenance, taxes or other proper disbursements, as follows:

1. To Marjorie Falk, the daughter of the Donor, there shall be paid annually in quarterly instalments, as near as may be, such portion of said income as the Donor in his lifetime and Leon Falk, Jr, the son of the Donor, after the death of the Donor, shall from time to time in writing direct, provided, however, that after the death of the Donor the amount so paid shall not be less than Five Thousand Dollars per year. The payments so to be made to said Marjorie Falk shall be made each year until the trust is terminated.

2. To such charities and benevolences, charitable, benevolent and educational institutions as the Donor in his lifetime, and as Leon Falk, Jr., after the death of the Donor shall, from time to time in writing, designate, there shall be paid such portion of said income as the Donor in his lifetime and Leon Falk, Jr., after the Donor's death shall direct, each year until the trust is terminated.

3. To Leon Falk, Jr, the son of the Donor, there shall be paid annually all of said income which shall not be paid to said Marjorie Falk and to charitable, benevolent and educational purposes as aforesaid. The payments so to be made shall be made each year until the termination of the trust.

By Paragraph 3 of the Second Article of the trust, the taxpayer was to receive its annual income less payments of at least $5,000 a year to his sister and less any payments directed by him to be paid to charities and benevolences, charitable, benevolent and educational institutions designated by him in writing in accordance with Paragraph 2 of the Second Article. There is no language in the article or in the agreement making it mandatory on the taxpayer to give anything to charity, etc. or even to make specific designations of a particular charity. There is not the slightest ambiguity about Article Second. It is impossible to construe Paragraphs 2 and 3 with a reasonable regard for their rational meaning and to arrive at the conclusion that they obligated the taxpayer to designate the type of charity and benevolence as mentioned in Paragraph 2 and to then direct that sums certain be paid them under the trust.

The taxpayer does not possess all of the incidents of ownership but within the exception provided for of disbursements to his sister, he does have practical control

of the trust income. As Judge L. Hand said in *Stix* v. *Commissioner*, 2 Cir., 152 F.2d 562, 564, "All else he might withhold, and whatever more he chose to give, he gave out of his own." See also *Mallinckrodt* v. *Nunan*, 8 Cir., 146 F.2d 1, certiorari denied 324 U.S. 871, 65 S. Ct. 1017, 89 L. Ed. 1426. Under the wording of the trust deed we are unable to find that the petitioner had a duty to designate "charities, benevolences, charitable, benevolent and educational institutions" in writing and to direct specific payments to them of trust income. Such designation and direction was left to the absolute discretion of the petitioner. With the exception of mandatory payments to his sister, he was unfettered in his control of the trust income. This is ample to bring it within his own taxable income under Section 22(a) of the Internal Revenue Code, 26 U.S.C.A. § 22(a)....

Petitioner relies largely upon our decision in *Funk* v. *Commissioner*, 3 Cir., 185 F.2d 127, 131. There, the taxpayer was given the authority in her discretion to pay all or part of the trust income to her husband or herself in accordance with their "needs," of which she was to be the sole judge with the balance of the income, if any, to be added to principal. We held, in Judge Kalodner's fine opinion, 185 F.2d at page 131, that the use of the words "needs" effectively distinguished the case from the *Stix* and *Mallinckrodt* opinions, *supra*, and " . . . confined the trustee to limits objectively determinable, and any conduct on her part beyond those limits would be unreasonable and a breach of trust, ..." Also in *Funk*, if there were no need of the taxpayer or her husband for all or part of the trust income, that income did not go to the taxpayer as in the matter before us, but to the principal of the trust. Plainly, the *Funk* decision is inapplicable to the instant problem where there is no circumscription of the petitioner's discretion; where he has no obligation under Article Second to make any of the kind of payments referred to in the trust and where if he does not make such payments, the income, less payments to his sister, is his own.

The above conclusion is not contrary to Pennsylvania law. It is, in fact, fortified by a line of opinions cited to us by petitioner, in each of which, though the charitable beneficiaries were not specified by name, the extent of the charitable gift was either certain, or as Judge Kalodner said in the *Funk* case, was "objectively determinable." Thus what was to go to charity in *Re Anderson's Estate*, 269 Pa. 535, 537, 112 A.766, was "said residue" of testator's estate; in *Re Thompson's Estate*, 282 Pa. 30, 32, 127 A. 446, 447, it was "All the rest, residue and remainder of my estate, real and personal . . ."; in *Re Jordan's Estate*, 329 Pa. 427, 428, 197 A. 150, it was "a certain part" of her estate; in *Re Funk Estate*, 353 Pa. 321, 322, 45 A.2d 67, 68, 163 A.L.R. 780, after certain legacies, it was "After all debts the rest" to be given to some worthy cause or institution. Here we have no such situation. Nor was there present in any of those cases cited by the taxpayer the other all important element of the matter before us, namely, that in the event petitioner did not designate charities or benevolences as detailed in the agreement and direct payments to them, the income went to him.

Petitioner also argues that a constructive trust should be imposed under the particular facts. This is based, primarily, upon certain statements with respect to the trust made to petitioner by his father and agreed to by petitioner. The testimony of the petitioner concerning these was accepted by the Tax Court. The son testified that the father told him that "He wanted me to carry on his

charities.... He wanted his current charities carried on and he wanted the family tradition of giving to be continued." Petitioner testified that he promised to carry out the desires that his father indicated. He also stated that his father never expressed in any way a limitation as to the amount of the income from the trust which should go to charities as a whole.

The Tax Court was unable to find in those statements ". . . a purpose to create a charitable fund which the petitioner was legally bound to distribute for charitable purposes." We must agree with that finding. As the Tax Court held, "Neither the trust instrument nor any direction by the grantor has provided for the use of any specific amount of income for any particular charity or even for charity in general." Unquestionably, the donor desired the family tradition of giving carried on and he did make it possible for his son to do this in his own right. But we do not think that either the facts or the law go any further than that. . . .

The next point urged by petitioner is that the Tax Court erred in disregarding the construction placed on the deed of trust by the Orphans' Court of Allegheny County, Pennsylvania, in the audit proceedings held on the final accounting of the trustee of the 1927 trust.

After the death of the trustee, Maurice Falk, his final account as trustee under the deed of trust here involved was filed in the Allegheny County Orphans' Court. An order of that Court in that proceeding, dated September 18, 1946, stated that the petitioner

> is required to exercise a reasonable, fair and legal discretion in carrying out the provisions of the said Section 2 of Article Second of the said deed of trust and his exercise of such discretion is subject to supervision and review by this court.

The order also stated that the deceased trustee

> was required to exercise reasonable care to assure the proper performance by the said Leon Falk Jr., of the latter's duties under the said Section 2 of Article Second of said deed of trust.

The order appointed Arthur W. Scully trustee ad litem to represent the interests of all charitable, benevolent and educational institutions under the provisions of the deed of trust at the audit of such account. The Maurice Falk account on which the above order was based was filed *after* the Commissioner had questioned the taxability of the distributions by petitioner to charitable and educational institutions. The Commissioner was not a party to the accounting. The Tax Court held that there was no evidence that the Orphans' Court

> was advised that a construction of the trust instrument contrary to that set out in the decree had been made by the Government and a substantial tax liability proposed against the petitioner on the basis of such construction.

The Tax Court also found, and the finding is not questioned, that

> Although the petition for the appointment of a trustee ad litem and the order of the court are separate documents, it is clear that the decree was prepared together with the application for appointment.

The Tax Court held that the Orphans' Court accounting

> was not an adverse proceeding and the construction of the trust recited in the order appointing the trustee is not binding upon us in the determination of the petitioner's tax liability with respect to the income of the trust.

The record abundantly supports this conclusion of the Tax Court. *Cf. Loggie* v. *Thomas*, 5 Cir., 152 F.2d 636; *Thomas Flexible Coupling Co.* v. *Commissioner*, 3

Cir., 158 F.2d 828, certiorari denied 329 U.S. 810, 67 S. Ct. 624, 91 L. Ed. 691. The fact that it was not an adverse proceeding highlights the basic proposition that this is a question of federal income tax law. Under the circumstances here present, the county orphans' court cannot, as Mr. Justice Black said in *Commissioner* v. *Tower*, 327 U.S. 280, 288, 66 S. Ct. 532, 536, 90 L. Ed. 670, ". . . decide issues of federal tax law and thus hamper the effective enforcement of a valid federal tax levied against earned income."

There is no merit in petitioner's final point and it need not be discussed.

The decision of the Tax Court will be affirmed.

Note

1. As the case indicates, the 1939 Code contained no specified statutory provision governing this area, and the income was taxed to the petitioner under the general language of § 22(a) (now § 61(a) of the 1954 Code). At the same time that the *Clifford* regulation was issued, regulations were issued by the Treasury to cover this area also. Regs. 118, Sec. 39.22(a)-22.

2. The 1954 Code provides a statutory rule for taxing the income to a person other than the grantor; see § 678, and note § 678(d). Section 671 provides, as it does for grantors of trusts, that no other person shall be taxed under the general language of § 61 "solely on the grounds of his dominion and control over the trust." Could the husband be taxed on the income of a trust like that involved in the *Clifford* case if the funds were supplied by some other member of the family (*e.g.*, his father-in-law) or by a generous friend?

3. On the final point discussed in the *Falk* case, see Cardozo, "Federal Taxes and the Radiating Potencies of State Court Decisions," 51 *Yale L J.* 783 (1942).

FUNK v. COMMISSIONER

U. S. Court of Appeals, Third Circuit, 1950
185 F.2d 127

Before BIGGS, Chief Judge, and KALODNER and HASTIE, Circuit Judges.

KALODNER, Circuit Judge.

The only substantial issue presented on this petition to review the decision of the Tax Court is whether there is taxable to the taxpayer under Section 22(a) of the Internal Revenue Code, 26 U.S.C.A. Section 22(a), the income of four trusts of which she was the sole trustee in the taxable years 1938 to 1941 here involved. The trusts were created by the taxpayer's husband.

The Tax Court, four judges dissenting, held that the income of the trusts, without regard to the distributions made by the taxpayer, is taxable to her. 14 T.C. 198.

The details of the creation of the trusts in controversy are set out in our prior decision in this matter, 3 Cir., 163 F.2d 796, as a result of which the cause was remanded to the Tax Court. In its decision now under review, the Tax Court has again set forth in detail its findings concerning the creation of the trusts. We shall not repeat them here. It is sufficient to state that under the terms of four trusts, which in this respect were identical, the taxpayer, as trustee, was given the authority

. . . in her discretion to pay all or a part of the net income annually to me (her husband, the settlor), or to herself, in accordance with our respective needs, of which she shall be the sole judge, and to accumulate and add to principal the balance of such income,

if any. Any income so accumulated and added to principal by the Trustee shall become a part of the corpus of the trust and may not thereafter be distributed by the Trustee.

Upon the death of the settlor-beneficiary, the corpus of each trust was to be distributed as he should appoint, but in default thereof, contingent beneficiaries were specified. The taxpayer and her husband were at all relevant times residents of New Jersey, where the trusts were created and administered.

The Commissioner, throughout this litigation, has contended that while the taxpayer was given control over the income of the trusts as trustee, nevertheless her control was "too little fettered to be regarded as less than absolute for tax purposes." Accordingly, he seeks to tax to her all of the income of the trusts, without regard to the manner of distribution, upon the example of *Mallinckrodt* v. *Nunan*, 8 Cir., 1945, 146 F.2d 1, certiorari denied, 324 U.S. 871, and *Stix* v. *Commissioner*, 2 Cir., 1945, 152 F.2d 562.

The Tax Court determined that the taxpayer had

absolute control over the trusts' income, that she made distributions entirely by the exercise of her own discretion; that she took whatever she wanted each year, and gave some of the rest to her husband in certain years; that what she distributed to him was determined solely by herself without any consideration of whether or not he had any need for the income, that the petitioner's (taxpayer's) husband had no need for any of the distributions which she made to him in 1939, 1940, and 1941, and that the sums which she did distribute to him were "gifts." [1]

It then concluded that the evidence showed that the taxpayer, as trustee

followed to the letter the provisions in the trust instruments that she should distribute the trust income in her discretion, and that she should be the "sole judge" of how she would distribute the income.

Thus, the Tax Court agreed with the Commissioner that the quoted clause in the trust instruments gave the taxpayer such unfettered command of the income therefrom as to bring her within the bounds of the *Mallinckrodt* and *Stix* cases. It held, too, after the manner of the *Stix* case, that the taxpayer had not shown what amount of the trusts' income she would have been compelled to pay to her husband, qua beneficiary, and hence, she had not proved what amount of the income was not within her absolute control.

It is our view that the Tax Court erred. But for the purpose of disposing of the instant petition of review we need not disagree on any principle of tax law. As the Tax Court recognized, the issue here turns on the provisions in the trust instruments relating to the power of the taxpayer-trustee over the income of the trusts. The Commissioner, likewise, rests upon the contention, that within the framework of the trusts, the income, for all practical purposes, was the taxpayer's own money.

The approach of the Commissioner to the problem presented is somewhat different from that of the Tax Court. He emphasizes the phrase "respective needs," and seeks to persuade that the word "needs," particularly coupled with the trustee's

---

[1] In its statement, "Findings of Fact," the Tax Court also determined that in making distributions for the taxable years 1938 through 1941, the taxpayer, as trustee, did not make the respective distributions to herself and to her husband upon the basis of the needs of either one of them It also found that the taxpayer's opinion was that neither she nor her husband had any need for any part of the income of the trusts in the taxable years because both had their own separate and independent income of substantial proportions. Finally, it found that taxpayer "took what money she wanted, if any, for her personal use, or to satisfy some desire to be extravagant, and gave her husband whatever was left, or whatever sum she wished to give him."

investiture as "sole judge" in respect thereto, is and was intended by the settlor to be, a nebulous standard not unlike that discussed in the *Stix* decision. Consequently, the Commissioner asserts that the trusts' income must be taxed to the taxpayer unless she proved the amount which a court of equity would require her to pay to her husband-beneficiary.

The Tax Court, on the other hand, starts with the conclusion that there is no ambiguity in the trust instrument insofar as here pertinent and, whatever the motive of the settlor, the unambiguous and specific language controls.[2] *Bunting* v. *Commissioner of Internal Revenue*, 6 Cir., 1947, 164 F.2d 443, certiorari denied 333 U.S. 856, 68 S. Ct. 735, 92 L. Ed. 1136. The construction which the Tax Court put upon the language of the trusts here in issue is exemplified by its determination, to which we have alluded, that the taxpayer, as trustee,

> followed to the letter the provisions . . . that she should distribute the trust income in her discretion, and that she should be the "sole judge" of how she would distribute the income.

However, the tautological holding that the trustee's endowed authority was to distribute in her discretion and to be the sole judge of how she would distribute omits the critical, mandatory directions given by the settlor. First, the distribution, hence the exercise of discretion, must relate exclusively to the beneficiaries' respective needs, of which the trustee is the sole judge; and second, what is not needed must be accumulated and added to the principal, in which event the trustee is deprived of any authority to distribute.

Re-inserting, as we cannot avoid, these important commands in the trust indentures, we are impelled to the conclusion that the trustee was not clothed with either the power or right to enjoy the trust income at her option, that is, unless the word "needs" be construed in such fashion as to permit it, a point which we shall shortly reach. The authorization to the trustee to act as the "sole judge" did not convey the trust income to her alone. To the contrary, only upon a determination of "needs," however that term may be defined, was she authorized to exercise her discretion in the matter of distributions. Patently, she would not be permitted to apply one definition of the word "needs" to her co-beneficiary and at the same time another more indulgent definition to herself, qua beneficiary. For it has been specifically held in New Jersey that a trustee-beneficiary cannot use his fiduciary capacity to prefer himself, and that where the trustee is a beneficiary his conduct will be scrutinized and weighed in the ultimate determination of the issue of the propriety of his exercise of discretion. Nor does it follow, when the settlor lays down a standard, here "respective needs," that the designation of the trustee as "sole judge," or even the grant to him of "absolute discretion," obviates the necessity of exercising his judgment in a sound and honest manner, or relieves him of the duty to act in good faith and with a proper motive within the reasonable boundaries of such standard. Thus, if the trustee here neglected or refused to make a

[2] If the empowering clauses of the trusts are clear and unambiguous, it would follow that the evidence of the settlor's intent and of the trustee's conduct would not be admissible in New Jersey, Central Hanover B. & T Co. v. Herbert, 1949, 1 N.J. 426, 429, 64 A.2d 75, 76· "The rule is that parol evidence is admissible to explain an ambiguity in a writing, or when the intent of the donor is not clear But where the language employed has an ordinary meaning or where the meaning is plain and unambiguous on its face, there is no ground for the application of the above rule and parol or extrinsic evidence is inadmissible."

sound determination of needs, or even honestly believed that there were no needs, and acted upon the extravagance of whim and caprice, made her own desires to predominate, and distributed any part of the trusts' income as a gift, then we should think such brazen abuse of her fiduciary obligations under the terms of the trusts here involved would be universally condemned. *Restatement, Trusts,* Section 187; 2 *Scott on Trusts* (1939) Section 187.

Since the single question in the case *sub judice* turns upon the provisions of the trust instruments, the trustee's actual conduct cannot be confused with her authorized powers. The Commissioner is not now asserting, nor did the Tax Court hold, that the trustee is taxable because she treated the trust income as her own regardless of her right to do so. The very minimum of difference between this and the *Mallinckrodt, Stix* and kindred cases, at once becomes apparent. In those two cases, the taxpayers had for their own undesignated use the primary right to, and the command of, the income involved. There was no duty to relinquish except to provide for others what they might consider proper; hence, the determination that the taxpayers should have shown what they could be required to distribute. Here, the trustee had no *a fortiori* right to the income, nor did the absence of any "needs" on the part of either her co-beneficiary or herself confer such right upon her. What was not needed was directed by the settlor to be accumulated and added to principal, and the trustee's discretionary power to distribute conclusively terminated. She did not even have the authority to invade the principal in the event the income proved inadequate. On the basis of the decisions already cited, it seems, therefore, beyond dispute that if the taxpayer, as the Tax Court found, was of the opinion that neither she nor her husband had any needs, however she defined that term, yet made distributions to her husband and herself, she was patently acting outside the scope of the authority conferred upon her as trustee and in violation of the confidence reposed in her.

Further, we should point out, as we once did,[3] that the fact that the taxpayer's husband, as a beneficiary, might not be in a position to compel payments to himself is not determinative of his standing to compel the trustee to accumulate, or at least to prevent her arbitrary administration of the trusts, whether for her own advantage or not. In point of law, it is not alone for him to complain, for clearly the contingent beneficiaries have a position in any proceeding involving the discharge by the trustee of her fiduciary duties, and so, too, successor or substituted trustees may maintain an action to redress a breach of trust particularly if it constitutes an appropriation of trust property.

In view of the foregoing, it must be apparent that in the final analysis the primary source of difficulty in this case, as the Commissioner contends, concerns the meaning of the word "needs." The Commissioner says that the term means, and was intended by the settlor * to mean, the equivalent of "desires," and that under the trust instruments the trustee was obliged only to distribute the income as she thought "fit" or "proper." The argument is based upon the determination that the taxpayer and her husband, qua beneficiaries, were in the taxable years independently wealthy and had no "needs" in the sense of necessities of life. The

---

[3] 163 F.2d 796, 803.

* The settlor was president of Funk & Wagnalls Co., whose New Standard Dictionary of the English Language (1945) defines "need" as follows: "*need*, n. 1. A lack of something necessary or very desirable, want; hence, destitution or deprivation, especially of the necessaries of life; indigence; poverty; as, the poor man was in great need." [Ed.]

intention of the settlor, in addition, is culled by the Commissioner from an exchange of letters between the settlor and his wife at the time of the creation of the trusts,† as well as from the failure of the settlor to take any action to correct his wife if in fact she were conducting herself as trustee contrary to his design and the declarations in the trusts.

The term "needs" is not, of course, one the content of which can be defined precisely. Nevertheless, we think it establishes a standard effectively distinguishing this case from, and taking it out of the rule of, the *Mallinckrodt* and *Stix* decisions. If, as the Tax Court observed, the trusts are unambiguous and specific, it can only be said of the term "needs" that it must be construed according to its ordinary meaning. While obviously it must include the essentials of life, it has been construed in New Jersey to mean that which is reasonably necessary to maintain a beneficiary's station in life. It is not indicative of an unqualified gift, nor is it dependent upon the fancy of the administrator. Thus, its use confined the trustee to limits objectively determinable, and any conduct on her part beyond those limits would be unreasonable and a breach of trust; certainly it did not countenance extravagance, whim, or caprice. And, as we have already noted, the absence of "needs," contrary to the situation of Mallinckrodt and Stix, did not result in the entitlement of the taxpayer to the trust income.

Assuming that the letters were admissible nothing in them demonstrates an intent on the part of the settlor, or even an understanding on the part of the trustee, to incorporate into the word "needs" something other than its common sense content. Indeed, the settlor's letter suggests the correctness of the result we have reached. True, he emphasizes therein the independence of the trustee from control by himself of any other person.[4] But he refers to the trustee's "discretion,"

† The letters, quoted in the Tax Court's opinion, 14 T.C. 198, 205n, were as follows [Ed]

Letter of Wilfred J. Funk to Eleanor M. Funk

"Dear Eleanor. As you know, I have to-day made you the Trustee of four trusts designated as Trusts A, B, C, and D, the property transferred to each trust consisting of 125 shares of the capital stock of Erwin Park, Inc. Under the terms of these trusts you are to have discretion annually to divide the income between us or to accumulate and add it to the principal of the trust

"My objective in setting up the trusts in this way is to provide substantial amounts of income which you may dispose of according to the circumstances which you find to exist at the end of each year. No one can foretell with certainty what those circumstances will be, and it is my desire to put you in a position to exercise your own judgment as to how such circumstances shall be met, to the extent of the income arising from these trust funds

"It is your legal right and duty to exercise this discretion each year as may seem best to you, and in the exercise of this discretion you are not subject to my control or to the control of any other person."

Letter of Eleanor M. Funk to Wilfred J. Funk·

"Dear Wilfred: I have read your letter of to-day with reference to the four new trusts which you are setting up, of which you have made me Trustee.

"I understand that at the end of each year I am to decide whether I will pay the income which I have received as Trustee to you or to myself or divide it between us or accumulate and add it to principal I am to do any or all of these things in such amounts and in such proportion as I see fit.

"I understand that the effect of these trusts is to place upon me the duty of deciding how the money shall be disposed of and that in making this decision I am not subject to your control or that of any other person."

[4] Patently, the purpose of the settlor was to avoid finding himself within the doctrine of Helvering v. Clifford, 1940, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788, and the Tax Court has determined him to have successfully achieved this aim: Wilfred J. Funk, decided February 7, 1944.

states that she is to act upon the circumstances which she finds to exist at the end of each year, and declares it his intention to put her in a position where she can exercise her own judgment as to how the circumstances should be met. Thus, the settlor has conveyed, as clearly as one might wish, his intent that the trustee should investigate and judge. His letter is inconsistent with any notion that she may act arbitrarily or capriciously. And the mandate of the trusts to accumulate, without right of re-entry by the trustee, lends weight to the conclusion that the settlor's state of mind did not encompass the thought that his wife should become the practical owner of the trusts' income. Similarly, her response to his letter emphasizes her independence of decision. It accepts the responsibility of administering the trusts and expressly acknowledges a duty with respect thereto. It is not a detailed attempt to state her understanding of her obligations, but it does not deny any of the terms of the trusts. If she has not acted since then within the scope of her fiduciary duties, it is not inferable from the mere failure of her husband to complain in the taxable years that she was therefore acting within the scope of those duties. We should not speculate upon the reasons for his failure to act, but, as we have pointed out, others may still do so.

We conclude, therefore, that the taxpayer was not endowed in the trust instruments with such unfettered command that the income therefrom became, for all intents and purposes, her own money. Accordingly, the decision of the Tax Court will be reversed.

Note

Since it was possible for the income to be distributed to the husband, who created the trusts, was it taxable to him? See again § 677(a)(2) and Regs. 118, Sec. 39.167-1. In a related case, *Funk* v. *Commissioner*, ¶ 44,030 P-H Memo TC (1944), referred to in footnote 4 of the principal case, it was held that the husband was not taxable under the *Clifford* case·

> Here Mrs. Funk was not only trustee but she was an income beneficiary under all four trust instruments. When she made payments to petitioner there remained just that much less for herself It can not be gain-said that her interest in the income was adverse to petitioner. . . . In New Jersey the courts will not substitute their judgment for that of a trustee where discretion is given the trustee, even at the behest of a beneficiary not the grantor, except upon proof that the exercise of the discretion has been in bad faith. . . . In view of the New Jersey law, it is inconceivable that this petitioner, having voluntarily placed such obviously broad discretionary powers in another and having no real need for the trust income during the taxable years, could successfully complain had the trustee elected to pay him no income.

See Note, 60 *Yale L.J.* 1426 (1951).

3. *Family Partnerships*

> *Note:* **Sections 191 and 3797(a)(2) of the 1939 Code, relating to family partnerships, which were enacted in 1951, were taken over without change by § 704(e) of the 1954 Code.**

Unlike the trust, the partnership is not a separate taxable entity. A partnership return must be filed for the Treasury's information, reporting all partnership income and deductions, but the firm's net income is taxed to the partners individually, whether withdrawn or not, in accordance with their respective interests. Sections

701–704. Losses of the firm are similarly allocated among the partners and deducted by them on their individual returns. The 1954 Code allows certain partnerships to be taxed, if they so elect, as corporations. See *infra*, Ch. 7, Section B.

With the decline of the trust as a tax avoidance device came, fortuitously or not, the rise of the "family partnership" as a means of splitting income. Typically, the head of the family, doing business as an individual proprietor, would create a partnership by transferring by gift portions of his business capital to his wife and children, and by agreeing that thereafter the income of the enterprise would be distributed among the partners in an agreed proportion, usually according to their interests in the firm's capital. Ordinarily the new partners took no part in the management of the firm, though occasionally they served in clerical or other minor capacities. Sometimes the donor would reserve a "salary" for his own services, to be deducted before the profits accruing to capital were calculated. The high water mark in this area is *Tinkoff* v. *Commissioner*, 120 F.2d 564 (7th Cir. 1941), involving an accountant who took his son into his accounting firm as a partner on the day the boy was born.

The Supreme Court's first direct sally into this field was in 1946, when *Commissioner* v. *Tower*, 327 U.S. 280, and *Lusthaus* v. *Commissioner*, *id.* 293, were decided. Although the lower courts could easily discern which way the wind was blowing, they were unsure of its velocity. The Supreme Court then tried again.

COMMISSIONER v. CULBERTSON

Supreme Court of the U. S., 1949

337 U.S. 733

MR. CHIEF JUSTICE VINSON delivered the opinion of the Court.

This case requires our further consideration of the family partnership problem. The Commissioner of Internal Revenue ruled that the entire income from a partnership allegedly entered into by respondent and his four sons must be taxed to respondent, and the Tax Court sustained that determination. The Court of Appeals for the Fifth Circuit reversed. 168 F.2d 979. We granted certiorari, 335 U.S. 883, 69 S. Ct. 235, to consider the Commissioner's claim that the principles of *Commissioner* v. *Tower*, 1946, 327 U.S. 280, 66 S. Ct. 532, 90 L. Ed. 670, 164 A.L.R. 1135, and *Lusthaus* v. *Commissioner*, 1946, 327 U.S. 293, 66 S. Ct. 539, 90 L. Ed. 679, have been departed from in this and other courts of appeals decisions.

Respondent taxpayer is a rancher. From 1915 until October 1939, he had operated a cattle business in partnership with R. S. Coon. Coon, who had numerous business interests in the Southwest and had largely financed the partnership, was 79 years old in 1939 and desired to dissolve the partnership because of ill health. To that end, the bulk of the partnership herd was sold until, in October of that year, only about 1,500 head remained. These cattle were all registered Herefords, the brood or foundation herd. Culbertson wished to keep these cattle and approached Coon with an offer of $65 a head. Coon agreed to sell at that price, but only upon condition that Culbertson would sell an undivided one-half interest in the herd to his four sons at the same price. His reasons for imposing this condition were his intense interest in maintaining the Hereford strain which he and Culbertson had developed, his conviction that Culbertson was too old to

carry on the work alone, and his personal interest in the Culbertson boys. Culbertson's sons were enthusiastic about the proposition, so respondent thereupon bought the remaining cattle from the Coon and Culbertson partnership for $99,440. Two days later Culbertson sold an undivided one-half interest to the four boys, and the following day they gave their father a note for $49,720 at 4 per cent interest due one year from date. Several months later a new note for $57,674 was executed by the boys to replace the earlier note. The increase in amount covered the purchase by Culbertson and his sons of other properties formerly owned by Coon and Culbertson. This note was paid by the boys in the following manner:

Credit for overcharge .	$ 5,930
Gifts from respondent .	21,744
One-half of a loan procured by Culbertson & Sons partnership	30,000

The loan was repaid from the proceeds from operation of the ranch.

The partnership agreement between taxpayer and his sons was oral. The local paper announced the dissolution of the Coon and Culbertson partnership and the continuation of the business by respondent and his boys under the name of Culbertson & Sons. A bank account was opened in this name, upon which taxpayer, his four sons and a bookkeeper could check. At the time of formation of the new partnership, Culbertson's oldest son was 24 years old, married, and living on the ranch, of which he had for two years been foreman under the Coon and Culbertson partnership. He was a college graduate and received $100 a month plus board and lodging for himself and his wife both before and after formation of Culbertson & Sons and until entering the Army. The second son was 22 years old, was married and finished college in 1940, the first year during which the new partnership operated. He went directly into the Army following graduation and rendered no services to the partnership. The two younger sons who were 18 and 16 years old respectively in 1940, went to school during the winter and worked on the ranch during the summer.

The tax years here involved are 1940 and 1941. A partnership return was filed for both years indicating a division of income approximating the capital attributed to each partner. It is the disallowance of this division of the income from the ranch that brings this case into the courts.

First. The Tax Court read our decisions in *Commissioner* v. *Tower*, *supra*, and *Lusthaus* v. *Commissioner*, *supra*, as setting out two essential tests of partnership for income-tax purposes: that each partner contribute to the partnership either vital services or capital orignating with him. Its decision was based upon a finding that none of respondent's sons had satisfied those requirements during the tax years in question. Sanction for the use of these "tests" of partnership is sought in this paragraph from our opinion in the *Tower* case:

> There can be no question that a wife and a husband may, under certain circumstances, become partners for tax, as for other, purposes. If she either invests capital originating with her or substantially contributes to the control and management of the business, or otherwise performs vital additional services, or does all of these things she may be a partner as contemplated by 26 U.S.C. §§ 181, 182, 26 U.S.C.A. §§ 181, 182. The Tax Court has recognized that under such circumstances the income belongs to the wife. A wife may become a general or a limited partner with her husband. But when she does not share in the management and control of the business, contributes no vital additional

service, and where the husband purports in some way to have given her a partnership interest, the Tax Court may properly take these circumstances into consideration in determining whether the partnership is real within the meaning of the federal revenue laws. (327 U.S. at page 290, 66 S. Ct. at page 537, 90 L. Ed. 670, 164 A.L.R. 1135.)

It is the Commissioner's contention that the Tax Court's decision can and should be reinstated upon the mere reaffirmation of the quoted paragraph.

The Court of Appeals, on the other hand, was of the opinion that a family partnership entered into without thought of tax avoidance should be given recognition taxwise whether or not it was intended that some of the partners contribute either capital or services during the tax year and whether or not they actually made such contributions, since it was formed "with the full expectation and purpose that the boys would, in the future, contribute their time and services to the partnership." We must consider, therefore, whether an intention to contribute capital or services sometime in the future is sufficient to satisfy ordinary concepts of partnership, as required by the *Tower* case. The sections of the Internal Revenue Code involved are §§ 181 and 182, which set out the method of taxing partnership income, and §§ 11 and 22(a), which relate to the taxation of individual incomes.*

In the *Tower* case we held that despite the claimed partnership, the evidence fully justified the Tax Court's holding that the husband, through his ownership of the capital and his management of the business, actually created the right to receive and enjoy the benefit of the income and was thus taxable upon that entire income under §§ 11 and 22(a). In such case, other members of the partnership cannot be considered "Individuals carrying on business in partnership" and thus "liable for income tax . . . in their individual capacity" within the meaning of § 181. If it is conceded that some of the partners contributed neither capital nor services to the partnership during the tax years in question, as the Court of Appeals was apparently willing to do in the present case, it can hardly be contended that they are in any way responsible for the production of income during those years.[1] The partnership sections of the Code are, of course, geared to the sections relating to taxation of individual income, since no tax is imposed upon partnership income as such. To hold that "Individuals carrying on business in partnership" include persons who contribute nothing during the tax period would violate the first principle of income taxation: that income must be taxed to him who earns it. *Lucas* v. *Earl*, 1930, 281 U.S. 111, 50 S Ct. 241, 74 L. Ed. 731; *Helvering* v. *Clifford*, 1940, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788; *National Carbide Corp.* v. *Commissioner*, 1949, 336 U.S. 422, 69 S. Ct. 726.

Furthermore, our decision in *Commissioner* v. *Tower*, *supra*, clearly indicates the importance of participation in the business by the partners during the tax year. We there said that a partnership is created "when persons join together their money, goods, labor, or skill for the purpose of carrying on a trade, profession, or business and when there is community of interest in the profits and losses." This is, after all, but the application of an often iterated definition of income—the gain

* Section 191 of the 1939 Code (§ 704(e) of the 1954 Code), relating specifically to family partnerships, was not enacted until 1951 [Ed.]

[1] Of course one who has been a bona fide partner does not lose that status when he is called into military or government service, and the Commissioner has not so contended On the other hand, one hardly becomes a partner in the conventional sense merely because he might have done so had he not been called.

derived from capital, from labor, or from both combined—to a particular form of business organization. A partnership is, in other words, an organization for the production of income to which each partner contributes one or both of the ingredients of income—capital or services. *Ward* v. *Thompson*, 1859, 22 How. 330, 334, 16 L. Ed. 249. The intent to provide money, goods, labor, or skill sometime in the future cannot meet the demands of §§ 11 and 22(a) of the Code that he who presently earns the income through his own labor and skill and the utilization of his own capital be taxed therefor. The vagaries of human experience preclude reliance upon even good faith intent as to future conduct as a basis for the present taxation of income.

Second. We turn next to a consideration of the Tax Court's approach to the family partnership problem. It treated as essential to membership in a family partnership for tax purposes the contribution of either "vital services" or "original capital." Use of these "tests" of partnership indicates, at best, an error in emphasis. It ignores what we said is the ultimate question for decision, namely, "whether the partnership is real within the meaning of the federal revenue laws" and makes decisive what we described as "circumstances [to be taken] into consideration" in making that determination.

The *Tower* case thus provides no support for such an approach. We there said that the question whether the family partnership is real for income-tax purposes depends upon

> whether the partners really and truly intended to join together for the purpose of carrying on the business and sharing in the profits and losses or both. And their intention in this respect is a question of fact, to be determined from testimony disclosed by their "agreement, considered as a whole, and by their conduct in execution of its provisions." *Drennen* v. *London Assurance Co.*, 113 U.S. 51, 56, 5 S. Ct. 341 [343], 344, 28 L. Ed. 919, *Cox* v. *Hickman*, 8 H.L. Cas. 268. We see no reason why this general rule should not apply in tax cases where the Government challenges the existence of a partnership for tax purposes. (327 U.S. at page 287, 66 S. Ct., at page 536, 90 L. Ed. 670, 164 A.L.R. 1135.)

The question is not whether the services or capital contributed by a partner are of sufficient importance to meet some objective standard supposedly established by the *Tower* case, but whether, considering all the facts—the agreement, the conduct of the parties in execution of its provisions, their statements, the testimony of disinterested persons, the relationship of the parties, their respective abilities and capital contributions, the actual control of income and the purposes for which it is used, and any other facts throwing light on their true intent—the parties in good faith and acting with a business purpose intended to join together in the present conduct of the enterprise.[2] There is nothing new or particularly difficult about

[2] This is not, as we understand it, contrary to the approach taken by the Bureau of Internal Revenue in its most recent statement of policy. I.T. 3845, 1947 Cum. Bull. 66, states at p. 67:

"Where persons who are closely related by blood or marriage enter into an agreement purporting to create a so-called family partnership or other arrangement with respect to the operation of a business or income-producing venture, under which agreement all of the parties are accorded substantially the same treatment and consideration with respect to their designated interests and prescribed responsibilities in the business as if they were strangers dealing at arm's length; where the actions of the parties as legally responsible persons evidence an intent to carry on a business in a partnership relation; and where the terms of such agreement are substantially followed in the operation of the business or venture, as well as in the dealings of the partners or members with each other, it is the policy of the Bureau to disregard

such a test. Triers of fact are constantly called upon to determine the intent with which a person acted.[3] The Tax Court, for example, must make such a determination in every estate tax case in which it is contended that a transfer was made in contemplation of death, for "The question, necessarily, is as to the state of mind of the donor." *United States* v. *Wells*, 1931, 283 U.S. 102, 117, 51 S. Ct. 446, 451, 75 L. Ed. 867. See *Allen* v. *Trust Co. of Georgia*, 1946, 326 U.S. 630, 66 S. Ct. 389, 90 L. Ed. 367. Whether the parties really intended to carry on business as partners is not, we think, any more difficult of determination or the manifestations of such intent any less perceptible than is ordinarily true of inquiries into the subjective.

But the Tax Court did not view the question as one concerning the bona fide intent of the parties to join together as partners. Not once in its opinion is there even an oblique reference to any lack of intent on the part of respondent and his sons to combine their capital and services "for the purpose of carrying on the business." Instead the court, focusing entirely upon concepts of "vital services" and "original capital," simply decided that the alleged partners had not satisfied those tests when the facts were compared with those in the *Tower* case. The court's opinion is replete with such statements as

> we discern nothing constituting what we think is a requisite contribution to a real partnership. . . . We find no son adding "vital additional service" which would take the place of capital contributed because of formation of a partnership . . . it is clear that the sons made no capital contribution within the meaning of the *Tower* case.[4]

Unquestionably a court's determination that the services contributed by a partner are not "vital" and that he has not participated in "management and control of the business" or contributed "original capital" has the effect of placing a heavy burden on the taxpayer to show the bona fide intent of the parties to join together as partners. But such a determination is not conclusive, and that is the vice in the "tests" adopted by the Tax Court. It assumes that there is no room for an honest difference of opinion as to whether the services or capital furnished by the alleged partner are of sufficient importance to justify his inclusion in the partnership. If, upon a consideration of all the facts, it is found that the partners joined together in good faith to conduct a business, having agreed that the services or capital to be

the close family relationship existing between the parties and to recognize, for Federal income tax purposes, the division of profits prescribed by such agreement However, where the instrument purporting to create the family partnership expressly provides that the wife or child or other member of the family shall not be required to participate in the management of the business, or is merely silent on that point, the extent and nature of the services of such individual in the actual conduct of the business will be given appropriate evidentiary weight as to the question of intent to carry on the business as partners."

[3] Nearly three-quarters of a century ago, Bowen, L. J., made the classic statement that "the state of a man's mind is as much a fact as the state of his digestion." Edgington v. Fitzmaurice, 29 L. R.Ch Div. 459, 483. State of mind has always been determinative of the question whether a partnership has been formed as between the parties. See, e.g, Drennen v London Assurance Co., 1884, 113 U S. 51, 56, 5 S. Ct. 341, 343, 28 L. Ed. 919, Meehan v. Valentine, 1892, 145 U.S. 611, 621, 12 S Ct. 972, 974, 36 L. Ed. 835; Barker v Kraft, 1932, 259 Mich. 70, 242 N W. 841; Zuback v. Bakmaz, 1943, 346 Pa. 279, 29 A 2d 473; Kennedy v. Mullins, 1930, 155 Va 166, 154 S.E. 568

[4] In the *Tower* case the taxpayer argued that he had a right to reduce his taxes by any legal means, to which this Court agreed. We said, however, that existence of a tax avoidance motive gives some indication that there was no bona fide intent to carry on business as a partnership If Tower had set up objective requirements of membership in a family partnership, such as "vital services" and "original capital," the motives behind adoption of the partnership form would have been irrelevant.

contributed presently by each is of such value to the partnership that the contributor should participate in the distribution of profits, that is sufficient. The *Tower* case did not purport to authorize the Tax Court to substitute its judgment for that of the parties; it simply furnished some guides to the determination of their true intent. Even though it was admitted in the *Tower* case that the wife contributed no original capital, management of the business, or other vital services, this Court did not say as a matter of law that there was no valid partnership. We said, instead, that "There was, thus, more than ample evidence to support the Tax Court's finding that no genuine union for partnership purposes *was ever intended*, and that the husband earned the income." 327 U.S. at page 292, 66 S. Ct. at page 538, 90 L. Ed. 670, 164 A.L.R. 1135. (Italics added.)

Third. The Tax Court's isolation of "original capital" as an essential of membership in a family partnership also indicates an erroneous reading of the *Tower* opinion. We did not say that the donee of an intra-family gift could never become a partner through investment of the capital in the family partnership, any more than we said that all family trusts are invalid for tax purposes in *Helvering* v. *Clifford, supra.* The facts may indicate, on the contrary, that the amount thus contributed and the income therefrom should be considered the property of the donee for tax, as well as general law, purposes. In the *Tower* and *Lusthaus* cases this Court, applying the principles of *Lucas* v. *Earl, supra*, *Helvering* v. *Clifford, supra*; and *Helvering* v. *Horst, supra*; 311 U.S. 112, 61 S. Ct. 144, 85 L. Ed. 75, 131 A.L.R. 655, found that the purported gift, whether or not technically complete, had made no substantial change in the economic relation of members of the family to the income. In each case the husband continued to manage and control the business as before, and income from the property given to the wife and invested by her in the partnership continued to be used in the business or expended for family purposes. We characterized the results of the transactions entered into between husband and wife as "a mere paper reallocation among the family members," noting that "The actualities of their relation to the income did not change." This, we thought, provided ample grounds for the finding that no true partnership was intended; that the husband was still the true earner of the income.

But application of the *Clifford-Horst* principle does not follow automatically upon a gift to a member of one's family, followed by its investment in the family partnership. If it did, it would be necessary to define "family" and to set precise limits of membership therein. We have not done so for the obvious reason that existence of the family relationship does not create a status which itself determines tax questions, but is simply a warning that things may not be what they seem. It is frequently stated that transactions between members of a family will be carefully scrutinized. But more particularly, the family relationship often makes it possible for one to shift tax incidence by surface changes of ownership without disturbing in the least his dominion and control over the subject of the gift or the purposes for which the income from the property is used. He is able, in other words, to retain "the substance of full enjoyment of all the rights which previously he had in the property." *Helvering* v. *Clifford, supra*, 309 U.S. at page 336, 60 S. Ct. at page 557, 75 L. Ed. 731.[5]

[5] It is not enough to say in this case, as we did in the *Clifford* case, that "It is hard to imagine that respondent felt himself the poorer after this [partnership agreement] had been executed or,

The fact that transfers to members of the family group may be mere camouflage does not, however, mean that they invariably are. The *Tower* case recognized that one's participation in control and management of the business is a circumstance indicating an intent to be a bona fide partner despite the fact that the capital contributed originated elsewhere in the family.[6] If the donee of property who then invests it in the family partnership exercises dominion and control over that property—and through that control influences the conduct of the partnership and the disposition of its income—he may well be a true partner. Whether he is free to, and does, enjoy the fruits of the partnership is strongly indicative of the reality of his participation in the enterprise. In the *Tower* and *Lusthaus* cases we distinguished between active participation in the affairs of the business by a donee of a share in the partnership on the one hand, and his passive acquiescence to the will of the donor on the other. This distinction is of obvious importance to a determination of the true intent of the parties. It is meaningless if "original capital" is an essential test of membership in a family partnership.

The cause must therefore be remanded to the Tax Court for a decision as to which, if any, of respondent's sons were partners with him in the operation of the ranch during 1940 and 1941. As to which of them, in other words, was there a bona fide intent that they be partners in the conduct of the cattle business, either because of services to be performed during those years, or because of contributions of capital of which they were the true owners, as we have defined that term in the *Clifford*, *Horst*, and *Tower* cases? No question as to the allocation of income between capital and services is presented in this case, and we intimate no opinion on that subject.

The decision of the Court of Appeals is reversed with directions to remand the cause to the Tax Court for further proceedings in conformity with this opinion.

Reversed and remanded.

MR. JUSTICE BLACK and MR. JUSTICE RUTLEDGE think that the Tax Court properly applied the principles of the *Tower* and *Lusthaus decisions*, 327 U.S. 280, 66 S. Ct. 532, 90 L. Ed. 670, 164 A.L.R. 1135, 327 U.S. 293, 66 S. Ct. 539, 90 L. Ed. 679, in this case. However, they consider it of paramount importance in this case to have a court interpretation of the applicable taxing statute, for guidance in its application. Accordingly, they acquiesce in the Court's opinion and judgment.

MR. JUSTICE BURTON, concurring, states that, upon remand of the cause to the

---

if he did, that it had any rational foundation in fact." 309 U S. at page 336, 60 S Ct at page 557, 74 L. Ed. 731. Culbertson's interest in his partnership with Coon was worth about $50,000 immediately prior to dissolution of the partnership. In order to sustain the Tax Court, we would have to conclude that he felt himself worth approximately twice that much upon his purchase of Coon's interest, even though he had agreed to sell that interest to his sons at the same price.

[6] As noted above (note 4), participation in control and management of the business, although given equal prominence with contributions of "vital services" and "original capital" as circumstances indicating an intent to enter into a partnership relation, was discarded by the Tax Court as a "test" of partnership. This indicates a basic and erroneous assumption that one can never make a gift to a member of one's family without retaining the essentials of ownership, if the gift is then invested in a family partnership We included participation in management and control of the business as a circumstance indicative of intent to carry on business as a partner to cover the situation in which active dominion and control of the subject of the gift had actually passed to the donee. It is a circumstance of prime importance.

Tax Court, there is nothing in the facts which have been presented here which, as a matter of law, will preclude that court from finding that the 1940 and 1941 income was properly taxable on a partnership basis. The physical absence of some of the Culbertson boys from the ranch does not necessarily preclude them or others from the obligations or the benefits of the partnership for tax purposes. Their contributions of capital, their participation in the income and their commitments to return to the ranch or otherwise to render service to the partnership are among the material factors to be considered. A present commitment to render future services to a partnership is in itself a material consideration to be weighed with all other material considerations for the purposes of taxation as well as for other partnership purposes.

MR. JUSTICE JACKSON would affirm on the opinion of the court below, being of the view that the ordinary common-law tests of validity of partnerships are the tests for tax purposes and that they were met in this case.

MR. JUSTICE FRANKFURTER, concurring.

The Court finds that the Tax Court applied wrong legal standards in determining that the arrangement in controversy did not constitute a partnership. It remands the case to the Tax Court because it is for that court, and not for the Court of Appeals, to ascertain, on the basis of appropriate legal criteria, the existence of a partnership within the provisions of Int. Rev. Code, §§ 181 and 182, 26 U.S.C.A. §§ 181, 182. With these conclusions I agree. I think, however, that it is due to the Tax Court, the Courts of Appeals, the Treasury and the bar to make more explicit what the appropriate legal criteria are.

The Tax Court's decision rested on a misconception of our decision in *Commissioner* v. *Tower*, 327 U.S. 280, 66 S. Ct. 532, 90 L. Ed. 670, 164 A.L.R. 1135. It is, however, fair to say that it was led into that misconception by phrases which it culled from the *Tower* opinion with inadequate attention to the opinion in its entirety—both what it said and what it significantly did not say. The *Tower* opinion did not say what the Government now urges upon this Court; the Court's opinion did not take the position of the concurring opinion. In short, the opinion did not say that family partnerships are not to be regarded as partnerships for income-tax purposes even though they be genuine commercial partnerships; the opinion did not even announce hobbling presumptions under the income-tax law against such partnerships.

On the contrary, in defining the relevant considerations for determining the existence of a partnership, the Court in the *Tower* case relied on familiar decisions formulating the concept of partnership for purposes of various commercial situations in which the nature of that concept was decisive. It is significant that among the cases cited was the leading case of *Cox* v. *Hickman*, 8 H.L. Cas. 268. The Court today reaffirms this reliance by its quotation from the *Tower* case. The final sentence of the portion quoted underlines the fact that the Court did not purport to announce a special concept of "partnership" for tax purposes differing from the concept that rules in ordinary commercial-law cases. The sentence is:

> We see no reason why this general rule should not apply in tax cases where the Government challenges the existence of a partnership for tax purposes. 327 U.S. at page 287, 66 S. Ct. at page 535, 90 L. Ed. 670, 164 A.L.R. 1135. . . .

A fair reading of our *Tower* opinion in its entirety reflects the formulation of the concept of partnership which is set forth at the beginning of its analysis and which the Court now quotes. While recognizing the importance of the question "who actually owned a share of the capital attributed to the wife on the partnership books," the *Tower* opinion states the ultimate issue to be "whether this husband and wife really intended to carry on business as a partnership." 327 U.S. at page 289, 66 S. Ct. at page 537, 90 L. Ed. 670, 164 A.L.R. 1135. To that determination it was of course relevant that no new capital was brought into the business as a result of the formation of the partnership, that the wife drew on income of the partnership only to pay for the type of things she had previously bought for the family, and that the consequence was a mere paper reallocation of income. But these circumstances were not cited as giving the term "partnership" a content peculiar to the Internal Revenue Code. They were characterized, rather, simply as "more than ample evidence to support the Tax Court's finding that no genuine union for partnership business purposes was ever intended" and, as a corollary, "that the husband earned the income." 327 U.S. at page 292, 66 S. Ct. at page 538, 90 L. Ed. 670, 164 A.L.R. 1135.

Recognition of the importance, in applying §§ 181 and 182, of the appraisal of facts makes manifest why, quite apart from the definition contained in § 3797, a determination by a State court should not, as the *Tower* opinion pointed out, foreclose a contrary determination by a federal tribunal charged with administration of the tax laws. Such an inconsistency would not mean that the legal standards applied by each were inconsistent; it would be a result simply of the commonplace that no finder of fact can see through the eyes of any other finder of fact. See *Texas* v. *Florida*, 306 U.S. 398, 411, 59 S. Ct. 563, 570, 83 L. Ed. 817, 121 A.L.R. 1179. Nor would inconsistency be created by a State court's concern for the protection of creditors which lead it to seize upon adoption of the outward form as the vital fact. So, indeed, might the taxing authorities refuse to be precluded from holding the taxpayer to his election to adopt the form of a partnership. *Cf. Higgins* v. *Smith*, 308 U.S. 473, 477, 60 S. Ct. 355, 357, 84 L. Ed. 406. The need for guarding against misuse of the outward form of a partnership as a device for obtaining tax advantages is properly satisfied by reliance on the vigilance of the Tax Court, not by distorting the concept of partnership. It is not for this Court, by redefinition or the erection of presumptions, to amend the Internal Revenue Code so as virtually to ban partnerships composed of the members of an intimate family group.

The present case, nevertheless, is not the first manifestation of an impression that the *Tower* opinion had precisely such an effect. It seems to me important, therefore, to make crystal clear that there is no special concept of "partnership" for tax purposes, while at the same time recognizing that in view of the temptations to assume a virtue that they have not for the sake of tax savings, men and women may appear in a guise which the gimlet eye of the Tax Court is entitled to pierce. We should leave no doubt in the minds of the Tax Court, of the Courts of Appeals, of the Treasury and of the bar that the essential holding of the *Tower* case is that there is "no reason" why the "general rule" by which the existence of a partnership is determined "should not apply in tax cases where the Government challenges the existence of a partnership for tax purposes."

In plain English, if an arrangement among men is not an arrangement which puts them all in the same business boat, then they cannot get into the same boat merely to seek the benefits of §§ 181 and 182. But if they are in the same business boat, although they may have varying rewards and varied responsibilities, they do not cease to be in it when the tax collector appears.

Note

1. On remand, the Tax Court found that the taxpayers did not intend in good faith to become partners. The Court relied in part on a statement made by the father to a creditor that he and his wife had reserved unrestricted control over the property until the sons reached their majority. Rather than assume that this document was invalid, and that the father was guilty of obtaining credit under false pretenses, the Court concluded that "it stated the real and true situation." Other facts inconsistent with a bona fide partnership were also found by the Court. *Culbertson* v. *Commissioner*, ¶ 50,187 P-H Memo TC. The Tax Court was again reversed by the Court of Appeals. As authority for the reversal, the Court of Appeals relied both on the Supreme Court's decision and on its own previous decision which had been reversed by the Supreme Court. The Court of Appeals found that the Tax Court had no more, and possibly less, evidence for its decision than it had had previously. The Court of Appeals also stated that the Supreme Court had misunderstood its "thoroughly considered and carefully reasoned opinion" and denied that "we held on the former opinion, hold now, or ever did hold to" the view attributed to it by the Supreme Court. *Culbertson* v. *Commissioner*, 194 F.2d 581 (5th Cir. 1952).

2. After watching the courts struggle with the *Culbertson* criteria for several years, the Bureau of Internal Revenue in 1952 issued Mim. 6767, 52-1 C.B. 111, "to clarify" its position "with respect to some aspects of the family partnership problem . . . concerning which there appears [!] to be uncertainty." But it was not possible in this area to single out relatively precise criteria for taxability, as was done in the Clifford Regulation, and the Bureau's position is consequently less clearly delineated.

3. The foregoing Mimeograph is applicable only to 1950 and earlier years. For the Revenue Act of 1951 introduced § 191 (now § 704(e)) into the Code, applicable to taxable years beginning after December 31, 1950.

4. See Bruton, "Family Partnerships and the Income Tax—The *Culbertson* Chapter," 98 *U. of Pa. L. Rev.* 143 (1949); Diamond, "Recent Developments of Parent-Child Business Relationships," *11th Ann. N.Y.U. Inst. on Fed. Taxation* 1071 (1953).

5. *A* and *B* are members of an admittedly valid partnership for the conduct of a real estate and accounting business. The partnership agreement provides that all "outside" income received by either of them shall be contributed to the partnership and distributed between them in the same proportion as the income from the business activities of the firm. Is the arrangement as to "outside" income effective for federal income tax purposes? *Mayes* v. *United States*, 207 F.2d 326 (10th Cir. 1953); *Mayes* v. *Commissioner*, 21 T.C. 286 (1953). Can two lawyers, each having a retainer from a separate client, become partners by pooling their income and expenses, if neither performs any services except for his "own" client?

S. REPT. NO. 781

Senate Finance Committee, 82d Cong., 1st sess., 1951
51–2 C.B. 458, 485–486

Sec. 339 of your committee's bill [§ 191, '39 Code; § 704(e), '54 Code] is intended to harmonize the rules governing interests in the so-called family partnership with those generally applicable to other forms of property or business. Two principles governing attribution of income have long been accepted as basic: (1) income from property is attributable to the owner of the property; (2) income

from personal services is attributable to the person rendering the services. There is no reason for applying different principles to partnership income. If an individual makes a bona fide gift of real estate, or of a share of corporate stock, the rent or dividend income is taxable to the donee. Your committee's amendment makes it clear that, however the owner of a partnership interest may have acquired such interest, the income is taxable to the owner, if he is the real owner. If the ownership is real, it does not matter what motivated the transfer to him or whether the business benefited from the entrance of the new partner.

Although there is no basis under existing statutes for any different treatment of partnership interests, some decisions in this field have ignored the principle that income from property is to be taxed to the owner of the property. Many court decisions since the decision of the Supreme Court in *Commissioner* v. *Culbertson* (337 U.S. 733) have held invalid for tax purposes family partnerships which arose by virtue of a gift of a partnership interest from one member of a family to another, where the donee performed no vital services for the partnership. Some of these cases apparently proceed upon the theory that a partnership cannot be valid for tax purposes unless the intrafamily gift of capital is motivated by a desire to benefit the partnership business. Others seem to assume that a gift of a partnership interest is not complete because the donor contemplates the continued participation in the business of the donated capital. However, the frequency with which the Tax Court, since the *Culbertson* decision, has held invalid family partnerships based upon donations of capital, would seem to indicate that, although the opinions often refer to "intention," "business purpose," "reality," and "control," they have in practical effect reached results which suggest that an intrafamily gift of a partnership interest, where the donee performs no substantial services, will not usually be the basis of a valid partnership for tax purposes. We are informed that the settlement of many cases in the field is being held up by the reliance of the field offices of the Bureau of Internal Revenue upon some such theory. Whether or not the opinion of the Supreme Court in *Commissioner* v. *Tower* (327 U.S. 280) and the opinion of the Supreme Court in *Commissioner* v. *Culbertson* (337 U.S. 733), which attempted to explain the *Tower* decision, afford any justification for the confusion is not material—the confusion exists.

The amendment leaves the Commissioner and the courts free to inquire in any case whether the donee or purchaser actually owns the interest in the partnership, which the transferor purports to have given or sold him. Cases will arise where the gift or sale is a mere sham. Other cases will arise where the transferor retains so many of the incidents of ownership that he will continue to be recognized as a substantial owner of the interest which he purports to have given away, as was held by the Supreme Court in an analogous trust situation involved in the case of *Helvering* v. *Clifford* (309 U.S. 351). The same standards apply in determining the bona fides of alleged family partnerships as in determining the bona fides of other transactions between family members. Transactions between persons in a close family group, whether or not involving partnership interests, afford much opportunity for deception and should be subject to close scrutiny. All the facts and circumstances at the time of the purported gift and during the periods preceding and following it may be taken into consideration in determining the bona fides or lack of bona fides of a purported gift or sale.

Not every restriction upon the complete and unfettered control by the donee

of the property donated will be indicative of sham in the transaction. Contractual restrictions may be of the character incident to the normal relationships among partners. Substantial powers may be retained by the transferor as a managing partner or in any other fiduciary capacity which, when considered in the light of all the circumstances, will not indicate any lack of true ownership in the transferee. In weighing the effect of a retention of any power upon the bona fides of a purported gift or sale, a power exercisable for the benefit of others must be distinguished from a power vested in the transferor for his own benefit.

Since legislation is now necessary to make clear the fundamental principle that, where there is a real transfer of ownership, a gift of a family partnership interest is to be respected for tax purposes without regard to the motives which actuated the transfer, it is considered appropriate at the same time to provide specific safeguards—whether or not such safeguards may be inherent in the general rule—against the use of the partnership device to accomplish the deflection of income from the real owner.

Therefore, the bill provides that in the case of any partnership interest created by gift the allocation of income, according to the terms of the partnership agreement, shall be controlling for income tax purposes except when the shares are allocated without proper allowance of reasonable compensation for services rendered to the partnership by the donor, and except to the extent that the allocation to the donated capital is proportionately greater than that attributable to the donor's capital. In such cases a reasonable allowance will be made for the services rendered by the partners, and the balance of the income will be allocated according to the amount of capital which the several partners have invested. However, the distributive share of a partner in the earnings of the partnership will not be diminished because of absence due to military service.

When more than one member of a family is a member of a partnership, all interests purchased by one member of the family from another will be treated as though the transfer were made by gift. For this purpose the family of an individual includes his spouse, ancestors, lineal descendants, and any trust for the primary benefit of such persons.

Note

1. What criteria will determine whether "reasonable compensation" has been allowed to the donor for his services? See *Patton* v. *Commissioner*, *supra*, p. 239. Will the requirement of such an allowance destroy the usefulness of the family partnership as a tax reduction device? Prior to § 191's enactment, it was held in several cases that a family partnership was either valid *in toto* or invalid *in toto*. Thus, in *Canfield* v. *Commissioner*, 168 F.2d 907 (6th Cir. 1948), the Tax Court was reversed for holding, in disregard of the partnership agreement, that 75 per cent of the firm's income should be attributed to the husband's services (and taxed to him) and that the remaining 25 per cent should be attributed and taxed to husband and wife in proportion to their capital interests. See also *Hartz* v. *Commissioner*, 170 F.2d 313, 318 (8th Cir. 1948), stating, however, that an "artificial" allocation of income among the partners "might constitute sufficient ground for a finding that the alleged partnership was a sham or a device to avoid the payment of taxes." Mim. 6767, *supra*, p. 348, however, adheres to the view for years before 1951 that there are intermediate cases where the partnership should not be totally disregarded but where income should be allocated according to the values of services and capital rather than according to the agreement itself. Reallo-

cation in appropriate cases was endorsed in *Weiss* v. *Johnson*, 206 F.2d 350 (2d Cir. 1953):

> No reason is perceived in either law or logic why, if a partnership may be found wholly invalid for a misuse of this business device as an instrument of tax evasion, it may not also be found partially invalid for a like ground.

See also *Wofford* v. *Commissioner*, 207 F.2d 749 (5th Cir. 1953), where, although an alleged partner was not recognized as such, its ownership of a portion of the capital used by the firm was acknowledged, and part of the firm's income was held to be compensation for the use of the "partner's" capital.

2. The student should carefully examine the regulations issued pursuant to § 191 with respect to minors, trustees as partners, and limited partnerships. Regs. 118, Sec. 39.191-1(b)(7)-(9). The tax treatment of these situations will greatly influence the use of § 191 because by and large the donor of an interest in a family partnership will wish to retain control over its management, especially in view of the fact that any general partner may always bring a partnership to an end and force dissolution. Uniform Partnership Act, §§ 31(1)(b) and 31(2). Can the head of the family maintain control over the enterprise by taking in the children as limited partners only? By transferring their shares in the firm into trusts of which he is the trustee? By relying simply on his powers as the natural guardian of the children? For a discussion of the use of limited partnerships and trusts as partners under the pre-Section 191 law, see *Toor* v. *Westover*, 200 F.2d 713 (9th Cir. 1952).

3. See Comment, Family Partnerships and the Revenue Act of 1951, 61 *Yale L.J.* 541 (1952).

4. *Family Corporations*

OVERTON v. COMMISSIONER
OLIPHANT v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1947
162 F.2d 155

Before SWAN, AUGUSTUS N. HAND and FRANK, Circuit Judges.

SWAN, Circuit Judge.

These appeals involve gift tax liability of petitioner Overton for the years 1936 and 1937 and income tax liability of petitioner Oliphant for the year 1941. Each petitioner was held liable on the theory that dividends received by his wife in the year in question on stock registered in her name on the books of Castle & Overton, Inc., a New York corporation, were income of the husband for tax purposes. No gift tax return with respect to such dividends was filed by Mr. Overton in 1936 or 1937, and the dividends received by Mrs. Oliphant in 1941 were not included in her husband's return for that year.

There is no dispute as to the evidentiary facts. They are stated in detail in the opinion of the Tax Court, 6 T.C. 304, and will be here repeated only so far as may be necessary to render intelligible the discussion which follows. On May 26, 1936 the corporation had outstanding 1,000 shares of common stock without par value but having a liquidating value of at least $120 per share. On that date, pursuant to a plan devised to lessen taxes, the certificate of incorporation was amended to provide for changing the outstanding common stock into 2,000 shares without par value, of which 1,000 were denominated Class A and 1,000 Class B. The old stock was exchanged for the new, the shareholders then gave the B stock to their

respective wives, and new certificates therefor were issued to the wives. The B stock had a liquidating value of one dollar per share, everything else on liquidation was to belong to the holders of the A stock, who had also the sole voting rights for directors and on all ordinary matters.[1] By virtue of an agreement made in April 1937 restricting alienation of their stock, the wives were precluded from realizing more than one dollar a share by selling their shares. The A stock was to receive noncumulative dividends at the rate of $10 a share per year before payment of any dividend on the B stock; if dividends in excess of $10 per share were paid on the A stock in any year, such excess dividends were to be shared by both classes of stock in the ratio of one-fifth thereof for the A stock and four-fifths for the B stock. During the six year period ending in December 1941, the dividends paid on B stock totaled $150.40 a share as against $77.60 a share paid on A stock. In 1941 the A stock had a book value of $155 per share.

The Tax Court was of opinion that the 1936 arrangement, though made in the form of a gift of stock, was in reality an assignment of part of the taxpayers' future dividends. Unless form is to be exalted above substance this conclusion is inescapable. Since the total issue of B stock represented only $1,000 of the corporate assets, it is plain that the property which earned the large dividends received by the B shareholders was the property represented by the A stock held by the husbands. In transferring the B shares to their wives they parted with no substantial part of their interest in the corporate property. Had they been content to transfer some of the original common stock, they could have accomplished their purpose of lessening taxes on the family group,[2] but they would then have made substantial gifts of capital. The arrangement they put into effect gave the wives nothing, or substantially nothing, but the right to future earnings flowing from property retained by the husbands. That anticipatory assignments of income, whatever their formal cloak, are ineffective taxwise is a principle too firmly established to be subject to question. . . . We think the Tax Court correctly applied this principle to the facts of the case at bar.

Orders affirmed.

COMMISSIONER v. LAUGHTON

U. S. Court of Appeals, Ninth Circuit, 1940
113 F.2d 103

Before DENMAN, MATHEWS, and STEPHENS, Circuit Judges.

DENMAN, Circuit Judge.

This is a review of a decision of the Board of Tax Appeals holding Laughton not liable for income taxation for moneys paid in the tax years 1934 and 1935 by various American motion picture producers to Motion Pictures & Theatrical Industries, Ltd., a British corporation, hereafter called Industries, Ltd., all of whose shares, except those qualifying the directors, were owned by Laughton, for services in the United States rendered by that company to the American producers by

[1] Whether the amendment of the certificate of incorporation excluded B shareholders from voting on extraordinary matters specified in section 51 of the Stock Corporation Law of New York, McK. Consol Laws, c. 59, in effect on May 26, 1937, the Tax Court did not find it necessary to determine; nor do we.

[2] See Blair v. Commissioner, 300 U.S. 5, 57 S. Ct. 330, 81 L. Ed. 465.

supplying Laughton, an employee of Industries, Ltd., as an actor in their motion pictures.

Laughton was employed as an actor by the company under an exclusive contract for five years at a salary very much less than that the company received for "loaning" him to the producers. Such hiring and loaning is established practice in the moving picture industry. The Commissioner contends that the corporate entity should be ignored for income tax purposes and the compensation deemed paid directly from the producers to Laughton. The Board held the corporation had a business purpose and hence its entity intervened.

The Board decision was made before the Supreme Court decided *Higgins* v. *Smith*, 308 U.S. 473, 60 S. Ct. 355, 84 L. Ed. 406, which we consider controlling this proceeding. In that case Smith, the taxpayer, dominated a corporation of which he owned all the shares through

> officers and directors [who] were [his] subordinates. . . . While its accounts were kept completely separate from those of the taxpayer, there is no doubt that Innisfail [the corporation] was his corporate self. (60 S. Ct. 356.)

That is to say, the corporation was "wholly owned" both as to management by the taxpayer's subordinates and as to stock interest.

Smith, having in mind reducing his taxes, sold to this "corporate self" certain of his shares of stock at a loss, which he claimed as a deduction from his taxable income. It was held that, assuming title had passed to his corporate self, he had such a command of the securities thereafter that "There is not enough of substance in such a sale finally to determine a loss." 60 S. Ct. 357.

In a long discussion the court, *inter alia*, states that

> Indeed this domination and control is so obvious in a wholly owned corporation as to require a peremptory instruction that no loss in the statutory sense could occur upon a sale by a taxpayer to such an entity. (60 S. Ct. 357.)

That the phrase "wholly owned" in this dictum regarding an instruction to the jury means something more than mere stock ownership is to be inferred from a ruling at the end of the opinion. There certain evidence of past transactions between taxpayer and corporation was admissible because the court thought "it apparent that this evidence was entirely relevant to the present issue; the history of the taxpayer's relations with the corporation shed considerable light on the actual effect of the sale in question." 60 S. Ct. 359.

Later, considering *Burnet* v. *Commonwealth Improvement Company*, 287 U.S. 415, 53 S. Ct. 198, 77 L. Ed. 399, in which the sole stockholder so utilized the corporation that it made a book profit and the corporation was held liable as a separate taxable entity, the court says:

> . . . A taxpayer is free to adopt such organization for his affairs as he may choose and having elected to do some business as a corporation, he must accept the tax disadvantages.
>
> On the other hand, the Government may not be required to acquiesce in the taxpayer's election of that form for doing business which is most advantageous to him. The Government may look at actualities and upon determination that the form employed for doing business or carrying out the challenged *tax event* is *unreal or a sham* may sustain or disregard the effect of the fiction as best serves the purposes of the tax statute. To hold otherwise would permit the schemes of taxpayers to supersede legislation in the determination of the time and manner of taxation. It is command of income

and its benefits which marks the real owner of property." (Emphasis supplied.) *Higgins* v. *Smith*, *supra*, 60 S. Ct. 358.

It is arguable that the *Higgins* decision means that no matter what the particular "tax event" may be, if it be more profitable to the tax collector to disregard the intervening corporate entity this must be done. However, it seems to us that if this were the intent of the court it would have said so and not spread its consideration of the cases over many pages of the opinion with such qualifying language as is quoted above.

We take the opinion to mean that the "tax event" is not an unreal attempt to use a corporation for a sham transaction, procuring an advantageous tax consequence to the taxpayer, if it may be considered as one primarily for an independent business purpose and not a transfer of assets (here Laughton's services), with a retention of their control, solely to reduce tax liability.

Applying this criterion to the instant case the question here is not whether Industries, Ltd., was formed for a business purpose. The corporation in *Higgins* v. *Smith*, *supra*, was formed and used for profitable business purposes causing it to pay federal and state income taxes. The question is whether Laughton's hiring of himself to Industries, Ltd., for a salary substantially less than the compensation for which the corporation supplied his services as its employee to various motion picture producers, constituted, in effect, a single transaction by Laughton in which he received indirectly the larger sum paid by the producers.

The Board made no finding on this issue. It seemed to think it sufficient to find no more than that the corporation itself had a business purpose. This places before us the determination whether the evidence warrants us to return the case to the Board with the freedom to make such a finding, or whether it permits only the finding that Laughton's transaction with regard to his services to the corporation is an "unreal and/or a sham" attempt at tax avoidance.

There is evidence here from which it might be inferred that tax avoidance by a sham transfer by Laughton of his services was the primary purpose of the use of the corporation. There is also evidence from which it may be inferred that it was not. The testimony is uncontradicted that Laughton had no intention to avoid taxes; that the purpose of engaging himself for five years as an employee of Industries, Ltd., was to join his efforts with other employees of the company to create motion pictures; that he contributed six thousand pounds to the capital of the company for his stock interest, other than the qualifying shares of his directors, and also royalties in certain enterprises in which he was interested; that he contemplated that the corporation would gather further accretions of capital by its use of his services as its agent for a time to other motion picture producers.

It is also uncontradicted that during the two tax years in question, 1934 and 1935, sufficient capital was accumulated from all these sources for the corporation's active engagement in motion picture production at a later date; that the directors of his company were not dominated and controlled by him as in the case of *Higgins* v. *Smith*, *supra*, that, on the contrary, they were business men who ran the business with a free hand and never asked Laughton's permission in its conduct. It is a matter of law that the stockholders have no right to direct the conduct of the board of directors.

It is also uncontradicted that Laughton's motive was based on the theory that as an actor he would die poor. He had a Gerald DuMaurier in mind who died poor

> and he said that he was determined while he was on the crest of the wave to safeguard his resources, that he would engage the services of the finest writers in New York and technicians and cameramen and form a renaissance of the British film industry.

Laughton is an English actor and was then an artist of international renown. The Board properly could infer that one with the artistic temperament is likely to dissipate his income and that Laughton was farseeing enough to desire that compensation for his genius should be handled by independent business men.

On the other hand, it appears that Laughton borrowed heavily on secured loans from Industries, Ltd., during the tax years in question. He had a previous engagement for his services which was surrendered to the company, followed by a similar engagement directly with the company to furnish them as its employee. The minutes of the company show that he was present at many of the directors' meetings. Also there was a very wide disparity between the salary he received from the company and what he had previously been receiving as a motion picture actor, and a still wider disparity between his company salary and what was received by the company for his subsequent services.

We cannot say as a matter of law that findings of ultimate fact must be made one way or the other with reference to the issue as stated above. The administrative body must be left free to make its own inferences relevant to that issue. Our sole function with regard to administrative findings is to determine whether there is any substantial evidence to support them.

We hold that the case must be returned to the Board to make the findings this opinion indicates are required.

*Remanded.**

Note

1. As will be seen in Ch. 7, Sec. A, a corporation like the one organized by Laughton may be subjected to the virtually confiscatory personal holding company surtax if the bulk of its income comes from "hiring out" the services of a stockholder unless the income is distributed annually as earned. Many family corporations can avoid these special provisions, however, even though the corporate income may be created largely by the personal skill or services of the head of the family. By giving some of the stock to members of the family, he may reduce income taxes unless the corporate entity is disregarded and the income of the corporation is taxed to him.

Note the Court's remark in the *Overton* case, *supra*, pp. 351, 352.

> Had they been content to transfer some of the original common stock, they could have accomplished their purpose of lessening taxes on the family group, but they would then have made substantial gifts of capital.

Suppose the husband's services are a principal source of the corporation's earnings, and his compensation is inadequate. Could the Commissioner include in the husband's income a "constructive" salary to give him adequate compensation for his services? Or could the Commissioner treat dividends subsequently paid to the wife and children as assignments of the husband's past earnings? If a family partnership, after being held invalid for tax purposes, is incorporated, and the stock is divided among the former "partners" in proportion to their capital interests, will the Commissioner have any ground for attacking the arrangement? See Alexandre, "The Corporate Counterpart of the Family Partnership," 2 *Tax L. Rev.* 493 (1947); Johnson, "Taxing Dividends of Family Corporations—A Dissent," *id.* 566.

2. Assuming that the husband could take an inadequate salary without jeopardizing

* The proceedings on remand are not reported. [Ed.]

the normal tax treatment of a corporation (separate tax on corporate earnings; dividends taxed to stockholders only when paid), what are the tax pressures that would discourage use of this device for income-splitting?

3 As will be seen in Ch. 6, certain partnerships may elect to be treated as corporations, as a result of a new provision, § 1361 of the 1954 Code. The relationship of this new provision to § 704(e), the family partnership provision, remains to be worked out. If a family partnership distributes its income without making a reasonable allowance for compensation to the donor for his services, can the firm elect to be treated as a corporation under § 1361? Even if the reasonable compensation requirement of § 704(e) can be thus avoided, of course, the firm will have to pay a corporate income tax.

5. Other Intra-Family Arrangements and Transactions

HENSON v. COMMISSIONER

U. S. Court of Appeals, Fifth Circuit, 1949

174 F.2d 846

Before SIBLEY, HOLMES, and MCCORD, Circuit Judges.

MCCORD, Circuit Judge.

This is an appeal from a decision of the Tax Court sustaining a deficiency assessment against petitioner on income taxes alleged to be due for the year 1943.

The question presented is whether the Tax Court properly held $22,348.78 profit of the J. M. Henson Company for the period from August 1, 1943, to December 31, 1943, was taxable to petitioner as his income, even though on the former date he had executed a valid and complete gift of this Company to his wife.

The material facts are without dispute, and reveal that petitioner and his wife were married in the year 1925, and reside in Atlanta, Georgia. Sometime prior to August 1, 1943, petitioner became the owner of two business concerns known as the J. M. Henson Company, a baker's supply business, and the Dairy and Ice Cream Supply Company. The two businesses were located in the same building, used the same offices, equipment, bookkeeper and stenographic help, but did not have the same salesmen or customers. Separate sets of books were kept and different letterheads were used, and the inventories and bank accounts were maintained separately. There were three other people besides petitioner who shared in the profits of the Dairy and Ice Cream Supply Company, while petitioner alone received the profits of the J. M. Henson Company.

On August 1, 1943, petitioner conveyed to his wife, a woman of little business experience, his entire ownership and interest in the J. M. Henson Company. On the same day, Mrs. Henson wrote their bank in Atlanta a letter giving petitioner, her husband, authority to sign checks, drafts and notes for the company.[1] Later, petitioner filed an affidavit with the clerk of the county court, stating that his wife was the sole owner of the business. A similar notice was published in a paper of general circulation throughout the county. In 1944, petitioner filed a gift tax return, disclosing the gift of this Company to his wife, and paid the gift tax thereon. His wife also filed a donee's information return, and paid the tax on income earned by the Company from the date of the gift until the end of the year 1943.

[1] It is without dispute that after receiving such notice the bank would not lend money to the Henson Company unless the notes were signed by Mrs. Henson.

After August 1, 1943, the J. M. Henson Company continued to operate under substantially the same conditions and under the same name, except that petitioner was retained by his wife as manager of the company at a salary of $300.00 per month, which was substantially the same amount he had withdrawn for his services prior to the transfer. He maintained a personal account for himself and charged his expenses to it. His wife had no office in the place of business and was not normally consulted as to its operation and direction. Petitioner alone drew checks on the Company's bank account, in accordance with the grant of such authority from his wife. However, it is undisputed that after the date of the transfer, which was admittedly a bona fide gift and effective to pass title to the property under Georgia law, that petitioner's wife was the sole and absolute owner of the Company, with no strings attached. She had the right and absolute power to dispose of it by gift, sale, or will. She further had the power to borrow money on account of the business, and to employ and discharge managers or other company employees at will, although she never saw fit to exercise her prerogative in the latter respect during the tax year involved. Under and by virtue of the gift to his wife, petitioner had irrevocably divested himself of all legal title, right, interest, and control over the business, and remained as manager of the Company solely at his wife's pleasure. In fact, it appears that since March 1, 1944, or shortly thereafter, petitioner has no longer managed the Company, nor has he drawn any salary whatever from the Company account for his services, at least insofar as this record reveals.

We are of opinion the Tax Court erred in holding petitioner taxable on the income from the Company after he had executed an absolute gift of such business to his wife. *Blair* v. *Commissioner*, 300 U.S. 5, 11, 12, 57 S. Ct. 330, 81 L. Ed. 465, *Hardymon* v. *Glenn*, D.C., 56 F. Supp. 269, 273; *Simmons* v. *Commissioner*, 5 Cir., 164 F.2d 220, 223; *Kent* v. *Commissioner*, 6 Cir., 170 F.2d 131, 133. This case involves a valid and unconditional gift, complete and effectual for all purposes, and is clearly distinguishable from those family partnership tax cases relied upon by the Commissioner. *Cf. Lucas* v. *Earl*, 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731; *Helvering* v. *Clifford*, 309 U.S. 331, 60 S Ct. 554, 84 L. Ed. 788; *Lusthaus* v. *Commissioner*, 327 U.S. 293, 66 S. Ct. 539, 90 L. Ed. 679; *Commissioner* v. *Tower*, 327 U.S. 280, 66 S. Ct. 532, 90 L. Ed. 670, 164 A.L.R. 1135.

The Tax Court has evidently, in its decision, failed to recognize the distinction between actual control over income-producing property with consent of the true owner, and the absolute right of control over both the property and the income derived therefrom which adheres in a valid and legal title. The controlling question in such cases is, therefore, not whether actual control over the property is exercised, but whether the right of control in fact exists, not who earns the income from such property, but who has the right to receive it. *Cf. Werner* v. *Commissioner*, 7 T.C. 39.

Every owner of a business, particularly those of limited business experience, has the undoubted right to have it managed by another, even though that person be married to the owner. Moreover, every husband has a legal right to create a valid gift of his property in favor of his wife without being held liable for the income tax thereon, provided, of course, there are no conditions attached which would enable him to retain a legal dominion and control over the property, or to revoke

the transfer. No such conditions are found to exist here. In this case, the wife was no partner, but became the undisputed and absolute owner of the business, under and by virtue of the gift from her husband. Under such circumstances, the income therefrom was taxable to her alone, and not to the petitioner. *Simmons* v. *Commissioner*, 5 Cir., 164 F.2d 220, 223; *Hardymon* v. *Glenn*, D.C., 56 F. Supp. 269, 273; *Edson* v. *Lucas*, 8 Cir., 40 F.2d 398; *Pearce* v. *Commissioner*, 315 U.S. 543, 554, 62 S. Ct. 754, 86 L. Ed. 1016.

It follows that the decision of the Tax Court should be, and the same is hereby *Reversed.*

Note

1. Was it crucial that the husband's salary was equal to his previous withdrawals? Was $300 per month the value of the husband's services, the rest of the profits being attributable to capital?

2. In *Visintainer* v. *Commissioner*, 187 F.2d 519 (10th Cir 1951), part of the income of a sheep ranch business was held taxable to minor children. Their father, who managed the business, gave some of the sheep to the children. The transferred sheep were branded, but were not separated from the herd. The income and expenses of the entire business were divided among the father and children in proportion to the sheep owned. The Tax Court held that, although the father "stopped one step short of the usual family partnership—the execution of the partnership agreement," the entire income of the business should be taxed to him under the *Tower* case. The Court of Appeals reversed, holding that there were bona fide gifts of the sheep to the children and that the income followed the sheep See also *Alexander* v. *Commissioner*, 190 F.2d 753 (5th Cir. 1951); *Sandberg* v. *Commissioner*, 8 T.C 423 (1947). For another approach in a comparable context, see *Hogle* v. *Commissioner*, 132 F.2d 66 (10th Cir. 1942). And see again *Strauss* v. *Commissioner*, *supra*, p. 307.

3. See *FitzGibbon* v. *Commissioner*, 19 T.C. 78 (1952), involving a "sale" of stock by a mother to her children, the purchase price to be paid in instalments out of the dividends received (less income tax thereon) by the children. The court found that the transaction was not a bona fide sale, and held that the dividends were taxable to the donor.

WHITE v. FITZPATRICK

U. S. Court of Appeals, Second Circuit, 1951
193 F.2d 398, cert. den. 343 U.S. 928 (1952)

Before AUGUSTUS N. HAND, CHASE, and CLARK, Circuit Judges.

CLARK, Circuit Judge.

Involved in this appeal is the recurring problem of tax savings claimed as a consequence of a transfer of property from husband to wife with resulting lease or license back. Here neither the Commissioner of Internal Revenue nor the district court has accepted the taxpayer's view of the transactions; and he now appeals from the judgment against him in his action for a refund of the deficiency assessed against him by the Commissioner upon his income and victory taxes for the years 1941, 1943, and 1944.

The following are the facts of the case as stipulated by the parties and found by the trial court. During the years in question and for some time prior thereto, plaintiff engaged in the manufacture of chokes for use on the barrels of shotguns, as

sole proprietor of the Poly Choke Company, an unincorporated business. Beginning in 1939 the company occupied certain properties—land, three factories, a garage, and an office—under a lease coupled with a nontransferable option to purchase for $15,370. Plaintiff had developed the basic invention for this device himself and obtained a United States patent for it on December 27, 1932.

On January 21, 1941, he entered into a written agreement with his wife, transferring "the entire right, title and interest in and to" the patent, "to the full end of the term of said patent," for a stated consideration of $10. The following day his wife licensed the exclusive manufacturing right back to him "to the full end of the entire term of said patent." The assignment back was subject to cancellation only if (a) payments fell into sixty days' arrears, or (b) receivership, bankruptcy, forced assignment, or other financial difficulty made it impossible for her husband to carry on his manufacturing concern. It provided for royalties of $1 on each product marketed. Plaintiff filed a gift tax return for the year declaring the fair market value of the patent to be $10,000 and for the next four years, 1941–1944 inclusive, paid his wife some $60,000 as royalties.

At about the same time, December 27, 1940, plaintiff's wife also purchased the property on which the company was located for $16,800 and immediately leased it to her husband orally. On the next day plaintiff made a gift to his wife of $16,175 to cover the purchase price and filed a gift tax return for that amount. Rental payments for the years 1941–1944 inclusive were $1,500 a year, which was the amount that plaintiff had been paying to the original lessor; in 1944, plaintiff in addition paid his wife some $5,000 as "an adjustment in rent."

During the years in question plaintiff deducted both rental payments and royalties as business expenses. After investigation and audit, the Commissioner of Internal Revenue issued a deficiency notice disallowing the deductions in 1948. Plaintiff paid the total deficiency of about $47,000 thus assessed and brought this action for refund. The district court found (1) that the plaintiff's motivation was to make good certain losses in the value of securities held by his wife and to minimize income taxes for the family group, but (2) that

> it was the taxpayer's expectation that no action would be taken by the wife in exercise of her rights of ownership of the patent or real property which would be detrimental to the plaintiff's interests.

The court then concluded that by the gifts and license and lease back

> by reason of the family relationship the husband retains effective control of the patent and real property, while valid transfers for other purposes, will not form a valid basis for deduction of royalties and rent paid by the husband to the wife as business expenses in arriving at the taxpayer's net income for income tax purposes.

The bare assignment of the patent was legally adequate to transfer all rights adhering thereto to the wife. Likewise the land was purchased in the name of the wife alone. From this plaintiff contends on appeal that the wife's legal title and power were absolute and subject to no conditions or future claims whatsoever. Moreover, there is no evidence, nor does defendant contend, that the plaintiff derived any direct benefit in the form of income from these transactions. Therefore, plaintiff argues that, since the royalties and rents were both ordinary in nature for his type of business and reasonable in amount, they constitute valid business expenses under I.R.C. § 23(a)(1)(A) [§ 163(a)(3), 1954 Code], which author-

izes the deduction from gross income of "ordinary and necessary expenses" paid "in carrying on any trade or business." See *Welch* v. *Helvering*, 290 U.S. 111, 54 S. Ct. 8, 78 L. Ed. 212; *Deputy* v. *DuPont*, 308 U.S. 488, 60 S. Ct. 363, 84 L. Ed. 416.

Underlying reality, however, contradicts this appearance of a complete assignment. "Title" to the patent and land may legally reside in the plaintiff's wife, practically and actually, as the district court concluded, control rests with the husband as effectively as if he had never made the gift of the patent to his wife or given her the money with which to buy the property. Assignment and gift cannot be divorced for tax purposes from their accompanying agreements whereby the husband retained dominion. And in fact plaintiff never intended that it should be; he admitted the impossibility of conducting the business without this basic patent or of finding a comparable factory site in Connecticut. His wife was neither equipped nor evinced any desire to exercise or transfer any rights to the use of either of the properties; in the case of the patent at least, it is clear that she had no legal right to do so, save in the unlikely event of the husband's default. The sole practical effect of these transactions, therefore, was to create a right to income in the wife, while leaving untouched in all practical reality the husband-donor's effective dominion and control over the properties in question. It is not without significance on this point that the arrangement made was actually disadvantageous to the business. For it passed over the reduction of land charges which the taxpayer might have made by taking up his option to purchase in order to create the income right in the donor's wife, and that, too, at a greater capital cost. For the statutory purposes, the mere creation of a legal obligation to pay is not controlling. *Interstate Transit Lines* v. *C. I. R.*, 8 Cir., 130 F.2d 136, affirmed 319 U.S. 590, 63 S. Ct. 1279, 87 L. Ed. 1607.

In this respect, then, the case before us does not involve the definite problem presented by the completed assignment of a created product which divided our court and the Fourth Circuit, both inter- and extra-murally, in the two cases of *Wodehouse* v. *C. I. R.*, 2 Cir., 177 F.2d 881, Id., 4 Cir., 178 F.2d 987. Gift and retained control must be regarded as inseparable parts of a single transaction, especially since it was only in their sum total that they had any reality in regard to the conduct of plaintiff's business. To isolate them, as would be necessary to bring them within the rationale of our own majority ruling in *Wodehouse* v. *C. I. R.*, *supra*, is to hide business reality behind paper pretense.

For the question here is as to the tax consequences of a formal gift of certain income-producing properties by the husband to his wife coupled with the informal retention of administrative control—the transfer, in effect, of the right to receive income and the retention of those complex of "use rights" which are usually compressed in the term "ownership." In the context of I.R.C. § 23(a)(1)(A), the question is a rather new one; under I.R.C. § 22(a) [§ 61(a), 1954 Code], where it arises in the definition of gross income problems, it is not. And we think the line drawn in the precedents under the latter section is the same as that in the field of deductibility of business expenses. Plaintiff here, for example, accepts as his own the income he has received on the patent equivalent to the royalties he is paying his wife, but then seeks to deduct it as a business expense; in effect this is not different from claiming that the gift itself made the original income hers in the first place.

We think, therefore, that the principles governing the intermarital transfer of income enunciated in *Helvering* v. *Clifford*, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788, and re-enforced by later cases, are also decisive here. In the case at bar, plaintiff assigned the "legal title" to the patent and provided for his wife's assumption of the "legal title" to the land; but he retained, by formal agreement in the first case, by informal arrangement in the second, the administrative control of these properties. His wife had the right to income, but he had a right to the use of the patent and land. *Henson* v. *C.I.R.*, 5 Cir., 174 F.2d 846, is thus distinguishable. The *Clifford* rule is clear, that this direct control, when fused with the indirect control which we must imply from a formal but unsubstantial assignment within the closed family group displaying no obvious business purpose, renders the assignment ineffective for federal tax purposes. The same result should obtain whether the question arises under § 22(a) or § 23(a)(1)(A) of the Internal Revenue Code.

Plaintiff relies heavily on *Skemp* v. *C. I. R.*, 7 Cir., 168 F.2d 598, and *Brown* v. *C. I. R.*, 3 Cir., 180 F.2d 926, certiorari denied *C. I. R.* v. *Brown*, 340 U.S. 814, 71 S. Ct. 42, 95 L. Ed. 598. These cases, which are criticized in reasoned discussions in 51 *Col. L. Rev.* 247 and 59 *Yale L.J.* 1529, may be thought to go to the verge of the law in support of what are essentially intrafamily transfers. But both, being to trustees, were sufficiently outright, to be distinguishable from our present case Both involved claimed deductions under I.R.C. § 23(a)(1)(A). In the first, a plaintiff-physician had deeded the building in which he had his office in irrevocable trust for twenty years or until the prior deaths of both himself and his wife, with their children as beneficiaries. He then leased the building back for ten years. In the second, there were two trusts, also irrevocable, terminating on the majority of the beneficiaries who were children of the settlor, coupled with an immediate leaseback of the corpus properties. In upholding the deductions, both courts expressly emphasized the independence of the trustees. It is probable that a like result would probably have obtained had the question been one of gross income under I.R.C. § 22(a). For three factors determine attributability of income to the settlor of a family trust. Whether these are conjunctive tests, see *Helvering* v. *Clifford*, *supra*, 309 U.S. at page 335, 60 S. Ct. 554, or alternative, under the new *Clifford* regulations, U.S. Treas. Reg. No. 118, § 39.22(a)-21; *Kay* v. *C. I. R.*, 3 Cir., 178 F.2d 772, it seems likely that in both the cases relied on, income would have been attributable to the trusts and thus to the beneficiaries, rather than the settlors. For (1) the settlors retained no reversionary interests; (2) they retained no dispositive power over either corpus or income;[1] and (3) administrative control was not exercisable primarily for the benefit of the settlors.[2] See Alexandre, "Case Method Restatement of the New Clifford Regulations," 3 *Tax L. Rev.* 189.

The Supreme Court has long emphasized the test of retention of practical ownership in passing on the tax consequences of intra-family assignment. Soll, "Intra-Family Assignments: Attribution and Realization of Income, 6 *Tax L. Rev.* 435. In the recent case of *C. I. R.* v. *Sunnen*, 333 U.S. 591, 68 S. Ct. 715, 92 L. Ed. 898, involving the assignment by the inventor-husband of patent licensing contracts to

---

[1] In the *Skemp* case, 7 Cir, 168 F.2d 598, 599, "the taxpayer . . . did reserve the right to rent all or a part of the building 'at a rental to be determined by the trustee' "; but this does not constitute "beneficial enjoyment" of the property in the *Clifford* sense. Moreover, both leases back were for a term and were not coextensive with the life of the trust.

[2] Here the factor of independent trusteeship is crucial. And it is in this respect that the instant case differs on its facts from the *Skemp* and *Brown* results

his wife, the court said, "The crucial question remains whether the assignor retains sufficient power and control over the assigned property or over receipt of the income to make it reasonable to treat him as the recipient of the income for tax purposes," 333 U.S. at page 604, 68 S. Ct. at page 725, and went on to note that "The taxpayer's controlling position in the corporation also permitted him to regulate the amount of royalties payable to his wife." 333 U.S. at page 609, 68 S. Ct. at page 725. In essence the assignment in the present case was effective only to the extent of transferring the single right to receive income. It is now too late to question the well-established proposition that mere assignment of such a right will not suffice to insulate the grantor from tax liability under § 22(a), and we think like tax results must obtain under § 23(a)(1)(A). See *Lucas* v. *Earl*, 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731; *Helvering* v. *Horst*, 311 U.S. 112, 61 S. Ct. 144, 85 L. Ed. 75; *Helvering* v. *Eubank*, 311 U.S. 122, 61 S. Ct. 149, 85 L. Ed. 81. The recent case of *C. I. R.* v. *Culbertson*, 337 U.S. 733, 69 S. Ct. 1210, 93 L. Ed. 1659, has established the test in the family-partnership field, whether or not there existed as part of the arrangement a "bona fide intent" to have the donee exercise a real part in management, thus giving a final blessing to the doctrine that "true ownership" is decisive in matters of federal taxation. See also *C. I. R.* v. *Tower*, 327 U.S. 280, 66 S. Ct. 532, 90 L. Ed. 670, 164 A.L.R. 1135; *Harrison* v. *Schaffner*, 312 U.S. 579, 61 S. Ct. 759, 85 L. Ed. 1055; *Ingle Coal Corp.* v. *C. I. R.*, 7 Cir., 174 F.2d 569.

Since here we find no evidence of a potential exercise of "control and management" on the part of the donee, only of "passive acquiescence to the will of the donor," *C. I. R.* v. *Culbertson*, *supra*, 337 U.S. at pages 747, 748, 69 S. Ct. at page 1217, since the transaction is in all practical respects a "mere paper reallocation of income among the family members," *C. I. R.* v. *Tower*, *supra*, 327 U.S. at page 292, 66 S. Ct. at page 538, and since the husband has remained the actual enjoyer and owner of the property, payments to the wife do not constitute valid business deductions within the statute. See *Johnson* v. *C. I. R.*, 2 Cir., 86 F.2d 710; *W. H. Armston Co.* v. *C. I. R.*, 5 Cir., 188 F.2d 531.

Affirmed.

CHASE, Circuit Judge (*dissenting*).

Perhaps it would be desirable to protect the revenue by amending Sec. 23(a)(1)(A) to exclude from the business expense deductions now allowed those which become necessary only because of intrafamily gifts of property used, or to be used, in the business. But that is a matter to be determined by Congress and, until it acts, I think courts are bound to give effect taxwise to gifts which are fully effective otherwise.

There is, I think, some distinction between the disallowance of the royalty and the disallowance of the rent deductions. It is that the transfer of the patent by gift to the wife was a transfer of needed business property already owned by the taxpayer which was intended to, and did, make it necessary to pay her the royalties. The gift of the money, however, which she used together with some of her own to buy the building never owned by the taxpayer was not shown to have been of money which had any connection with the business at all and the net result from the standpoint of the taxpayer and his business was merely a change in landlord. However, as I view this case, it is not necessary to rely upon this distinction.

In respect to the claimed deductions, the decisive factor as the statute is now, is whether the rent and royalty payments were

> required to be made as a condition to the continued use or possession, for purposes of the trade or business, of property to which the taxpayer has not taken or is not taking title or in which he had no equity.

Sec. 23(a)(1)(A). The findings, based on evidence adequately supporting them, show that everything was done to transfer the legal and equitable titles both to the patent and to the building absolutely to the wife, and the ownership she thereby acquired gave her the right to whatever she could get by way of royalties and rents which were, of course, taxable to her as income. And, as Sec. 23(a)(1)(A) is now so broad that no exception is made because of the way in which business expenses become necessary, i. e., by gift or otherwise, the reasonable royalties and rents the husband paid her were, I think, well within the scope of the statute, being "required" by the license and lease arrangements, and therefore deductible. *Skemp v. Commissioner*, 7 Cir., 168 F.2d 598; *Brown* v. *Commissioner*, 3 Cir., 180 F.2d 926, certiorari denied, 340 U.S. 814, 71 S. Ct. 42, 95 L. Ed. 598. See also *Henson* v. *Commissioner*, 5 Cir., 174 F.2d 846. The fact that in the *Skemp* and *Brown* cases the transfers were to independent trustees for the benefit of family members is a distinction without a difference since that bore only on the completeness of the gifts and reasonableness of the royalties and rentals paid, both here shown and found. *W. H. Armston Co.* v. *Commissioner*, 5 Cir., 188 F.2d 531, is distinguishable as an instance of a disguised transfer of dividends to a large stockholder of the corporation.

The cases dealing with problems arising under Sec. 22(a), I.R.C. as to the identity of the taxpayer liable for taxes payable by some one, on which my brothers so much rely, help little, if any, in determining what deductions an identified taxpayer may take under Sec. 23(a)(1)(A) in computing his net income. Assuming, arguendo, that these cases are relevant,[1] factually they are inapplicable. The only basis pointed out by the majority for applying these cases to the facts before us is that the license of the patent and the lease of the buildings given to the taxpayer left "untouched in all practical reality the husband-donor's effective dominion and control over the properties in question." But whatever control the taxpayer received was the control of a licensee and lessee and was conditioned upon making the payments here claimed to be deductible. It would seem erroneous, therefore, to deny the claimed deduction on this basis.

One other point warrants brief mention. My brothers apparently think that the taxpayer is no longer entitled to any rent deduction because, presumably, he could have used the money he gave his wife to buy the building himself and then he would have had no rent to pay. If he had done so, no doubt he would have been allowed as deductions the maintenance costs, taxes, etc., which must have been included in the rent he paid his wife to make it reasonable over all but the effect of this decision may deprive him of even them. I cannot help but think that my

[1] The only issue to which these cases could be relevant is whether or not the taxpayer was "required" to pay the royalties and rents as a condition to using the property since that is the test set forth in the statute In order to be relevant to this issue, and to hold as the majority does, it would seem that one must accept the premise that a donor who retains sufficient control over property transferred by him so as to make any income from that property includible in the donor's gross income under Sec. 22(a), is not, as a matter of law, "required" to pay the donee for its use even though he has entered into a firm, and legally enforceable, obligation so to do.

brothers have mistakenly applied the business purpose rule of cases like *Gregory* v. *Helvering*, 293 U.S. 465, 55 S. Ct. 266, 79 L. Ed. 596, to a situation where what the taxpayer did was merely to use permissible business judgment as to whether he would increase his business investment or continue to pay reasonable rent.

I would reverse and remand for a judgment for the appellant.

Note

With this case, the student should compare *Dorzback* v. *Collison*, 195 F.2d 69 (3d Cir. 1952). See also *Preston* v. *Commissioner*, 132 F.2d 763 (2d Cir. 1942), and *Commissioner* v. *Park*, 113 F.2d 352 (3d Cir. 1940), allowing taxpayers to deduct interest paid on their own bonds which had been transferred by gift, directly or in trust, to members of their families. For an extensive review of the cases, see *Woodward* v. *U. S.*, 106 F. Supp. 14 (N.D. Ia. 1952).

I.T. 3812

Bureau of Internal Revenue, 1946
46–2 C.B. 29

Advice is requested whether, for Federal income tax purposes, the value of meals and lodging furnished by a father to his unemancipated minor child is includible in the gross income of the child and deductible as wages by the father where the employer-employee relationship exists between them.

It is pointed out that in many instances wages paid to minor children amount to less than $500, but if the value of meals and lodging which is furnished by the father to his child constitutes additional wages, the gross income of the child would frequently exceed $500. In such cases, the child would be required to file an income tax return, and the father would lose the surtax exemption of $500 on account of the child.*

In I.T. 3767 (C.B. 1945, 101) it was held that reasonable wages paid by a father to his unemancipated minor child for personal services actually rendered as a bona fide employee in the conduct of a trade or business, or in the production of income, are deductible as ordinary and necessary expenses, for Federal income tax purposes, for taxable years beginning after December 31, 1943. However, in order to obtain such a deduction, the father must establish that a bona fide employer-employee relationship exists between him and the child. In determining whether there is in fact such a relationship, consideration must be given to whether the father is dealing with his minor child, for the purpose of employment, as he would deal with a stranger under the same circumstances. Thus, there should be a satisfactory showing by the father that the usual conditions of employment, such as duties, hours of work, amount of wages, and time of payment of wages, had been agreed upon to the same extent as they would have been had the father been engaging the services of a stranger. If wages are paid pursuant to an arrangement in the guise of an employer-employee relationship, entered into either before or

* A dependent may now receive up to $600 of gross income, and the dependency exemption, available against both normal tax and surtax, is also now $600. Section 151 (e) (1) (A). Moreover, the 1954 Code removes the gross income limitation for children of the taxpayer who are under the age of 19 or students, § 151 (e) (1) (B), but the taxpayer must still show that he furnished over half the dependent's support. [Ed.]

after the services are performed, a claimed deduction for wages paid will not be allowed.

Section 24(a)(1) [see § 262 of the 1954 Code] provides that in computing net income no deduction shall in any case be allowed in respect of personal, living, or family expenses, except extraordinary medical expenses which are deductible under § 23(x) [§ 213, '54 Code]. A father is legally liable for the support and maintenance of his minor children, and the cost of meals and lodging which he furnishes them constitutes a personal expense.

It is held that, for Federal income tax purposes, the value of meals and lodging furnished by a father to his unemancipated minor child is not includible in the gross income of the child and is not deductible as wages in computing the net income of the father, even though an employer-employee relationship exists between them. If the father takes the child's earnings and utilizes them for his own purposes, or if the father requires the child to purchase his own clothing or other necessities which the father is obligated to furnish, the deduction of the child's earnings as a business expense should be disallowed to that extent.

McWILLIAMS v. COMMISSIONER

Supreme Court of the U. S., 1947
331 U.S. 694

MR. CHIEF JUSTICE delivered the opinion of the Court.

The facts of these cases are not in dispute. John P. McWilliams, petitioner in No. 945, had for a number of years managed the large independent estate of his wife, petitioner in No. 947, as well as his own. On several occasions in 1940 and 1941 he ordered his broker to sell certain stock for the account of one of the two, and to buy the same number of shares of the same stock for the other, at as nearly the same price as possible. He told the broker that his purpose was to establish tax losses. On each occasion the sale and purchase were promptly negotiated through the Stock Exchange, and the identity of the persons buying from the selling spouse and of the persons selling to the buying spouse was never known. Invariably, however, the buying spouse received stock certificates different from those which the other had sold. Petitioners filed separate income tax returns for these years, and claimed the losses which he or she sustained on the sales as deductions from gross income.

The Commissioner disallowed these deductions on the authority of § 24(b)* of the Internal Revenue Code, . . . which prohibits deductions for losses from "sales or exchanges of property, directly or indirectly . . . between members of a family," and between certain other closely related individuals and corporations.

On the taxpayers' applications to the Tax Court, it held § 24(b) inapplicable, following its own decision in *Ickelheimer* v. *Commissioner*,[1] and expunged the Commissioner's deficiency assessments. The Circuit Court of Appeals reversed the Tax Court and we granted certiorari because of a conflict between circuits and the importance of the question involved.

Petitioners contend that Congress could not have intended to disallow losses

* §§ 267(a)(1) and 267 (b)(1) of the 1954 Code. [Ed.]

[1] 45 B.T.A. 478, affirmed, 2 Cir., 132 F.2d 660, 145 A.L.R. 556.

on transactions like those described above, which, having been made through a public market, were undoubtedly bona fide sales, both in the sense that title to property was actually transferred, and also in the sense that a fair consideration was paid in exchange. They contend that the disallowance of such losses would amount, pro tanto, to treating husband and wife as a single individual for tax purposes.

In support of this contention, they call our attention to the pre-1934 rule, which applied to all sales regardless of the relationship of seller and buyer, and made the deductibility of the resultant loss turn on the "good faith" of the sale, *i.e.*, whether the seller actually parted with title and control. They point out that in the case of the usual intra-family sale, the evidence material to this issue was peculiarly within the knowledge and even the control of the taxpayer and those amenable to his wishes, and inaccessible to the Government. They maintain that the only purpose of the provisions of the 1934 and 1937 Revenue Acts—the forerunners of § 24(b)—was to overcome these evidentiary difficulties by disallowing losses on such sales irrespective of good faith. It seems to be petitioners' belief that the evidentiary difficulties so contemplated were only those relating to proof of the parties' observance of the formalities of a sale and of the fairness of the price, and consequently that the legislative remedy applied only to sales made immediately from one member of a family to another, or mediately through a controlled intermediary.

We are not persuaded that Congress had so limited an appreciation of this type of tax avoidance problem. Even assuming that the problem was thought to arise solely out of the taxpayer's inherent advantage in a contest concerning the good or bad faith of an intra-family sale, deception could obviously be practiced by a buying spouse's agreement or tacit readiness to hold the property sold at the disposal of a selling spouse, rather more easily than by a pretense of a sale where none actually occurred, or by an unfair price. The difficulty of determining the finality of an intra-family transfer was one with which the courts wrestled under the pre-1934 law, and which Congress undoubtedly meant to overcome by enacting the provisions of § 24(b).

It is clear, however, that this difficulty is one which arises out of the close relationship of the parties, and would be met whenever, by prearrangement, one spouse sells and another buys the same property at a common price regardless of the mechanics of the transaction. Indeed, if the property is fungible, the possibility that a sale and purchase may be rendered nugatory by the buying spouse's agreement to hold for the benefit of the selling spouse, and the difficulty of proving that fact against the taxpayer, are equally great when the units of the property which the one buys are not the identical units which the other sells.

Securities transactions have been the most common vehicle for the creation of intra-family losses. Even if we should accept petitioners' premise that the only purpose of § 24(b) was to meet an evidentiary problem, we could agree that Congress did not mean to reach the transactions in this case only if we thought it completely indifferent to the effectuality of its solution.

Moreover, we think the evidentiary problem was not the only one which Congress intended to meet. Section 24(b) states an absolute prohibition—not a presumption—against the allowance of losses on any sales between the members of certain designated groups. The one common characteristic of these groups is that

their members, although distinct legal entities, generally have a near-identity of economic interests. It is a fair inference that even legally genuine intra-group transfers were not thought to result, usually, in economically genuine realizations of loss, and accordingly that Congress did not deem them to be appropriate occasions for the allowance of deductions.

The pertinent legislative history lends support to this inference. The Congressional Committees, in reporting the provisions enacted in 1934, merely stated that "the practice of creating losses through transactions between members of a family and close corporations has been frequently utilized for avoiding the income tax," and that these provisions were proposed to "deny losses to be taken in the case of [such] sales" and "to close this loophole of tax avoidance." Similar language was used in reporting the 1937 provisions. Chairman Doughton of the Ways and Means Committee, in explaining the 1937 provisions to the House, spoke of "the artificial taking and establishment of losses where property was shuffled back and forth between various legal entities owned by the same persons or person," and stated that "these transactions seem to occur at moments remarkably opportune to the real party in interest in reducing his tax liability but, at the same time allowing him to keep substantial control of the assets being traded or exchanged."

We conclude that the purpose of § 24(b) was to put an end to the right of taxpayers to choose, by intra-family transfers and other designated devices, their own time for realizing tax losses on investments which, for most practical purposes, are continued uninterrupted.

We are clear as to this purpose, too, that its effectuation obviously had to be made independent of the manner in which an intra-group transfer was accomplished. Congress, with such purpose in mind, could not have intended to include within the scope of § 24(b) only simple transfers made directly or through a dummy, or to exclude transfers of securities effected through the medium of the Stock Exchange, unless it wanted to leave a loophole almost as large as the one it had set out to close.

Petitioners suggest that Congress, if it truly intended to disallow losses on intra-family transactions through the market, would probably have done so by an amendment to the wash sales provisions,† making them applicable where the seller and buyer were members of the same family, as well as where they were one and the same individual. This extension of the wash sales provisions, however, would bar only one particular means of accomplishing the evil at which § 24(b) was aimed, and the necessity for a comprehensive remedy would have remained.

Nor can we agree that Congress' omission from § 24(b) of any prescribed time interval, comparable in function to that in the wash sales provisions, indicates that § 24(b) was not intended to apply to intra-family transfers through the Exchange. Petitioners' argument is predicated on the difficulty which courts may have in determining whether the elapse of certain periods of time between one spouse's sale and the other's purchase of like securities on the Exchange is of great enough importance in itself to break the continuity of the investment and make § 24(b) inapplicable.

Precisely the same difficulty may arise, however, in the case of an intra-family transfer through an individual intermediary, who, by pre-arrangement, buys from

† § 1091 of the 1954 Code, which re-enacts §§ 118 and 113(a)(10) of the 1939 Code. [Ed.]

one spouse at the market price and a short time later sells the identical certificates to the other at the price prevailing at the time of sale. The omission of a prescribed time interval negates the applicability of § 24(b) to the former type of transfer no more than it does to the latter. But if we should hold that it negated both, we would have converted the section into a mere trap for the unwary.[2]

Petitioners also urge that, whatever may have been Congress' intent, its designation in § 24(b) of sales "between" members of a family is not adequate to comprehend the transactions in this case, which consisted only of a sale of stock by one of the petitioners to an unknown stranger, and the purchase of different certificates of stock by the other petitioner, presumably from another stranger.

We can understand how this phraseology, if construed literally and out of context, might be thought to mean only direct intra-family transfers. But petitioners concede that the express statutory reference to sales made "directly or indirectly" precludes that construction. Moreover, we can discover in this language no implication whatosever that an indirect intra-family sale of fungibles is outside the statute unless the units sold by one spouse and those bought by the other are identical. Indeed, if we accepted petitioners' construction of the statute, we think we would be reading into it a crippling exception which is not there....

Affirmed.

MR. JUSTICE BURTON took no part in the consideration or decision of these cases.

Note

1. Does the buying spouse get a deduction when he or she sells to a third party? See § 267(d), which is new in the 1954 Code, *cf.* Note 2 of *McWilliams* case.

2. May one spouse sell securities to the other at cost in order to allow the transferee to take the gain or loss on a later sale to an outsider?

3. Section 267 disallows losses; it does not exempt gain. Suppose *A* buys a vacant city lot for $5000 and during a boom buys an identical adjacent lot for $15,000. Later he sells the lots to his wife for a price of $10,000 each, the market value at that time. For tax purposes, does he break even or have a gain of $5000? See *Morris Investment Co.* v. *Commissioner*, 156 F.2d 748 (3d Cir. 1946).

4. Section 267 is not exhaustive; loss may be disallowed if the transaction is devoid of economic reality even though the vendee is not in the prohibited group. *Crown Cork International Corp.* v. *Commissioner*, 4 T.C. 19 (1944), aff'd. *per curiam*, 149 F.2d 968 (3d Cir. 1945); *cf. Higgins* v. *Smith*, 308 U.S. 473 (1940); *DuPont* v. *Commissioner*, 118 F.2d 544 (3d Cir. 1941).

Section D. Income-Splitting Among Corporations

***Note:* Section 45 of the 1939 Code, authorizing the government to allocate income, deductions, etc. among related taxpayers to**

[2] We have noted petitioners' suggestion that a taxpayer is assured, under the wash sales provisions, of the right to deduct the loss incurred on a sale of securities, even though he himself buys similar securities thirty-one days later; and that he should certainly not be precluded by § 24 (b) from claiming a similar loss if the taxpayer's spouse, instead of the taxpayer, makes the purchase under the same circumstances We do not feel impelled to comment on these propositions, however, in a case in which the sale and purchase were practically simultaneous and the net considerations received by one spouse and that paid by the other differed only in the amount of brokers' commissions and excise taxes.

reflect income clearly, is re-enacted by § 482 of the 1954 Code.

Sections 129 and 15(c) of the 1939 Code, relating to corporate acquisitions or transfers to avoid taxes, are carried over in principle, with some modifications, by §§ 269 and 1551 of the 1954 Code.

See Regs. 118, Secs. 39.45-1, 39.15-2, and 39.129-1-4.

Since corporate income tax rates are not as steeply progressive as the individual income tax rates, there is less to be gained by the splitting of income among affiliated corporations. For 1954, the corporation must pay a normal tax of 30 per cent and, on its income in excess of $25,000, a surtax of 22 per cent. Sections 11(b) and 11(c) (The normal tax and surtax are imposed on the same base, except that "partially tax-exempt interest" is subject to the surtax but not to the normal tax.) If business income of $50,000 can be divided equally between two corporations, the additional surtax exemption of $25,000 will save the group $5,500 in taxes, *i.e.*, 22 per cent of $25,000. If a business income of $1,000,000 is similarly divided between two corporations, precisely the same saving, $5,500, will result. Splitting $1,000,000 of income equally among forty corporations, however, would result in a saving of $214,500, since 40 surtax exemptions, instead of only one, would be allowed.

Corporate income can often be split by having separate corporations carry on different branches of an enterprise: a factory may be owned by a real estate corporation, which leases it to a second corporation engaged in manufacturing; the latter may buy its supplies from a third corporation and in turn sell its manufactured goods to one or more sales corporations, all corporations being under common control. A combination of corporate and individual or partnership activity is also possible. Within limits, a division of income by such means is possible. The student should examine § 482, authorizing the Commissioner "to distribute, apportion, or allocate gross income, deductions, credits or allowances" among any two or more taxable entities that are under common ownership or control so as "clearly to reflect the income" of such entities. Section 482 has been the Commissioner's principal weapon where transactions between two related business units are manipulated for tax purposes, *e.g.*, sales at artificial prices to increase the income or losses of one of the entities in an arbitrary fashion.

There are two other statutory provisions that the Commissioner may employ to combat income-splitting and similar practices among corporations:

(a) Section 1551, enacted in 1951 and still relatively untested. Note the conditions that will bring § 1551 into play. It is not applicable if money, rather than property, is transferred. When applicable, § 1551 denies the $25,000 surtax exemption to the transferee corporation. How effective is the limitation likely to be? Emmanuel, "Section 15(c). New Teeth for the Reluctant Dragon?" 8 *Tax L. Rev.* 457 (1953).

(b) Section 269 is another safeguard against tax-motivated corporate transactions See *infra*, Chapter 6, Section B.

While primary attention is now being directed to income-splitting by the use of subsidiary and affiliated corporations, the student should recognize that sometimes an enterprise that is carried on through a complex of separate corporations may prefer to disregard all intra-family transactions and report its income on a consolidated basis. A simple illustration may make the problem clear. Assume

Corporation *A* owns both *B* and *C*, that *B* manufactures widgets and sells them at current wholesale prices to *C*, which sells them to the public. *B* and *C* both distribute part of their profits as dividends to *A*. In any given year, *B* may be operating at a profit while *C* is operating at a loss, and some or all of the dividends paid by *B* to *A* may represent intra-company, rather than "real," profits.*

By filing a consolidated return,† as authorized by § 1501, the corporate group will be taxed only on the profits represented by its transactions with the outside world. In effect, *C*'s loss is offset against *B*'s gain, and the dividends paid to *A* by *B* and *C* are disregarded. The group is treated as a single entity, so that only one surtax exemption is allowed; moreover, the surtax rate is 2 per cent higher (for 1954, 24 per cent instead of the usual 22 per cent) for the privilege of filing the consolidated return. Once a consolidated return has been filed, the group must continue to report on a consolidated basis, unless (1) a new corporation (other than one organized or created by a member of the affiliated group) becomes a member of the group, (2) the Commissioner consents to the use of separate returns, or (3) the statute or regulations are amended so as to make consolidated returns less advantageous to affiliated groups as a class. See Hellerstein, "Consolidated Federal Income Tax Returns," 5 *Amer. U. Tax Inst. Lectures* 415 (1953).

ADVANCE MACHINERY EXCHANGE, INC. v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1952
196 F.2d 1006

Before CHASE, BIGGS and CLARK, Circuit Judges.

CHASE, Circuit Judge.

The Tax Court affirmed a deficiency assessment in the declared value excess profits taxes and excess profits taxes of the petitioner for the year 1942 on the ground that amounts of income reported by other taxpayers were properly allocable to the petitioner under §§ 45 and 22(a), I.R.C. . . .

*By reason of the dividends-received deduction of § 243(a), *A* would ordinarily be taxed on only 15 per cent of the dividends received from *B*, but even this amount may exceed the "real" profits of the whole group

† Consolidated returns can be filed only if all included corporations consent Does the management of a corporation that can bring a tax loss to the consolidated return have a fiduciary obligation to its minority stockholders or creditors to demand a *quid pro quo*? Mr Justice Jackson had this to say (in a dissenting opinion) of an action brought by a subsidiary corporation's receiver against the parent corporation for unjust enrichment in "appropriating" the subsidiary's tax loss for use on a consolidated return, with a savings to the parent of $17,000,000 in taxes "Each of these corporations had something to contribute to a tax-saving plan. . . It was as if a treasure of seventeen million dollars were offered by the Government to whomever might have two keys that would unlock it. Each of these parties had but one key, and how can it be said that the holder of the other key had nothing worth bargaining for? The management, probably without improper intent, failed to claim for the plaintiff the advantages of its position, turning them over without compensation for the advantage and profit of another affiliated corporation. On the face of it, the conclusion would seem to be warranted that the plaintiff is entitled to what fair arm's-length bargaining would probably have yielded." (Western Pacific R. R Corp. v. Western Pacific R R Co, 345 U.S. 247, 276-7 (1953)) The Court of Appeals had the last word, however, and the petition was dismissed "How could this court or the district court determine 'what fair arm's-length bargaining would probably have yielded.' Bargaining presupposes negotiations to determine the maximum amount a buyer is willing to pay and the minimum amount a seller is willing to accept Such activity is a matter of business administration, and is not a judicial function" (Western Pacific R. R Corp v Western Pacific R R. Co, 206 F.2d, 495, 499-500 (9th Cir 1953).)

Whether the Tax Court was correct in allocating income to the petitioner under § 45, I.R.C. is essentially one of fact and the decision below must be affirmed if supported by substantial evidence. . . . Section 45 [§ 482, 1954 Code] provides.

In any case of two or more organizations, trades, or businesses (whether or not incorporated, whether or not organized in the United States, and whether or not affiliated) owned or controlled directly or indirectly by the same interests, the Commissioner is authorized to distribute, apportion, or allocate gross income . . . between or among such organizations, trades, or businesses, if he determines that such distribution, apportionment, or allocation is necessary in order to prevent evasion of taxes or clearly to reflect the income of any of such organizations, trades, or businesses.

The Tax Court found that the petitioner was organized in 1928 by one Joseph Blachman to deal in used machinery. Subsequently, the Blachman Machinery Company, Inc. and the Awon Holding Corporation were formed, and, in 1939, Joseph Blachman proceeded to engage in this business individually. Joseph Blachman and his son, Seymour Blachman, were officers and directors of all of these corporations, did most of the buying and selling for each of the business enterprises, and they or their immediate families owned all of the stock in them. Each of the enterprises was conducted from the same office with the same employees, using the same equipment, and to a large extent supplying the same customers. The petitioner, however, carried on by far the largest part of this business. There was evidence that large numbers of purchase invoices had been altered to attribute them to one or another of these taxpayers and that these changes were made without any set policy to indicate that there was any motive in doing so other than to divert income from the petitioner. Typical of this shifting of income under the arrangement used was the fact that, in the last half of 1942, when Blachman Machinery Company, Inc. was inactive, and listed no employees in its Social Security returns for that period, the sales invoices indicated that it made 47 separate sales. Such evidence gave the Tax Court an adequate basis on which to find that:

All four businesses were controlled by J. Blachman and Seymour Blachman, father and son. The two operated the business and kept the books and records of all four businesses in such a way that the net profit of each could be manipulated as they saw fit, and, in general, so conducted the business that it is impossible to determine where the activities of one or the other begin and end.

And, in view of the extent to which this was done, to hold that

petitioner had not shown that respondent erred in attributing to it [all] the net income of the three other businesses, ...

The petitioner argues that if the formal tax entities are not to be charged with the income they each received, then, any attribution of income to another taxpayer under § 45 must be to Joseph and Seymour Blachman as individuals, and not to the petitioner, since these individuals controlled all four enterprises. However, as the Tax Court found,

The evidence is clear that petitioner served as the connecting link for the (business) conducted by these four entities and the outside customers.

This conclusion is supported by substantial evidence. The petitioner's contention, therefore, indicates a misconception of the purpose served by § 45. It was not these two individuals who, in fact, earned all of the income reported by the four

enterprises any more than that would be true of the income of any closely held corporation. An individual

> is free to adopt such organization for his affairs as he may choose and having elected to do some business as a corporation, he must accept the tax disadvantages. (*Higgins* v. *Smith*, 308 U.S. 473, 477, 60 S. Ct. 355, 358, 84 L. Ed. 406.)

While § 45 permits the Commissioner to reallocate income, it does not permit him to disregard valid tax entities altogether. Here, it was determined that there were four such entities but that only one, in fact, earned the income which was divided among all four and that one was the petitioner. Consequently, it is the taxpayer to whom the income in question was properly allocated.

We need not decide whether what the Commissioner did is sustainable under § 22(a), I.R.C. alone, *cf. Helvering* v. *Horst*, 311 U.S. 112, 61 S. Ct. 144, 85 L. Ed. 75; *Lucas* v. *Earl*, 281 U.S. 111, 50 S. Ct. 241, 74 L. Ed. 731; *Helvering* v. *Clifford*, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788, since we think § 45 is applicable to this situation despite the petitioner's contention that what the Commissioner has done amounts to a consolidation of the income of the various entities as under § 141(d), I.R.C. [§ 1501, 1954 code] in violation of Regulation 118, § 39.45–1(b).[1]

At first blush, this regulation would seem to support the petitioner's position but analysis shows the contrary. The effect of such an interpretation would be to exclude from the applicability of § 45 fact situations like the present one if the separate entities involved were all corporations and the Commissioner had sought to allocate all of the income from each to one of them, since this "would produce a result equivalent to a computation of consolidated net income under § 141." It may, perhaps, be sufficient for the present to point out that what was done is not, strictly, equivalent to a consolidation under § 141 since, under that section, only the income of affiliated corporations may be consolidated while here the income of a sole proprietorship was included. However, we do not rely entirely upon this distinction. Whatever valid interpretation may be given this regulation, the unsoundness of that of the petitioner is illustrated by the fact that it would exclude from the "policing" provisions of § 45 the most flagrant evasion by arbitrary shifting of income. It would let the Commission reallocate the income of these separate entities, to reflect the income of each correctly, if the amount involved, however great, did not equal their total combined income but he could not apply § 45 at all if the taxpayers succeeded in constructing a situation where, in order to prevent tax evasion or properly to reflect income, it were necessary to attribute all of the income of the separate entities to one of them, as was done here. Thus tax evasion could be so complete as to make itself invulnerable, a proposition whose statement discloses its fallacy.

Our opinion in *Asiatic Petroleum Co. (Delaware), Ltd.* v. *Commissioner of I. R.*, 79 F.2d 234, and that of the Third Circuit in *National Securities Corp.* v. *Commissioner of I. R.*, 137 F.2d 600, indicate clearly that the purpose of § 45 is to prevent tax evasion by any arbitrary shifting of gross income among businesses owned or controlled by the same interests. See 8 Merten's, *Law of Federal Tax-*

---

[1] "(Section 45) is not intended . . . to effect in any case such a distribution, apportionment, or allocation of gross income, deductions, credits, or allowances, or any item of gross income, deductions, credits, or allowances, as would produce a result equivalent to a computation of consolidated net income under § 141."

ation, § 46.69. There is no exception, nor any reason for excepting, from this purpose the case where such arbitrary allocation of income is among affiliated corporations who could, under § 141, consolidate their respective incomes. Furthermore, subdivision (1) of § 141 contains this language: "For allocation of income and deductions of related trades or businesses, see section 45." We interpret this subdivision to mean that, although the Commissioner is not free to require affiliated corporations to consolidate their incomes, he may allocate the income among them if they are engaged in "related trades or businesses" and "if it is necessary in order to prevent evasion of taxes or clearly to reflect the income of any such organizations" just as he may do that in respect to other taxpayers and do so to whatever extent that may be necessary to accomplish the purpose of that section....

Affirmed.

COMMISSIONER v. CHELSEA PRODUCTS, INC.

U. S. Court of Appeals, Third Circuit, 1952
197 F.2d 620

Before McLaughlin, Staley and Hastie, Circuit Judges.

Staley, Circuit Judge.

The Commissioner of Internal Revenue has petitioned for a review of two decisions of the Tax Court. The principal issue presented is whether Section 45 of the Internal Revenue Code, . . . authorizes the Commissioner to combine the net income of three corporations with that of taxpayer where all are owned by the same interests. We are in accord with the Tax Court's conclusion that Section 45 was erroneously applied.

Between 1941 and 1944, taxpayer was engaged in the manufacture and sale of fans and blowers under the name of Chelsea Fan & Blower Co., Inc. During this period the sole stockholders, officers, and directors of taxpayer were William J. Lohman, Sr., who held 50% of the common stock outstanding, and his two sons, Eugene W. and William J., Jr., each of whom held 25%.

In 1944 the three Lohmans, after consultations with their attorney, decided to separate taxpayer's manufacturing functions from its sales. The new plan was carried out by forming a sales corporation in each of three states: Missouri, Georgia, and New Jersey. These new corporations bore the respective names Chelsea Fan and Blower Company of Missouri, Chelsea Fan & Blower Company of Georgia, and Chelsea Fan and Blower Co., Inc. Each of the sales companies issued 1200 shares of stock at $1 a share, which was subscribed to in equal amounts by each of the three Lohmans. As in the case of taxpayer, the three Lohmans constituted the Board of Directors of each of the sales companies during the taxable years involved. At the same time, the taxpayer changed its name to Chelsea Products, Incorporated, and thereafter confined its activities principally to manufacturing.

Prior to the creation of the new corporate structure in 1944, taxpayer had sold its products through its officers and through "manufacturer's agents." Taxpayer had entered into contractual arrangements with these agents whereby they were

paid commissions of about 10% on sales. After July 11, 1944, taxpayer no longer employed these manufacturer's agents. On that date the sales companies were designated exclusive agents, each company being assigned a different area of the country, and they in turn proceeded to employ sales agents. The arrangements between taxpayer and the sales companies were formalized by written agreements entered into between taxpayer and each sales company. These agreements, signed by William J. Lohman as president of taxpayer and Eugene W. Lohman as vice president of the sales companies, provide that each sales company is to "employ a sufficient number of salesmen to properly canvass its territory" and is to be charged the list price less 50% and 25%. The former discount was the standard one given by those in the industry to wholesale jobbers and was passed on to the wholesale jobbers who bought the products. The 25% discount, the Tax Court found, includes the 10% commission normally paid to the agent, thus leaving 15% for the operation of the business of the sales companies.

Although the Missouri and Georgia companies had mailing addresses in their respective states of incorporation, neither had an office there. Each of the sales companies maintained its office in New Jersey at 1206 South Grove Street, Irvington—the same address which had been occupied by taxpayer. Each of the companies had separate books and records and separate bank accounts. The records of the sales companies were kept by the same bookkeeper who kept taxpayer's books and were audited by an outside accounting firm.

During the taxable years involved, all the fans and blowers sold by the sales companies were manufactured by taxpayer. A sales agent, upon receiving an order, would send it to Irvington, N. J., to the sales company which employed him. The order was then turned over to taxpayer which shipped the merchandise directly to the customer and invoiced the sales company. The latter, in turn, submitted an invoice to the customer and received payment from him.

The business reasons which prompted the organization of the sales companies are set forth in the record. The attorney whom the Lohmans consulted in 1944 testified that he had advised them that taxpayer's tort liability arising from accidents in the use of the fans could thereby be "minimized." The record also reveals that the Lohmans had intended that the sales companies establish assembly plants in several states in order to reduce freight costs. Further, the Lohmans believed that sales, especially in the South, would be increased if promoted by a local firm.

The Commissioner determined that there was a deficiency of $110.58 in taxpayer's income tax liability and $37,091.85 in its excess profits tax liability for the year 1944. He also determined that there was a deficiency of $165.62 in its income tax liability and $25,519.13 in its excess profits tax liability for the year 1945. In arriving at these deficiencies, the Commissioner allocated the net income of the three sales companies to that of taxpayer. The latter then sought a redetermination before the Tax Court. The Tax Court found that each sales company was a business enterprise separate and distinct from taxpayer and that no part of the income of the sales companies constituted income to it. Moreover, that Court determined that the principal purpose for the organization of the sales companies was to carry on business and not to aid taxpayer in evading or avoiding Federal income or excess profits taxes. The Tax Court, five judges dissenting, held that the Commissioner's action was not authorized.

The Commissioner asserts that he acted within the broad discretionary power conferred upon him by Section 45, which section reads.

> Allocation of income and deductions. In any case of two or more organizations, trades, or businesses . . . owned or controlled directly or indirectly by the same interests, the Commissioner is authorized to distribute, apportion, or allocate *gross income*, deductions, credits, or allowances between or among such organizations, trades, or businesses, if he determines that such distribution, apportionment, or allocation is necessary in order to prevent evasion of taxes or clearly to reflect the income of any of such organizations, trades, or businesses. (Italics supplied.)

Section 45 has been a part of our Revenue Laws since 1928.[1] It is in some sense an offspring of Section 240(f) of the Revenue Act of 1926, which gave the Commissioner the right to consolidate the accounts of business controlled by the same interests where he finds it necessary to make an accurate distribution of profits and deductions. Section 240(f) was a part of the Consolidated Returns section of the 1926 Act. In drafting the new Section 45, important changes were made and, significantly enough, the offspring became a new section, separate and apart from the Consolidated Returns section.

Section 45 grants to the Commissioner power to allocate "gross income, deductions, credits, or allowances." There is no mention of authority to disregard completely the corporate entity by combining the net income of controlled corporations. The plain language of Section 45 must prevail.

The scope and purpose of Section 45 is clearly set forth in the Treasury Regulations. Treasury Regulation 118, § 39.45–1(b) states:

> The purpose of section 45 is to place a controlled taxpayer on a tax parity with an uncontrolled taxpayer, by determining, according to the standard of an uncontrolled taxpayer, the true net income from the property and business of a controlled taxpayer. . . . The standard to be applied in every case is that of an uncontrolled taxpayer dealing at arm's length with another uncontrolled taxpayer. . . . It is not intended (except in the case of the computation of consolidated net income under a consolidated return) to effect in any case such a distribution, apportionment, or allocation of gross income, deductions, credits, or allowances, or any item of gross income deductions, credits, or allowances, as would produce a result equivalent to a computation of consolidated net income under section 141.

The Report of the House Ways and Means Committee states that the evil for which Section 45 was designed was the arbitrary shifting of profits from one corporation to another by such devices as fictitious sales. House Rep. No. 2, 70th Cong., 1st Sess., p. 16.

Both the Treasury Regulation and the Committee Report clearly delineate the scope of Section 45. This section authorizes the Commissioner to scrutinize all transactions between controlled corporations. His object is to arrive at the true net income of each controlled taxpayer and the technique used is the application of the standard of an uncontrolled taxpayer dealing at arm's length with another uncontrolled taxpayer. Whenever the lack of an arm's length relationship produces a different economic result from that which would ensue in the case of two uncontrolled taxpayers dealing at arm's length, the Commissioner is authorized to allocate gross income and deductions.

Section 45, based upon a recognition of the various corporate entities, merely

---

[1] The section has remained unchanged since 1928 except for a minor amendment in 1944. Act of February 25, 1944, c. 63, Title I, § 128(b), 58 Stat. 48.

allows the Commissioner to prevent distortions in income between controlled corporations. In fact, the Treasury Regulation itself states that Section 45 is

> not intended (except in the case of the computation of consolidated net income under a consolidated return) to effect in any case such a distribution, apportionment, or allocation of gross income, deductions . . . as would produce a result equivalent to a computation of consolidated net income under § 141.

The Commissioner, in disregarding the corporate entities of the sales companies and lumping together all net incomes, has proceeded beyond his statutory bounds.[2]

The dissenting judges in the Tax Court were of the opinion that the allocation of net income was a shorthand way of allocating that portion of the gross income of the sales companies which exceeded their deductions. We cannot accept this approach. In fact, this argument points up a second error underlying the manner in which the Commissioner proceeded. The notices of deficiency in the instant cases merely state that given amounts alleged to represent the net income of the sales companies represent net income taxable to taxpayer. The notices contain no indication whatsoever that the Commissioner made his determination under Section 45. Moreover, the petitions and answers in these cases raise no issue with respect to the application of this section. See *Burrell Groves, Inc.*, 16 T.C. 1163 (1951), acq. 51-2 I.R.B. 2; *Palm Beach Aero Corp.*, 17 T.C. 1169.

The deficiency notices were thus deceptive and gave taxpayer no notice that the Commissioner was proceeding under Section 45. Since Section 45 grants the Commissioner discretionary powers the burden falls upon the taxpayer to prove that the Commissioner's determination is arbitrary. *G.U.R. Co.* v. *Commissioner*, 7 Cir., 1941, 117 F.2d 187, 189; *National Securities Corp.* v. *Commissioner*, 3 Cir., 1943, 137 F.2d 600, 602, certiorari denied 1943, 320 U.S. 794, 64 S. Ct. 262,

---

[2] The Court of Appeals for the Second Circuit has recently handed down its decision in Advance Machinery Exchange, Inc. v. Commissioner of Internal Revenue, 2 Cir., 196 F.2d 1006. The taxpayer there was organized by one Blachman to deal in used machinery. Subsequently, two corporations (which we denominate A and B) were formed to engage in the same business and Blachman proceeded to engage in the same business individually. All four businesses were controlled by Blachman and his son. All the entities conducted their businesses at the same office and all used the identical employees and equipment. Each enterprise had many customers in common. In contrast to the instant case, *there was no separation of business functions* as among the four enterprises. The Tax Court's conclusion is well expressed in the following statement in its opinion: "All four businesses were controlled by J. Blachman and Seymour Blachman, father and son The two operated the business and kept the books and records of all four businesses in such a way that the net profit of each could be manipulated as they saw fit, and, in general, so couducted the business that *it is impossible to determine where the activities of one or the other begin and end*" (Italics supplied)

The Commissioner allocated the net income of Corporation A, Corporation B, and Blachman individually to the taxpayer, relying on both § 22(a) and § 45 of the Internal Revenue Code. The Tax Court, 8 T.C M. 84 (1949), held that the Commissioner's determination was proper under the broad scope of § 22(a) but was silent on the applicability of § 45. The Tax Court was clearly of the opinion that the three enterprises other than taxpayer were mere shams The Tax Court concluded with the following words "*In reality, therefore, there is but one taxable entity, the petitioner, and all of the income of the business is attributable to it*" (Italics supplied) The finding is thus in marked contrast with the Tax Court's finding in the case at bar that each of the sales companies was a business enterprise separate from the taxpayer and that the principal purpose for their organization was to carry on business

In affirming the decision of the Tax Court, the Court of Appeals for the Second Circuit relied on § 45 rather than § 22(a). We consider the Court's observation with respect to § 45 to be essentially dicta, for, since the Tax Court had determined that there was but one taxable entity, all the net income was necessarily taxable to taxpayer under § 22(a).

88 L. Ed. 479. This considerable power given the Commissioner certainly carries with it a correlative duty to give the taxpayer fair notice in advance of hearing that the Commissioner has proceeded under Section 45. The taxpayer can hardly shoulder its burden if it does not know the Commissioner has proceeded under Section 45 or if it does not know which transactions or group of transactions the Commissioner has determined to have resulted in distortions of true net income.

The Commissioner asserts that his determination is also warranted by Section 129 [§ 269, 1954 Code], the pertinent portion of which is as follows

Acquisitions made to evade or avoid income or excess profits tax. (a) Disallowance of deduction, credit, or allowance. If (1) any person or persons acquire, on or after October 8, 1940, directly or indirectly, control of a corporation, . . . and the principal purpose for which such acquisition was made is evasion or avoidance of Federal income or excess profits tax by securing the benefit of a deduction, credit, or other allowance which such person or corporation would not otherwise enjoy, then such deduction, credit, or other allowance shall not be allowed. . . . (b) Power of Commissioner to allow deduction, etc., in part. In any case to which subsection (a) is applicable the Commissioner is authorized— (2) to distribute, apportion, or allocate gross income, and distribute, apportion, or allocate the deductions, credits, or allowances the benefit of which was sought to be secured, between or among the corporations, or properties, or parts thereof, involved, ...

The Commissioner relies specifically on Subsection (b)(2) of the Section. Like Section 45, it speaks in terms of allocating "gross income, deductions, credits, or allowances." Hence there is certainly a real doubt as to whether the Commissioner has properly proceeded under this section. We need not decide this point, however, for the Tax Court has found as a fact that the principal purpose of the organization of the sales companies was to carry on business and not to aid in the evasion or avoidance of Federal income or excess profits taxes. We cannot say that this finding of fact is clearly erroneous. See *Chester Distributing Co.* v. *Commissioner*, 3 Cir., 1950, 184 F.2d 514. On the contrary, we think it is supported by substantial evidence.

For the above reasons, the decisions of the Tax Court will be affirmed.

TWIN OAKS CO. v. COMMISSIONER

U. S. Court of Appeals, Ninth Circuit, 1950
183 F.2d 385

Before MATHEWS, BONE and LINDLEY, Circuit Judges.

LINDLEY, Circuit Judge.

This is a petition to review a decision of the United States Tax Court sustaining the assessment of income taxes against the corporate petitioner for the years 1941–44 inclusive.

Prior to January, 1941, the Petitioner had, for many years, been engaged in the purchase and sale of builders' materials. During all this period the business had been managed by Rogers, who, with 473 shares of the corporate stock, was the corporation's principal stockholder, and Scharpf, who held 35.3 shares and whose wife owned the remaining 437.7 shares. In January, 1941, after the corporation had for some time realized unsatisfactory profits, pursuant to a plan suggested by Scharpf and, after some opposition, agreed to by Rogers, the latter and his wife

and Scharpf and his wife executed a partnership agreement whereby the four, as equal partners, were to take over the business of the corporation, purchasing its operating assets and leasing from it the real estate on which the business had been and was then being conducted. The two men were to continue to manage the business; each was to receive an annual salary of $6,600 in addition to one-fourth of the partnership profits, their wives were to furnish lesser services for which they were to receive salaries of $300 per annum each.

Petitioner, in consideration of the assumption by the partnership of the corporation's accounts payable and of the partnership's promissory note in an amount which, added to the liabilities assumed, equalled the book value of the petitioner's assets other than real estate, transferred to the partnership all its assets except the premises on which the business had been and was thereafter to be conducted, which land it leased to the partnership for an annual rental of $3000. Each of the four partners contributed $2000 in additional capital. Petitioner caused its corporate name to be changed from Twin Oaks Builders Supply Company to Twin Oaks Company, and the partnership, after registration with proper public authorities, engaged in business under the name by which petitioner had formerly been known. The corporation and the partnership thereafter maintained different and separate sets of books, records and bank accounts.

In the years 1941–44, petitioner's income, duly reported, included only (1) the rent received from the partnership under the lease, (2) the interest paid by the partnership on its note, and (3) a few petty miscellaneous items. The Commissioner asserted tax deficiencies against the corporation on the theory that the partnership had been created solely as a device improperly to effectuate reallocation of income among family groups to defeat taxes and, hence, that the profits of the partnership, reported in the individual returns filed by Rogers and Scharpf and their wives, were properly taxable to petitioner. A single-judge Tax Court sustained the deficiency assessments, agreeing with the Commissioner that the creation of the partnership and the transfer to it of petitioner's operating assets had been "forms without substance" which were not entitled to recognition, in so far as taxes were concerned.

It is, as the Tax Court observed, well settled that a taxpayer is free to adopt such legal organization for the conduct of his affairs as he may choose; he may convert from the corporate method to the partnership method of doing business and, though his motive in so doing be to reduce taxes, the conversion must be accorded recognition unless it is such a sham, such a change in form only, without substance, as to require that it be disregarded for tax purposes. *Helvering* v. *Clifford*, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788. It seems clear to us, however, that the Tax Court, in its characterization of the change in business structure involved in the instant case as a sham and a mere form without substance, has, in effect denied the taxpayers the legal right to conduct their business affairs through a medium of their own choice.

There can be no doubt that it was the intent of the parties that the partnership should thereafter conduct the supply business which, prior to the formation of the partnership, had been conducted by petitioner; that the partnership was actually formed; that petitioner's stockholders were, as members of the partnership, subjected to unlimited personal liability not only for the old corporate debts but also for any which might grow out of the operation of the business thereafter by the

partnership, in place of the limited liability to which they had previously been subject, and that the profits of the business were not thereafter distributed among the partners in proportion to their respective holdings of stock in the corporate petitioner. These changes, all made without thought of or intent to achieve tax advantages, were, we think, far more than mere changes in form. The Tax Court felt that the fact that profits were distributed in a different manner and in different proportions, but to the same people, indicated that the changes were formal only. The logic of this position escapes us, for it ignores the reality of the conversion from corporate to partnership operation of the business and tends in no way to show that the corporation, rather than the partnership, earned the income.

It seems obvious that if petitioner's affairs had been completely liquidated, the income in question would necessarily have been regarded as earned by the partnership. The mere fact that the parties stopped one step short of liquidation, i.e., kept the corporation alive for the sole purpose of holding title to the real estate, while selling and transferring the operating business itself to the partnership, does not, we believe, detract from the reality or substance of what was done or require that all the income of the business be taxed to petitioner. As a matter of fact, the decision of the Tax Court itself, in such cases as *Seminole Flavor Co.*, 4 T.C. 1215; *Buffalo Meter Co.*, 10 T.C. 83, and *Miles-Conley Co.*, 10 T.C. 754, would seem to impel a decision that the partnership was entitled to full recognition for tax purposes even though the corporation continued to exist and to function in a rather close relationship with it. The Tax Court sought to distinguish these cases by saying that the businesses involved therein were capable of being broken down into distinct divisions, whereas the builders supply business was "unitary in character," but it certainly could be and was easily separated from the real estate and was thereafter conducted solely by the partnership.

We conclude that the Tax Court erred in sustaining the Commissioner's deficiency assessments against petitioner. The decision is reversed.

CHAPTER 5

CAPITAL GAINS AND LOSSES

Section A. Introductory

SELTZER
THE NATURE AND TAX TREATMENT OF CAPITAL GAINS AND LOSSES *

National Bureau of Economic Research (1951), pp. 3-5, 8-12
(Reprinted by Permission)

Capital gains vs. ordinary profits

In both law and common speech, capital gains are generally regarded as the profits realized from increases in the market value of any assets that are not a part of the owner's stock-in-trade or that he does not regularly offer for sale, and capital losses, as the losses realized from declines in the market value of such assets. *Ordinary* profits and losses, in contrast, are realized on the sale of goods and services that *are* a part of the seller's stock-in-trade or that he regularly offers for sale. The profit earned by a manufacturing company through the operation of its plants and machinery may be contrasted with the gain it would make if it sold some of its investment securities for more than they had cost it. The former is an ordinary business profit, the latter a capital gain.

Ordinary profits are commonly the result of buying goods in one market and selling them in another, that is, in a different form, in different quantities, at a different season, or in a different place. The manufacturer earns ordinary profits by converting raw materials and semifinished goods into new forms, which he sells to other manufacturers, wholesalers, retailers, or consumers. The wholesaler buys in large quantities from the manufacturer and relieves the latter of the task of finding and supplying scores of retail outlets. The retailer earns ordinary income by buying his wares from wholesalers, jobbers, and manufacturers, and selling them to his customers in much smaller unit-quantities, together with packaging, and perhaps delivery and credit services. Capital gains or losses, on the other hand, are most commonly the result of changes in prices in the same market. They are realized most characteristically when one investor or speculator sells his holdings to another. The profit made by a real estate company that buys raw acreage, subdivides it into streets and building lots, and sells plots, is regarded as an ordinary business profit; but the gain made by the farmer or long term specu-

* Reviewed by Slitor, 5 *Nat'l Tax J.* 178 (1952). [Ed.]

lator who sells the acreage to the real estate company, or by the factory worker who purchases a single lot and subsequently resells it, is regarded as a capital gain.

The major sources of capital gains and losses are capital assets; that is, property acquired for income-making rather than consumption purposes—corporation securities, real estate, government bonds, and interests in partnerships, leases, and contracts. In 1936, the only year for which the relevant data are available, approximately four-fifths of the aggregate net capital gains reported on federal income tax returns were derived from stocks and bonds. In the broadest sense, personal and other nonbusiness possessions such as jewelry, paintings, and houses may also give rise to capital gains and losses. During World War II and the period immediately following, many persons were able to sell automobiles, houses, cameras, and certain other articles they had previously purchased for their own use at much higher prices than these goods had cost them. The United States recognizes capital gains so derived and taxes them as such, but it does not allow deductions from taxable income for losses sustained on assets not acquired for a 'gainful,' i.e., money-making purpose....

Distinction between capital gains and ordinary income often blurred

While the broad distinction we have made between capital gains and ordinary profits is useful in a general way, it cannot be pressed far for purposes of either economic analysis or law. As we shall find upon further examination, ordinary business profits often contain large amounts of what are essentially capital gains, while large amounts of so-called capital gains are little or no different from ordinary profits, or arise indirectly from the accumulation of ordinary income.

Moreover, although the general distinction offers a rough guide to the legal concept of capital gains and losses, the effective legal definition has varied from time to time in the United States and in other countries. The profits and losses arising from short term transactions in capital assets, for example, have frequently been excluded from the legal category of capital gains and losses. In addition, the dividing line between short and long term transactions has at different times been 24, 18, 12, and 6 months in the United States. In Sweden the dividing line is 10 years for real estate and 5 years for other capital assets. The point at which the owner of any kind of capital assets ceases to be merely an investor and becomes, in the eyes of the law, engaged in buying and selling them (and his capital gains become, for tax purposes, ordinary profits), is by no means always clear and has been the subject of much litigation. What constitutes 'realization' has also been altered by the statutes and courts from time to time. The legal form of the transaction rather than its substance is sometimes decisive. The successive changes in the statutory definition of capital assets in the United States are described briefly at the end of this chapter....

3. ARE CAPITAL GAINS INCOME?

Whether capital gains should be taxed as ordinary income, taxed at lower rates, or excluded from taxable income has been the subject of more or less continuous controversy in the United States.† In favor of taxing capital gains like ordinary in-

† The constitutionality of taxing capital gains was settled, after some uncertainty, in 1921, when the Supreme Court decided Merchants' Loan & Trust Co. v. Smietanka, 255 U. S 509, 520-521 (1921): "It is elaborately argued in this case . . . that the word 'income' as used in the

come it has been argued that they produce an equal increase in an individual's economic power· the ability to command economic resources and direct them into channels of his own choosing. Like ordinary income, realized capital gains may be spent or saved. Used for consumption, they enhance the ability of a man to build or buy a bigger house, to give his family more expensive clothes, food, and amusements, and to provide his children with superior educational opportunities. As savings, capital gains can be converted into bank balances, bonds, stocks, and other titles to wealth in precisely the same manner and degree as wages and salaries, interest, rent, and ordinary profits. Even when capital gains have not yet been 'realized' by sale—while they are still in the form of paper profits, so-called—they constitute additions to the economic resources of those who enjoy them. For even in this form they supply approximately the same increase in economic power, excluding the effects of taxes, as an equal amount of wealth obtained by accumulating and investing ordinary income. In analogous ways, capital losses may be said to reduce the economic power of those who suffer them and, therefore, to be valid deductions from ordinary income.

But no less positive have been the protests of those who hold that capital gains and losses should be completely excluded from income tax on the ground that they are not true elements of income. Unlike most kinds of ordinary income, capital gains occur irregularly in the lives of most individuals. A prudent man does not consider them available for ordinary consumption purposes both because they cannot confidently be expected to recur and because they may well be followed by sporadic losses. A capital gain, therefore, is commonly regarded as a direct addition or accretion to a man's capital, not a part of his disposable income.

Moreover, capital assets derive their value from the incomes that are expected from them, and these incomes are subject to tax when received. A rise in the value of a capital asset often reflects merely a rise in the income expected from it. To tax both the increase in income when it is received and the rise in the market value which merely reflects this expected increase in income is really to tax the same thing twice, it is argued. Of course, the owner gives up the enlarged prospective income from the capital asset when he sells it to 'realize' his gain; but he will presumably reinvest the entire proceeds, minus taxes, at the going rate of return and will therefore continue to obtain and pay taxes on the enlarged income reflected by his capital gain.

Also, if we tax the seller's capital gain as income, are we not treating him unfairly as compared with the owner who does not sell but who equally enjoys the enlarged income?

Sixteenth Amendment . . does not include the gain from capital realized by a single isolated sale of property but that only the profits realized from sales by one engaged in buying and selling as a business—a merchant, a real estate agent, or broker—constitute income which may be taxed

"It is sufficient to say of this contention . that the definition of the word 'income' as used in the Sixteenth Amendment, which has been developed by this Court, does not recognize any such distinction . . and that there is no essential difference in the nature of the transaction or in the relation of the profit to the capital involved, whether the sale or conversion be a single, isolated transaction or one of many. The interesting and ingenious argument, which is earnestly pressed upon us, that this distinction is so fundamental and obvious that it must be assumed to be a part of the 'general understanding' of the meaning of the word 'income,' fails to convince us that a construction should be adopted which would, in a large measure, defeat the purpose of the amendment." See Magill, *Taxable Income* (rev. ed. 1945) 103–113. [Ed.]

Further, most capital gains arise over periods longer than 1 year, often many years. To treat them as the income of the single year in which they are realized subjects the recipient to a higher tax than would be payable on an equal amount spread over the number of years in which the gain developed.

Finally, to mention only one of several other aspects in which capital gains differ from ordinary income . . . , it is contended that capital gains do not represent as much taxpaying capacity as an equal amount of ordinary income because they are sporadic, as compared with the recurring character of most types of ordinary income.

The last two points can be illustrated by a comparison. The annual income of James Peters of Cleveland, Ohio hovered about $3,000 for many years. In 1951, besides his ordinary income of $3,000, he realizes a capital gain of $15,000 by selling the house he bought 30 years before to a company that plans to erect an automobile service station on the land. Should Mr. Peters be taxed in 1951 as if his income were $18,000? Does his taxpaying capacity equal that of his sister whose 1951 income of $18,000 was derived wholly from $720,000 par value of 2½ percent Treasury bonds bequeathed her by her husband?

Powerfully supporting the view that capital gains and losses are not true elements of income has been the example of Great Britain, Canada, Australia, and most European countries with respect to capital gains realized by individuals outside the course of their ordinary business activities. A long tradition in European thought and law has excluded most casual and irregular gains, particularly from the sale of capital assets, from the prevailing concept of personal income and, therefore, from the taxable income of individuals. Besides the force of example, some of the same historical influences and logical considerations that produced this attitude in Europe have been influential in the United States.

But some capital gains are different only in form from ordinary income. An investor who buys a 30-year 3 percent corporation bond at 90 is actually getting an interest return of about 3.55 percent annually; but his return will take the *form* of an interest income of 3 percent a year and a capital gain of about $100 per $1,000 bond at maturity.‡

Reinvested corporate profits

Capital gains that appear to reflect the direct reinvestment of profits by corporations have raised an especially troublesome question. Because the law conceives a business corporation as an entity separate and distinct from its stockholders, corporate profits are not regarded as the income of the latter unless and until they receive them in dividends. Consequently, stockholders can postpone or avoid the ordinary personal income taxes upon their proportionate shares of retained corporate earnings. But if these retained earnings are profitably employed by the corporation, stockholders can reasonably expect to obtain some proportion of them—though often only a surprisingly small proportion—in the form of a capital gain taxable at a preferentially low rate when they sell the stock. Meanwhile, they can expect to enjoy a rise in the earning power and market value of their holdings. Even the capital gains tax will be avoided and the share of these stockholders in the accumulated earnings of the corporation will never be subjected to personal income taxes if they never sell the stock but leave

‡ See Commissioner v. Caulkins, *infra*, p 423. [Ed.]

it to their heirs § or give it away during their lifetimes to charitable or other tax-exempt institutions or to persons who leave it to *their* heirs. (Persons who sell property received by gift are subject to tax on the proceeds over the excess of the donor's cost or other basis.)

On the other hand, some reinvestment of earnings may be essential to enable an enterprise merely to maintain its competitive position and its earning power. Accounting charges for obsolescence are often absent or insufficient, with the consequence that the reported earnings often overstate what later are seen to have been the true earnings. Most individual shareholders in large corporations cannot expect to influence dividend policies greatly. They seldom regard their *pro rata* share in the undistributed earnings of their corporations as a part of their individual incomes. They cannot confidently expect their holdings to increase in market value by the exact amount of earnings reinvested on their behalf. Even if such an increase occurs, the stockholder may find it impracticable to convert it into disposable income by selling one or a few shares and regarding the enhanced market value of the remainder as a measure of the maintenance of the principal of his investment. The scale of brokers' commission charges makes the sale of a few shares of stock relatively expensive, and the market value of a single share may greatly exceed the amount of corporate earnings being reinvested on behalf of the remainder of the investor's holdings. For these and other reasons, the market is likely in many cases to appraise reinvested corporate earnings at less than face value. The question of the proper tax treatment of capital gains comes into contact at this point with the whole question of the tax treatment of corporate profits.

TAX ADVISORY STAFF, TREASURY DEPARTMENT FEDERAL INCOME TAX TREATMENT OF CAPITAL GAINS AND LOSSES

(1951), pp. 9-10, 12-14, 21-22

The capital gain and loss provisions of the Federal taxes on individual and corporate income have been controversial since their enactment. Opinion concerning these provisions has ranged from one extreme, that capital gains and losses should be completely excluded from the bases for income taxation, to the other, that these gains and losses should be treated for tax purposes precisely like any other positive or negative elements of ordinary income.

Prior discussion regarding taxation of capital gains has devoted considerable attention to the question whether these gains are capital or income. Opponents of the tax state that capital gains are not income and therefore should not be subject to income tax. Proponents of capital gains taxation believe these gains are sufficiently indicative of taxpaying ability, at least when realized, to be properly subject to income tax.

Since 1922, Congress, while consistently upholding the general principle that capital gains are proper objects of income taxation, has followed an intermediate course in determining the rates of tax to be applied. Although varying in detail,

§ See § 1014. [Ed.]

this has included the following main characteristics: (1) Inclusion of capital gains and losses for tax purposes only when realized by sale or exchange; (2) application of special low tax rates to capital gains accrued over more than a minimum period prior to realization; and (3) limitations on deductibility of capital losses from ordinary income....

Basically, the problem of capital-gains taxation is difficult because of the realization criterion of taxability. Under this rule, the taxpayer himself determines when his gains and losses shall be brought to account. Thus taxpayers have the option to postpone tax liability simply by holding gains unrealized, i. e., by not selling or exchanging their appreciated property. Conversely, they can obtain immediate tax reduction (subject to the limitations already described) by the sale or exchange of capital assets on which losses have accrued. Tax considerations, therefore, reinforce the normal tendency of investors to take losses promptly while letting gains accumulate.

The aggregate of capital gains realized by sale or exchange in any given year will have accrued over a broad range of holding periods—from a few days to many years. There has been widespread acceptance of the general principle that it is unfair to tax at progressive rates, in a single year, capital gains which have accrued over a number of previous years. Concentration of such long accrued capital gains for tax purposes in the year of realization tends to push some taxpayers into higher rate brackets and to make effective tax rates on some gains higher than would have been the case had the taxpayer been allowed to apportion his gains back, either to the actual years of accrual or to some arbitrary period, such as 5 years. Preferential tax treatment for long-term capital gains has always been justified in part by this effect. However, the amount of tax preference given long-term gains has generally been substantially greater than the amount of tax rate adjustment required by this equity consideration.

In addition to the averaging objective in preferential treatment of long-term capital gains, a low rate of tax is often deemed necessary to encourage prompter realization of these gains. The desire to avoid income tax strengthens the natural tendency to hold on to investments. If existing provisions for capital gains taxation have the effect of unduly retarding realization, this may be due as much to defects in the capital gains tax structure, for example, to the fact that capital gains may be transferred free of income tax at death, as to the mere existence of the tax.

The holder of an appreciated capital asset who would like to switch to some other investment must find an alternative that he considers sufficiently preferable to his present holding to offset the tax and other costs (brokerage, etc.) of the exchange. The tax cost is dependent on the rates of capital gains taxation; these in turn vary with the amount of accumulated gain and with the size of the taxpayer's ordinary income. Any significant tax on capital gains levied at the time of realization will undoubtedly tend somewhat to discourage sales of appreciated property. The higher the tax rate, the stronger this effect will be. However, the tax factor is only one among a number of considerations influencing investment decisions. It may be much less important to a given investor than his forecast of future price and other economic trends.

The question of the proper levels of preferential rates to apply to long-term gains is complicated by the conflicting considerations involved. In general and

unless capital gains are very large relative to ordinary income, only moderately preferential rates are usually needed for the majority of long-term capital gains in order to make appropriately equitable adjustments for the greater lumpiness and more sporadic nature of these gains compared with ordinary income. On the other hand, if minimum interference with markets for capital assets rather than tax equity is the standard, a relatively low set of tax rates for long-term capital gains may be indicated. If maximum revenue from capital gains taxation is the standard, an intermediate schedule of rates, which does not too greatly restrict transactions and at the same time does not encourage an excessive amount of conversion of ordinary income into preferentially taxed long-term capital gains, may be desirable. Moreover, intermediate rates may be held to effect a reasonable compromise between the conflicting equity and market considerations.

Finally, any generally acceptable solution of the capital-gains tax problem might require complex tax provisions. It is important for administration and compliance that these complications be kept to a minimum. In the past, Congress has sought as much simplicity as was consistent with prevailing views concerning the objectives of capital-gains taxation. . .

Preferential treatment of capital gains has been justified on several grounds, namely, equity, incentive, and revenue yield.

With respect to equity, it has been pointed out that it is unfair to include with other income and to tax at progressive rates in the year of realization capital gains which have accrued over a number of previous years. It has become more or less generally accepted that an equitable principle of taxation for capital appreciation under an annual income tax would be one under which the tax on capital gains levied upon realization would approximate that which would have been paid if the gain or loss, treated as ordinary income or loss, had been realized as it accrued annually.

One of the earliest proposals for special treatment of capital gains which received the serious consideration of Congress provided for prorating realized capital gains, together with certain other types of income, over the years during which the capital asset had been held or the other income earned. This method was rejected, however, as too complicated for administration.

Consideration has also been given at various times to such proposals as (1) the inclusion in taxable income of annually accrued though unrealized gains and losses, and (2) proration or averaging of realized capital gains, either separately or with other income, over several years—not necessarily the number of years the capital assets have been held. These methods were likewise rejected largely because of administrative and compliance complexities, but also in part because of constitutional questions and fear of causing taxpayer hardship.

Throughout the history of capital-gains taxation, continuous concern about the effects of the tax on (*a*) sales and exchanges, (*b*) security and other property prices, and (*c*) revenue yield has been apparent. It was the belief that a moderate tax rate would encourage the sale of much appreciated property which otherwise would not be sold that provided the main foundation of the case for the introduction of preferential treatment in 1921.

Congress has tried time and again to find a method, both practicable and equitable, of taxing capital gains. Such a method has been conceived to be one which

would interfere as little as possible with realization of gains and at the same time would not stimulate loss realization too much.

But finding satisfactory formulas for achieving the divergent equity and incentive objectives that are entwined in the philosophy of capital-gains taxation and at the same time protecting the revenue has been a difficult problem. Consequently, the history of the legal provisions has been a record of compromise and change without satisfactory solution.

NEW YORK STOCK EXCHANGE
TAXES—EQUITY CAPITAL—AND OUR ECONOMIC CHALLENGES
(1953), pp. 38–40)

Tax treatment of capital gains and losses has changed from time to time in an effort to reconcile various unresolved conflicts between equity considerations, revenue requirements, and the desire to avoid reducing investment incentives and the marketability of capital assets.

Taxation of capital gains provides the federal government with only a small portion of its total tax revenue. (During the ten-year period 1942-1951, for example, 3 per cent of Federal income taxes paid by individuals represented receipts from capital gains.) The depressive effects of the present capital gains tax on investment incentives alone far outweigh, in their economic implications, the amount of revenue this tax provides.

Several special factors peculiar to capital gains taxation are pertinent to a precise understanding of its important economic implications

1. *Tax Liability is Matter of Choice.* To incur capital gains tax liability is a voluntary act undertaken at the discretion of the taxpayer. Therefore, even modest tax rates have the general effect of inducing many investors not to sell or exchange their capital holdings, which, in turn, means reduced tax revenue, restricted market activity, and impaired mobility in capital movement.

2. *Periodic Fluctuations in Security Values.* One of the fundamental characteristics of a free securities market is its sensitivity to the diverse factors which influence investors' evaluations of their future interest and future price movements. Changes in the economic climate, both in this country and abroad, changes in our political or economic relations with other countries, new discoveries, sudden increases in product popularity, and many other factors, can substantially affect security prices in a period as brief as a few days or as long as several months. Many instances of this sensitivity are observable in the price movements of individual and industry-wide stock issues, even when overall market averages are steady. But today's capital gains tax law (with a six-month holding period) unfortunately prevents many security transactions of a non-speculative nature which would otherwise be made if the holding period were less than six months.

In a study of public stock transactions made by the New York Stock Exchange, it was found that 806,000 shares were sold at a gain by "public" individuals (that is, persons other than members or allied partners of the New York Stock Exchange), on the two days surveyed. The following percentages of the shares sold

had been held for the indicated periods of time: under 30 days, 3 per cent; 30 days to 6 months, 20 per cent; 6 months to one year, 26 per cent; over one year, 48 per cent; no indication, 3 per cent. From these data it seems fair to conclude that a substantial number of the delayed transactions—certainly a large part of the 26 per cent held for 6 months to one year—were deferred for the express purpose of meeting the holding period provisions of the capital gains tax law.

It was not the intent of Congress when it set up the holding period that it should act as a barrier against sound investment transactions. It was rather an arbitrary device designed to help distinguish between capital gains deserving special tax treatment and gains which are so close to being ordinary income that they should be taxed as such. As such, however, the six-month holding period is too long, and has proven unnecessarily restrictive. A period of three months would be a more desirable dividing line because:

1. It would differentiate as well as the present six months period between those capital transactions deserving of special treatment and those which should be taxed as ordinary income.
2. It would be as workable administratively.
3. By permitting the freer exercise of investment judgment, it would result in thousands of additional transactions in capital assets, and result in substantial additional government revenues.
4. It would increase the liquidity of the securities markets, thus providing needed encouragement to equity investment.

3. *Price Level Changes and "Locked-In" Capital.* The substantial increase in the general price level in the last two decades has resulted in much capital appreciation.* Because of this general increase in price levels the proceeds of the realization of such gains are largely "illusory" in terms of real value. Nevertheless any realized gains, whether real or not, are subject to tax liability. But, since the tax is self-imposed, an investor who regards his gains as fictitious can avoid it by not shifting his investment. The result is a "freezing" or "locking-in" of large sums of capital which otherwise could be of more productive use if put into newer, or different industries.

4. *Taxing Transfers of Permanently-Invested Equity Capital.* An established principle of tax policy has been to permit the tax-free transfer of certain assets similar in kind, such as farms, real estate, livestock, etc.† The tax laws, in the Revenue Act of 1950, extended this principle by permitting the tax-free shifting of personal residences.‡

The above principle of taxation would be even more valuable to the national economy if it were applied to equity funds as long as they remained invested in productive enterprise. It would eliminate a major cause of investment-fund stagnation since, at present, the transfer of investments are undertaken, in a great many cases, only when the asset purchased yields a substantially higher return than did the one being liquidated.

5. *"Roll-Over" Proposal.* One suggestion, which has been considered from time-to-time, would apply this principle of tax-free transfers of assets similar in value and in kind to all forms of capital reinvestment. This suggestion, sometimes

* See Cloe, "Capital Gains and the Changing Price Level," 5 *Nat'l Tax J.* 207 (1952). [Ed.]
† Sec. 1031. [Ed.]
‡ Sec. 1034. [Ed.]

termed the "roll-over" proposal, would have the effect of deferring the capital gains tax until *final* "realization" of the capital asset. Thus, for example, an investor would *not* be taxed if he sold one security for the purpose of purchasing another within a given period of time, or sold a farm, timberland, etc., for similar reinvestment of the proceeds.

A tax liability would be incurred only on that portion of capital *not* reinvested in productive enterprise, or *not* reinvested in similar types of capital assets.

Although this proposal would provide more equitable treatment for certain types of capital transactions, it would not be a complete solution and would also involve tremendous administrative complexities. The more practical immediate solution would appear to be a substantial lowering of the rate and a shortening of the holding period to permit such transfers to be made without today's excessive tax impact.

6. *Inflationary Effect of Capital Gains Tax on Security Prices.* The effect of the present capital gains tax in keeping large quantities of stock off the market can be an additional inflationary factor of considerable significance in a period of high or rising prices. Moreover, the impact of the tax under such conditions becomes even greater as prices continue to rise—which is when, in the interest of price stability, stockholders should be encouraged to liquidate holdings rather than retain them.

SIMONS
FEDERAL TAX REFORM

University of Chicago Press (1950), pp. 70–71
(Reprinted by Permission)

The capital-gains problem has now three important aspects. First, accrued gains on property held until one's death are never reached as taxable income at all. Second, gains realized by sale are only partially taxable and, besides, are subject to a maximum rate far lower than the maximum rate on other income. Third, deductions for capital losses are limited and segregated, so that, while those who have net capital gains are grossly undertaxed, those who have net capital losses are often grossly overtaxed. Limited deduction for losses is actually inseparable politically from limited inclusion of gains; but to regard the two limitations as offsetting is to repudiate the primary purpose of income taxation, namely, fairness among persons. It is indeed a shabby apology for present practice that, if it obviously undertaxes some persons, it obviously overtaxes others.

Even if one overlooks the major flaw, namely, failure to reach gains on property transferred by gift or at death, the limited taxation of realized capital gains is obviously inconsistent with our whole scheme of progression. *It is inherently unjust to impose any bracket rate in excess of the maximum rate applicable to capital gains.* In the long view, we must either abandon progression or abandon special treatment of capital gains and losses. This should be too obvious for argument, now that even the huge salaries and bonuses of corporation executives are often converted into a capital-gain form, by the device of the option to purchase the corporation's stock. The logical conclusion of recent trends in legislation is a blanket option for every taxpayer to treat any income as capital gain, if and as

he so desires. This option would give us an effective maximum rate about equal to the minimum or basic rate; and Congress could then manipulate the rest of the surtax scale as it pleased and without any effect on anybody! But the scheme would have the great merit of imposing similar taxes on people in similar circumstances.

Note

The student will note that so far we have not tried to define the phrase "capital gains and losses." The authors who have been quoted have obviously meant primarily gains and losses on the sale of corporate securities. But do they mean to include only the casual investor or would they grant the same special treatment to the transactions of one who makes his entire living by "playing the market?" Would they include even the dealer who maintains a regular office, with a large clientele, for the purchase and sale of securities? What other kinds of property should get special treatment? Real estate? Used machinery and equipment? Patents? Contract rights? Merchants' inventories? Should the special treatment be restricted to property that has been *sold*? What if the property has been stolen or destroyed?

These questions, and a host of others like them, must be answered, once it has been decided to grant special treatment to "capital" gains and losses. Occasionally the statute answers the question clearly, but more frequently the lawyer must be called in. The cases that follow focus on the statute, of course, but the student should also ask himself in each case whether the income or loss ought to be treated specially.

See generally Miller, "The 'Capital Asset' Concept: A Critique of Capital Gains Taxation: I and II," 59 *Yale L.J.* 837, 1057 (1950); Lowndes, "The Taxation of Capital Gains and Losses Under the Federal Income Tax," 26 *Tex. L. Rev.* 440 (1948); Tax Institute, *Capital Gains Taxation* (1946), and, for a view into the future, Blum, "The Decline and Fall of Capital Gains. 1921–1957," 28 *Taxes* 838 (1950).

Section B. Securities

1. *Are They Capital Assets?*

Note: Section 1221 of the 1954 Code, defining the term "capital asset," reenacts § 117(a)(1) of the 1939 Code, except that paragraph (4) of § 1221 is new.

See Regs. 118, Sec. 39.117(a)-1.

VAN SUETENDAEL v. COMMISSIONER

Tax Court of the U. S., 1944

¶ 44,305 P-H Memo TC

MEMORANDUM FINDINGS OF FACT AND OPINION

HARRON, Judge: ...

During the taxable years, and for some years prior thereto, the petitioner was primarily engaged in buying and selling securities. Approximately 90 per cent of the securities purchased by him were interest-bearing bonds and the other 10 per cent consisted of preferred and common stock. His income was derived

principally from interest on the bonds purchased and from interest on bank deposits. He maintained an office in Yonkers and had one employee who acted as his secretary-typist and general assistant. He was not a member of any stock exchange. His name was listed in several statistical financial publications as a dealer in securities, and in the Yonkers city and telephone directories under the classification of "investments." He also listed offerings to buy or sell securities at a certain price in the National Daily Quotation Service, for which he paid an annual subscription fee. This service was circularized among investment and trading houses in the United States. Petitioner has registered with the Securities and Exchange Commission, the State of New York, and the Bureau of Internal Revenue as a broker or dealer in securities. From time to time he has advertised in a Yonkers newspaper offering to buy or sell certain securities. Occasionally, his name appeared in the advertising section of the Columbia Alumni News under the caption "Investment Securities." He has also written to individuals, banks, and insurance companies offering securities at stated prices. Over a period of years, he has occasionally distributed calendars and pocket manuals containing data on securities of companies listed on the leading stock exchanges. Prior to the taxable years, petitioner, to a small degree, had participated in selling groups for the purpose of distributing new issues of securities....

During the taxable years, petitioner maintained separate accounts with Eastman, Dillon & Company, Ira Haupt & Company, and Chisholm & Chapman, all of whom were brokers, having membership on the New York Stock Exchange and the New York Curb Exchange. The great proportion of the securities sold by the petitioner during these years were sold to or through Eastman, Dillion & Company and Ira Haupt & Company. Excluding sales to petitioner's wife and son, approximately 77 per cent of petitioner's total sales in these years were made to or through Eastman, Dillon & Company and Ira Haupt & Company. Some of the securities purchased by petitioner from these brokers were kept by them for petitioner. Many of the specific securities sold to or through Eastman, Dillon & Company and Ira Haupt & Company had been previously purchased by petitioner from these same brokers....

In reporting the transactions of the sales of securities in each year on his return, petitioner took the view that all of the securities sold were non-capital assets, so that he computed the result of all the transactions in each year simply by taking the total cost of the securities and the total receipts from sales....

The respondent, in determining the deficiencies, held that the securities sold by petitioner were capital assets, and he therefore applied the limitations of section 117 [§ 1211(b), 1954 Code] in computing petitioner's net income from the sale of such securities.

Opinion

In this proceeding, as well as in a former proceeding before the Board of Tax Appeals involving prior taxable years, the petitioner has attempted to show that he was recognized in the security trade as a dealer in securities. He has placed great emphasis on the fact that he had registered with the Securities and Exchange Commission and the State of New York as a security dealer. Similarly, he has pointed to advertisements placed by him in newspapers, bulletins, and pamphlets indicating

that he dealt in securities during the taxable years. On brief, he argues that the entire case resolves itself to the one question of whether he was engaged in business as a dealer in securities. That, however, is not the issue. The phrase "dealer in securities" is not defined in the statute, although it is defined in the Regulations. Regulations 118, Sec. 39.22(c)-5. The only issue for determination here is whether the securities sold by petitioner during the taxable years were capital assets under section 117(b) of the Revenue Act of 1936 and section 117(a)(1) of the Revenue Act of 1938. For the purpose of this proceeding both sections of the Acts are substantially identical.

Under the cited sections of the Revenue Acts, all property is to be treated as capital assets unless the taxpayer is able to bring himself within one of the stated exceptions in the definition of capital assets. As far as this proceeding is concerned, the only possible exceptions which petitioner could rely upon are that the securities sold were

> stock in trade of the taxpayer or other property of a kind which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business.

The securities which petitioner sold during the taxable years cannot be classified as stock in trade or property subject to inventory in his hands unless they were held by him primarily for sale to customers in the ordinary course of his business. Thus, the issue turns on whether or not the securities sold by petitioner during the taxable years were held by him primarily for sale to customers in the ordinary course of business. This is probably the reason why petitioner has placed such stress upon the contention that he was a dealer in securities since securities in the nature of stock in trade held primarily for sale to customers are held only by dealers in securities. See Francis Shelton Farr, 44 B.T.A. 683. However, there may be many sales of securities by so-called dealers in securities which do not come within the exceptions set forth in the definition of capital assets. The fact that petitioner had a teletype machine, four telephones and statistical financial publications in his office, was listed as a "dealer" in certain publications, and advertised himself as willing to buy or sell securities is not determinative of the issue. The subject matter of the cited sections is property and it must be shown that the property itself comes within the exceptions stated in the definition of capital assets.

The respondent has determined that the securities sold by the petitioner during the taxable years were not held by him primarily for sale to customers in the ordinary course of his business. The burden of proving otherwise is upon petitioner The question is predominantly one of fact. . . .

From an analysis of the schedule showing all of petitioner's transactions in securities during these years, we cannot find as a fact that petitioner held the securities sold by him during the taxable years primarily for sale to customers in the ordinary course of his business. The facts are just as consonant with the theory that petitioner held the securities for speculation or for investment. It is well established that taxpayers who buy securities for speculation or investment hold them as capital assets and not primarily for resale to customers. *Seeley* v. *Helvering*, 77 F.(2d) 323, 15 AFTR 1402; *O. L. Burnett*, 40 BTA 605, affirmed on point considered here, 118 F.(2d) 659, 26 AFTR 893; *Vaughan* v. *Commissioner*, 85 F.(2d)

497, 18 AFTR 455, certiorari denied, 299 U.S. 606. One who holds securities in the nature of stock in trade primarily for resale to customers is regularly engaged in the purchase of securities at wholesale. *Francis Shelton Farr, supra.* He is a middleman in distributing the securities and he does not resell to the same class of persons from whom he buys. *Seeley* v. *Helvering, supra.* Here, petitioner did not make wholesale purchases of securities. The securities purchased were in relatively small quantities and were diversified. In this respect, he acted no differently from an ordinary purchaser. Most of the securities purchased by petitioner were resold to or through the same brokers from whom they were bought. Here again, petitioner acted in the same manner as an ordinary purchaser having an account with a broker. Approximately 77 per cent of all the securities sold by petitioner during the taxable years, excluding those sold to his wife and son, were sold to or through Eastman, Dillon & Company and Ira Haupt & Company. In most of these transactions, the companies acted as brokers and did not purchase the securities as principals for their own account. These brokers or their clients cannot be considered as petitioner's customers. *Francis Shelton Farr, supra*; *Seeley* v. *Helvering, supra*; *Vaughan* v. *Commissioner, supra.* Over 92 per cent of the securities sold by petitioner to or through Eastman, Dillon & Company and Ira Haupt & Company had been previously acquired by him from the same two brokerage houses. Many of these securities were resold by petitioner at a profit on the same day in which he purchased them or a short time thereafter. Obviously, in those cases, he never actually received the securities since the brokers who purchased and sold them for him were the same. The result of those transactions was that petitioner merely received or was credited with the profit. In this respect, his operations were similar to a trader purchasing securities on margin. Petitioner could not have intended to purchase these securities for resale to "customers" as that word is used in the statute. Some of the securities purchased through the two brokerage houses were not delivered to petitioner, but were kept by the brokers. It may be that they were retained as collateral for loans, which would be another indication that petitioner was purchasing and holding the securities for speculation. Our analysis of these schedules, together with the record as a whole, warrants the conclusion that the securities purchased by petitioner were not held as stock in trade primarily for resale to customers. Although petitioner did make efforts to sell some of the securities through channels other than brokers and dealers, and actually did sell a small amount of the securities to other parties, we cannot find even as to those securities that they were purchased primarily for resale to customers. A mere statement in behalf of petitioner that they were purchased or held for that purpose is insufficient. *Vaughan* v. *Commissioner, supra.* We think that the purchases and sales of all of the securities were engendered by the speculative advantage which might be derived by petitioner, or the income which he might receive therefrom.

Respondent points out that during the taxable years, petitioner's principal source of income was derived from interest on the bonds owned by him and that the great proportion of his losses resulted from securities which he had held for a long period of time. He argues that petitioner, during each of the taxable years, selected securities which he had held for a long time and which were then unprofitable to him and disposed of those securities at the best possible price to anyone who would buy them in order that the loss sustained thereon should offset his in-

come from the interest-bearing bonds held by him. The facts indicate that petitioner received interest on bonds in 1936 in the amount of $25,012; in 1937 in the amount of $27,120.23; and in 1938 in the amount of $31,683.25. During the same period, petitioner reported on his income tax returns, business losses in substantially the same amounts. The facts also show that in 1936, of the total losses of $35,796.68 sustained by petitioner from the sale of securities, $32,659.67 was sustained on securities held by him for more than five years. In 1937, of the total losses of $37,660.91 sustained by petitioner, $16,096.34 was sustained from securities held more than five years. In 1938, of the total losses of $25,806.13 sustained by petitioner, the amount of $21,441.41 was a long-term loss sustained on securities held for more than 18 months. Respondent also argues that as to the securities held for a long period, petitioner did not hold them for resale to customers, but for the income which he might derive therefrom. The facts apparently support respondent's contentions. Respondent also states in his brief that in all of the years since 1929, petitioner has reported substantial income from interest and dividends, yet, in all of these years, his sales of securities have resulted in substantial annual losses which were offset against his income. There appears to be ground for this statement. See *Achille O. Van Suetendael,* ¶ 40,269 P-H Memo BTA.

Petitioner has placed considerable reliance upon *United States* v. *Chinook Investment Co.,* 136 F.(2d) 984 (9th Cir. 1943). The facts of that case, however, are not shown in the opinion and the court merely affirmed the decision of the district court, which had found that the securities sold were held by the taxpayer for resale to customers in the ordinary course of business. The facts in the district court decision are not reported. *Chinook Investment Co.* v. *United States,* 30 AFTR 1618.

A careful study of the whole record, including all of the exhibits in evidence, convinces us that petitioner has not sustained the burden of proof imposed upon him of showing that the securities sold during the taxable years were held by him primarily for sale to customers in the ordinary course of his business. The proof is just as susceptible of a construction that some of the securities were acquired and held by petitioner for speculation and some for investment. We think that a reasonable conclusion from all of the facts is that petitioner intended to sell the securities in any way he could and to any purchaser regardless of whether or not the purchaser could be deemed a "customer" within the meaning of the statute. It is therefore held that the securities sold by petitioner during the taxable years were capital assets and subject to the limitations of gain and loss set forth in sections 117 of the Revenue Acts of 1936 and 1938. Respondent's determination is sustained.

Note

1. The Tax Court's decision was affirmed per curiam, *Van Suetendael* v. *Commissioner,* 152 F.2d 654 (2d Cir. 1945):

> This issue was predominantly one of fact and the Tax Court's finding was adverse to the taxpayer. We cannot say that "the Tax Court's inferences and conclusions on this factual matter are so unreasonable from an evidentiary standpoint as to require a reversal of its judgment." . . . With respect to some of the securities sold the taxpayer may have been a dealer and with respect to others a trader, investor or speculator. In his returns he made no attempt to distinguish one sale from another; nor did he present sufficient evidence to enable the Tax Court to do so.

In *Commissioner* v. *Burnett*, 118 F.2d 659 (5th Cir. 1941), a leading case in this area, it was held that a "trader" in securities and commodities, whose trading averaged over $10,000,000 per year, did not hold property "primarily for sale to customers in the ordinary course of his trade or business." 152 F.2d 654–655.

Should a "trader" in securities be treated differently from a dealer, either when he has gains or when he suffers losses? The requirement that property, to avoid capital asset treatment, be held for sale "to customers" came into the statute in 1934. It was designed to prevent "a stock speculator trading on his own account" from claiming ordinary losses on his transactions and thus cancelling out his income from dividends, interest, *etc.* by what were apparently thought by Congress to be frequently fictitious transactions. H.R. Rept. No. 1385, 73d Cong. 2d Sess., 39-1 C.B. (Part 2) 627, 632. In enacting the restriction, Congress seems to have overlooked the possibility that, in another part of the business cycle, "traders" might realize profits and would be able to report them as capital gains. In point of fact, the 1934 amendment ultimately proved to be superfluous; in *Higgins* v. *Smith*, *supra*, p. 196, decided in 1941, the Supreme Court held that a trader was not engaged in a "trade or business" under § 162(a). Presumably he was also not engaged in a "trade or business" as the term is used in § 1221, so that even without the phrase "to customers" his losses would be capital rather than ordinary.

2. A dealer in securities may hold some of his securities in an "investment account" rather than for sale and thus qualify them as capital assets. *Carl Marks & Co.* v. *Commissioner*, 12 T.C. 1196 (1949). Section 1236, added to the Revenue Act of 1951, requires such investment securities to be clearly identified as such, to prevent the taxpayer from claiming capital asset treatment if they are sold at a profit, but non-capital treatment if a loss is incurred. By virtue of § 1236(b), once a security has been identified as held for investment, any loss on a subsequent sale or exchange by the dealer will be a capital loss; the security cannot be effectively transferred to the category of property held for sale to customers.

3. As will be seen, some types of property, though non-capital, receive capital gain or loss treatment in special circumstances. Property that falls under § 1221(1), however, is never so treated; it always gives rise to ordinary income or loss.

In a few cases, losses on the sale of securities, though seemingly "capital assets" under § 1221, have been treated as business expenses under § 162(a) rather than as capital losses on the theory that taxpayer bought the securities not for investment, but as an incident to its regular business. For example, in *Bagley & Sewall Co.* v. *Commissioner*, 20 T.C. 983 (1953), the taxpayer purchased certain government bonds for deposit in escrow to insure its performance of a contract. When the bonds were released from the escrow, it sold them at a loss. The loss was held to be deductible under § 162(a). See also *Western Wine & Liquor Company* v. *Commissioner*, 18 T.C. 1090, *Pressed Steel Car Company* v. *Commissioner*, 20 T.C. 198 (1953). For a contrary holding on similar facts, see *Exposition Souvenir Corporation* v. *Commissioner*, 163 F 2d 283 (2d Cir. 1947). If the bonds had been sold at a profit, would it be taxed as ordinary income rather than as capital gain?

2. *Was the Asset Sold or Exchanged?*

> ***Note:*** **Sections 1222, 1232(a)(1), and 165(g) of the 1954 Code, relating to sales, exchanges, and similar transactions, are based upon §§ 117(a)(2)-(11), 117(f), 23(g), and 23(k)(2)-(5) of the 1939 Code, but some changes have been made.**
> **See Regs. 118, Secs. 39.23(g)-1 and 39.23(k)-1.**

To qualify for capital gain or loss treatment, the transaction not only must involve a capital asset but also it must constitute a "sale or exchange." This phrase is narrower than § 1001(a)'s phrase "sale or other disposition." Thus, in *Herbert's Estate* v. *Commissioner*, 139 F.2d 756 (3d Cir. 1943), it was held that when a claim was paid by the debtor, it was "disposed of" by the creditor so as to bring § 1001

(a) into play. The claim was held by the estate of the lender, and under § 1014, its basis to the executors was its value at the date of death. The executors had collected more than this amount, and the government contended that the excess was "gain from the sale or other disposition of property," under § 1001(a). The court agreed, and added that in the alternative the excess might be taxable under § 61(a). Although the creditor is held to have made a "disposition" of the claim in these circumstances, he has not "sold or exchanged" it so as to warrant capital gain or loss treatment. *Hale* v. *Helvering*, 85 F.2d 819 (D.C. Cir. 1936); *Fairbanks* v. *United States*, 306 U.S. 436 (1939); see also *Fahey* v. *Commissioner*, 16 T.C. 105 (1951) (compromise settlement of claim not a "sale or exchange"); *Hudson* v. *Commissioner*, 20 T.C. 734 (1953) (settlement of judgment not a "sale or exchange").

There are certain statutory exceptions to § 1222's general requirement of a "sale or exchange." Thus, § 1232 provides that in general a retirement of certain securities shall be treated as a sale or exchange. The reason, no doubt, is that capital gain or loss would result if the security were sold just before maturity (unless the sale could be ignored as a sham), and there is no reason to differentiate a retirement. See also Section 165(g), which for a similar reason provides that worthless securities shall be treated as though they had been sold or exchanged in the year they became worthless. Sections 1232 and 165(g) are applicable only to *corporate* securities. Thus, if a bond issued by an individual is *retired* at above its basis, the holder will have ordinary income (since the bond, though a capital asset, has not been sold or exchanged and § 1232 is inapplicable), but its *sale* at a profit will produce capital gain. A similar disparity may exist if a loss is incurred on a bond issued by an individual. If sold at a loss, the instrument will give rise to a capital loss; if held until worthless, it will produce an ordinary loss *unless* it is a "non-business debt" (see *Smith* v. *Commissioner*, *supra*, p. 257), in which event § 166(d) will require capital loss treatment.

Section 165(g) is applicable to bonds, notes, etc. with interest coupons or "in registered form." What does the latter phrase mean? See *Gerard* v. *Helvering*, 120 F.2d 235 (2d Cir. 1941); *Lynn* v. *Commissioner*, 15 T.C. 832 (1950) (dissenting opinion). Why should coupon-bearing or registered securities be treated differently from others? Can the taxpayer avoid the capital loss limitation of § 165(g) by de-registering the security (if it does not bear interest coupons) so that it is not "in registered form" when it becomes worthless? See *Lurie* v. *Commissioner*, 156 F.2d 436 (9th Cir. 1946). Note that the security may be a "non-business" bad debt, so as to be subject to § 166(d) even if it escapes § 165(g).

The predecessor of § 1232 (§ 117(f) of the 1939 Code) contained a similar requirement that the security be in registered form or bear interest coupons; see the *Lurie* case, *supra*. This requirement was eliminated by the 1954 Code for securities issued after 1954.

While Section 165(g) provides, as was stated above, that worthless securities shall be treated as sold or exchanged, these provisions are not ordinarily applicable to the securities of a subsidiary corporation. See Section 165(g)(3), whose purpose is to approximate roughly the treatment that would have been accorded to the loss if it had been incurred directly by the parent. Thus, if the subsidiary was engaged in manufacturing or selling, the parent's loss on its failure will be an ordinary loss, in recognition of the fact that if the operations had been carried

on by the parent without the intervention of the subsidiary, the parent would probably have deducted the expenses or losses of the operations from ordinary income. On the other hand, if the subsidiary was engaged in security speculations, the loss on its failure will be a capital loss, conforming to the tax effect that would have been felt if the parent had carried on such operations in its own right.

Section 165(g)(3) applies only if the securities of the subsidiary become worthless, not if they are sold.

3. Is the Gain or Loss Recognized?

We have already seen that sometimes gain or loss, though "realized" under § 1001, is not "recognized" under § 1002. See *supra*, p. 155, dealing with gain on the sale of the taxpayer's residence when another residence is acquired within one year.

Some of the most important—and intricate—provisions of the Code provide for the non-recognition of gain and/or loss on transactions involving securities. These "non-recognition" provisions, some of which will be examined in more detail later, are applicable to non-capital as well as capital assets, though ordinarily the securities involved are capital assets. Among these provisions are the following:

(a) Section 1036, which provides for the non-recognition of gain or loss in a transaction such as the exchange of Class A common stock for Class B common stock of the same corporation.

(b) Section 354(a)(1), which provides for the non-recognition of gain or loss on a corporate reorganization. An example is the exchange of stock in the ABC Corporation for stock of XYZ, Inc., when the former is merged into the latter. The stock received may be worth more or less than the adjusted basis of the stock given up, but neither gain nor loss is recognized. Non-recognition is dictated partly by the possibility that the taxpayers' investment has been changed only in form and not in substance, partly by the possibility that the taxpayer had no choice but to make the exchange, and partly by a desire to facilitate corporate adjustments to changing economic circumstance.

(c) Sections 371, 1071, and 1081, which provide for the non-recognition of gain or loss on certain exchanges of securities under judicial or administrative compulsion.

In addition to the non-recognition provisions, there are two other sections having a similar effect—though with respect to losses only—that should be referred to here:

(a) Section 1091, which disallows losses incurred on "wash" sales. Loss on the sale of stock or securities is not deductible if within 30 days before or after the sale the taxpayer acquires (or enters into a contract or option to acquire) "substantially identical stock or securities." The loss is disallowed regardless of the *bona fides* of the sale and even though the taxpayer may have no intent to acquire substantially identical stock or securities when the sale occurs. Only losses are subject to § 1091, the taxpayer will have to recognize any gain if he sells and promptly repurchases. This may be done deliberately; if, for example, the taxpayer has capital losses in a particular year, he may sell for a tax gain and rebuy so as to hold the securities at a higher basis. Section 1091 is applicable to stock and securities only. Loss on a sale of other types of property may be disallowed if the transaction is a sham (*e.g.*, accompanied by a secret agreement to reacquire), but there is no automatic non-recognition of the loss merely because of a prompt repurchase, as in the case of stock or securities.

(b) Section 267, which was considered in the *McWilliams* case, *supra*, p. 365. As was pointed out there, even where no specific statutory provision is applicable, sham sales do not give rise to deductible losses.

See Brodsky, "Losses and Wash Sales Between Related Taxpayers," 10th *Annual N.Y.U. Inst. on Fed. Taxation* 171 (1952).

Ordinarily, when the taxpayer's gain or loss on a sale or exchange is not recognized, the basis of the property acquired is so fixed that the taxpayer's entire economic gain or loss will be reflected when he disposes of that property.

Section C. Real Estate

1. *Is It a Capital Asset?*

Note: Section 1221(1) of the 1954 Code, relating to property held for sale, is a reenactment of § 117(a)(1)(A) of the 1939 Code.

Section 1221(2) of the 1954 Code, relating to real property used in trade or business, is a reenactment of § 117(a)(1)(B) of the 1939 Code.

Section 1237 of the 1954 Code, relating to real property subdivided for sale, is new.

MAULDIN v. COMMISSIONER

U. S. Court of Appeals, Tenth Circuit, 1952
195 F.2d 714

Before HUXMAN, MURRAH and PICKETT, Circuit Judges.

MURRAH, Circuit Judge.

This is an appeal from a decision of the Tax Court, holding that certain lots sold by petitioners during the taxable years 1944 and 1945, were "property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business" within the exclusionary clause of Section 117(a)(1) of the Internal Revenue Code. If the gain from the sale of these lots was derived in this manner, it constituted ordinary income taxable under Section 22(a), and not a capital gain taxable under Section 117(a)(1). Petitioners, residents of the State of New Mexico, are husband and wife, and all income involved is community income. The two cases were therefore consolidated for trial and disposition. A summary of Mauldin's business activities is necessary to a determination of the issue presented.

C. E. Mauldin, a graduate veterinarian since 1904, who also engaged in some road contracting, moved to Albuquerque, New Mexico in 1916, where he organized a road construction company. While in Clovis, New Mexico in 1920, to bid on a sewer project, he decided to move there and engage in the cattle business. Later in the same year, he contracted to buy 160 acres of land one-half mile from the city limits of Clovis for $20,000.00. This land was particularly suitable for cattle feeding, but was not at that time considered suitable for residential development, because the City, with a population of 5000, was not growing in that direction.

By the time Mauldin finally received title to the land in June 1921, he decided that it was not the time to go into the cattle business because of drought, crop and bank failures, and a decline in the cattle business which continued through 1924. He tried to sell the entire tract in 1924 for less than he paid for

it, but was unable to do so, partly because a highway had been surveyed diagonally across the land, splitting it into two tracts and rendering it less suitable for cattle feeding. A real estate agent with whom he listed the property for sale advised him that they would have better success if he divided it into small tracts and blocks. The land was accordingly platted into 29 tracts and 4 blocks containing 88 lots each, and called the "Mauldin Addition." At the time the land was platted in 1924, there was still no demand for residential property in the area. In 1927, he built a home for himself near the center of the Addition.

There were no sales of any consequence until the land commenced to be included in the city limits of Clovis in 1931. By 1939, it was wholly within the city limits, and without Mauldin's request, the City began a paving program in the area, for which he was assessed approximately $25,000.00. When he was unable to pay this assessment, the City instituted suits on its paving liens, and in order to save his property, he divided some additional tracts into lots and devoted most of his time to the sale of the lots in the Addition. He listed the property with real estate agents and otherwise promoted sales through personal solicitations, signs, newspaper advertisements, and gifts of lots to a school and the builder of the first F. H. A. house in Clovis. He stated that at times he would "chase" a prospective purchaser "around the block." During 1939 and 1940, he sold enough lots to liquidate the paving indebtedness.

Mauldin testified that with the indebtedness to the City paid, he decided to hold the remaining portions of the original tract for investment purposes, and after 1940, did nothing to promote sales. He stated, "I cut it up and tried my best to sell it to clear it, and when I cleared it, I quit." From 1940 until 1949, when his health failed, Mauldin devoted full time to the lumber business he organized in 1939. During this period, he had no real estate office, no license to sell real estate, did not advertise the properties by newspapers or signs, had no fixed price for lots, and at times refused to sell certain lots, either because the prospective purchaser would not pay the asked price, or Mauldin did not wish to sell the particular property at that time. The only real estate purchased by Mauldin after acquiring the 160 acres in 1920 was one "unsightly" block of lots near his residence, and some commercial properties to be used in connection with his lumber business.

Due primarily to the location of war facilities nearby, the City of Clovis grew in population to 14,000 in 1940 and to 20,000 to 25,000 in 1945, and the lots in Mauldin Addition were in great demand. By the end of 1945, Mauldin had disposed of all but 20 acres of his original 160 acre tract. This 20 acres was considered by him and real estate dealers to be his most valuable property. Mauldin's records show that he sold 2 lots in 2 transactions in 1941; 11 in 1942 in 2 transactions (6 lots were given to his daughter as a wedding present); 5½ in 1943 in 3 transactions; 5½ in 1944 in 3 transactions, 44½ in 1945 in 15 transactions; 39 in 1946, 1 in 1947 and 2 in 1948. For the taxable years in 1939 and 1940, the taxpayers' income tax returns showed income from real estate only; for each of the years 1941 and 1944 (returns for 1942 and 1943 not shown) they showed net income of approximately $3,000.00 from sales of real estate and approximately $12,000.00 from the lumber business; for the year 1945, $20,484.84 from real estate and $12,339.80 from lumber; and in 1946, $21,942.88 from real estate and $25,005.07 from lumber. On his 1940 return, Mauldin stated

that the nature of his business was "real estate"; in 1943 it was shown as "lumber business"; in 1944 he did not designate the nature of his business; and in 1945 it was shown as "lumber and real estate."

In their income tax returns for the years 1944 and 1945, petitioners showed the lots sold during those years as long-time capital assets, and computed the tax accordingly. The Commissioner determined that the profit realized was ordinary income within the meaning of Section 117(a) (1) of the Internal Revenue Code, and assessed the additional tax. This appeal is from the judgment of the Tax Court sustaining the Commissioner, and the only question is whether its judgment on these facts can be said to be clearly erroneous.

It is admitted by taxpayer that during 1939 and 1940, he was engaged in the business of selling the tracts and lots in Mauldin Addition. He earnestly contends, however, that after 1940, his business status was changed; that his full time thereafter was devoted to the lumber business, and held the remaining lots for investment purposes, selling them only through unsolicited offers when the price was right.

There is no fixed formula or rule of thumb for determining whether property sold by the taxpayer was held by him primarily for sale to customers in the ordinary course of his trade or business. Each case must, in the last analysis, rest upon its own facts. There are a number of helpful factors, however, to point the way, among which are the purposes for which the property was acquired, whether for sale or investment; and continuity and frequency of sales as opposed to isolated transactions. *Dunlap* v. *Oldham Lumber Co.*, 5 Cir., 178 F.2d 781; Annot. 106 A.L.R. 254; *Mertens*, Vol. 3, Sec. 22.08. And, any other facts tending to indicate that the sales or transactions are in furtherance of an occupation of the taxpayer, recognizing however that one actively engaged in the business of real estate may discontinue such business and simply sell off the remnants of his holdings without further engaging in the business. *Snell* v. *Commissioner*, 5 Cir., 97 F.2d 891. Thus, where residents of New York bought land in Florida and elsewhere from time to time for investment, a part of which was platted and improved, it was held that the occasional sale of lots through local brokers was not sufficiently frequent or engrossing to give the taxpayers the vocation of real estate dealers. *Phipps* v. *Commissioner*, 2 Cir., 54 F.2d 469. And, in *Foran* v. *Commissioner*, 5 Cir., 165 F.2d 705, a taxpayer admittedly engaged as a broker of nonproducing oil and gas leases and royalties purchased a producing property which he sold within eighteen months. The profit realized therefrom was held to be income from a long-time capital asset, the court reasoning that since this was the first producing property purchased by the taxpayer, there was no occasion to disbelieve his statement that he acquired it for investment or his motive for selling it.

On the other hand, sale and exchange of lots in 1939 and 1940 from a 92 acre tract of land, partially subdivided in 1932, was held to be in the ordinary course of business where the taxpayer had been continuously engaged in the real estate business since 1908, and had divided a part of the tract into lots in order to facilitate the sale of the land. *Gruver* v. *Commissioner*, 4 Cir., 142 F.2d 363. So too was the sale of lots from a tract of land which had been originally purchased for and used as a lettuce farm, but subdivided into lots when it became too valuable for truck farming operations. *Richards* v. *Commissioner*, 9 Cir., 81 F.2d 369,

106 A.L.R. 249. See also *Oliver* v. *Commissioner*, 4 Cir., 138 F.2d 910. And, lots sold through sales agencies after reacquisition at a trustee's sale, were held to be in the ordinary course of trade or business, as against the contention that they were sold in furtherance of an orderly liquidation in *Ehrman* v. *Commissioner*, 9 Cir., 120 F.2d 607. While the purpose for which the property was acquired is of some weight, the ultimate question is the purpose for which it was held. *Rollingwood Corp.* v. *Commissioner*, 9 Cir., 190 F.2d 263.

Admittedly, Mauldin originally purchased the property for purposes other than for sale in the ordinary course of trade or business. When, however, he subdivided and offered it for sale, he was undoubtedly engaged in the vocation of selling lots from this tract of land at least until 1940. As against his contention that he ceased to engage in the business after 1940, the record evidence shows that he sold more lots in 1945 on a sellers market without solicitation than he did in 1940 on a buyers market. It seems fairly inferable from the record that at all times he had lots for sale, and that the volume sold depended primarily upon the prevailing economic conditions, brought on by wartime activities and their aftermath. It is true that he was in the lumber business, but his returns plainly show that a substantial part of his income was derived from the sale of the lots. In these circumstances, we cannot say that the Tax Court's conclusions are without factual basis.

The decisions are Affirmed.

Note

1. Compare this taxpayer with Mr. Van Suetendael, in *Van Suetendael* v. *Commissioner*, *supra*, p. 390, whose securities were held to be capital assets. Is there any reason of policy why one should realize ordinary income and losses on his transactions while the other has capital gains and losses? If the persons to whom Mr. Mauldin sold his land were "customers," as that term is used in § 1221(1), why were not the persons who bought securities from Mr. Van Suetendael also "customers"? Neither taxpayer had a "clientele" of the kind that a department store or other dealer in merchandise has. In *Black* v. *Commissioner*, 45 B.T.A. 204 (1941), it was stated that for a taxpayer regularly engaged in the business of buying and selling real estate, "any person who can be found to buy such property is a customer." This seems to mean that as respects real estate, the term "to customers" adds nothing to the statutory requirement that the property be held "primarily for sale . . . in the ordinary course of his trade or business." It has already been pointed out, *supra*, p. 395, that the phrase "to customers" turned out to be an unnecessary precaution in the case of traders or speculators in stock.

See also *Hollis* v. *United States*, 121 F. Supp. 191 (N.D. Ohio 1954), on the meaning of "customers."

2. See § 1237, added in 1954. What is the significance of its basic principle that certain lots "shall not be deemed to be held primarily for sale to customers in the ordinary course of trade or business at the time of sale *solely* because of the taxpayer having subdivided" the tract, *etc.* If there are other factors pointing to a trade or business, is § 1237 inapplicable? May the fact of subdividing a tract be regarded as a persuasive factor, even though it is not the *sole* reason for denying capital gain or loss treatment? Does § 1237(b)(1) mean that ordinary income must be reported, even though but for this provision, the property would give rise to capital gain? Does it mean that ordinary income will be realized on the sale of property held for five years or more (see § 1237 (a)(3)) but that property held for a shorter period, unless otherwise shown to be held for sale, will produce capital gain? Section 1237 applies only to noncorporate taxpayers. Is it possible that a corporation will realize capital gain (*e.g.*, if land is held for investment, but more than five lots are sold) where an individual would realize ordinary gain, at least in part?

Can the effect of § 1237(b)(1) be minimized by splitting a tract up among all members of the family and arranging for them to sell alternate lots? If a parcel of land is divided among the members of the family, is it still one "tract" under § 1237(c)?

As the case indicates, it has not been easy to distinguish real estate held for sale from real estate held for investment. Fink, "'Dealing' in Real Estate," 2 *Tax L. Rev.* 111 (1946), cites many of the cases, and there have been many more since 1946, among others, see *Friend* v. *Commissioner*, 198 F.2d 285 (10th Cir. 1952).

3. Suppose Mr. Mauldin organized a corporation, transferred one of the lots to it in exchange for its stock, and then sold the stock His profit would be the difference between (a) his basis for the stock (which, as seen *infra*, Ch. 6, Sec. C, would be the same as the basis of the land transferred to the corporation) and (b) the sales price, which presumably would be about the same as the value of the land itself. Would this profit be capital gain? Section 341, which will be met again, *infra*, Ch. 6, Sec. F(1), expressly provides that the profit on certain transactions of this type is ordinary income, despite the fact that ordinarily the profit on a sale of stock is capital gain. Even without this elaborate statutory provision, the transfer of the real property to the corporation might be disregarded as a sham. What are the taxpayer's prospects for converting some of the lots into capital assets by giving them to members of his family? Bittker, "Charitable Gifts of Income and the Internal Revenue Code. Another View," 65 *Harv. L. Rev.* 1375, 1385–1388 (1952).

FACKLER v. COMMISSIONER

U. S. Court of Appeals, Sixth Circuit, 1943
133 F.2d 509

Before HICKS, ALLEN, and HAMILTON, Circuit Judges.

HAMILTON, Circuit Judge.

This is a proceeding to review a decision of the Board of Tax Appeals (now the United States Tax Court).

The Commissioner of Internal Revenue found a deficiency in petitioner's income tax for the calendar year 1938 in the sum of $4,639.67 which deficiency was sustained by the Board. The additional tax grows out of a profit realized from the sale of a leasehold.

On August 22, 1933, petitioner became lessee for a ninety-nine year lease, renewable forever, the lessor being the fee owner of certain lands with improvements thereon at 823 Prospect Avenue, in the business section of Cleveland, Ohio.

The property had on it a six-story building erected in 1916. The lease provided for the payment of an annual rental of $10,000 for the first five years of the term and $12,000 thereafter, for the ground and improvements. The lessee was to pay all real estate taxes, special or other assessments, water rents and other public charges already assessed or imposed upon the premises and unpaid and those thereafter assessed or imposed thereon during the term of the lease. The lessee was required also to keep the building on the premises in good repair and, in case of its destruction, to erect new improvements at a cost of not less than $200,000. In the event the lease was not renewed at the end of any term, all improvements on the property reverted to the lessor. The lessee was granted an option to purchase the property for the sum of $250,000 at the end of the lessor's life.

At the time petitioner acquired the property, all space in the building was occupied. When subsequent vacancies occurred, petitioner sought new tenants through his own efforts, and did not list the property with a real estate agency

but was willing to pay commissions to persons who obtained tenants for him. About 1936, petitioner closed all of the building except the ground floor, which, with the basement, was thereafter rented. In 1938, the rear of the first floor was occupied by the Western Union Telegraph Company and the remainder of the space was rented to tenants who operated a drug store, electrical store and haberdashery store. The basement was used by a tenant for the operation of a restaurant and barber shop. Two tenants moved out before April 1938 and the space used by them was thereafter vacant.

On September 30, 1938, petitioner sold the leasehold for $35,000 thereby realizing a net taxable gain of $29,064.32. The Board included this gain in petitioner's gross income under the provisions of Section 22(a) of the Internal Revenue Code. Petitioner contended before the Board, and now insists, that his gain was from the sale of a "capital asset" as defined in Section 117(a)(1) of the . . . . Internal Revenue Code.

The question turns on the interpretation of Section 117(a)(1) integrated with Section 23(*l*) of the Revenue Act of 1938, Internal Revenue Code § 23(*l*).

Section 117(a) (1) defines "capital asset" as property held by the taxpayer whether or not connected with his trade or business, but excludes property used "in the trade or business, of a character which is subject to the allowance for depreciation provided in section 23(*l*)."

Section 23(*l*) provides "a reasonable allowance for the exhaustion, wear and tear of property used in the trade or business, including a reasonable allowance for obsolescence."

Petitioner is a busy and successful lawyer and devotes all of his time to the practice of his profession. According to the findings of the Board, petitioner visited the leasehold premises once or twice each month, which consumed one or two hours of his time. . . .

The Board found that the lease in question was property of the taxpayer used in his trade or business and of a character subject to an allowance for depreciation, and therefore under the express terms of the statute that it was not a capital asset. This was the determination of an ultimate fact. We are limited therefore to an examination of the record to ascertain whether there is any substantial evidence to sustain the findings of the Board. *Helvering* v. *Rankin*, 295 U.S. 123, 133, 55 S. Ct. 732, 79 L. Ed. 1343. Petitioner sold neither lands nor buildings but a leasehold. The question subdivides into two branches, (1) Was the leasehold used by petitioner in a trade or business? (2) Was it of a character subject to an allowance for depreciation?

There is a trite definition of trade or business which is probably sufficient for the disposition of the question here. It is "that which occupies the time, attention, and labor of men for the purpose of a livelihood or profit." *Flint* v. *Stone Tracy Company*, 220 U.S. 107, 171, 31 S. Ct. 342, 357, 55 L. Ed. 389, *Ann. Cas.*1912B, 1312. The difficulty centers around the problem that petitioner here was engaged in a profession which admittedly occupied all of his business hours, but there is such a thing as carrying on a business through agents which is in fact a common practice. The question is one of degree, or "where to draw the line." *Irwin* v. *Gavit*, 268 U.S. 161, 45 S. Ct. 475, 476, 69 L. Ed. 897. Justice Holmes there said that a question of degree was the only one worth arguing in the law.

In its findings of fact the Board found petitioner had gross rentals from the leasehold ranging from $33,983.69 in 1934 down to $19,349.78 in the nine months of 1938. Excluding ground rent and taxes, the Board found petitioner had operating expenses ranging from $15,902.33 in 1934 to $6,557.03 in 1938. In the schedule of receipts and expenditures in the operation of the property, it is shown that petitioner paid out in wages in 1934, $10,346.17; 1935, $10,229.06; 1936, $8,522.98; 1937, $1,596.67; 1938, $750.02. Petitioner sustained a net operating loss for the years 1934 to and including 1937, and for 1938, a net profit.

It is a fair inference from the evidence that petitioner acquired the leasehold with the primary intention of operating the building upon it for profit and that he was not holding the property merely as an investment and solely for the purpose of collecting rents without rendering personal service to tenants. The fact may not be disputed that a person may engage in both a profession and a business [*Mente* v. *Eisner*, 2 Cir., 266 F. 161, 11 A.L.R. 496] and the fact that petitioner was engaged in the practice of law does not at all negative the fact that he was also engaged in the business of operating the building. The management of the property necessarily involved alterations and repairs commensurate with the number of tenants who occupied the building. It was also necessary to furnish elevator service, heat, light and water which required regular and continuous activity and the employment of labor, the buying of material and many other things which come within the definition of business. *Commissioner of Internal Revenue* v. *Boeing*, 9 Cir., 106 F.2d 305.

Petitioner urges that the income arising from the sale of the leasehold is not within the statutory exclusion, because he sold the business as a whole and not merely an asset used in it. This contention is without merit. The purpose of the exclusion provided in the Act is said to be a "recognition of the principle that gains or losses realized upon the sale, exchange, or other disposition of such property are business gains or losses and, as such directly affect the volume of business profits which should be subjected to tax in the years in which such transactions occur." "This, in the great majority of cases, should be of benefit to the taxpayer since it will allow him to take losses against his ordinary income from the sale of such property. Under existing law, if a taxpayer loses on the sale of depreciable property, he cannot charge it off against ordinary income and can only receive a deduction if he has capital gains." Report of the Committee on Ways and Means on the Revenue Bill of 1938, dated March 1, 1938.*

Under the Board's findings of fact, petitioner was engaged in the business of managing and renting property. He used in that business the present leasehold and when he disposed of it, presumptively he sold an asset used in his business.

Viewing the language of the statute in the light of its purpose, it is clear that petitioner disposed of a business asset. *Richards* v. *Commissioner*, 9 Cir., 81 F.2d 369, 106 A.L.R. 249.

The case of *Commissioner* v. *Shapiro*, 6 Cir., 125 F.2d 532, relied on by petitioner has no application. It is distinguishable on its facts.

Petitioner relying on the settled rule that no depreciation is allowable under Section 23(*l*) unless the asset has a limited and terminable existence, urges that as the lease in question was renewable forever, its exhaustion is not susceptible to measurement. The concept of a lessening in value or exhaustion attributable

* 39–1 C.B. (Part 2) 752, 732. [Ed.]

entirely to the gradually diminishing life, measured in periods of time, has been applied in determining depreciation of leaseholds under all revenue acts and is specifically applicable under the present act as provided in Treasury Regulations 118, § 39.23(a)-10.

The renewal privileges under the terms of the present lease are qualified and may never be exercised. Under such circumstances, the life of the lease is measurable in time and is a depreciable asset within the purview of the statute. *Bonwit Teller & Co.* v. *Commissioner*, 2 Cir., 53 F.2d 381, 82 A.L.R. 325; *379 Madison Ave.* v. *Commissioner*, 2 Cir., 60 F.2d 68; *Helvering* v. *F. & R. Lazarus Co.*, 308 U.S. 252, 254, 60 S. Ct. 209, 84 L. Ed. 226.

The findings of the Board are supported by substantial evidence. Its order is affirmed.

Note

1. Since 1942, the statute has excluded from the category of capital assets *all* real property used in the trade or business. Section 1221(2). In 1938, the year involved in the *Fackler* case, however, the statute excluded only *depreciable* property used in the trade or business. It was for this reason that the Court had to decide if the leasehold was depreciable. Ordinarily, of course, the taxpayer who owns rental property sells both land and a building. Since only the building is depreciable, the effect of finding that the property was used in the trade or business was (before 1942) to require capital gain or loss to be reported on the land and ordinary income or loss to be reported on the building. To avoid the resulting difficulty of allocating a lump sum sales price between land and building, the statute was amended in 1942 to remove *all* trade and business real estate from the capital asset category. H.R. Rept. No. 2333, 77th Cong., 1st Sess., 42–2, C.B. 372, 445. The price must still be allocated in calculating the buyer's deduction for depreciation.

2. Note that the Court says the taxpayer "was not holding the property merely as an investment and solely for the purpose of collecting rents without rendering personal service to tenants." In *Hazard* v. *Commissioner*, 7 T.C. 372 (1946), the *Fackler* principle was applied to a building originally used as the taxpayer's residence, then rented for four years, and finally sold. (On the "conversion" of personal property to business uses, see *supra*, p. 208.) There was no evidence that the taxpayer owned other rental property, presumably the management of this property occupied even less time than the "one or two" hours monthly devoted by Mr. Fackler to the management of his leasehold. Yet the court determined that, at the time of sale, the property was "used in the trade or business" because rented. For a contrary result on very similar facts, see *Grier* v. *United States*, 120 F. Supp 395 (D. Conn. 1954), where the court said:

> In this case the activities with relation to this single dwelling, although of long duration, were minimal in nature. Activity to rent and re-rent was not required. No employees were regularly engaged for maintenance or repair. Lacking the broader activity stressed in . . . *Fackler* v. *Commissioner*, the real estate in this case appears to partake more of the nature of property held for investment than property used in a trade or business. The property in this case, although used for the production of income should not be considered as used in the taxpayer's trade or business.

Do the arguments for special treatment of capital gains and losses suggest how property like that involved in the *Fackler* case should be treated? Is there any reason why a share of stock held by a trader like Mr. Van Suetendael, *supra*, p. 390, should be a capital asset while rental property owned by an investor is not?

2. *Is It a Quasi-Capital Asset?*

Note: **Section 1231 of the 1954 Code is virtually identical with § 117(j) of the 1939 Code.**
See Regs. 188, Sec. 39.117(j)-1.

Until 1942, on a sale or exchange of property the gain (loss) was ordinary income (loss) or capital gain (loss) depending upon whether the property was a capital asset or not. This bipolar classification was abandoned when § 117(j) [now § 1231] was added in 1942. Certain types of property, that would previously have given rise to ordinary income or loss, by virtue of § 1231 now give rise to capital gain or capital loss under certain circumstances.

Section 1231 should be examined with some care. It throws into a hotchpot all recognized gains or losses:

(a) on the sale, exchange, or "compulsory or involuntary conversion" (including condemnation, requisition, seizure, theft, and destruction) of depreciable and real property used in the trade or business and held for more than six months (excluding property includible in inventory or held for sale to customers and most copyrights and similar property);

(b) on the "compulsory or involuntary conversion" of capital assets, held for more than six months; and

(c) on the sale or exchange of certain livestock, unharvested crops, timber, iron ore, and coal.

If the hotchpot just described shows a net gain, then all gains and losses therein are treated as capital gains and losses; if it produces a net loss, the individual items are treated as ordinary income and ordinary losses.

Returning to *Fackler* v. *Commissioner*, *supra*, p. 402, if the taxpayer's transaction had occurred in 1942 or thereafter and had been his only "§ 1231 transaction" for the year, the profit would have been capital gain. If there had been a loss, however, it would have been an ordinary loss. But if there were other § 1231 transactions during the year, the treatment of profit or loss on the transaction in question would depend on the outcome of the hotchpot computation. To the extent that the taxpayer can postpone or accelerate his § 1231 transactions, he can determine the outcome of the hotchpot in a given taxable year and thus insure for himself a happy succession in alternate years of capital gains and ordinary losses.

Section 1231's extraordinary operation cries out for a rationale.

WELLS
LEGISLATIVE HISTORY OF TREATMENT OF CAPITAL GAINS UNDER THE FEDERAL INCOME TAX

2 Nat'l. Tax J. 12, 31–2 (1949)
(Reprinted by Permission)

Section 117(j), originally formulated to apply only to involuntary conversions, had been extended during the development of the 1942 act to ordinary sales and exchanges of depreciable property and finally to real property used in the trade or business, whether depreciable or not. The Ways and Means Committee bill limited special treatment to involuntary conversions and depreciable assets other than buildings and similar real estate improvements. The increase in involuntary conversions during the war, chiefly through shipping losses and condemnation of property for military purposes, had brought up the problem of providing special treatment for involuntary conversions. The expansion of the provision to cover ordinary sales and exchanges of depreciable property used in trade or business was intended to offer a solution to problems

raised by sales under wartime conditions. The 1938 exclusion of depreciable property from capital gains treatment had been intended to give full loss offset to sales of machinery and equipment used in trade or business. In ordinary times, no gains are realized upon such sales, but because of the war situation many taxpayers were selling buildings, machinery, and other equipment at substantial gains. Many of these sales involved an involuntary element. In considering the types of property to which section 117(j) should be extended on voluntary sale or exchange, the troublesome distinction between real property [*i.e.*, land] and depreciable property reappeared. The Senate bill in line with the view that uniform treatment should apply to both types of business property extended the section to cover not only depreciable property but also real property used in the trade or business. In addition, the lenient treatment thus provided for gains removed a principal objection to the Senate classification of real property as a noncapital asset, namely tax interference with gainful sales. The Senate version was adopted.

Note

1. Section 1231 is ordinarily favorable to the taxpayer, since it holds out the possibility of capital gain treatment on assets like business real estate and depreciable personalty that would otherwise be ineligible. The gain on such assets, moreover. may be merely a recoupment of excessive depreciation deducted from ordinary income in earlier years.

But § 1231 can also work against the taxpayer's interest. Suppose in a given taxable year the taxpayer suffers a loss of $10,000 on the sale of an apartment house and a gain of $8,000 on the sale under threat of condemnation of his own residence, both items having been held for more than six months. Were it not for § 1231, the $10,000 ordinary loss on the apartment house could be used to wipe out $4,000 of the long term capital gain on his home (the other $4,000 being deducted under § 1202), and he would be left with a $6,000 loss to be applied against his other income. By reason of § 1231, however, both items are treated as non-capital assets· the result is that after applying his $10,000 loss against his $8,000 gain, the taxpayer has only $2,000 of loss to apply against his other income. If the taxpayer's profit on the sale under threat of condemnation of his residence had been $25,000 instead of $8,000, § 1231 would also be unfavorable. For then, were it not for § 1231, he would have had an ordinary loss of $10,000 to apply against the taxable half of his capital gain, leaving only $2,500 to be taxed. Under § 1231, however, both items are capital, the result is that the taxpayer has a net long-term capital gain of $15,000, of which 50 per cent will be taxed.

By and large, however, § 1231 is favorable to the taxpayer. The adverse impact just noted could sometimes be avoided by postponing one transaction from one year to another.

2. There has been a flurry of recent litigation over the status of real property originally held for rental but then sold. At what point does such property come to be "held by the taxpayer primarily for sale to customers" in the ordinary course of his trade or business? When it is so held, it is no longer eligible for the benefit of § 1231. See *Rollingwood Corp.* v. *Commissioner*, 190 F.2d 263 (9th Cir. 1951); Brodsky, "Sale of Houses Originally Built for Investment, or Whither Section 117(j)?" 12th *Annual N.Y.U. Inst. on Fed. Taxation* 109 (1954).

3. Another recent group of cases has concerned the nature of the income realized by a farmer who sells farmland with an unharvested crop for a lump sum. If there is a profit on the sale, and if the sale is the taxpayer's only transaction under § 1231 for the taxable year, is the profit taxable as a capital gain under § 1231, or must the profit allocable to the crop be taxed as ordinary income on the theory that the crop, even though unharvested and unripe, is held primarily for sale to customers? In *Watson* v. *Commis-*

sioner, 345 U.S. 544 (1953), the Supreme Court held that the profit on the crop must be taxed as ordinary income. Under a line of lower court cases to the contrary, the taxpayer might have had a taxable loss despite his enjoyment of an economic gain. Assume that the land cost $10,000, that the expenses of raising the crop were $2,000, that the "package" is sold for $13,000, and that the sales price is allocable $10,000 to the land and $3,000 to the crop. Under the decisions rejected by the *Watson* case, the farmer would have $3,000 of capital gain, of which 50 per cent could be deducted under § 1202,* and $2,000 of expenses deductible under § 162(a). The Revenue Act of 1951 added §§ 1231(b)(4), 268, and 1016(a)(11) to the Code; they have the effect of allowing capital gain on the sale, but at the expense of capitalizing the costs of raising the crop. How would the example just given be affected by these sections? See Halstead, "Capital Gains of Farmers," 25 *So. Calif. L. Rev.* 36, 37–57 (1951).

3. *The Requirement of a Sale or Exchange*

JAMISON v. COMMISSIONER

Tax Court of the U. S., 1947
8 T.C. 173

Johnson, Judge. Issue No. 1. In computing petitioner's taxable income, the Commissioner disallowed the deduction of $7,300 claimed for 1942 as a loss sustained by the abandonment of 3 lots in Brigantine, New Jersey, and the deduction of $3,000 claimed for 1943 as a loss sustained by the abandonment of 31 lots near Morehead, North Carolina. Respondent does not dispute the amounts of the losses claimed and that petitioner deeded the lots to the respective states in order to avoid payment of taxes, as the evidence establishes. But he contends that these losses are capital in nature, and that their deduction is subject to § 117(d)(2) [now § 1211(b)], which imposes a limitation equal to the taxpayer's capital gains or $1,000, whichever is smaller. As petitioner for each year sustained other capital losses in excess of $1,000, the maximum deduction was absorbed by them, and the losses in controversy were disallowed in full.

Petitioner assails the determination that the deductions claimed involved losses from the sale or exchange of capital assets as defined by section 117(a). He contends that as to the 3 lots in Brigantine, New Jersey, and the 31 lots in North Carolina, he is entitled to a deduction for the full loss on these properties, since there was no sale or exchange, but rather an abandonment, and under the circumstances the loss is an ordinary one and not subject to the limitation of $1,000 prescribed in § 117(d) of the code. He cites *Commonwealth, Inc.*, 36 B.T.A. 850, and *James B. Lapsley*, 44 B.T.A. 1105, as supporting the deduction of an ordinary loss under the circumstances shown. In these cases this Court held that an ordinary loss resulted where the owner of realty subject to a mortgage deeded the property to the mortgagee without consideration and thereby sustained a loss, since the owner was not personally liable for the indebtedness covered by the mortgage.

Respondent asserts in his brief "that in conveying title to the taxing authorities petitioner was making a forced conveyance which the courts hold the equivalent of a foreclosure sale," and cites *Helvering* v. *Nebraska Bridge Supply*

* Deduction under § 1202 assumes either that the crop can be regarded as held for more than six months or that the holding period of the land governs the whole transaction.

& Lumber Co. (1941), 312 U.S. 666, and *Helvering* v. *Hammel* (1941), 311 U.S. 504.

In the pending case there was nothing to indicate a "forced conveyance," as there was no evidence that the taxing authorities had brought or threatened foreclosure of the tax lien, but, on the contrary, it appears that the taxpayer's action in deeding both properties was voluntary and he manifested to the taxing authorities his desire to deed the properties as he wished to abandon same, having decided that their value was less than the taxes thereon.

The laws of New Jersey and North Carolina, in which two states these properties are located, both expressly provide that there is no personal liability against the owners of realty for taxes due thereon. The dollar consideration recited not being paid and petitioner not being personally liable for the taxes, the conveyances of both properties were without consideration. As was said in *Commonwealth, Inc., supra.*

> Inasmuch as there was in fact no consideration to the petitioner, the transfer of title was not a sale or exchange The execution of the deed marked the close of a transaction whereby petitioner abandoned its title.

The cases of *Helvering* v. *Hammel* and *Helvering* v. *Nebraska Bridge Supply & Lumber Co., cited* by respondent, are clearly distinguishable from this case. In both of these cases the title to the property passed, not by a deed voluntarily executed without consideration for an abandonment of the property, but in the former by virtue of a foreclosure sale, based upon a court decree foreclosing the lien, and in the latter by tax sale. In the *Hammel* case the taxpayer was one of a syndicate which defaulted in payment of indebtedness secured by lien on realty. The holder of the indebtedness obtained judgment and a foreclosure decree without equity of redemption and thereafter the "Sheriff sold the property at public auction" and the taxpayer lost the amount he had invested therein. The taxpayer contended, and the Circuit Court held, 108 Fed. (2d) 753, that, since the taxpayer was not a party to the sheriff's sale and neither contracted for nor consented to it and received no part of the consideration and was deprived of his interest in the property, not by sale, but by adverse judicial proceeding, the sheriff's sale was not a sale within the meaning of section 117(d). The Supreme Court, however, reversed the Circuit Court and held that the word "sale" in section 117(d) was comprehensive enough to cover a *forced sale* or a sale foreclosing the lien and was not restricted to a private or voluntary sale, as had theretofore been held. We quote from the Supreme Court's opinion in the *Hammel* case:

> . . . *the sale* was the definitive event establishing the loss within the meaning and for the purpose of the revenue laws. They are designed for application to the practical affairs of men. *The sale*, which finally cuts off the interest of the mortgagor and is the means for determining the amount of the deficiency judgment against him is a means adopted by the statute for determining the amount of his capital gain or loss from *the sale* of the mortgaged property. [Italics supplied]

In the *Nebraska Bridge* case, *supra*, the taxpayer owned land upon which there were delinquent taxes secured by a tax lien, but no personal liability against the owner, and the taxpayer's property was divested, not by a conveyance without consideration, but the state foreclosed its lien and "the lands were bought in by the state at a regular tax *sale* for the amount of the delinquent taxes."

The Circuit Court of Appeals for the Eighth Circuit, at 115 Fed.(2d) 288, held in favor of the taxpayer that such transaction did not constitute a sale and that the loss was an ordinary one and not limited by section 117(d), but the Supreme Court, following its decision in the *Hammel* case, decided shortly prior thereto, reversed the judgment of the Circuit Court without a written opinion. . . .

In *Stokes* v. *Commissioner*, 124 Fed.(2d) 335, the Circuit Court of Appeals for the Third Circuit held that if the taxpayer who is not personally liable conveys the mortgaged premises to the mortgagee, who accepts the deed without paying or promising to pay anything therefor, the transaction is not a "sale" or "exchange" within the meaning of section 117(d). In that case, as in the pending one, the Commissioner contended that the *Hammel* and the *Nebraska Bridge* cases were in conflict with such holding, and the opinion of the Circuit Court in the *Stokes* case, in answering such argument, used this language:

> It is contended on behalf of the Commissioner that the case is governed by *Helvering* v. *Nebraska Bridge Supply & Lumber Co.* (1941), 312 U. S. 666, 667, 61 S. Ct. 827, 85 L. Ed. 1111, which follows *Helvering* v. *Hammel* (1941), 311 U. S. 504, 61 S. Ct. 368, 85 L. Ed. 303, 131 A. L. R. 1481, and *Electro-Chemical Engraving Co., Inc.* v. *Commissioner of Internal Revenue* (1941), 311 U.S. 513, 61 S. Ct. 372, 85 L. Ed. 308. Each of these cases, however, involved a sale, i. e., a foreclosure sale or a tax sale; the only issue being whether such forced sales were outside the contemplation of Congress in referring to sales. . . .

We therefore hold that petitioner sustained ordinary and not capital losses in 1942 as to the Brigantine lots and in 1943 as to the North Carolina lots and is entitled to deduction for the full amount of his losses on both.

Note

1. *Should* there be any tax difference between a foreclosure of a tax or mortgage lien and a "voluntary" abandonment or conveyance to the lienor? Can the taxpayer whose real estate has become worthless take a deduction under § 165(a) without abandoning or transferring it and thereby avoid even the semblance of a "sale or exchange?" In *Helvering* v. *Gordon*, 134 F.2d 685 (4th Cir. 1943), the Commissioner argued that real estate could not give rise to a loss until the taxpayer divests himself of title. Although admitting that in the case of other property, actual worthlessness permits a deduction even though the property is not disposed of in any way, he argued that "real estate always has potential value" so that no closed transaction is shown while the taxpayer continues to own the property. The Court said:

> Assuming the truth of this assertion with respect to an unencumbered interest in land, it cannot stand the practical or realistic test which is met when the interest is subject to superior liens or encumbrances that exceed its real value. In such a case the value of the equity is extinguished as effectually as the interest which a stockholder retains who holds title to shares in an insolvent corporation that has no reasonable expectation of recovery. In one case, as in the other, the loss has taken place and the retention of the bare legal title becomes a circumstance without significance.

Recall that by virtue of Section 165(g) the loss on stocks and other securities that become worthless are capital losses. *Infra*, p. 396. There is no comparable provision for other kinds of property.

2. Condemnation has been held to constitute a sale or exchange. *Hawaiian Gas Products Ltd.* v. *Commissioner*, 126 F.2d 4 (9th Cir. 1942). If it were not, there would be an unwarranted disparity between condemnation and sales under threat of condem-

nation. Their similarity has received statutory recognition; both § 1033 and § 1231 put them on a plane of equality. Where property is destroyed and the taxpayer is compensated by an insurer, however, the Supreme Court has held that there is no sale or exchange. *Helvering* v. *Flaccus Oak Leather Co.*, 313 U.S. 247 (1941). Here again § 1231 puts the involuntary transaction on a par with a sale. What if property is stolen and the owner waives the tort and sues for and recovers the value of the property?

3. See generally Note, The Elements of a Section 117 "Sale or Exchange," 53 *Col. L. Rev.* 976 (1953).

4. *Is the Gain or Loss Recognized?*

> ***Note:*** **Section 1031(a) of the 1954 Code, relating to certain exchanges, in kind, reenacts, without substantive change, § 112(b)(1) of the 1939 Code.**
> **See Regs. 118, Sec. 39.112(b)(1)-1.**

We have already seen that the Code provides for the non-recognition of gain and/or loss in a diversity of transactions with securities. Gain or loss in certain real estate transactions also goes unrecognized. Two examples of non-recognition have already been encountered: the gain on sale of a residence if another is purchased within a year (*supra*, p. 155); and the gain on an involuntary conversion when the taxpayer elects to come under § 1033 (*supra*, p. 156). The following case illustrates another non-recognition provision: § 1031. Like § 1033 it is not limited to capital assets, but it is nevertheless conveniently examined here. § 1031, unlike both § 1033 and § 1034, provides for the non-recognition of both gain *and loss*. Moreover, unlike § 1033, it is not elective.

CENTURY ELECTRIC CO. v. COMMISSIONER

U. S. Court of Appeals, Eighth Circuit, 1951
192 F.2d 155, cert. den. 342 U.S. 954 (1952)

Before SANBORN, JOHNSEN and RIDDICK, Circuit Judges.

RIDDICK, Circuit Judge.

The petitioner, Century Electric Company, is a corporation engaged principally in the manufacture and sale of electric motors and generators in St. Louis, Missouri. It is not a dealer in real estate. As of December 1, 1943, petitioner transferred a foundry building owned and used by it in its manufacturing business and the land on which the foundry is situated to William Jewell College and claimed a deductible loss on the transaction in its tax return for the calendar year 1943. The Commissioner of Internal Revenue denied the loss. The Commissioner was affirmed by the Tax Court and this petition for review followed.

The opinion of the Tax Court and its findings of fact, stated in great detail, are reported in 15 T.C. 581. Petitioner accepts the Tax Court's findings of fact as correct.

Since its organization in 1901 petitioner has been continuously successful in business. In its income tax return for the year 1943 it reported gross sales of $17,004,839.73 and gross profits from sales of $5,944,386.93. On December 31, 1942, petitioner owned land, buildings, and improvements of the total depreciated cost of $1,902,552.16. On December 31, 1943, its actual cash on hand amounted to $203.123.70. During the year 1943 it distributed cash dividends

of $226,705.69 and made a contribution to Washington University of $42,500. It also held tax anticipation notes and Series G bonds totaling $2,000,000, readily convertible into cash and sufficient to liquidate its outstanding 1943 tax liability and its two outstanding 90-day bank notes due January 20, 1944.

Petitioner has always operated its business in large part on borrowed capital. In 1943 it had open lines of credit with the Chase National Bank of New York of $300,000, with the Boatmen's National Bank of St. Louis of the same amount, and with the Mercantile-Commerce Bank and Trust Company of $400,000. At the end of 1943 its outstanding loans from the Mercantile bank amounted to $600,000 approved by the authorized officers of the bank. Petitioner has always been able to liquidate its outstanding 90-day bank loans as they become due either by payment or renewal.

The assessed value of petitioner's foundry building and land upon which it is located for 1943 was $205,780. There was evidence that in St. Louis real property is assessed at its actual value. There was also evidence introduced by petitioner before the Tax Court that the market value for unconditional sale of the foundry building, land, and appurtenances was not in excess of $250,000.

As of December 1, 1943, the adjusted cost basis for the foundry building, land, and appurtenances transferred to William Jewell College was $531,710.97. The building was a specially designed foundry situated in a highly desirable industrial location. It is undisputed in the evidence that the foundry property is necessary to the operation of petitioner's profitable business and that petitioner never at any time considered a sale of the foundry property on terms which would deprive petitioner of its use in its business.

Petitioner's explanation of the transaction with the William Jewell College is that in the spring of 1943 a vice-president of the Mercantile bank where petitioner deposited its money and transacted the most of its banking business suggested to petitioner the advisability of selling some of its real estate holdings for the purpose of improving the ratio of its current assets to current liabilities by the receipt of cash on the sale and the possible realization of a loss deductible for tax purposes. Petitioner's operating business was to be protected by an immediate long-term lease of the real property sold.

Petitioner's board of directors rejected this proposition as unsound. But in July 1943, when a vice-president of the Mercantile bank suggested to petitioner's treasurer that it would be a good idea for petitioner to pay off all its bank loans merely to show that it was able to do so, petitioner interpreted this advice as a call of its bank loans. Acting on this interpretation, petitioner borrowed from the First National Bank in St. Louis on the security of tax anticipation notes held by it, funds with which it discharged all its bank loans. Immediately thereafter it re-established its lines of bank credit and began consideration of a sale of the foundry property and contemporaneous lease from the purchaser.

On September 2, 1943, petitioner's board of directors adopted a resolution that the executive committee of the board study the situation "and present, if possible, a plan covering the sale and rental back by Century Electric Company of the foundry property." The decision to enter into the transaction described was communicated to the Mercantile bank, but petitioner never publicly offered or advertised its foundry property for sale. The Tax Court found that petitioner "was concerned with getting a friendly landlord to lease the property back to

it, as there was never any intention on the part of petitioner to discontinue its foundry operations." Several offers to purchase the foundry property at prices ranging from $110,000 to $150,000 were received and rejected by petitioner.

At a special meeting of the board of directors of petitioner on December 9, 1943, the president of petitioner reported that the officers of petitioner had entered into negotiations for the sale of the foundry property to William Jewell College for the price of $150,000 with the agreement of said college:

> that in addition thereto said Trustees of William Jewell College further have agreed to execute a lease of the property so purchased to Century Electric Company for the same time and on substantially the same terms and conditions which were authorized to be accepted by the special meeting of shareholders of this corporation, held on the 24th day of November, 1943.

The stockholders at the November meeting had authorized the sale of the foundry property at not less than $150,000 cash, conditioned upon the purchaser executing its lease of the property sold for a term of not less than 25 and not more than 95 years. The Board by resolution approved the proposed transaction with the William Jewell College, but on condition that

> this corporation will acquire from Trustees of William Jewell College, a Missouri Corporation, an Indenture of Lease . . . for a term of not less than twenty-five years and for not more than ninety-five years.

The resolution set out in detail the terms of the lease from the college to petitioner, approved the form of the deed from the petitioner to the college, authorized the president and secretary of petitioner to execute the lease after its execution by the trustees of the college, and directed

> that the president and secretary of this corporation be authorizd to deliver said Warranty Deed to said purchaser upon receiving from said purchaser $150,000 in cash, and upon receiving from said purchaser duplicate executed Indenture of Lease on the forms exhibited to this Board.

The resolution provided that the deed and lease should be dated December 1, 1943, and effective as of that date.

The deed and the lease were executed and delivered as provided by the resolution of petitioner's board of directors. Neither instrument referred to the other. The deed was in form a general warranty deed, reciting only the consideration of $150,000 in cash. The lease recited among others the respective covenants of the parties as to its term, its termination by either the lessor or lessee, and as to the rents reserved.

As of Decmber 31, 1942, the ratio of petitioner's current assets to its current liabilities was 1.74. The $150,000 in cash received by petitioner on the transaction increased the ratio of current assets to current liabilities from 1.74 to 1.80. The loss deduction which petitioner claims on the transaction and its consequent tax savings would if allowed have increased the ratio approximately twice as much as the receipt of the $150,000.

The questions presented are:

1. Whether the transaction stated was for tax purposes a sale of the foundry property within the meaning of section 112 of the Internal Revenue Code, on which petitioner realized in 1943 a deductible loss of $381,710.97 determined under section 111 of the code (the adjusted basis of the foundry property of

$531,710.97 less $150,000) as petitioner contends; or, as the Tax Court held, an exchange of property held for productive use in a trade or business for property of a like kind to be held for productive use in trade or business in which no gain or loss is recognized under sections 112(b)(1) and 112(e), and Regulation 118, section 39.112(b)(1)-1.[1]

2. Whether if the claimed loss deduction is denied, its amount is deductible as depreciation over the 95-year term of the lease as the Tax Court held, or over the remaining life of the improvements on the foundry as the petitioner contends.

On the first question the Tax Court reached the right result. The answer to the question is not to be found by a resort to the dictionary for the meaning of the words "sales" and "exchanges" in other contexts, but in the purpose and policy of the revenue act as expressed in section 112. Compare *Federal Deposit Insurance Corp.* v. *Tremaine*, 2 Cir., 133 F.2d 827, 830; *Cabell* v. *Markham*, 2 Cir., 148 F.2d 737, 739; *Markham* v. *Cabell*, 326 U.S. 404, 409, 66 S. Ct. 193, 90 L. Ed. 165; *Brooklyn National Corp.* v. *Commissioner*, 2 Cir, 157 F.2d 450, 451; *Emery* v. *Commissioner*, 2 Cir., 166 F.2d 27, 30, 1 A.L.R.2d 409. In this section Congress was not defining the words "sales" and "exchanges." It was concerned with the administrative problem involved in the computation of gain or loss in transactions of the character with which the section deals. Subsections 112(b) (1) and 112(e) indicate the controlling policy and purpose of the section, that is, the nonrecognition of gain or loss in transactions where neither is readily measured in terms of money, where in theory the taxpayer may have realized gain or loss but where in fact his economic situation is the same after as it was before the transaction. See *Fairfield S.S. Corp.* v. *Commissioner*, 2 Cir., 157 F.2d 321, 323; *Trenton Cotton Oil Co.* v. *Commissioner*, 6 Cir., 147 F.2d 33, 36. For tax purposes the question is whether the transaction falls within the category just defined. If it does, it is for tax purposes an exchange and not a sale. So much is indicated by subsection 112(b) (1) with regard to the exchange of securities of readily ascertainable market value measured in terms of money. Gain or loss on exchanges of the excepted securities is recognized. Under § 112(e) [now § 1031(c)] no loss is recognized on an exchange of property held for productive use in trade or business for like property to be held for the same use, although other property or money is also received by the taxpayer. Compare this subsection with § 112(c)(1) [now 1031(b)] where in the same circumstances gain is recognized but only to the extent of the other property or money received in the transaction. The comparison clearly indicates that in the computation of gain or loss on a transfer of property held for productive use in trade or business for property of a like kind to be held for the same use, the market value of the properties of like kind involved in the transfer does not enter into the equation.

The transaction here involved may not be separated into its component parts

[1] "Sec. 39.112(b)(1)-1. Property Held for Productive Use in Trade or Business or for Investment.—As used in section 112(b) (1), the words 'like kind' have reference to the nature or character of the property and not to its grade or quality. One kind or class of property may not, under such section, be exchanged for property of a different kind or class. The fact that any real estate involved is improved or unimproved is not material, for such fact relates only to the grade or quality of the property and not to its kind or class. . . .

"No gain or loss is recognized if . . . (2) a taxpayer who is not a dealer in real estate exchanges city real estate for a ranch or farm, or a leasehold of a fee with 30 years or more to run for real estate, or improved real estate for unimproved real estate. . . ."

for tax purposes. Tax consequences must depend on what actually was intended and accomplished rather than on the separate steps taken to reach the desired end. The end of the transaction between the petitioner and the college was that intended by the petitioner at its beginning, namely, the transfer of the fee in the foundry property for the 95-year lease on the same property and $150,000.

It is undisputed that the foundry property before the transaction was held by petitioner for productive use in petitioner's business. After the transaction the same property was held by the petitioner for the same use in the same business. Both before and after the transaction the property was necessary to the contined operation of petitioner's business. The only change wrought by the transaction was in the estate or interest of petitioner in the foundry property. In Regulations 118, section 39.112(b) (1)-1, the Treasury has interpreted the words "like kind" as used in subsection 112(b) (1). Under the Treasury interpretation a lease with 30 years or more to run and real estate are properties of "like kind." With the controlling purpose of the applicable section of the revenue code in mind, we can not say that the words "like kind" are so definite and certain that interpretation is neither required nor permitted. The regulation, in force for many years, has survived successive reenactments of the internal revenue acts and has thus acquired the force of law. *United States* v. *Dakota-Montana Oil Co.*, 288 U.S. 459, 466, 53 S. Ct. 435, 77 L. Ed. 893; *Helvering* v. *R. J. Reynolds Tobacco Co.*, 306 U.S. 110, 116, 59 S. Ct. 423, 83 L. Ed. 536; and see *Commissioner of Internal Revenue* v. *Crichton*, 5 Cir., 122 F.2d 181.

On the second question the Tax Court held that petitioner was not entitled to depreciation on the improvements on the foundry property over their useful life after December 1, 1943. The answer to this question depends upon whether as a result of the transaction under consideration the petitioner has an indentifiable capital investment in the improvements on the land covered by the lease. Petitioner contends that the amount of its claimed loss, $381,710.97, should be apportioned between the land and improvements in proportion to their respective cost bases as of November 30, 1943. This would result in an allocation of $277,076.68 of petitioner's investment in the leasehold to the improvements and $104,634.29 to the land. The difficulty with petitioner's position is that it involves assumptions and inferences which find no support in the record. What the petitioner has done is to exchange the foundry property having an adjusted basis of $531,710.97 on December 1, 1943, for a leasehold and $150,000 in cash. Its capital investment is in the leasehold and not its constituent properties. Accordingly, we agree with the Tax Court that petitioner is entitled to depreciation on the leasehold. The basis for depreciation of the leasehold on December 1, 1943, is, therefore, $381,710.97 under section 113(a) (6) [now § 1031(d)], deductible over the term of the lease.

The decision of the Tax Court is affirmed.

Note

Was § 1031(a) necessary to the result? In two cases where the sale was coupled with a lease-back for less than 30 years, the period mentioned in Regulations 118, Sec. 39.112(b)(1)-1, the loss has been allowed by the Tax Court, *Standard Envelope Mfg. Co.* v. *Commissioner*, 15 T.C. 41 (1950); *May Department Stores Co.* v. *Commissioner*, 16 T.C. 547 (1951). The many ramifications of this somewhat over-advertised device

are well elucidated by Cary, "Corporate Financing Through the Sale and Lease-Back of Property: Business, Tax, and Policy Considerations," 62 *Harv. L. Rev.* 1 (1948), and "Current Tax Problems in Sale, or Gift, and Lease-Back Transactions," *9th Annual N.Y.U. Inst. on Fed. Taxation* 959 (1951). In certain circumstances, non-profit institutions that are otherwise tax-exempt will be taxed on the income they recive from property purchased and then leased-back. Sections 421 and 423. See *infra*, Chapter 7, Section C.

Section D. Tangible Personal Property

The problems arising under § 1221 with respect to tangible personal property are roughly parallel to those relating to real property.

Property held for sale to customers in the ordinary course of the taxpayer's business, and property includible in inventory, give rise to ordinary income and loss. See *Reynolds* v. *Commissioner*, 155 F.2d 620 (1st Cir. 1946). The Tax Court holds that such property does not become a capital asset when the taxpayer goes out of business and sells it in the process of liquidation. *Grace Bros., Inc.* v. *Commissioner*, 10 T.C. 158 (1948); the opinion of the Court of Appeals affirming this decision is confusing on the question, 173 F.2d 170, 178, (9th Cir. 1949). Note that the process of liquidation may itself become a trade or business and the property being disposed of may be held for sale to customers, as in the *Mauldin* case, *supra*, p. 398.

Tangible personal property used in the trade or business, if depreciable, is also excluded from the capital asset category. (Note that non-depreciable personalty so used, unlike non-depreciable real property used in trade or business, is a capital asset.) Such property, however, is eligible for § 1231; indeed, as pointed out above, *supra*, p. 406, a major purpose of § 1231 was to grant favorable treatment to machinery, equipment, and vessels that were sold or requisitioned during World War II.

A troublesome problem in the application of § 1231 has been to ascertain when property used in the trade or business is also includible in inventory or held for sale to customers, since if it is, § 1231 does not apply. See § 1231(b)(1)(A) and (B). In *Benetti Novelty Co.* v. *Commissioner*, 13 T. C. 1072 (1949), it was held that a taxpayer whose business was renting slot machines was entitled to employ § 1231 on selling used machines; the government had argued that because the taxpayer's regular practice was to sell its older machines and replace them with new ones, the machines were not only used in the trade or business but also held for sale to customers. The Bureau apparently will not accept this decision; see Rev. Rul. 108, 53-1 C.B. 185 (§ 1231 not applicable to automobiles sold by a taxpayer in the business of leasing them for less than their normal useful life and then selling them); I.T. 4062, 51-2 C.B. 61 (automobiles used by a dealer as "demonstrators" are not eligible under § 1231); *cf. Latimer-Looney Chevrolet* v. *Commissioner*, 19 T.C. 120 (1952) ("company cars" used by a dealer for various purposes but customarily sold after 8,000 to 12,000 miles of service are not excluded from § 1231.

A sizeable volume of litigation was concerned with the application of this

distinction to livestock prior to the Revenue Act of 1951, which added what is now Section 1231(b)(3). Animals held exclusively for breeding purposes are depreciable property used in the trade or business and even though sold when their usefulness for breeding is exhausted are not *held* for sale. Hence they have always qualified under § 1231. But suppose a farmer's practice is to use a substantial number of all the animals he raises for breeding and to sell them after a season or two. Are such animals then not only used in the trade or business but at the same time held primarily for sale, and thus ineligible under § 1231? The Treasury's attempt to deny capital gain treatment under § 1231 was on the whole unsuccessful in the courts, but it litigated the issue so persistently that Congress finally intervened in 1951 to insure § 1231's applicability. The leading case under § 1231 prior to its amendment is *Albright* v. *United States*, 173 F.2d 339 (8th Cir. 1949); and see Halstead, "Capital Gains of Farmers," 25 *So. Calif. L. Rev.* 36, 57-64 (1951).

Under § 1231 as amended (the change was retroactive to January 1, 1942), the livestock owner is assured of capital gains treatment if the animals are held for draft, breeding, or dairy purposes even though they are also held for sale. The inclusion of these animals under § 1231 is a shining example of bartering deductions from ordinary income for capital gains. The cost of raising the animals is deductible from ordinary income (unless the farmer inventories his animals); the profit on sale is capital gain. To illustrate by an extreme example, assume that the cost of raising an animal is $100, deducted from income that would otherwise be taxed at the rate of 50 per cent, and that the animal is sold for $100. Has the owner made a profit? What if he sells the animal for $80?

The third category of tangible personal property is made up of capital assets. This category includes property devoted to personal use (private automobiles, furniture, jewelry, *etc.*), property held for investment, and non-depreciable property used in the trade or business but not held for sale.

Section E. Patents, Copyrights, and the Like

1. *Before 1950*

Until 1950, the Code did not explicitly prescribe the tax treatment of patents, inventions, copyrights, manuscripts, and similar property. Capital gains and losses would be realized only if, under the general provisions of the statute, the patent, copyright, or other item was a "capital asset" and was "sold or exchanged."

To meet the first requirement—that the property be a capital asset—the taxpayer had to show that it was neither held for sale to customers in the regular course of trade or business nor depreciable property used in his trade or business. In general, capital gains were thus confined to "amateur" inventors and authors, though this category might embrace a person who was employed to invent or write if the work sold was the result of spare-time work outside the scope of his employment. See *Myers* v. *Commissioner*, 6 T.C. 258, 266 (1946); *Pike* v. *United States*, 101 F. Supp. 100 (D. Conn. 1951). Patents and copyrights might also have qualified as "quasi-capital" assets under what is now § 1231, if used in the

trade or business and not held for sale to customers, though this was not entirely clear. See *Avery* v. *Commissioner*, 47 B.T.A. 538 (1942); *Diescher* v. *Commissioner*, 36 B.T.A. 732, 743; *General Spring Corp.* v. *Commissioner*, ¶ 53,257 P-H Memo TC.

Meeting the second requirement—that the capital asset was "sold" or "exchanged"—was easy if the patent or invention was sold for a specified sum. But the typical method of exploiting inventions and literary works is to allow commercial enterprises to use them in return for royalties, and the Internal Revenue Service took the position that a patent or copyright that was licensed for use on a royalty basis was not "sold" or "exchanged" within the meaning of what is now § 1222. This argument was rejected in a number of cases; see, for example, *Dreymann* v *Commissioner*, 11 T.C. 153, 162-163, where the court said:

> We do not agree with respondent's contention that to apply the benefits of the long term capital gains provisions . . . would be repugnant to the "underlying theory of the capital gains limitations." He argues that the purpose of the capital gains limitations is to lessen the impact of the Federal income tax "on the realization in one lump sum in one taxable year of an increment in value which had taken place over a number of years." Since petitioner here did not sell the process for one lump sum, he concludes, the application of the capital gains limitations in the case at bar would defeat the intent and purpose of Congress. In the first place, section 117 of the Revenue Act of 1934 did not contain any provision to the effect that payment from the sale of a capital asset must be in one lump sum. Respondent supports his position, however, by pointing to House Report No. 350, 67th Cong., 1st sess. (C.B. 1939-1 (Part 2), p. 176). That report accompanied the Revenue Act of 1921, which first introduced the capital gains provision into our taxing statute. It reads in part as follows:
>
> > "Section 206: The sale of farms, mineral properties, and other capital assets is now seriously retarded by the fact that gains and profits earned over a series of years are under the present law taxed as a lump sum (and the amount of surtax greatly enhanced thereby) in the year in which the profit is realized. . . ."
>
> There is nothing in the House report or in the Senate report which supports respondent's assertion that a taxpayer, in order to have the tax benefit of the capital gains provisions, must sell his asset for one lump sum. As a matter of fact, this and other courts have held that where, as here, the consideration for the sale of a capital asset was in the form of periodic payments based on a percentage of the gross sales made during the year, the taxpayer was entitled to a capital gains limitation on the sums received in each year. See *Commissioner* v. *Celanese Corporation*, *supra*, *George James Nicholson*, 3 T.C. 596, and cases cited therein. We can find no valid reason for holding otherwise in this case.

See also *Myers* v. *Commissioner*, 6 T.C. 258 (1946), holding that an exclusive license of a patent was a sale, as required for capital gain treatment. The Internal Revenue Service persisted in its view, no doubt much influenced by the anamoly of capital gains being realized for the product of personal service and skill, and in 1950 it issued Mim. 6490, 1950-1 C.B. 9, announcing that royalties were to be treated as ordinary income and withdrawing a previously announced acquiescence in the *Myers* decision.

Up to this point, as indicated above, no distinctions were made between the inventor and the author. From 1950 on, however, it was evident that their paths diverged.

2. *The 1950 Amendments*

Note: Sections 1221(3) and 1231(b)(1)(C), relating to copyrights, literary compositions, and similar property, reenact §§ 117(a)(1)(C) and 117 (j)(1)(C) of the 1939 Code.

In 1948 the financial arrangements for the publication of General Eisenhower's "Crusade in Europe" were extensively discussed in the press. The New Yorker reported:

> The manuscript was finished on March 24th and sold to Doubleday early this month [Oct., 1948] for a sum that has been rumored to be somewhere between a hundred thousand and a million dollars. There hadn't been any doubt that Doubleday would buy the book. The reason for the hiatus, and for an outright sale rather than the usual royalties deal, was a ruling by the income-tax people that in this way Eisenhower would qualify for a twenty-five-per-cent capital-gains tax on the transaction, instead of being subject to the graduated income tax. The capital-gains tax is limited to twenty-five per cent only in the case of so-called capital assets held at least six months, and apparently writers can get in under it when they are non-professionals. If the General should write a second book, he might find himself in the same tax boat as Norman Mailer and Dale Carnegie. We note that he has recently taken up painting, on an amateur basis.

During the 1952 Presidential campaign General Eisenhower made public the Treasury's ruling, which was followed a year later by a closing agreement, to the effect that capital gain would be realized on the assumption that

> you propose to sell to a publisher in one transaction all of your right, title and interest in your literary work, and that after such sale, you would have no further control over the manuscript or its exploitation in any field or medium of publication. . . . that there would be no further income of any kind accruing to you after the single transaction. (New York Times, Oct. 15, 1952, p. 22.)

The emphasis on the sale of all rights for a lump sum reflects the Treasury's view that a royalty arrangement would defeat the concept of a "sale" and that the transfer of book publication rights to one publisher, serial rights to a second, foreign book rights to a third, and dramatic and motion picture rights to others would be indicative of "licenses" and not "sales." See Mim. 6490, *supra;* Fulda, "Copyright Assignments and the Capital Gains Tax," 58 *Yale L.J.* 245 (1949).

About the same time that General Eisenhower's transaction occurred, it was reported that the Columbia Broadcasting Company had lured a number of radio performers, including Amos 'n Andy and Jack Benny, from the National Broadcasting Company, by so-called "capital gains deals." The details have never been authoritatively publicly announced, but it was reported that the performers sold the "shows" — embracing perhaps the scripts, trade names, good will, rights to the characters and manner of rendition, *etc.* — for flat sums, simultaneously entering into long-term employment contracts. Every Broadway and Hollywood columnist had his own explanation of the tax advantages thereby gained: speculation was reported on whether Faust's sale of his soul to the Devil gave rise to ordinary income or capital gain.

The bubble was pricked on January 3, 1949, when the Bureau issued this laconic statement:

> The tax effect of any business transaction is determined by its realities.
> Accordingly, proposals of radio artists and others to obtain compensation for personal services under the guise of sales of property cannot be regarded as coming within the capital gains provisions of the Internal Revenue Code. Such compensation is taxable at ordinary income tax rates.

See generally Mintz, "Entertainers and the Capital Gains Tax," 4 *Tax L. Rev.* 275 (1949).

The Revenue Act of 1950 added what are now §§ 1221(3) and 1231(b)(1)(C), so as to deny capital gain treatment to copyrights, literary, musical, and artistic compositions, and similar property held either by the creator or by a person, such as a donee, whose basis for the property is determined by reference to the creator's basis. The House of Representatives, proposed to treat inventors like authors, but the Senate Finance Committee demurred:

> Your committee believes that the desirability of fostering the work of such [occasional] inventors outweighs the small amount of additional revenue which might be obtained under the House bill, and therefore the words "invention," "patent," and "design" have been eliminated. . . (S. Rept. No. 2375, 81st Cong. 2d Sess., 1950–2 C.B. 483, 515.)

Can copyrights, manuscripts, and the like ever qualify for capital gain and loss treatment under the present statute? See *Fidler* v. *Commissioner*, 20 T.C. 1081 (1953) (literary properties purchased as an investment with the hope of a profitable resale held to be capital assets).

It should be noted that § 1302 may provide some tax relief for authors and inventors whose income in a single year represents the fruits of work over a period of 36 months or more. *Infra*, Ch. 8, Sec B (3). Another method of avoiding the telescoping of income is to make an "installment sale" of the copyright or other property. Under § 453(b) the income realized on the sale is taxed as the installments are received. Ex-President Truman, who decided to sell his memoirs after the enactment of § 1221(3), was granted a ruling in late 1953 approving a proposed installment sale under § 453(b). *Infra*, Ch. 8, Sec. B(1).

3. *The 1954 Amendment*

***Note:* Section 1235 of the 1954 Code is new.**

The Senate Report on § 1235 states (p. 439):

> To obviate the uncertainty caused by [Mim. 6490, *supra*, relating to royalties] and to provide an incentive to inventors to contribute to the welfare of the Nation, your committee intends, in subsection (a) [of § 1235], to give statutory assurance to certain patent holders that the sale of a patent (whether as an "assignment" or "exclusive license") shall not be deemed not to constitute a "sale or exchange" for tax purposes solely on account of the mode of payment.

What is the meaning and purpose of the requirement in § 1235(a) that the taxpayer transfer "property consisting of all substantial rights to a patent, or an undivided interest therein which includes a part of all such "rights"? Under earlier law, the Treasury was unsuccessful in its contention that a patent or copyright is an indivisible unit that can be "sold" only as a whole. Thus Kathleen Winsor's trans-

fer of the motion picture rights to "Forever Amber" was held to be a "sale," rather than a "license," as the government asserted. *Herwig* v. *Commissioner,* 105 F. Supp. 384 (Ct.Ct. 1952). Apparently a transfer of the exclusive right to exploit a patent in a limited geographical area would also be a "sale." See *Cleveland Graphic Bronze Co.* v. *Commissioner,* 10 T.C. 974, 988 (1948), aff'd. p.c. 177 F.2d 200 (6th Cir. 1949). Do cases like these shed light on the phrase quoted above from § 1235(a)?

Note that the benefits of § 1235 are not restricted to amateur inventors. Can capital gain or loss be realized in connection with patents or inventions apart from § 1235?

See § 1302, giving favorable treatment, within certain limits, to ordinary income "in respect of a particular invention or artistic work created by the individual." When would an inventor make use of this provision?

What is the basis upon which gain or loss on the sale of a patent by its inventor is to be computed? See Regs. 118, Sec. 39.23(1)–7. With respect to "developmental or experimental expenses, etc.," which the regulation treats as the cost of a patent, recall that the Bureau's policy has been to allow the "expensing" of these costs where the taxpayer has done so consistently. *Supra,* p. 277. After deducting such costs, could the taxpayer include them in the patent's basis on the theory that the Bureau should not have allowed the deductions? An *amateur* inventor would probably not be allowed to deduct his costs even under the Bureau's lenient policy

---

Section F. Assets Linked with Ordinary Income

RHODES' ESTATE v. COMMISSIONER

U. S. Court of Appeals, Sixth Circuit, 1942
131 F.2d 50

Before HAMILTON, MARTIN, and MCCALLISTER, Circuit Judges.

Per Curiam.

On petition for review of a decision of the United States Board of Tax Appeals, it appears from the record that on November 18, 1937, the Carroll Furniture Company of Atlanta, Georgia, declared a cash dividend of $20.00 per share payable on December 18, 1937, to stockholders of record at 12:00 o'clock noon on November 26, 1937. The taxpayer, Herman W. Rhodes, was the record owner of 600 shares of stock of said company on each of the three said dates.

The taxpayer offered to sell his dividend right for $11,925.00 to C. H. Patton of Memphis, Tennessee, an intimate friend. The offer was accepted and on December 7, 1937, Patton borrowed $12,000.00 from a bank for the purpose of making the purchase and pledged the assigned dividend right as collateral for the loan.

The check in payment of said dividend when issued on December 18, 1939, was made payable to Patton, who indorsed it to the bank from which he had obtained the loan, and the bank stamped the note paid and returned it to Patton.

The question is whether the amount received by the taxpayer from Patton

should be treated as ordinary income as held by the Board, or whether such amount constitutes capital gain which is available as an offset against capital losses as the petitioner contends.

In our opinion under the circumstances here present, the sum received by the taxpayer was not capital gain as that phrase is used in Section 117(b) of the Revenue Act of 1936, but was taxable as ordinary income under Section 22(a) of the Revenue Act of 1936. Compare *Helvering* v. *Horst,* 311 U.S. 112, 61 S. Ct. 144, 85 L. Ed. 75, 131 A.L.R. 655; *Helvering* v. *Eubank,* 311 U.S. 122, 61 S. Ct. 149, 85 L. Ed. 81; *Harrison* v. *Schaffner,* 312 U.S. 579, 61 S. Ct. 759, 85 L. Ed. 1055.

The order of the Board is affirmed.

Note

1. If on December 7th the taxpayer had sold the stock itself, together with the right to receive any dividends paid thereafter, would the dividend be taxed to him when paid? I.T. 4007, 50–1, C.B. 11, apparently takes the position that dividends are taxable to the transferor if there is a transfer after the declaration and record dates. Since he is the person entitled to the dividend as a matter of private law (see Stevens, *Corporations* (2d ed. 1949) §§ 132–33), any sale of stock plus dividend for a lump sum might be broken down for tax purchases into separate sales of the stock and of the dividend right; and the sale of the dividend right might be treated as a sham or ineffective assignment.

Does the principal case point in this direction? What if stock is sold between the date of declaration and the record date, or just before and in anticipation of a dividend declaration? See Regs. 118, Sec. 39.22(a)–1(d); *Falco* v. *Donner Foundation,* 208 F.2d 600 (2d Cir. 1953).

If a bond is sold between interest dates, the seller must report the accrued interest as income; the buyer treats it as return of capital. I.T. 3175, 38–1 C.B. 200; *Fisher* v. *Commissioner,* 209 F.2d 513 (6th Cir. 1954). Should the seller's income in respect of the accrued interest be discounted on the theory that the buyer of the bond in fixing the price he will pay for the bond with accrued interest would shade the price for the latter because it will not be paid to him until the next interest date?

2. Should the taxpayer in the *Rhodes' Estate* case be taxed on $11,925 or on $12,000? If the dividend was sold in one year and paid in another, in which is the taxpayer taxable? In *Gleason* v. *Commissioner,* ¶ 42,572 P-H Memo TC, a taxpayer who engaged in this practice was apparently taxed on the amounts received from his assignee in the years the assignments occurred rather than when the dividends were paid:

> He cannot escape or change the tax upon them [the dividends] by any anticipatory arrangement even though he may anticipate the realization of income by means of a transaction which he chooses to call a sale.

What if the taxpayer sells the dividends not in the hope of getting capital gains but solely to realize the income in an earlier year?

3. Would the same result as in the principal case be reached if the taxpayer sold a claim for a dividend if the obligor corporation's liability or capacity to pay was disputed and the transaction was entirely at arm's length? The *Fisher* case, *supra,* paragraph 1, held that on a sale of notes that were in default, the portion of the sales price allocable to past-due interest is ordinary income:

> The petitioner received substantially all of his defaulted interest when he sold his notes . . . and it was, in the light of the *Horst* case, unimportant that he received it not from the [debtor] corporation but from the purchaser of the notes. (209 F.2d 513, 515.)

4. A taxpayer paid $450,000 for the right to receive the first $550,000 of profits received by the owners of a motion picture. After receiving about $375,000 under this

agreement the taxpayer sold its remaining rights (to about $175,000) for their face amount, when the sale occurred, only a tiny fraction of the $175,000 balance had been earned by the picture, but apparently there was little doubt that the entire amount would be earned. The taxpayer's profit of $100,000 was held to be taxable as capital gain. *Pacific Finance Corp.* v. *Commissioner*, ¶ 53,129 P-H Memo TC.

5. If a bond is issued at a discount, the purchaser's profit when it is retired at face amount is the equivalent of interest. Despite this fact, it was held in *Commissioner* v. *Caulkins*, 144 F.2d 482 (6th Cir. 1944), that the purchaser realizes capital gain when the bond is paid at maturity. The court rested its decision on the statutory provision (§ 117(f) of the 1939 Code; § 1232 of the 1954 Code) that the retirement of a bond is to be treated like a sale or exchange:

> Clearly $20,000 was the amount received on the retirement of the certificate, and under the plain wording of 117(f), it was taxable as a capital gain. A provision that the increment in such cases should be taxable under 22(a) might or might not have been wise and fair; but Congress has not enacted it, and the courts cannot supply it by judicial legislation.

Legislative legislation was the result; § 1232 is now qualified to insure that the interest represented by the original discount will be taxed as ordinary income rather than capital gain. The problem did not arise with Series E war bonds (and certain other United States bonds), even though issued at a discount, because § 22(c) of the Second Liberty Bond Act, as amended, 49 Stat. 21 (1935), requires the increment to be reported as ordinary income. The holder, if on the cash basis, may report the income either annually, as the redemption value increases, or at maturity; and if the bond is held for a second 10-year period, he may postpone reporting the income until final maturity. Sections 454(a) and (c).

SALES TO CONTROLLED FOUNDATIONS

Intra-Office Memorandum, Internal Revenue Service, 1948

Reprinted in Hearings Before a Subcommittee of House Committee on Ways and Means 83d Cong., 1st. sess. (1953) pp. 1368–69

In 1941, the Lasdon family group—consisting of about 10 individuals—acquired from their wholly owned corporation, for the consideration of $10,000, certain patents and patent applications relating to sulfadiazine. On the following day they granted to the American Cyanamid Co., an exclusive license to exploit sulfadiazine in return for a royalty of 16 percent of the net sales value thereof, plus 25 percent of royalties received from sublessees, the license to continue for 18 years. On an application made by the Lasdons in 1945, the Bureau ruled that the "inventions and the patents, patent applications and contract rights pertaining thereto" constituted capital assets, that they had been held for more than 6 months, and that gain or loss from the sale thereof would constitute long-term capital gain or loss. About a year and a half later the Lasdons established the Lasdon Foundation, Inc., which was to support certain projects in medical research. In September 1947, this foundation was held to be exempt under section 101 (6) [now § 501(c)(3)]. In that same month, the Lasdons proposed to sell to the foundation the sulfadiazine patents and patent applications and their contract rights under the contract with American Cyanamid for the consideration of $6,500,000, or 90 percent of the payments to be received under the American Cyanamid contract, whichever was the lesser. The foundation would assume the Lasdons' obligation under the 1941 license contract to protect the inventions, and Cyanamid would accept this substitution of the foundation for the Lasdons

individually. The foundation would be prohibited from selling the Cyanamid license contract without the consent of Cyanamid, and the Lasdons would guarantee the foundation's performance of the licensor's obligations under the 1941 contract. On the basis of this proposal, the Lasdons requested a prospective ruling * that this transaction would be deemed to be the sale of a capital asset, the gain therefrom returnable on the installment basis.† In a separate request, the foundation requested that its receipt of proceeds under the Cyanamid license contract would be tax exempt. In March 1948, the Lasdons amended their plan by making the consideration payable by the foundation to be the fixed sum of $6 million payable in equal quarterly sums over a period of 10 years. In September 1947, when the original requests were filed, the foundation had approximately $90,000 worth of assets. Over the life of the Cyanamid license contract the Lasdons have heretofore received from Cyanamid an average of approximately $1,100,000 annually. . . .

There are now pending . . . 4 cases, in addition to this case, all 5 of which involve prospective transactions and have these elements in common: (a) a "seller" who is a taxpaying individual or corporation; (b) a "buyer" which is a tax-exempt corporation; (c) a "sale" by the first to the second of these parties of income-producing property; (d) immediately prior to the transfer, the buyer has no substantial amount of assets; (e) provision is made for the deferred payment of the consideration by the "buyer," and it is obvious that such consideration must be derived from income produced by the property transferred. In all of these cases, the "seller" desires a ruling holding the transaction to be the sale of a capital asset, the proceeds of which are returnable on the installment basis

Note

Would capital gains be barred by § 1235(d) of the 1954 Code? If so, could § 1235 be avoided by (a) a similar transaction with a foundation that is not controlled by the transferor family, or (b) a gift by the inventor to his spouse or children, followed by a transfer by them to a foundation? If § 1235(d) is not a barrier, is there any other obstacle to capital gain treatment? See *Hamme* v. *Commissioner*, 209 F.2d 29 (4th Cir. 1953); MacCracken, "Selling a Business to a Charitable Foundation," 1954 *So. Calif. Tax Inst.* 205.

Does § 1235 make it unnecessary to work so hard to get capital gain from a patent? Could a successful author sell his royalty contract to a foundation?

McALLISTER v. COMMISSIONER

U. S. Court of Appeals, Second Circuit, 1946
157 F.2d 235, cert. den. 330 U.S. 826 (1947)

Before SWAN, CLARK, and FRANK, Circuit Judges.

CLARK, Circuit Judge.

This petition for review presents the question whether the sum of $55,000 received by petitioner on "transfer" or "surrender" of her life interest in a trust to the remainderman constitutes gross income under I.R.C. § 22(a), or receipts from the sale of capital assets as defined in I.R.C. § 117(a)(1). As we shall see,

* See *infra*, Ch. 9, Sec. A(3)(e). [Ed.]
† See *infra*, Ch. 8, Sec. B(1). [Ed.]

some significance seemingly is attached to a choice between the two words set in quotation marks as a description of the transaction. Petitioner contends that the life estate was a capital asset, the transfer of which resulted in a deductible capital loss, leaving her with no taxable income for the year. A majority of the Tax Court agreed with the Commissioner that the receipt in question was merely an advance payment of income, while four judges dissented, Judges Opper and Disney writing the opposing opinions. 5 T.C. 714.

The will of Richard McAllister established a trust fund of $100,000, the income of which was to be paid to his son John McAllister for life and, on the latter's death without children, to John's wife, the petitioner herein. On her death, the trust was to terminate, the residue going to the testator's wife and his son Richard. The testator died in 1926, his widow in 1935, and John in 1937. Except for stock in the R. McAllister corporation, not immediately salable at a fair price, John left assets insufficient to meet his debts; and in order to obtain immediate funds and to terminate extended family litigation according to an agreed plan, petitioner brought suit in the Court of Chancery of New Jersey to end the trust. The parties then agreed upon, and the court in its final decree ordered, a settlement by which the remainderman Richard, in addition to taking over the stock for $50,000, was to pay petitioner $55,000, with accumulated income and interest to the date of payment, in consideration of her release of all interest in the trust and consent to its termination and cancellation. Receiving payment on July 19, 1940, petitioner, in accordance with the court order, executed a release, providing:

> I do further consent and agree that my estate in the aforesaid trust, created under the third paragraph of the . . . will . . . shall be and the same is hereby terminated absolutely, and I do decline to accept further any benefits therefrom or interest therein.

For the year 1940, she reported a capital loss on the transaction of $8,790.20, the difference between the amount received and the value of the estate computed under I.T. 2076. The Commissioner disallowed the loss and made the deficiency assessment which was upheld by the majority below.

The issue, as stated by the Tax Court and presented by the parties, reduces itself to the question whether the case is within the rule of *Blair* v. *Commissioner of Internal Revenue*, 300 U.S. 5, 57 S. Ct. 330, 81 L. Ed. 465, or that of *Hort* v. *Commissioner of Internal Revenue*, 313 U.S. 28, 61 S. Ct. 757, 85 L. Ed. 1168. In the *Blair* case, the life beneficiary of a trust assigned to his children specified sums to be paid each year for the duration of the estate. The Supreme Court held that each transfer was the assignment of a property right in the trust and that, since the tax liability attached to ownership of the property, the assignee, and not the assignor, was liable for the income taxes in the years in question. The continued authority of the case was recognized in *Helvering* v. *Horst*, 311 U.S. 112, 118, 119, 61 S. Ct. 144, 85 L. Ed. 75, 131 A.L.R. 655, although a majority of the Court thought it not applicable on the facts, and in *Harrison* v. *Schaffner*, 312 U.S. 579, 582, 61 S. Ct. 759, 85 L. Ed. 1055, where the Court very properly distinguished it from the situation where an assignor transferred a portion of his income for a single year. We think that its reasoning and conclusion support the taxpayer's position here. It has been relied upon by other cases cited below which we find indistinguishable from the present case.

Petitioner's right to income for life from the trust estate was a right in the estate itself. Had she held a fee interest, the assignment would unquestionably have been regarded as the transfer of a capital asset; we see no reason why a different result should follow the transfer of the lesser, but still substantial, life interest. As the Court pointed out in the *Blair* case, the life tenant was entitled to enforce the trust, to enjoin a breach of trust, and to obtain redress in case of breach. The proceedings in the state chancery court completely divested her of these rights and of any possible control over the property. The case is therefore distinguishable from that of *Hort* v. *Commissioner of Internal Revenue, supra.* where a landlord for a consideration cancelled a lease for a term of years, having still some nine years to run. There the taxpayer surrendered his contractual right to the future yearly payments in return for an immediate payment of a lump sum. The statute expressly taxed income derived from rent, Revenue Act of 1932, § 22(a); and the consideration received was held a substitute for the rent as it fell due. It was therefore taxed as income.

What we regard as the precise question here presented has been determined in the taxpayer's favor on the authority of the *Blair* case by the Eighth Circuit in *Bell's Estate* v. *Commissioner of Internal Revenue*, 8 Cir., 137 F.2d 454, reversing 46 B.T.A. 484. This case, in turn, has been followed by the Tax Court in *Harman* v. *Commissioner of Internal Revenue*, 4 T.C. 335, acquiesced in by the Commissioner, 1945-6 Int. Rev. Bull. No. 6, p. 1, and by the District Court in *First Nat. Bank & Trust Co. in Macon* v. *Allen, D.C.M.D.*Ga., 65 F. Supp. 128. See also *Quigley* v. *Commissioner of Internal Revenue*, 7 Cir., 143 F.2d 27; *Estate of Camden* v. *Commissioner of Internal Revenue*, 47 B.T.A. 926, affirmed 6 Cir., 139 F.2d 697; *Randall* v. *Randall, D.C.S.D.*Fla., 60 F. Supp. 308, 313, 314.

The Tax Court and the government have attempted to distinguish both the *Bell* and the *Blair* cases on grounds which seem to us to lack either substance or reality. The principal ground seems to be the form the transaction assumed between the parties. Thus the Court says that petitioner received the payment for "surrendering" her rights to income payments, and "she did not assign her interest in the trust, as did petitioners in the *Bell* case." But what is this more than a distinction in words? Both were cases where at the conclusion of the transaction the remaindermen had the entire estate and the life tenants had a substantial sum of money. There surely cannot be that efficacy in lawyers' jargon that termination or cancellation or surrender carries some peculiar significance vastly penalizing laymen whose counsel have chanced to use them. And the fact that the whole affair was embodied in a court decree can add nothing more than a seal of legal validity to it. What was practically accomplished remained the same. And that here, as in the *Bell* case, there was a "surrender" to the remainderman, rather than a "transfer" to third persons as in the *Blair* case, does not change the essentially dispositive nature of the transaction so far as the former property owner is concerned.

Other suggestions seem equally dubious. Thus it is said that the transfer in the *Blair* case was without consideration. But it is hard to see how this affects either the fact or the validity of the transfer; if anything, the odds should favor the conveyance for a consideration—the income of which will yield taxes in the future. Naturally, since there were no capital gains or losses, the *Blair* case does not discuss them. (Actually it cites neither the gross income nor the capital

assets statutes.) But its holding that the assignment leaves no taxable income with the assignor is just as potent here on the like point, even though we do have the further problem posited by the claim of a capital loss. And there was very definitely a consideration paid in the *Bell* case. Next it is urged that there could be no assignment because this was a spendthrift trust where the creator had forbidden assignment or anticipation by a beneficiary. (The form of prohibition here was an express command as to a vested equitable interest, there was no grant of discretionary power to the trustees to withhold income.) But the answer is that it was done by a series of transactions affirmed by the state court. That is, the trust provisions made passing of the interest somewhat more difficult, but not beyond the ingenuity of lawyers, when the parties were agreed. So in the *Blair* case the government argued that the trust was a spendthrift trust under Illinois law. Said the Court, 300 U.S. 5, 10, 57 S. Ct. 330, 332, 81 L. Ed. 465:

> The point of the argument is that, the trust being of that character, the state law barred the voluntary alienation by the beneficiary of his interest. The state court held precisely the contrary. The ruling also determines the validity of the assignment by the beneficiary of parts of his interest. That question was necessarily presented and expressly decided.

Setting the bounds to the area of tax incidence involves the drawing of lines which may often be of an arbitrary nature. But they should not be more unreal than the circumstances necessitate. Here the line of demarcation between the *Blair* and the *Hort* principles is obviously one of some difficulty to define explicitly or to establish in borderline cases. Doubtless all would agree that there is some distinction between selling a life estate in property and anticipating income for a few years in advance. It is the kind of distinction stressed in *Harrison* v. *Schaffner*, *supra*, 312 U.S. 579, 583, 61 S. Ct. 759, 762, 85 L. Ed. 1055, where the Court said:

> Nor are we troubled by the logical difficulties of drawing the line between a gift of an equitable interest in property for life effected by a gift for life of a share of the income of the trust and the gift of the income or a part of it for the period of a year as in this case.

The distinction seems logically and practically to turn upon anticipation of income payments over a reasonably short period of time and an out-and-out transfer of a substantial and durable property interest, such as a life estate at least is. See 57 *Harv.L.Rev.* 382; 54 *Harv.L.Rev.* 1405; 50 *Yale L.J.* 512, 515. Where the line should be finally placed we need not try to anticipate here. But we are clear that distinctions attempted on the basis of the various legal names given a transaction, rather than on its actual results between the parties, do not afford a sound basis for its delimitation. More rationally, to accept the respondent's contention we ought frankly to consider the *Blair* case as overruled, 50 *Yale L.J.* 512, 518, a position which, as we have seen, the Supreme Court itself has declined to take.

The parties are in conflict as to the valuation of the life estate; and we are returning the case to the Tax Court for computation, without, of course, assuming that there will necessarily be some tax.

Reversed and remanded.

FRANK, Circuit Judge (*dissenting*).

Taxpayer's father-in-law, by his will, created a trust by which taxpayer during her life was to receive the income from a fund of $100,000; the will provided that she was not to dispose of her interest or otherwise to anticipate the income. She joined with others interested in the trust to demolish it; in consideration of her doing so, she received a lump sum of $55,000. The question is whether, with respect to that $55,000, resulting from the frustration of the testator's purpose through the destruction of the trust, she is entitled to the exceptional advantages of the capital gains provisions.

We must, then, ascertain the intention of Congress expressed in those provisions—especially § 117(a)(1)—in the light of the language it employed and the policy there embodied, i.e., we must determine whether Congress intended that a taxpayer who receives income in those circumstances should come within that exception.

My colleagues avoid a direct discussion of that problem. Instead, they rely on *Blair* v. *Commissioner*, 300 U.S. 5, 57 S. Ct. 330, 81 L. Ed. 465, which they hold to be controlling. But the court in the *Blair* case had no occasion to, and did not, consider § 117; it considered solely the interpretation of § 22(a). There, the holder of a life interest, created by a trust, had made a gift for life of a share of the future income. The only question was whether thereafter the donor, notwithstanding the gift, should be regarded, under § 22(a), as the recipient annually of that part of the income which was the subject of the gift and, consequently, should be taxed each year thereon. In other words, no capital gain or loss was involved, and the one issue was whether the donor or donee was annually taxable. The only conceivable ground for holding the donor liable was — as the court recognized in *Helvering* v. *Horst*, 311 U.S. 112, 61 S. Ct. 144, 85 L. Ed. 75, 131 A.L.R. 655, and *Harrison* v. *Schaffner*, 312 U.S. 579, 61 S. Ct. 759, 85 L. Ed. 1055 — that which moved the Court in *Helvering* v. *Clifford*, 309 U.S. 331, 60 S. Ct. 554, 84 L. Ed. 788, *i. e.*, that, in terms of "non-material satisfactions" the donor had not, by the gift, changed his position and, because of his continued "enjoyment of the economic benefit," [311 U.S. 112, 61 S. Ct. 147] must still be regarded, within § 22(a), as receiving the income actually paid to the donee. In the *Horst* and *Schaffner* cases, the Court said the donor was thus within § 22(a); in the *Blair* case, because the gift transferred the income for the duration of the donor's life, the Court held he was not. In the *Schaffner* case, the Court distinguished the *Blair* case, saying that there was a difference

> between a *gift* of an equitable interest in property for life . . . of a share of the income of the trust and the *gift* of the income or a part of it for the period of a year as in this case.

Since the Court in the *Blair* case was not called on to say (as we are here) whether the taxpayer was liable under either § 22(a) or under § 117, but only whether taxpayer was liable, if at all, under § 22(a), the *Blair* case sheds no light on the construction of § 117. Surely it does not follow merely (1) because one who makes a gift of a life estate does not retain such "non-material satisfactions" as to be liable under § 22(a), that (2) one who disposes of a life estate for a valuable consideration is to be treated as having disposed of a "capital asset" under § 117(a) (1) and is therefore entitled to the peculiar, exceptional, treatment accorded by the capital gains provisions. So, when it was argued that an interest

which, pursuant to the *Horst* case, was "property" for the purposes of § 22(a) must be "capital" for purposes of the capital gains provisions, the Supreme Court answered that " 'property' and 'capital' are not necessarily synonymous in the Revenue Act of 1932 or in common usage"; *Hort* v. *Commissioner*, 313 U.S. 28, 31, 61 S. Ct. 757, 758, 85 L. Ed. 1168.

In interpreting the capital gains provisions, we ought to have in mind that they have a legislative history and embody a legislative policy distinct, respectively, from the history and the policy embodied in § 22(a). As we said recently,

It is well to remember that the concepts employed in construing one section of a statute are not necessarily pertinent when construing another with a distinguishable background.

Rohmer v. *Commissioner*, 2 Cir., 153 F.2d 61, 65. For that reason, I think the language used by the Supreme Court in *Blair*, a gift case under § 22(a), should not be applied here. Such an application, I think, involves the assumption that words, regardless of their context, have a constant meaning.

The policy of the capital gains provisions is not in doubt: Congress believed that the exaction of income tax on the usual basis on gains resulting from dispositions of capital investments would undesirably deter such dispositions. To put it differently, Congress made an exception to § 22(a), in order to give an incentive to the making of such transfers. Having regard to that purpose, the courts have been cautious in interpreting the clauses creating that exception. They have refused to regard as "capital" transactions for that purpose divers sorts of transfers of "property," especially those by which transferors have procured advance payments of future income.[1]

Those cases and *Hort* v. *Commissioner*, 313 U.S. 28, 61 S. Ct. 757, 85 L. Ed 1168, seem to me to render it somewhat doubtful whether any transfer of a life estate for a valuable consideration is within § 117. The consideration paid for such a transfer is a substitute for future payments which would be taxable as ordinary income, and resembles the advance payment of dividends, interest or salaries. I am, therefore, not at all sure that *Bell's Estate* v. *Commissioner*, 8 Cir., 137 F.2d 454, is correct (although, for reasons noted below, I think it is not apposite here). It may well be that, had Congress specifically thought of the problem, it would explicitly so have defined "capital assets" as to exclude such an interest. I do not say that *Hort* v. *Commissioner* conclusively fixes that interpretation, but it does so suggest.

It suggests far more strongly that we cannot reasonably extrapolate the language of § 117 to include the transaction before us in the instant case. In the *Hort* case, the Supreme Court held that the "prepayment of the discounted value of unmatured rental payments" to a landlord on the cancellation of a lease constituted "ordinary income," coming within § 22(a), and not within the capital gains clauses. The Court said, "Simply because the lease was 'property' the amount received for its cancellation was not a return of capital"; and it also said that

it is immaterial that for some purposes the contract creating the right to such payments may be treated as "property" or "capital". . . . The cancellation of the lease involved

[1] See, *e. g.*, Helvering v. Smith, 2 Cir., 90 F.2d 590, 592; Levinson v. Commissioner, 2 Cir., 154 F.2d 60; Rhodes' Estate v. Commissioner, 6 Cir., 131 F.2d 50, *cf.* Ansorge v. Commissioner, 2 Cir., 147 F.2d 459, 461.

nothing more than the relinquishment of the right to future rental payments in return for a present substitute payment and possession of the leased premises . . .

and it added that § 22(a) "does not distinguish rental payments and a payment which is clearly a substitute for rental payments."

That ruling is indeed suggestive here. For here we have these facts: The creator of the trust did everything he could to keep the taxpayer from disposing of her life interest.[2] Aided by what my colleagues described as "the ingenuity of counsel," she succeeded in frustrating his effort to prevent such alienation, by joining with the other persons interested in the trust to "extinguish" and "cancel" it, the instruments she executed in that connection recited that the payment to her was "to represent the value of her life interest" and that the "settlement is based to a large extent upon her life expectancy." In that way, what the testator intended should be given to her only in instalments, she procured, in effect, in a lump sum payment.

I think it most unlikely that Congress intended by § 117 to relieve such a taxpayer of the ordinary tax burdens, to supply an incentive for the demolition of such a trust. That the life tenant in the *Blair* case in somewhat similar manner avoided the intent of the trust's creator is, I think, of no moment; for that conduct was not relevant to the issue of Congressional purpose there before the Court, *i.e.*, whether § 22(a) made her taxable on the income subsequently paid her donee. But here the question is whether Congress meant that the exceptional benefits of § 117 should be accorded a taxpayer who, in disposing of her life interest, circumvented the avowed purpose of the creator of the trust. I think not.

Perhaps *Bell's Estate* v. *Commissioner*, 8 Cir. 137 F.2d 454, is distinguishable from the instant case. For there the creator of the trust had not sought to prevent alienation of the life interests, and it is arguable that furtherance of sales of such interests falls within the intention of § 117. But, since that question is not present here, I think we should leave it unanswered.

For the foregoing reasons, I think the Tax Court's decision should be affirmed.

Note

Why did the taxpayer have a loss when she received payment of $55,000? For some startling ramifications of transactions with life interests, see Plumb, "Tax Effects of Sales of Life Interests in Trusts: How to Eat Your Cake and Have It," 9 *Tax L. Rev.* 39 (1953).

---

[2] His will and codicil contained the following provisions

"I further direct that the income from the various trusts hereinabove created shall not be subject to any transfers, assignments or encumbrances, made or created by any of the respective beneficiaries, and shall not be subject to any suits, liens, judgments, attachments, or executions resulting from any debts or acts of any of the respective beneficiaries, nor shall the same be subject to any suits, actions or proceedings, of any kind, brought against any of them. . . .

"I will and direct that all the shares of principal and income by this my will given to or directed to be held for the use and benefit of the several and respective beneficiaries in the Trusts in this my will mentioned or set out shall not be in any way or manner subject or liable to their or either of their anticipation, sale, pledge, debts, contracts, engagements or liabilities, and not subject or liable to attachment or sequestration under any legal or equitable or other process."

STARR BROTHERS v. COMMISSIONER

Tax Court of the U. S., 1952
18 T.C. 149

ARUNDELL, Judge

The issue in this proceeding is the narrow one of whether the amount of $6,394.57 received by the petitioner in 1943 from United Drug Company was capital gain or ordinary income. The petition makes mention of a March 1, 1913, value, but this was not developed at the trial or on brief, and the parties have presented the case on the theory that the entire amount received was income.

The statute defines as capital assets "property held by the taxpayer" with certain exclusions that are not presently material. Internal Revenue Code section 117(a) (1). Capital gain is the "gain from the sale or exchange of a capital asset. . . ." Code section 117(a)(2) and (a)(4).

In view of the provisions of the Code, upon which both parties rely, there are two matters that require resolution before we can arrive at the ultimate answer in this proceeding. The first is whether the 1903 agreement was property in the hands of the petitioner. Second, if it was property, whether there was a sale of it. If both are resolved affirmatively, the petitioner makes its case under the applicable Code provisions If either is resolved in the negative, the respondent's determination must stand.

The starting point is the agreement of November 17, 1903, between the petitioner and United Drug Company. That agreement nominated the petitioner to be United Drug Company's special selling agent in New London, Connecticut, for as long as the petitioner should perform the terms of the agreement. The petitioner, on its part, agreed to uphold all of the products of United Drug Company to the full list retail prices set by that company. In short, the agreement was one whereby the petitioner became United Drug Company's exclusive retail outlet in the city of New London, without a time limitation. Neither party questions the validity of this contract. While contracts are property, the decisions are to the effect that not all property rights constitute capital assets. Whether or not they are depends, at least in part, upon the nature of the income that would normally result from the fulfilment of the terms of the contract. If it is one that provides for the rendition of personal services, its sale, commutation, or extinguishment by agreement between employer and employee does not change the inherent character of the income realized under it. *Thurlow E. McFall*, 34 B.T.A. 108, *George K. Gann*, 41 B.T.A. 388. Even though there is no strict employer-employee relation, if the contract requires the rendition of personal services, the proceeds of its sale are ordinary income. *General Artists Corporation*, 17 T.C. 1517. Again, if it provides for payment of rent, a lump sum payment in commutation does not change the character of the income that is realized. *Hort* v. *Commissioner*, 313 U.S. 28. Proceeds from the sale of the right to insurance commissions are ordinary income "since there was no capital asset to dispose of." *Estate of Thomas F. Remington*, 9 T.C. 99. In the *Hort* case, *supra*, a lessee of real estate under a long term lease paid a lump sum to effect a cancellation of the lease. The lessor claimed that the lump sum payment, if income at all, was taxable under the gain or loss provisions of the Revenue Act of 1932

as a capital gain. The Supreme Court, in holding that the payment was ordinary income, said:

> Where, as in this case, the disputed amount was essentially a substitute for rental payments which § 22 (a) expressly characterizes as gross income, it must be regarded as ordinary income, and it is immaterial that for some purposes the contract creating the right to such payments may be treated as "property" or "capital."

On the other hand, an agency contract, even though services may be required in order to make it lucrative, is regarded as property that is a capital asset, and a payment by the principal for its termination is capital gain. *Jones* v. *Corbyn*, 186 F.2d 450. In that case, the taxpayers were members of a partnership which, by contract, was the exclusive agency of a life insurance company in a designated territory. In 1944, the company and the agency entered into a written contract which terminated the partnership's agency contract, and provided that the partnership should turn over to the insurance company its office space, and records and files pertaining to the company business. The insurance company paid the agency the sum of $46,500, of which $1,500 represented fees to be paid by the agency to attorneys representing it in litigation then pending between the company and the agency. The court held that the $45,000 received by the agency constituted capital gain. On the point of whether the agency contract was a capital asset, the court said in part:

> The contract or franchise had at all times substantial value. It was capable of producing income for its owner. It was enforceable at law and could be bought and sold. Acting under its provisions, the agents developed a large and lucrative business. . . . Except for the renewal commissions, the effect of the termination contract was to transfer the business to the company intact.
>
> The statutory definition of capital assets includes all property not excluded. Mertens *Law of Federal Income Taxation*, Vol. 3, Sec. 22.04. If the thing given up by the taxpayers is property within the meaning of the statute, then, of course, it is a capital asset. The term "capital assets" should not be considered in a technical or restricted sense but should be given its ordinary meaning.

In holding that the transaction between the insurance company and the agency was a sale, the court said:

> Broadly speaking, a sale is a transfer of property for a valuable consideration. . . . [cases]. By terminating the contract and transferring the business to the company, there was a sale and transfer of a capital asset within the meaning of the statute. . . . The amount of the settlement in this case was not based upon damages. It was based upon the value of the exclusive business franchise.

In the case of *Elliott B. Smoak*, 43 B.T.A. 907, the taxpayer had an exclusive agency for leasing and licensing machinery. He sold all of his interest in the agency contract for a sum paid in cash and a further sum to be paid over a period of years. In holding the income realized to be capital gain, we said that "What the petitioner sold was an agency business" and that "it was a capital asset."

We are of the opinion that the facts in the present case bring it within the scope of the holdings in *Jones* v. *Corbyn*, and *Elliott B. Smoak*, *supra*. The exclusive agency owned by the petitioner constituted property in its hands, and it sold that property in the taxable year. The agency contract did not require it to render personal services, though to be sure the petitioner expected to perform

selling services in order to assure itself of income. But there was no employer-employee relationship between it and the grantor of the license. There was nothing in the nature of commissions or rentals to be paid by the grantor, as in the *Remington* and *Hort* cases, *supra.*

The respondent's principal argument is that the transaction between the petitioner and United Drug Company was not a sale but was essentially an extinguishment of the petitioner's exclusive agency. This argument is answered by the case of *Isadore Golonsky*, 16 T.C. 1450,* where the owner of real estate paid a lump sum to the lessees for an accelerated termination of the lease. The lessees were before us in that case and we held that the income realized by them in the lump sum payment was capital gain. In so holding, we pointed out that the lessees "had a right under the lease to possession and use of the property" and that the sum paid by the owner was "to acquire the right to the use and possession of the property" for the remainder of the lessees' term, and concluded that "That is a sufficient transfer of property to bring the transaction within section 117." We said, in part:

> The use of the word "cancellation" is not determinative where something is transferred. *Cf. Jones* v. *Corbyn*, 186 F.2d 450. The case is unlike *Hale* v. *Helvering*, 85 F. 2d 819, involving the satisfaction of a debt in which no property was received by the debtor.

Similarly, in *McAllister* v. *Commissioner*, 157 F.2d 235, where the life tenant sold her interest to the remainderman under an instrument which provided that her interest should be "terminated," the court held that the choice of words was not determinative of what had actually occurred, and treated the transaction as the sale of a capital asset by the life tenant.

On authority of the above cases, we hold that the exclusive license held by the petitioner under the 1903 agreement was a capital asset which it sold to United Drug Company in 1943, and that the income realized was capital gain.

Reviewed by the Court.

Decision will be entered under Rule 50.

LEMIRE, J., concurring:

I think that this case involves the same question we had before us in *General Artists Corporation*, 17 T.C. 1517. The distinction of the present case on the grounds that the assigned contract here does not require the "rendition of personal services" is, I believe, unwarranted. Accordingly, I concur in the result reached in the instant case, but wholly on the basis of my dissenting opinion in the *General Artists Corporation* case.

Note

1. The Tax Court's decision was reversed by the Court of Appeals, Second Circuit, 204 F.2d 673 (1953), on the ground that there was no "sale or exchange":

> What the taxpayer gave in return for the cash payment was a release of United's contract obligations, chief of which was its promise not to sell its products to other dealers in New London. Such release not only ended promisor's previously existing duty but also destroyed the promisee's rights. They were not transferred to the promisor, they merely came to an end and vanished.

* Affirmed, Commissioner v. Golonsky, 200 F.2d 72 (3d Cir. 1952), cert. den. 345 U.S. 939 (1953). [Ed.]

The Court went on to express its disagreement with the Tenth Circuit's holding in *Jones* v. *Corbyn* that the cancellation of an insurance agency contract was a "sale," as well as to shed some doubt on the validity of its own decision in the *McAllister* case:

> That case was decided upon the theory that it was within the rule of *Blair* v. *Commissioner*, 300 U.S. 5, rather than that of *Hort* v. *Commissioner*, 313 U S. 28. Whether that distinction is valid we need not now consider. In any event, to hold the life tenant's transfer a "sale" puts less strain upon the ordinary meaning of that term than does a holding that the taxpayer's release of United's negative covenant is a sale.

As to whether the contract with United Drug Company was a "capital asset"—an important issue since the rights under such a contract might be "sold" to a third party if capital gain could thereby be obtained—the Second Circuit only said that it would assume "arguendo" that it was.

Not long after the *Starr Bros., Inc.* case was decided by the Court of Appeals, Second Circuit, on the theory that there was no sale, it had to say whether an amount paid by a landlord to a tenant for vacating premises which it was entitled to occupy as a statutory tenant under state rent controls was the proceeds of a "sale or exchange" of a capital asset. It said:

> In [the *Starr Bros., Inc.* case] no "sale or exchange" within the meaning of the statute was found because the contractual right was not transferred, but was released and merely vanished. However, we think the right of possession under a lease or otherwise, is a more substantial property right which does not lose its existence when it is transferred. If it is sold by the tenant to a third person, the gain derived therefrom is a capital gain, *Sutliff* v. *Commissioner*, 46 B.T.A., and we see no reason why a different result should be reached here. *Commissioner* v. *McCue Bros. & Drummond, Inc.*, 210 F.2d 752 (2nd Cir. 1954).

See also the *Golonsky* case, *supra*, p. 433. In *Commissioner* v. *Ray*, 210 F.2d 390 (5th Cir. 1954), capital gain treatment was extended to a payment received by a tenant for releasing his landlord from a restriction in a five-year lease that prohibited renting certain adjacent property to a competitive variety store.

Section 1241 of the 1954 Code provides a statutory guide to certain aspects of these problems. Does it insure capital gain or loss treatment for the amounts in question, or does it simply get the taxpayer over the "sale or exchange" hurdle, leaving him to establish independently that the lease or distributor's agreement is a "capital asset" Would § 1231, so far as it relates to depreciable property used in the trade or business, have any application here? Note that a distributor must have a "substantial capital investment in the distributorship." What does this mean? Would the Starr Brothers' stock of United Drug Co. products qualify? Must the investment be "substantial" in relation to the amount received by the taxpayer? Why are only distributors of goods, and not other agents and holders of franchises, included in the statute? The Senate Report states (p. 115) that "the section is limited in scope and it does not constitute a reexamination of present law relating to contracts to which the section does not specifically apply." Note that as to leases, § 1241 applies to payments received by the lessee, but not to those received by the lessor, and that only amounts "for the cancellation" of a lease qualify.

The *McFall* case, cited and distinguished by the Tax Court in the principal case, involved two taxpayers who had been employed under five year contracts for a fixed salary and a percentage of the employer's profits. When the contracts had two and a half years to run, they agreed to "sell" them to a third party (who wanted the contracts terminated to facilitate a refinancing of the employer) for $175,000 each. The Board of Tax Appeals, holding that the proceeds constituted ordinary income rather than capital gain, said:

> Petitioners did not sell their contracts, for inherently this they could not do . . . Before they had any contractual rights which they could sell, they were obligated to perform services for the company. . . . On April 2, 1929 [the date they agreed to

> sell the contracts], there was a right of petitioners to continue to perform services and then to be paid—to persist in their contractual relation for its agreed term. While this right is property in the constitutional sense in that it could not be arbitrarily legislated away, it is not capital. . . . Obviously it is not the sort of property which is susceptible of ownership for a length of time as is a share of stock, a bond, or a thing. (34 B.T.A. 108, 110.)

Is this reasoning applicable to the exclusive agency of Starr Brothers, Inc., at least if it was not assignable without the consent of the United Drug Company?

2. What became of the Tax Court's view that whether a contract is a capital asset "depends, at least in part, upon the nature of the income that would normally result from the fulfillment of the contract?" If the taxpayer in the principal case had continued in business as United Drug's exclusive agent, ordinary income would have been realized.

3. Capital gain treatment has been granted to income received on the sale of good will, even though created by personal service and skill. *Michaels* v. *Commissioner*, 12 T.C. 17 (1949). (As pointed out *infra*, p. 276, good will has generally been regarded as non-depreciable, and it is consequently not taken out of the capital asset category by § 1221(2).) Indeed, in the *Michaels* case, the taxpayer was accorded capital gain on a lump sum received for the good will of a business that he conducted as an individual proprietorship and for his personal covenant not to compete, although amounts received for the latter are customarily taxed as ordinary income. The Court said that where

> it is apparent that the covenant not to compete has the function primarily of assuring to the purchaser the beneficial enjoyment of the good will which he has acquired, the covenant is regarded as nonseverable and as being in effect a contributing element to the assets transferred . . .
>
> We have accordingly found as a fact, though the matter is not free from doubt, that the agreement to refrain from competition should be treated as a capital asset ancillary to the transfer of good will and customers. (12 T.C. at 19–20.)

The sale of the stock of a corporation is often accompanied by an agreement not to compete. *Hamlin* v. *Commissioner*, 209 F.2d 761 (10th Cir. 1954), involved a sale of stock with a covenant by the stockholders not to compete for a period of ten years. After a draft contract was prepared under which the seller was to pay $1,000,000 for the stock with no stated amount for the covenant, the buyer suggested a change by which $750,000 would be allocated to the stock and $250,000 to the covenant:

> He stated in substance that the purpose of the suggested provision was to make such provision for non-competition enforceable and to help him and his associates taxwise. With very little discussion, the stockholders present agreed to the suggested provision, because they thought it would make no difference to them. (209 F.2d at 763.)

The court held that the covenant was not ancillary to a sale (as in the *Michaels* case, *supra*) because the sellers sold stock and not a going business; and it also held that the sellers were bound by their own allocation despite the circumstances under which they agreed to it. Consequently the amount received for the covenant was ordinary income, and the amount received for the stock gave rise to capital gain or loss. In *Gazette Telegraph Co.*, 19 T.C. 692, 696 (1953), the same allocation was accepted in computing the buyer's amortization of the covenant. There it was stated that the buyers

> insisted upon a fixed and separate consideration for the covenant not to compete in order to establish its value and also for the purpose of fixing liquidated damages to be paid in the event of its breach.

See Taylor, "Covenants Not to Compete Consulting Arrangements, Adjustments to Purchase Price," *12th Annual N.Y.U. Inst. on Fed. Taxation* 1047 (1954). See also Paul, "The Lawyer As a Tax Adviser," 25 *Rocky Mt. L. Rev.* 412, 421:

> It is easy to give illustration of prevailing techniques of misrepresentation. One

favorite device is to put a transaction into two contracts, one of which is to be shown to the Government's representatives, and the other of which is to be kept secret. This happened once in my experience in connection with a sale of stock to a buyer for about $5 million. Since the buyer had an option on the stock of about $3 million, it was obvious that $2 million was being paid for an agreement not to compete. A payment for this covenant would have been ordinary income and not capital gain. The seller insisted that this transaction be put in two documents, one which would recite the sale of stock for $5 million, and the other of which would provide against competition without mentioning any consideration. I felt obliged to refuse to be an adviser in this transaction. As a result, my client, who had reluctantly agreed because of anxiety to procure the stock, went to another attorney who was willing to let the client do what the seller wished. The client never came to me with his subsequent problems.

4. Note the quotation from the *Hort* case, where a lessee's payment of $140,000 to his lessor to obtain a cancellation of a burdensome lease was held to be ordinary income and not capital gain. Presumably if the lessor had sold the property, subject to the lease, to a third party, he would have realized capital gain. What if the property were worth nothing apart from the lease, so that on its sale the lessor received just $140,000, *i.e.*, the amount the buyer assumed he could extract from the lessee for a cancellation? What if the lessor sold the property to the lessee, receiving an amount equal to the value of the property free of a lease plus $140,000? In point of fact, does not the value of any real estate (or other property) represent simply the discounted value of the income it will produce in the future?

5. Section 421, enacted in 1950, grants capital gain treatment to the employee who is compensated with a "restricted stock option." To what extent does it turn profit that would otherwise be ordinary income into capital gain? Lyon, "Employee Stock Options Under the Revenue Act of 1950," 51 *Col. L. Rev.* 1 (1951). The section was changed in certain respects in 1954.

6. Time Magazine (May 18, 1953) contained this report on the recent financial success of the Ford Motor Company:

> The management team that put the whole works in the black is getting rewards commensurate with its achievement. To get the new men the Ford company wanted —and to keep valuable old hands from being lured away—the Ford brothers let the top brass write out their own incentive plan. A new company, Dearborn Motors, Inc. was set up by the executives as the selling agent for tractors, and the stock was split among Breech, former Sales Manager Jack Davis, Production Boss Del Harder, Labor Boss John Bugas, Ford Division Boss Crusoe and eight others.
>
> The Ford company will soon buy up the stock of Dearborn Motors at a price which will give the holders huge capital gains . . .

WILLIAMS v. McGOWAN

U. S. Court of Appeals, Second Circuit, 1945
152 F.2d 570

Before: L. Hand, Swan and Frank, Circuit Judges.

L. Hand, Circuit Judge.

This is an appeal from a judgment dismissing the complaint in an action by a taxpayer to recover income taxes paid for the year 1940. . . .

Williams, the taxpayer, and one Reynolds, had for many years been engaged in the hardware business in the City of Corning, New York. On the 20th of January, 1926, they formed a partnership, of which Williams was entitled to two-thirds of

the profits, and Reynolds, one-third. They agreed that on February 1, 1925, the capital invested in the business had been $118,082.05, of which Reynolds had a credit of $29,029.03, and Williams, the balance—$89,053.02. At the end of every business year, on February 1st, Reynolds was to pay to Williams, interest upon the amount of the difference between his share of the capital and one-third of the total as shown by the inventory; and upon withdrawal of one party the other was to have the privilege of buying the other's interest as it appeared on the books. The business was carried on through the firm's fiscal year, ending January 31, 1940, in accordance with this agreement, and thereafter until Reynold's death on July 18th of that year. Williams settled with Reynolds's executrix on September 6th in an agreement by which he promised to pay her $12,187.90, and to assume all liabilities of the business; and he did pay her $2,187.98 in cash at once, and $10,000 on the 10th of the following October. On September 17th of the same year, Williams sold the business as a whole to the Corning Building Company for $63,926.28—its agreed value as of February 1, 1940—"plus an amount to be computed by multiplying the gross sales of the business from the first day of February, 1940 to the 28th day of September, 1940," by an agreed fraction. This value was made up of cash of about $8100, receivables of about $7000, fixtures of about $800, and a merchandise inventory of about $49,000, less some $1000 for bills payable. To this was added about $6000 credited to Williams for profits under the language just quoted, making a total of nearly $70,000. Upon this sale Williams suffered a loss upon his original two-thirds of the business, but he made a small gain upon the one-third which he had bought from Reynolds's executrix; and in his income tax return he entered both as items of "ordinary income," and not as transactions in "capital assets." This the Commissioner disallowed and recomputed the tax accordingly, Williams paid the deficiency, and sued to recover it in this action. The only question is whether the business was "capital assets" under § 117(a)(1) [§ 1221(1), 1954 Code].

It has been held that a partner's interest in a going firm is for tax purposes to be regarded as a "capital asset." *Stilgenbauer* v. *United States*, 115 F.2d 283 (CCA 9); *Commissioner* v. *Shapiro*, 125 F.2d 532 (CCA 6). We too accepted the doctrine in *McClellan* v. *Commissioner*, 117 F.2d 988, although we had held the opposite in *Helvering* v. *Smith*, 90 F.2d 590, where the partnership articles had provided that a retiring partner should receive as his share only his percentage of the sums "actually collected" and "of all earnings . . . for services performed." Such a payment, we thought, was income; and we expressly repudiated the notion that the Uniform Partnership Act had, generally speaking, changed the firm into a juristic entity. See also *Doyle* v. *Commissioner*, 102 F.2d 86 (CCA 4). If a partner's interest in a going firm is "capital assets" perhaps a dead partner's interest is the same. New York Partnership Law §§ 61, 62(4). We need not say. When Williams bought out Reynolds's interest, he became the sole owner of the business, the firm had ended upon any theory, and the situation for tax purposes was no other than if Reynolds had never been a partner at all, except that to the extent of one-third of the "amount realized" on Williams's sale to the Corning Company, his "basis" was different. The judge thought that, because upon that sale both parties fixed the price at the liquidation value of the business while Reynolds was alive, "plus" its estimated earnings thereafter, it was as though Williams had sold his interest in the

firm during its existence. But the method by which the parties agreed upon the price was irrelevant to the computation of Williams's income. The Treasury, if that served its interest, need not heed any fiction which the parties found it convenient to adopt; nor need Williams do the same in his dealings with the Treasury. We have to decide only whether upon the sale of a going business it is to be comminuted into its fragments, and these are to be separately matched against the definition in § 117(a)(1), or whether the whole business is to be treated as if it were a single piece of property.

Our law has been sparing in the creation of juristic entities; it has never, for example, taken over the Roman "universitas facti" [1] and indeed for many years it fumbled uncertainly with the concept of a corporation. [2] One might have supposed that partnership would have been an especially promising field in which to raise up an entity, particularly since merchants have always kept their accounts upon that basis. Yet there too our law resisted at the price of great and continuing confusion; and, even when it might be thought that a statute admitted, if it did not demand, recognition of the firm as an entity, the old concepts prevailed. *Francis* v. *McNeal*, 228 U.S. 695. And so, even though we might agree that under the influence of the Uniform Partnership Act a partner's interest in the firm should be treated as indivisible, and for that reason a "capital asset" within § 117(a)(1), we should be chary about extending further so exotic a jural concept. Be that as it may, in this instance the section itself furnishes the answer. It starts in the broadest way by declaring that all "property" is "capital assets," and then makes three exceptions. The first is "stock in trade... or other property of a kind which would properly be included in the inventory"; next comes "property held . . . primarily for sale to customers"; and finally, property "used in the trade or business of a character which is subject to . . . allowance for appreciation." In the face of this language, although it may be true that a "stock in trade," taken by itself, should be treated as a "universitas facti," by no possibility can a whole business be so treated; and the same is true as to any property within the other exceptions. Congress plainly did mean to comminute the elements of a business; plainly it did not regard the whole as "capital assets."

As has already appeared, Williams transferred to the Corning Company "cash," "receivables," "fixtures," and a "merchandise inventory." "Fixtures" are not capital because they are subject to a depreciation allowance; the inventory, as we have just seen, is expressly excluded. So far as appears, no allowance was made for "good-will"; but, even if there had been, we held in *Haberle Crystal Springs Brewing Company* v. *Clarke, Collector*, 30 F.2d 219, that "good-will" was a depreciable intangible. It is true that the Supreme Court reversed that judgment—280 U.S. 384 —but it based its decision only upon the fact that there could be no allowance for the depreciation of "good-will" in a brewery, a business condemned by the Eighteenth Amendment. There can of course be no gain or loss in the transfer of cash; and, although Williams does appear to have made a gain of $1072.71 upon the "receivables," the point has not been argued that they are not subject to a

[1] "By universitas facti is meant a number of things of the same kind which are regarded as a whole; *e.g.* a herd, a stock of wares." Mackeldey, *Roman Law* § 162.

[2] "To the 'church' modern law owes its conception of a juristic person, and the clear line that it draws between 'the corporation aggregate' and the sum of its members." Pollock & Maitland, Vol. 1, p. 489.

depreciation allowance. That we leave open for decision by the district court, if the parties cannot agree. The gain or loss upon every other item should be computed as an item in ordinary income.

Judgment reversed.

FRANK, Circuit Judge, *dissenting* in part:

I agree that it is irrelevant that the business was once owned by a partnership. For when the sale to the Corning Company occurred, the partnership was dead, had become merely a memory, a ghost. To say that the sale was of the partnership's assets would, then, be to indulge in animism.

But I do not agree that we should ignore what the parties to the sale, Williams and the Corning Company, actually did. They did not arrange for a transfer to the buyer, as if in separate bundles, of the several ingredients of the business. They contracted for the sale of the entire business as a going concern. Here is what they said in their agreement:

> The party of the first part agrees to sell and the party of the second part agrees to buy, *all of the right, title and interest* of the said party of the first part *in and to the hardware business* now being conducted by the said party of the first part, *including* cash on hand and on deposit in the First National Bank & Trust Company of Corning in the A. F. Williams Hardware Store account, in accounts receivable, bills receivable, notes receivable, merchandise and fixtures, including two G. M. trucks, good will and all other assets of every kind and description used in and about said business.[3] . . . Said party of the first part agrees not to engage in the hardware business within a radius of twenty-five miles from the City of Corning, New York, for a period of ten years from the 1st day of October 1940.

To carve up this transaction into distinct sales—of cash, receivables, fixtures, trucks, merchandise, and good will—is to do violence to the realities. I do not think Congress intended any such artificial result. In the Senate Committee Report on the 1942 amendment to § 117, it was said: "It is believed that this Senate amendment will be of material benefit to business which, due to depressed conditions, have been compelled to dispose of their plant or equipment at a loss. The bill defines property used in a trade or business as property used in the trade or business of a character which is subject to the allowance for depreciation, and real property held for more than six months which it not properly includible in the inventory of the taxpayer if on hand at the close of the taxable year or property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business. If a newspaper purchased the plant and equipment of a rival newspaper and later sold such plant and equipment at a loss, such plant and equipment, being subject to depreciation, would constitute property used in the trade or business within the meaning of this section." These remarks show that what Congress contemplated was not the sale of a going business but of its dismembered parts. Where a business is sold as a unit, the whole is greater than its parts. Businessmen so recognize; so, too, I think, did Congress. Interpretation of our complicated tax statutes is seldom aided by saying that taxation is an eminently practical matter (or the like). But this is one instance where, it seems to me, the practical aspects of the matter should guide our guess as to what Congress meant. I believe Congress had those aspects in mind and was not thinking of the nice

[3] Emphasis added.

distinctions between Roman and Anglo-American legal theories about legal entities.

Note

1. The effect of this decision, which was cited with approval by the Supreme Court in *Watson* v. *Commissioner*, 345 U.S. 544, is that gain or loss must be separately reckoned on each item, to ascertain both the amount of gain or loss on that item and whether it is capital or ordinary. Consequently, if there is a sale for a lump sum that amount must be allocated to the various items, and if the parties did not do so, or made an artificial allocation, the Commissioner and courts must do it for them. See, for an example, *Cohen* v. *Kelm*, 119 F. Supp. 376 (D. Minn. 1953). See also *Michaels* v. *Commissioner*, *supra*, p. 435.

Assuming that the buyer and seller, having agreed on a lump-sum sales price, are about to make their own allocation of it to the various assets, will their interests coincide, *i.e.*, will the buyer want a high-cost basis for the same assets for which the seller wants a high sales price?

The approach of *Williams* v. *McGowan* is not restricted to the sale of an individual proprietorship, a similar allocation would be required if a partnership or a corporation sold its business as a going concern. In the case of a partnership it would be necessary to decide whether each partner sold his partnership interest or the group sold the entire business. See *Hatch's Estate* v. *Commissioner*, 198 F.2d 26 (9th Cir. 1952), where the court, although apparently holding contrary to *Williams* v. *McGowan* that an entire business is a capital asset, acknowledged that a sale of the firm's assets as such would be taxed differently from a sale of the partners' interests. See also *Kaiser* v. *Glenn*, 114 F. Supp. 356 (W.D. Ky. 1953).

Should the tax results hinge on whether the sale is regarded as a sale of (a) the assets of the partnership, (b) the going business of the partnership, or (c) the interests of the partners? See Note, Some Tax Consequences of Partnership Readjustments, 67 *Harv. L. Rev.* 860 (1954).

The sale of an interest in a partnership is now governed by statute, Ch. 7, Sec. B, but there is still no explicit statutory provision dealing with the sale by a partnership of its business as a going concern.

2. How should gain or loss on the accounts receivable be taxed? See § 1221(4), rejecting the position taken in *Graham Mill & Elevator Co.* v. *Thomas*, 152 F.2d 564; *Torodor* v. *Commissioner*, 19 T.C. 530 (1952). If the purchaser of the accounts collects more or less than he paid for them, or if he sells them, how will his gain or loss be taxed?

MERCHANTS NAT'L BANK v. COMMISSIONER

U. S. Court of Appeals, Fifth Circuit, 1952
199 F.2d 657

Before BORAH, STRUM, and RIVES, Circuit Judges.

STRUM, Circuit Judge.

This is a petition to review a decision of the Tax Court which sustained deficiency assessments in petitioner's income taxes for the years 1943 and 1944.

The 1944 deficiency arose from the following facts: On January 1, 1941, the petitioner held notes of Alabama Naval Stores Company, representing loans made by the bank to the Naval Stores Company, on which there was an unpaid balance of $49,025.00. In 1941 and 1943, at the direction of national bank examiners, the bank charged these notes off as worthless, thereafter holding them on a "zero" basis. Deductions for the charge-offs, as ordinary losses, were allowed

in full by the Commissioner on petitioner's income tax returns in 1941 and 1943. In 1944, petitioner sold the notes to a third party for $18,460.58, which it reported on its return for 1944 as a long term capital gain and paid its tax on that basis. The Commissioner held this sum to be ordinary income, taxable at a higher rate than long term capital gains, and entered a deficiency assessment accordingly, in which he was sustained by the Tax Court. This is the basis of the 1944 controversy.

The rule is well settled, and this Court has held, that when a deduction for income tax purposes is taken and allowed for debts deemed worthless, recoveries on the debts in a later year constitute taxable income for that year to the extent that a tax benefit was received from the deduction taken in a prior year. *Commissioner* v. *First State Bank of Stratford*, 5 Cir., 168 F.2d 1004, 7 A.L.R.2d 738, certiorari denied 335 U.S. 867, 69 S. Ct. 137, 93 L. Ed. 412; *Nat'l Bank of Commerce of Seattle* v. *Commissioner of Internal Revenue*, 9 Cir., 115 F.2d 875.

When these notes were charged off as a bad debt in the first instance, the bank deducted the amount thereof from its ordinary income, thus escaping taxation on that portion of its income in those years. The amount subsequently recovered on the notes restores *pro tanto* the amount originally deducted from ordinary income, and is accordingly taxable as ordinary income, not as a capital gain. When the notes were charged off, and the bank recouped itself for the capital loss by deducting the amount thereof from its current income, the notes were no longer capital assets for income tax purposes. To permit the bank to reduce its ordinary income by the amount of the loss in the first instance, thus gaining a maximum tax advantage on that basis, and then permit it to treat the amount later recovered on the notes as a capital gain, taxable on a much lower basis than ordinary income, would afford the bank a tax advantage on the transaction not contemplated by the income tax laws.

The fact that the bank sold these notes to a third party, instead of collecting the amount in question from the maker of the notes does not avoid the effect of the rule above stated. Nor are the cases just cited distinguishable, as contended by appellant, because in the first the notes were distributed as a dividend in kind, and in the second were received by the taxpayer as part of a non-taxable reorganization. The controlling point in both cases is, as here, that the amount of the notes was originally deducted from ordinary income, and the owner-bank allowed a tax benefit on that basis, from which premise both courts concluded that the taxpayer should settle on the same basis as to sums subsequently recovered, since those sums stand in place of the income which escaped taxation in the year when the deduction was taken.

As the recoveries in question were ordinary income, not capital gains, the 1944 deficiency was properly entered.

Affirmed.

Note

1. Note the court's reference to "a tax advantage not contemplated by the income tax laws." What if, by reason of changing tax rates or the taxpayer's fluctuating income, ordinary income in 1944 on proceeds of a sale would produce a tax greater than the tax that was saved by the 1941 and 1943 deductions? If a taxpayer deducts a non-business bad debt as a capital loss under § 166(d), can he treat a later recovery on it as capital gain rather than ordinary income even though he has not engaged in a sale or exchange? A taxpayer sold certain real property, reporting a capital gain on the transac-

tion. Several years later the vendees discovered that the building encroached on the land of a third party and paid some $3,000 to relocate the building. The taxpayer, who had sold the property by warranty deed, reimbursed the vendees for this expense and sought to deduct it as an ordinary loss. The Tax Court held that only a capital loss could be taken, since the "adjustment under the warranty was a part and parcel of the sale of the property," on which capital gain rather than ordinary income was realized. *Estate of Shannonhouse* v. *Commissioner*, 21 T.C. 422 (1954).

2. Partly depreciated business property has always been regarded as eligible under § 1231 for capital gain treatment, even though the profit on the sale is a recoupment of depreciation that was deducted from ordinary income. Does the court cast doubt on this assumption? Does it suggest that fully depreciated business property will not qualify under § 1231?

3. Note Section 1239, which deals with another aspect of the interplay between capital gain and ordinary income. It will prevent certain transactions designed to obtain, at the capital gain rate, a stepped-up basis for depreciable property. In its absence a husband might be able to sell appreciated rental property to his wife or to a family corporation, reporting the profit as a long-term capital gain under § 1231, and thus at a low tax cost provide the transferee with a stepped-up basis to be recouped by depreciation deductions from ordinary income.

COMMISSIONER v. CARTER

U. S. Court of Appeals, Second Circuit, 1948
170 F.2d 911

Before L. HAND, SWAN and CHASE, Circuit Judges.

SWAN, Circuit Judge:

This appeal presents the question whether income received by the taxpayer in 1943 is taxable as long-term capital gain, as the Tax Court ruled, or as ordinary income as the Commissioner contends. The facts are not in dispute. The taxpayer, Mrs. Carter, had owned for ten years all the stock of a corporation which was dissolved on December 31, 1942. Upon its dissolution all of its assets were distributed to her in kind, subject to all its liabilities which she assumed. In the distribution she received property having a fair market value exceeding by about $20,000 the cost basis of her stock, and she reported such excess as a capital gain in her 1942 return and paid the tax thereon. In the corporate liquidation she also received 32 oil brokerage contracts which the parties stipulated had no ascertainable fair market value when distributed. Each contract provided for payment to the corporation of commissions on future deliveries of oil by a named seller to a named buyer. The contracts required no additional services to be performed by the corporation or its distributee, and the future commissions were conditioned on contingencies which made uncertain the amount and time of payment. In 1943 the taxpayer collected commissions of $34,992.20 under these contracts. She reported this sum as a long-term capital gain; the Commissioner determined it to be ordinary income. The Tax Court held it taxable as capital gain. The correctness of this decision is the sole question presented by the Commissioner's appeal.

Mrs. Carter's stock was a "capital asset" as defined by § 117(a) of the Internal Revenue Code. In exchange for her stock, she received the assets of the corporation upon its dissolution. The tax consequences of such a transaction are controlled by § 115(c) which provides that "the gain or loss to the distributee resulting from such exchange" shall be determined under section 111 but recognized only to the extent provided in section 112. Turning to section 111(a). the "gain from the sale

or other disposition of property" is the excess of "the amount realized therefrom" over the adjusted cost basis provided in § 113(b). Paragraph (b) of § 111 defines the "amount realized from the sale or other disposition of property" to be the sum of money received "plus the fair market value of the property (other than money) received." Paragraph (c) of the same section provides that "In the case of a sale or exchange, the extent to which the gain or loss determined under this section shall be recognized for the purposes of this chapter, shall be determined under the provisions of section 112." That section lays down the general rule, subject to exceptions not pertinent to the case at bar, that "upon the sale or exchange of property" the entire amount of the gain or loss, determined under section 111, shall be recognized. From the foregoing statutory provisions,* it is obvious that if the oil brokerage contracts distributed to the taxpayer had then had a "fair market value," such value would have increased correspondingly the "amount realized" by her in exchange for her stock and would have been taxable as long-term capital gain, not as ordinary income. *Boudreau* v. *Commissioner*, 5 Cir., 134 F.2d 360, *Fleming* v. *Commissioner*, 5 Cir., 153 F.2d 361. The question presented by the present appeal is whether a different result is required when contract obligations having no ascertainable fair market value are distributed in liquidation of a corporation and collections thereunder are made by the distributee in later years.

In answering this question in the negative, the Tax Court relied primarily upon *Burnet* v. *Logan*, 283 U.S. 404. That involved a sale of stock, not a distribution in liquidation, under which the seller received cash and the buyer's promise to make future payments conditioned on contingencies. The cash received did not equal the seller's cost basis for the stock, and the contingencies affecting future payments precluded ascribing a fair market value to the buyer's promise. In later years payments were made which the seller did not return as income. The decision held that she was not required to do so With respect to such payments, the court said, pages 412-413:

> As annual payments on account of extracted ore come in they can be readily apportioned first as return of capital and later as profit. . . . When the profit, if any, is actually realized, the taxpayer will be required to respond. The consideration for the sale was $2,200,000.00 in cash and the promise of future money payments wholly contingent upon facts and circumstances not possible to foretell with anything like fair certainty. The promise was in no proper sense equivalent to cash. It had no ascertainable fair market value. The transaction was not a closed one. Respondent might never recoup her capital investment from payments only conditionally promised. . . . She properly demanded the return of her capital investment before assessment of any taxable profit based on conjecture.

The Commissioner argues that the *Logan* case is inapplicable because there the taxpayer had not recovered the cost basis of her stock while here she had. The Tax Court thought the distinction immaterial. We agree. The Supreme Court spoke of the annual payments as constituting "profit" after the seller's capital investment should be returned. Until such return it cannot be known whether gain or loss will result from a sale, thereafter it becomes certain that future payments will result in gain. No reason is apparent for taxing them as ordinary income. As this court said in *Commissioner* v. *Hopkinson*, 126 F.2d 406, 410, "payments received by the seller after his basis had been extinguished would have been

* The statutory provisions governing complete liquidations have been somewhat modified by the 1954 Code, Ch 6, Sec. F (1), but not in respects material to this case. [Ed.]

taxable to him as capital gains from the sale of the property," citing *Burnet* v. *Logan* as authority.

The Commissioner also urges that the *Logan* case is distinguishable because it dealt with a sale of stock rather than exchange of stock for assets distributed in a corporate liquidation. This contention is answered by *White* v. *United States*, 305 U.S. 281, 288, and *Helvering* v. *Chester N. Weaver Co.*, 305 U.S. 293, 295, where the court held that the recognition required by § 115(c) of gains and losses on liquidations must for purposes of computation of the tax, be taken to be the same as that accorded to gains and losses on sales of property. Consequently we agree with the Tax Court's ruling that the principle of the *Logan* case is applicable to a corporate liquidation where stock is exchanged in part for contracts having no ascertainable market value, and that future collections under such contracts are taxable as capital gain in the year when received if the distributee has previously recovered the cost basis for the stock.

The Commissioner's argument that such collections are analogous to the receipt of interest or rent upon bonds or real estate distributed in a corporate liquidation overlooks a significant distinction. Payment of interest or rent does not impair the value of the bond or real estate since each remains as a capital asset regardless of the number of payments. See *Helvering* v. *Manhattan Life Ins. Co.*, 2 Cir., 71 F.2d 292, 293. But with respect to the oil brokerage contracts, under which no additional services were to be rendered by the payee, each payment decreases their value until, with the final payment it will be completely exhausted; and, if the payments be treated as income, the distributee has no way to recoup his capital investment, since concededly he has no economic interest in the oil producing properties and therefore no right to depletion deductions. Hence to consider the brokerage payments as ordinary income would produce a most unjust result and one quite unlike the result which follows the distribution of bonds or real estate in a corporate liquidation.

For the foregoing reasons we think the decision of the Tax Court correct. It is affirmed.

Section G. The Holding Period

Note: Sections 1222(1)-(4) and 1223 of the 1954 Code, relating to the holding period of capital assets, carry over the basic principle, with some modifications of detail, of §§ 117(a)(2)-(5) and 117(h) of the 1939 Code.

See Regs. 118, Sec. 39.117(h)-1.

If a taxpayer is approached by a potential buyer during the six-month period, he can of course postpone any transaction until he has held his property for more than six months, even though his only reason for waiting is to secure the benefit of a long-term capital gain. But what if during the period he enters into a contract to sell, with transfer of title to be postponed? If he puts the property into escrow, with delivery to be made by the escrow agent after the period has expired? If he requires the buyer to post a bond or to deposit the price in escrow during the six-month period? If he sells on conditional sale? See *Dyke* v. *Commissioner*, 6 T.C. 1134 (1946); *Watson* v. *Commissioner*, ¶ 49,089 P-H Memo TC; Dibble, "Current Problems in Determining Holding

Period," 1951 *So. Calif. Tax Inst.* 359, see also *Kuehner* v. *Commissioner*,—F.2d— (1st Cir. 1954).

Section 1233(b), derived from a provision added in 1950, was designed to take the profit out of several practices previously employed to outwit the holding period. Example (1) of Regs. 118, Sec. 39.117(l)-1, illustrates the problem. Note that on July 1 the taxpayer has an unrealized profit of $600, which would constitute a short-term gain if realized at that time. By selling short on July 1 he immunizes himself against any subsequent fluctuations of the market, since any increase in the value of the stock resulting in further unrealized appreciation on his "long" position (the stock bought in February) will be counterbalanced by an equal unrealized loss on his "short" position. Conversely, a decline in the value of the stock will improve his "short" position at the expense of his "long" position. Since the taxpayer is thus no longer at the risk of the market after July 1, § 117(l) treats his profit as short-term (February 1-July 1), no matter when he closes out his investments. Before § 1233(b) was enacted, the taxpayer would have claimed a long-term capital gain of $600 on the theory that he sold his February stock on August 2, when he delivered it to satisfy his short position.

Other applications of § 1233(b) may be studied in the examples given in the Regulations. Some of the transactions against which § 1233(b) was aimed are comprehensible only if one recalls that before 1952 long-term capital gains and losses were "taken into account" only to the extent of 50 per cent, while short-term gains and losses were "taken into account" in full. This meant that a taxpayer with a long-term profit of $200 and a short-term loss of $100 would break even for tax purposes. Some of the manipulations with short sales and similar devices were designed to produce this happy combination of long-term gains and short-term losses. See Brach, "Investor Short Sales," *11th Annual N.Y.U. Inst. on Fed. Taxation* 1 (1953). Even before the enactment of § 1233(b), the Bureau had ruled that such attempts to transmute short-term gains in commodity futures into long-term gains would be disregarded for tax purposes because they were not in accord with the realities. Mim. 6243, 48-1 C.B. 44. *Cf. Deal* v. *Morrow*, 197 F.2d 821 (5th Cir. 1952). Four years later the Mimeograph was amended so that it would not have retroactive effect. Mim. 6789, 52-1 C.B. 38.

Note that an asset must be held "for more than 6 months" for the gain or loss to be long-term. § 1222(3) and (4). Property bought on June 19 and sold on December 19 has been held not to qualify, on the ground that the date of acquisition must be excluded. *Fogel* v. *Commissioner*, 203 F.2d 347 (5th Cir. 1953). Moreover, the court held that "month" means a calendar month, whether it includes 28, 29, 30, or 31 days. This means that property bought in February, September, or November need be held only 182 days to qualify, while property acquired in March, May, or July will have to be held 185 days. Moreover, the Bureau has ruled that the period January 31 to February 28 is one month, so that property bought on August 31 and sold on March 1, though held for only 181 days, will qualify for long-term treatment. I.T. 3985, 49-2 C.B. 51.

In the case of transactions effected through a broker on the organized securities exchanges, the customer's order is executed on a "contract" or "trade date," with delivery and payment postponed for several days to the "settlement date." It is the former date that controls for tax purposes; the customer's holding period

begins the day after the purchase order is executed and ends on the day the sale order is executed. I.T. 3705, 45 C.B. 174.

Section 1223 sets out a number of occasions on which the taxpayer may "tack" to his holding period for a specific asset the time he held some other property or the period some other taxpayer held the same or other property. Periods which can often be thus "tacked" to the time the taxpayer held property include: the time the taxpayer held stock on which he received a tax-free dividend; the time a taxpayer held property exchanged in a tax-free transaction for other property; and the time a taxpayer held stock that was disposed of in a "wash sale" on which the loss was disallowed by § 1091. Before 1954, "tacking" was permissible in the situations set out by § 1223, even though the earlier property was not a capital asset, G.C.M. 25301, 47-2 C.B. 83, but for exchanges after 1954, § 1223(1) is more restrictive.

When a number of assets are sold at the same time, it is necessary to compute the holding period separately for each one. In *Paul* v. *Commissioner*, 206 F.2d 763 (3d Cir. 1953), involving a sale of real estate where the land had been held for more than six months but a building had been completed just before the sale, the Commissioner allowed the profit on the land to be treated as long-term capital gain but asserted that the profit on the building was short-term because its holding period commenced only with its completion. The court held that the taxpayer could allocate part of his profit on the building to the portion that was erected more than six months before the sale, and report it as long-term capital gain; if he could convince the Tax Court of an appropriate allocation, the profit on the rest of the building would be a short-term gain. The court did not indicate how the profit should be allocated; conceivably the taxpayer might prove that the entire profit was attributable to excavation and structural work completed more than six months before the sale and none to the more recently completed trim and interior finish.

MILLIKEN v. COMMISSIONER

U S. Court of Appeals, Second Circuit, 1952
196 F.2d 135, cert. den. 344 U.S. 884, reh. den. id. 910 (1952)

Before SWAN, Chief Judge, and CLARK and FRANK, Circuit Judges.

CLARK, Circuit Judge.

Both the taxpayer, Seth M. Milliken, and the Commissioner of Internal Revenue have appealed from a decision of the Tax Court, 15 T.C. 243, finding an overpayment by the taxpayer of $28,805.83 in his income and victory taxes for the year 1943. The transactions giving rise to the two disputed issues on taxpayer's appeal are as follows. In 1922, his brother, Gerrish H. Milliken, contracted to buy the taxpayer's shares of stock in Cotwool Securities Corporation — or, as it was later called, Cotwool Manufacturing Corporation — at current book value at any time the taxpayer called upon him to do so. When taxpayer invoked the agreement in 1940, however, Cotwool's actual assets were worth far less than the stock's value on the books and Gerrish was therefore unwilling to go through with it. In substitution a new contract was effected on June 28, 1940, whereby taxpayer sold the stock to Gerrish at market value and received an option to purchase, also at market value as of that date, certain of the corporation's assets.

Among these were certain demand notes of a Whitney Manufacturing Company. Taxpayer exercised his option as to these on November 13, 1941, paying the agreed price of ten cents per thousand or a total of $3.05 for participation to the extent of $30,527.25. On December 26, 1941, taxpayer was paid interest of $4,726.65 then due, and on March 5, 1942, he was paid the full face value of his participation. In his return he reported the net amount of $30,524.20 as a short-term capital gain, and this view of the transaction was approved by the Tax Court, though on argument the Commissioner contended that it was ordinary income, and taxpayer in turn that it was a tax-free return of capital or, in the alternative, a long-term capital gain. . . .

The other issue presented on the taxpayer's petition, namely, the correctness of the decision that the net amount he received in payment for his participation in the Whitney notes was a short-term capital gain, requires somewhat fuller development. Here we have an ingenious argument by him that this transaction constituted either wholly or partially a return of capital or was a long-term capital gain. We are not clear how far this argument was developed below, since it is not discussed at all in the opinion of the Tax Court. On this phase of the case the judge contented himself with answering only the Commissioner's argument that this was ordinary gain, as apparently not within the statutory definition, I.R.C. § 117(f), of an "exchange" for the purposes of computing capital gain or loss from a "retirement" of corporate bonds or notes. Since the Commissioner has not appealed from the ruling, that issue is not before us. Moreover, since the Commissioner has failed to reply to the taxpayer's argument, we have been forced back upon our own resources, which we can only hope will prove adequate for adjudication.

The major premise of the taxpayer's argument is the conclusion that the exercise of the option in November, 1941, was a capital transaction and therefore taxable to the amount of the value of the notes when received. If this is accepted and it is further assumed that the value of the notes when received is ascertainable, that value then constitutes a new basis to be used when they were paid off and only the excess over this basis constitutes capital gain in March, 1942. The remainder would then be a tax-free return of capital. On the other hand, if the value is unascertainable or zero he contends that the basis must then derive from the 1940 agreement creating the option. Thus under the *Burnet* and *Carter* cases cited *supra* he would push back the period of holding to this date and make the 1942 retirement of the notes a long-term capital gain.

We cannot agree. In the first place the exercise of the option could not be a capital transaction creating a new basis for the option property. For the taxpayer to argue that the Commissioner should have taxed his option exercise in 1941—a position inconsistent with his apparent failure to report it, see *Orange Securities Corp.* v. *C. I. R.*, 5 Cir., 131 F.2d 662—assumes that the amount of the value of the notes which should have been taxed then as gain would be his new basis when the notes were later retired. Such a concept is distinctly at odds with the mandate of I.R.C. § 113 (a), that "The basis of property shall be the cost of such property," not its value. The basis of the notes must be not the value of the option which was given up (or its equivalent, the value of the option property), but rather the final cost of the notes to the taxpayer. *C. I. R.* v. *Cummings*, 5

* Discussion of the first issue has been omitted [Ed.]

Cir., 77 F.2d 670, 673, specifically approved in *Helvering* v. *San Joaquin Fruit & Investment Co.*, 297 U.S. 496, 498, 56 S. Ct. 569, 80 L. Ed. 824. The value of notes when received is thus irrelevant and cannot be exploited in support of a contention that their payment was partially or wholly a return of capital. See also *C. I. R.* v. *Oxford Paper Co.*, 2 Cir., 194 F.2d 190.

As to the correlative argument that this was a long-term capital gain, taxpayer has ignored the impact of *Helvering* v. *San Joaquin Fruit & Investment Co*, *supra*. That case, the authority of which this circuit has honored as recently as *Kinkel* v. *McGowan*, 2 Cir., 188 F.2d 734, explicitly prescribes that the period during which option property is deemed to be held begins with the date that property was actually acquired through exercise of the option. See also *Mack* v. *C. I. R.*, 3 Cir., 148 F.2d 62, certiorari denied 326 U.S. 719, 66 S. Ct. 23, 90 L. Ed. 425. Thus where, as here, an option is secured more than six months prior to the sale of the property, but the date the option is exercised falls within six months of the sale, the latter only determines the period during which the gain or loss accrued.[1]

The *Burnet* and *Carter* cases cannot override this simple rule, for they have no application to the period of holding. Contrary to taxpayer's contention, they can neither push the acquisition date back nor advance the time of a sale or exchange for purposes of the long term-short term dichotomy. The principle announced in those cases extends only to the nature of payments on speculative contracts of unascertainable value received in a prior capital transaction; though it permits the taxpayer to treat such payments as return of capital or capital gain rather than ordinary income, it does not vary the period during which the property given in exchange for such contracts was held. Hence if this is less than six months, the future payments in a *Carter* and *Burnet* type obligation must be short-term capital gain, no matter how long after the exchange they are received.

Treating the amount in question as a short-term capital gain taxable to the extent that it was a gain on cost, there still might arise an interesting question as to the components of the cost figure here, to wit, whether only the amount paid on exercise or that amount plus some apportionment of the original cost of the option should be included. But that interesting question is not before us. The evidence bearing upon such cost or clarifying the complicated transaction which gave rise to the option was not developed of record; and, after the opinion of the court below, the parties filed an agreed computation upon which the court based its order of overpayment. Hence no issue as to such computation remains open or has been presented to us. . . .

Note

See § 1234, derived from § 117(g)(2) of the 1939 Code.

[1] Note the similar rule for determining the period for which a taxpayer has held stock or securities of a corporation, acquired through the exercise of rights, which includes "only the period beginning with the date upon which the right to acquire was exercised." I.R.C. § 1223 (6). See E. T. Weir, 10 T.C. 996, affirmed per curiam, Weir v. C. I. R., 3 Cir., 173 F.2d 222.

CHAPTER 6

THE CORPORATION AND ITS STOCKHOLDERS

Section A. Introductory

GOODE
THE POSTWAR CORPORATION TAX STRUCTURE
IN HOW SHOULD CORPORATIONS BE TAXED?

New York. Tax Institute, Inc., 1947, pp. 46-58 *
(Reprinted by Permission)

Criticisms of the present corporate income tax and suggestions for its revision center largely around the so-called "double taxation" of distributed corporate profits. Corporations now pay a tax on their profits, and stockholders pay a personal income tax on dividends received. Most plans for reform of the present method of taxing corporations are intended to reduce or eliminate this so-called "double taxation" of distributed profits.

NATURE OF THE PROBLEM OF "DOUBLE TAXATION" OF CORPORATE PROFITS

For a number of reasons I believe that the use of the term "double taxation" is unfortunate. In the first place, the emotional content of the words "double taxation" is enough to condemn the present system in the minds of most people without further hearing. It may be that the present method of taxing corporate profits should be fundamentally revised, but the issue should be argued out fully and carefully and not decided on the basis of colorful phrases. In the second place, the real problem seems to me not to be "double taxation" in the sense of simultaneous imposition of two taxes but how the taxation of corporate profits and stockholders compares with taxation of other kinds of income and other income recipients.

Under the present system, the corporate tax strikes profits distributed to stockholders not subject to individual income tax, either because of low-income or tax-exempt status, although other income going to the same income recipients is not taxed. In this case dividends are taxed more heavily than other kinds of income even though there is no double taxation in the literal sense. On the other hand, profits retained in corporations controlled by high-income stockholders may bear a smaller current tax than other income under the control of the same individuals

It seems to me that discussion would be advanced by substituting for "double

* Economist Division of Tax Research, U S Treasury Department Opinions expressed are personal views and do not necessarily reflect the official views of the Treasury Department This paper is based largely on a study entitled *The Postwar Corporation Tax Structure* released by the Treasury Department, Division of Tax Research December 6, 1946

taxation" such colorless terms as "relative overtaxation" or "relative undertaxation." Instead of talking about removal of "double taxation," it seems better to speak of equalizing taxes on corporate profits and other kinds of income. Whether one finds a specific proposal acceptable may well depend on whether one is more concerned with eliminating "double taxation" in the literal sense or with equalizing taxes on different kinds of income.

Several charges have been brought against the present so-called "double taxation" of corporate profits or, as I should prefer to say, the present relative overtaxation of corporate profits. The first charge is that the present system is inequitable. The first principle of equity in taxation is often held to be to tax all natural persons with the same income at the same rate. By this standard it is indeed true that stockholders are often overtaxed. At other times, however, many stockholders are at least temporarily undertaxed. The rule of equal taxation of equal incomes is subject to modification in accordance with the principle of reasonable classification.

It may be argued in support of the present system that differences in taxation of stockholders and other income recipients are a reasonable reflection of genuine differences between stockholders and others. Within the limits of this paper, I cannot pretend to dispose of this issue. A complete discussion of it would, in my opinion, require a thoroughgoing analysis of the corporate income tax and its far-reaching effects on the distribution of income and wealth, on consumption and saving, on incentives and investment, and on employment and national income.

A second charge against the present corporate tax system is that it reduces the incentive to invest and thus reduces national income or slows its growth. In large part, I believe, this criticism is actually a complaint against income taxes in general rather than against the corporate income tax in particular. If, however, corporate profits are taxed more heavily than other kinds of income, the corporate tax may be especially harmful to investment.

In connection with investment incentives it should be noted that the present "double taxation" or "relative overtaxation" of distributed corporate profits is greatest in the case of low-income stockholders and least in the case of high-income stockholders. This is true because the progressive rates of the individual income tax partly offset the effect of the corporate tax on the distributed part of profits. In the case of profits distributed to high-income stockholders who are subject to high individual tax rates, the tax collector would get a much bigger cut at the individual level if he did not get so much at the corporate level. For example, only 30 cents out of each dollar of the corporate tax on profits distributed to a stockholder subject to a 70 per cent marginal individual rate is net revenue to the Treasury or net additional tax on the stockholder's equity. But, 81 cents out of each dollar of corporate tax is net additional tax in the case of profits distributed to a stockholder subject to only a 19 per cent individual rate.

Two other charges against the present method of taxing corporations, which seem to me somewhat less important than those already mentioned, also stem from the present so-called "double taxation" or "relative overtaxation" of distributed profits. The present tax system is held to favor debt financing as compared with equity financing and to discourage the corporate form of doing business.

I shall not attempt to evaluate these charges nor even to state the counterargu-

ments in favor of the present corporate tax I do want to say that I think that none of the arguments on either side can be accepted uncritically and that, in my opinion, a great deal more analysis needs to be done on the questions raised. For present purposes it is enough to point out that the validity of the case against the present corporate tax depends in large measure on the actual extent of "double taxation" or "relative overtaxation" of corporate profits as compared with other kinds of income.

The present relative overtaxation of corporate profits is neither so extensive nor so heavy as might be supposed on the basis of superficial examination. Unfortunately, however, it does not seem possible at the present stage of economic analysis to set definite limits to the actual extent of existing relative overtaxation of corporate profits. This is true mainly because we do not know with any degree of certainty who actually pays the present corporate tax. If the tax is passed forward to consumers in the form of higher prices or backward to workers in the form of lower wages, as many believe, stockholders may not be taxed more heavily than other income recipients. To the extent that the corporate tax is shifted forward in higher prices, it is no more a "double tax" on stockholders than, say, the excises on alcoholic beverages are double taxes on stockholders in distilleries, breweries, and wineries If, and to the extent that, the corporate tax is shifted, it becomes in effect a broad consumption tax and must be so appraised.

Economic and business opinion is divided on the critical issue of shifting. Indeed, the division of opinion goes so deep that sometimes the same individual or group advances arguments that seem conflicting because of inconsistent treatment of the subject of incidence. Without going fully into the subject, I wish only to raise the question of shifting of the corporate tax as a possible limitation on the validity of the criticisms against the tax and as a point that may be pertinent to the appraisal of the various proposals for modifying the present system.

Even if the corporate tax is not shifted to commodity prices or wages, present stockholders may in many cases largely escape the tax The basis for this assertion is the familiar theory of tax capitalization and amortization. If present stockholders bought their shares with the expectation that the corporate tax would continue, they probably took the tax into account in deciding how much to pay for stocks. Probably stock prices decreased or did not rise as much as they otherwise would have. Present stockholders in many cases may have bought their shares at prices and yields that at least in part discounted the tax To the extent that they did so, the corporate tax was transformed into a one-time levy on the previous owners of stock, and its unexpected repeal or reduction would give present stockholders windfall gains. It is, of course, impossible to appraise this possibility in quantitative terms

Furthermore, the effect of the corporate tax has probably not been confined to stock prices but probably has spread to all kinds of earning assets As stocks became a less attractive investment after imposition or increase of the corporate tax, some potential investors probably attempted to shift to bonds and other assets. The result was doubtless that the prices of bonds and other assets were bid up to some extent, while the fall of the price of stocks was somewhat cushioned If this happened, the corporate tax was the cause of a general decrease in yields of all kinds of earning assets rather than merely a tax on the yield of stocks.

Problems in Shifting to a New Method of Taxing Corporate Profits

One important problem in shifting to a new method of taxing corporate profits would be to prevent or to minimize tax postponement and avoidance on the part of stockholders. Few critics would suggest outright repeal of the corporate tax without any other change. Such action would open the way for stockholders to escape or postpone personal taxes on their part of undistributed corporate profits. With present low tax rates on long-term capital gains, the opportunities for tax avoidance would be especially tempting. If corporate savings were exempt from taxation, other savings could not in fairness be taxed. But exemption of savings would transform the income tax into a spendings tax, which would be a drastic remedy for any existing "double taxation" or relative overtaxation of distributed corporate profits. Consequently, most suggestions for revision of the corporate tax contemplate keeping a tax on retained corporate profits while decreasing present taxes on distributed profits.

Another transitional problem in adoption of a new method of taxing corporate profits would be to minimize possible windfall gains to present stockholders. If a new tax system resulted in lower taxes on corporate profits than the securities markets had generally anticipated, windfall gains could not be wholly avoided. If it is true that the effect of the corporate tax has spread to the prices and yields of all kinds of assets, windfall gains for stockholders would be accompanied by windfall losses for owners of bonds, real estate, and perhaps other earning assets. While such windfall gains and losses could not be wholly avoided, their impact might be softened and their secondary effects lessened by spreading the tax adjustment over a period of years.

Approaches to Equalization of Taxes on Corporate Profits and Other Kinds of Income

Partnership Approach. The partnership approach carries to its logical conclusion the view that there is no genuine distinction between corporations and their stockholders, which is implicit in many criticisms of the present corporate tax. The partnership approach would eliminate the corporate income tax and would tax stockholders on their proportionate part of corporate profits when earned whether the profits were distributed or retained by the corporation. Presumably, stockholders would also be allowed to take account of their proportionate part of corporate losses. The partnership approach would completely eliminate any "double taxation" of corporate profits and would completely equalize taxation of corporate profits and other kinds of income. No stockholder's personal tax liabilities would ever be affected by the dividend policy of the corporation. In this respect, the partnership approach is an ideal system against which other proposals for equalizing taxes on corporate profits and other income must be measured.

But from a practical point of view it seems very doubtful that the partnership approach would be an "ideal" system. It seems extremely doubtful that the partnership technique could be successfully applied to big corporations with many stockholders and complicated capital structures. Aside from the work required to allocate earnings among thousands or hundreds of thousands of stockholders,

the partnership method would involve the almost insoluble problem of distributing profits according to the different kinds of claims represented by a hierarchy of securities

I am not prepared to say whether the partnership method would be feasible and appropriate for small corporations. It does seem to me, however, that as a general method the partnership approach must be regarded as an ideal to be approximated rather than a goal to be reached. I hasten to say that it is an "ideal" only in the sense of equalizing taxes on corporate profits and other kinds of income. Saying that a corporation is nothing more than a sophisticated partnership does not make it so Personally, I want to leave open the question whether elimination of special taxes on corporate profits is desirable in the light of all relevant equity and economic considerations.

Adjustment at the Corporate Level Another approach that has been suggested to the equalization of taxes on corporate profits and other kinds of incomes is to grant corporations a tax credit when they pay dividends or to exclude all or part of dividends paid from taxable corporate income. Stockholders would pay the usual personal taxes on dividends when received. This approach would continue a corporate tax on retained profits but would reduce or eliminate the corporate tax on distributed profits The corporate tax on retained profits would be intended to minimize possibilities for stockholder tax postponement or avoidance, but it would relatively overtax the part of retained profits allocable to low-income stockholders. If a full tax credit or exclusion were allowed corporations for dividends paid, this system would approach the partnership ideal as closely as any other leading proposal

The dividends-paid-credit approach could practically eliminate the present premium on debt financing and the present tax discrimination against the corporate form of doing business. The approach would also lower any tax barriers that may now exist to corporate investment It would be well calculated to counteract any tendency of corporations to shift their taxes to consumers and wage earners.

Another characteristic of the dividends-paid-credit approach may be considered either an advantage or a disadvantage depending on one's point of view. This approach would probably stimulate corporations to pay larger dividends Management and stockholders would see that taxes could be lowered by increasing dividends. Some observers fear that a tax inducement to distribution of profits might lead corporations to deprive themselves of needed funds and so reduce investment Others believe that investment is better allocated if submitted to the test of the capital market than if financed by retained earnings. This is another issue that is too broad to be disposed of within the limits of this paper. Perhaps I should emphasize, however, that, while a tax credit for dividends paid might *induce* some corporate managements to be imprudent, it would never *force* them to be so A corporation could retain as much profits under a dividends-paid-credit plan as under any other plan that imposed a similar tax rate on retained profits. Moreover, it would be possible under the dividends-paid-credit approach to recognize the special capital-raising problems of small corporations by treating a limited amount of profits as if distributed even though retained.

Administration of the dividends-paid-credit approach would be rather simple, since all adjustments would be made at the corporate level

Adjustment at the Individual Level: Withholding approach. The withholding approach would consider all or part of the corporate tax as a withholding tax or an advance payment on the liabilities of stockholders. Corporations would continue to pay a tax on both distributed and undistributed profits, but dividend recipients would be allowed to take credit for the tax paid by the corporation on their share of distributed profits. Dividend recipients would include in their taxable income cash received plus withholding tax but would get credit for the withholding tax. If the amount withheld by the corporation exceeded the stockholder's personal tax liability, he would get a refund from the Treasury. This system, which is used in Great Britain, would be somewhat similar to the present method of withholding on salaries and wages.

The withholding approach would be closely similar to the dividends-paid-credit approach except for making the tax adjustment at the individual rather than the corporate level. Both approaches could completely equalize taxes on distributed corporate profits and other forms of income. Taxes could be entirely eliminated on dividends going to nontaxable stockholders and the same tax imposed on other dividends as on interest and other kinds of income. Both approaches would continue a tax on retained corporate profits in order to reduce individual tax postponement or avoidance.

The withholding approach could reduce or practically eliminate the tax discrimination against equity financing and against the corporate form of organization. In the long run it might counteract any tendency for the corporate tax to raise prices and lower wages, but in the short run the withholding approach would be less likely to eliminate the tax as a factor in price and wage decisions than would a tax adjustment at the corporate level.

If corporate officials and stockholders acted quite rationally, the withholding approach should have the same effect on dividend policy as the dividends-paid-credit approach. In both cases stockholders could gain the advantages of the plan only if profits were distributed. Perfectly rational stockholders would bring as much pressure on management to distribute profits under one plan as under the other. It must be admitted, however, that, given present management and stockholder psychology, the withholding approach would probably be a less powerful stimulus to increased dividends than a dividends-paid-credit plan.

A withholding system would raise some rather troublesome administrative problems, but probably no insuperable ones. For example, it would be necessary to trace dividends back to the corporate income from which paid in order to determine how much tax credit for withholding to allow stockholders. It would also be necessary to grant every dividend recipient a proper tax credit and in many cases to make refunds for overwithholding.

Dividends-received-credit approach Another possible approach at the individual level would be to exempt dividends from a part of the individual income tax. Usually this approach contemplates exemption of dividends from the first bracket of the individual income tax, which would be equal to the corporate tax rate. But equality of the corporate rate and the individual first-bracket rate is not a necessary feature of the approach.

The dividends-received-credit approach could eliminate "double taxation" in the literal sense by making sure that dividends never bore two taxes. But this ap-

proach could not eliminate relative overtaxation of distributed corporate profits. It could not approximate the partnership ideal so closely as the dividends-paid-credit approach or the withholding approach. The dividends-received-credit approach would grant no relief to stockholders not subject to the individual income tax. While these stockholders are not doubly taxed in the literal sense, they are overtaxed on dividends as compared with other kinds of income.

Nor would the dividends-received-credit approach equalize taxation of corporate profits and other kinds of income going to high-income stockholders This approach would, in effect, consider the tax paid by the corporation as a payment on the tax liability of stockholders. But unlike the withholding approach, it would not require stockholders to include in their taxable income the tax paid on their behalf by the corporation. This would benefit high-income stockholders subject to high surtax rates more than low-income stockholders subject to low surtax rates. Although the dividends-received-credit approach could eliminate "double taxation" in the narrow sense and reduce the tax load on corporate profits, it could not so nearly equalize taxation of corporate profits and other kinds of income as could the dividends-paid-credit approach and the withholding approach.

It ought to be recognized that the dividends-received-credit approach would in effect introduce a new scale of graduated tax rates for distributed corporate profits. This new scale would start higher than the rate on other income but would end lower than the rate on other income This may be a defensible rate scale, but its merits are not obvious; they would have to be established explicitly, in fair competition with the claims of other possible schedules.[1]

The dividends-received-credit approach could reduce, but not wholly eliminate, tax discrimination against equity financing and against the corporate form of doing business This approach would be simple to administer

3. Dividend-exclusion approach. Another approach would be to allow stockholders to exclude a part of dividends received from their taxable incomes. This approach would reduce taxes on corporate profits, but it could not equalize the taxation of corporate profits and other kinds of income. The tax value of the exclusion of dividends would equal the present relative overtaxation of dividend income only by coincidence and then only for one taxable income bracket. All other stockholders would get either a smaller or a larger benefit. Nontaxable stockholders would get no benefit at all.

It is clear that the tax value of the dividend exclusion would vary directly with the surtax rate applicable to the stockholder's dividend income. Thus, high-income stockholders would benefit substantially from the dividend-exclusion approach while low-income stockholders would benefit much less or not at all

[1] If, as is usually suggested, the corporate tax rate and the individual first-bracket rate were equal, the *combined* corporate and individual taxes on distributed profits would be lower than the rate on other kinds of income for all stockholders subject to more than the first-bracket individual rate. In such cases, the combined taxes would be less than the individual tax alone that would apply if there were no corporate tax and dividends were subject only to regular individual rates. Suppose, for example the corporate tax and the first-bracket individual rate were both 20 per cent and that Stockholder A were subject to a 50 per cent individual rate, made up of the 20 per cent first-bracket rate and 30 per cent higher bracket rates On $1.00 of profits a corporation would pay 20 cents in tax, on the remaining 80 cents of cash dividends, A would pay 24 cents in tax, the combined corporate and individual taxes would be 44 cents Yet, if there had been no corporate tax, A would have paid 50 cents in the individual tax on $1 00 of dividend income

The allocation of tax reductions among different stockholders under the dividend-exclusion approach would not approximate the present overtaxation of distributed corporate profits as measured against the "ideal" standard of the partnership approach. Like the dividends-received-credit approach, the dividend-exclusion approach would in effect provide a new scale of graduated rates for distributed profits—a scale beginning relatively high and ending relatively low.

Conclusions

The problem of corporate tax reform is complicated by uncertainty as to the real effects of the present system, but the discussion has been enriched by the number of different plans suggested. Among the main approaches, only the partnership approach could completely equalize taxation of corporate profits and other kinds of income. But both the dividends-paid-credit approach and the withholding approach could equalize taxes on distributed profits and other income, while continuing a corporate tax on retained profits. The dividends-received-credit approach and the dividend-exclusion approach could reduce taxes on distributed profits but could not equalize taxes on this and other kinds of income.

While the problem of relative overtaxation of corporate profits is at the root of most criticisms against the corporate tax, the objective of equalizing taxes on corporate profits and other kinds of income is not the only factor to be considered in designing the postwar corporation tax structure. One controlling condition is revenue adequacy. Moreover, possible economic gains from remodeling the present structure can be appraised only by comparing the effects of the present corporate tax on consumption, investment, and national income with the effects of other taxes, which would have to be higher than would otherwise be necessary if the tax on corporate profits were lower.

Note

1. The 1954 Code, as was seen *supra*, p. 194, permits the first $50 of dividends received by an individual taxpayer to be excluded from gross income; in the case of a joint return, husband and wife may each exclude $50 if each receives that much dividend income A dividends received credit of 4 per cent of the balance of the taxpayer's dividends is also allowed. This credit may not exceed 2 per cent of the taxable income in 1954 or 4 per cent in later years Sections 34 and 116. What is the purpose of the 2 per cent-4 per cent limitation?

As proposed by the House Ways and Means Committee and passed by the House of Representatives, the Code provided a credit that would rise to 10 per cent of dividends received after July 31, 1955. The credit was the most controversial part of the Code, and the House divided along party lines on a vote to recommit the bill to committee with instructions to strike the credit and substitute an increase in the personal exemption from $600 to $700 The motion was rejected by 204 (193 Democrats, 10 Republicans, 1 Independent) to 210 (201 Republicans, 9 Democrats).

The Senate eliminated the credit (though it retained the $50 exclusion) and substituted a provision directing the Secretary of the Treasury "to make a study of questions involving the inclusion in gross income of dividends received by individuals and to report to the Congress on or before January 15, 1955" In doing so, the Senate rejected the recommendation of the Senate Finance Committee, which had favored the credit. As the bill went to conference to iron out the differences between the House and the Senate versions, Chairman Reed of the House Ways and Means Committee was quoted by the newspapers as saying. "We'll get the House version or not have a bill." (*New York Times*, July 4, 1954, p. 16, col. 3.) The House won out

in conference on this issue, but it accepted most of the other Senate changes in the bill.

2. The Senate bill adopted another approach to the "double taxation" of corporate earnings. It authorized certain closely-held corporations organized after December 31, 1953, to elect to be taxed as partnerships, a corporation could qualify only if it had no more than ten shareholders, all of whom were individuals actively engaged in the conduct of its trade or business. and there were other restrictions as well. The proposal was eliminated in conference, no reasons being given in the conference committee's report.

3. Section 1361, permitting certain unincorporated business enterprises (both partnerships and individual proprietorships) to elect to be taxed as corporations, is new in the 1954 Code An enterprise will not qualify if it is owned by more than fifty persons, and it is necessary that capital be a 'material income producing factor" or that 50 per cent or more of gross income consists of gains, profits, or income derived from trading as a principal or from acting as a broker in sales of real property, commodities, or stock, or securities. Ordinarily, of course, any enterprise that wishes to be taxed as a corporation can achieve its aim easily enough, by organizing in corporate form. Lawyers, doctors, and other professionals who are not permitted to practice in corporate form will not be able to take advantage of Section 1361, because they will be unable to meet the capital or gross income requirements. But members of the New York Stock Exchange, who are forbidden by its rules to incorporate, and other individuals and partnerships that do not wish to limit their personal liability may now continue to do business in unincorporated form while being taxed as corporations.

LOWNDES
TAXING THE INCOME OF THE CLOSE CORPORATION

18 Law & Contemp. Probs, 558-565 (1953)
(Reprinted by Permission)

Although there is no substantial agreement about how the income from close corporations should be taxed, there appears to be virtual unanimity with respect to the defects of the present system.

The basic weakness of the method adopted by the federal income tax for taxing corporate income is that it is predicated upon a legal fiction which ignores economic realities. In the case of a partnership, the partnership is disregarded and the partners are taxed directly upon their distributive shares of the partnership income.[1] In the case of a corporation, however, the law gives full credence to the corporate fiction. Although in substance a close corporation represents an incorporated partnership, or perhaps an incorporated sole proprietorship, the corporate entity is treated as an independent taxable entity, and the income of the undertaking is taxed to the legal convention, rather than to the real owners of the enterprise.

The recognition of the corporation as a distinct taxable entity has several unhappy corollaries. Even in the case of the publicly owned corporation, it results in a complete disregard of the ability to pay principle, which is supposed to be one

[1] The first federal income taxes, passed during the Civil War, taxed the income of corporations in the same way, that is, they ignored the corporate entity and taxed the shareholders directly upon their distributive shares of the corporate income This system was sustained in Collector v Hubbard, 12 Wall. 1 (U S 1870), although the Supreme Court later repudiated the Hubbard case in Eisner v. Macomber, 252 U S 189, at 217-219 (1920), declaring that "the stockholder's share in the accumulated profits of the company is capital, not income" (p 219), and that he realizes no income upon which he may be taxed under the Sixteenth Amendment until the corporate profits are distributed to him in the form of dividends.

of the cardinal *desiderata* of an income tax. Although there is considerable speculation about the actual incidence of the corporate income tax, and whether the burden of the tax is shifted to the consumer in the form of higher prices, or to the corporate employees in the form of lower wages, or to the stockholders in the form of diminished dividends, it is clear that the actual burden of the tax is not imposed upon the corporation, which is a legal fiction. The corporate tax, which in recent years has been graduated according to the size of the corporate income, obviously bears no relation to the wealth or the ability to pay of the person who actually pays the tax, whoever he may be.

In the case of close corporations there are more fundamental objections to the current system of taxing corporate income. Some taxes are unjust because they bear too heavily upon a particular class of taxpayers. Others lack equity because they are susceptible to manipulation which makes it possible for the sophisticated taxpayer to shift his legitimate share of the tax burden to some more ingenuous citizen. The corporate tax enjoys the dubious distinction of erring in both directions. Since corporate income is taxed in the first instance to the corporate entity, when it is earned, and again to the stockholders, when it is distributed to them in the form of dividends, while the income of a partnership or a sole proprietorship is taxed but once to the partners or the sole proprietor, the corporate tax discriminates against incorporated partnerships and incorporated sole proprietorships. On the other hand, the recognition of an artificial legal convention as an independent taxable entity is a constant stimulus to tax manipulation and tax avoidance.

The theoretical objections to the present system of taxing the income of close corporations are that it makes the conduct of a business subordinate to tax considerations and interposes an unwarranted impediment to freedom of choice of the form of business organization, because of the double tax on corporate income, as contrasted with the single tax upon the income of a partnership or a sole proprietorship. Moreover, by treating the corporate personality as a distinct taxable entity, the corporate tax serves as a shield behind which the tax dodger may conduct his maneuvers with impunity.

The ultimate test of a tax, however, lies in the practical operation of the tax in a concrete context, rather than its theoretical imperfections. The present system of taxing the income of close corporations must be judged by whether it really does create a genuine obstacle to conducting a business as a corporation rather than a partnership or sole proprietorship, and whether it actually encourages tax manipulation and tax avoidance.

Choice of Form of Business Organization: The Close Corporation Versus the Partnership or Sole Proprietorship

It is difficult to determine the precise extent to which the present system of taxing the income of close corporations constitutes a genuine impediment to the selection of the corporate form to conduct a business, which could be carried on as a partnership or sole proprietorship, because the relative tax advantages and disadvantages of various forms of business organization are linked so intimately with the concrete facts of a particular situation. In some cases it may actually be more economical to do business as a corporation. In others, a partnership or a sole proprietorship is preferable from a tax point of view. Unquestionably, the fact that the income of a close corporation is taxed differently than that of a part-

nership or a sole proprietorship is a predominating factor in the selection of the form of business organization. It is not, however, a consideration which inclines constantly in the same direction, since the tax advantages of one form of organization over another shift continually with changes in the underlying factual situation

Because the tax advantages of a particular form of business organization are tied so closely to the unique facts of the particular situation, it is impossible to lay down any rigid rule which can be applied indiscriminately in every case to determine the most economical form of doing business from a tax point of view. It is feasible, however, to point out some of the major tax factors which must be weighed in choosing a form of business organization to illustrate the unwarranted predominance which tax considerations have achieved in this area, because of the identification of the corporation as an independent taxable entity.

A. Rates

A basic consideration in the choice of a corporation or a partnership or sole proprietorship as a form of business organization is the matter of rates, since corporate income is taxed under a different rate schedule than that applied to individual income, and corporate income is subject to the excess profits tax, which does not apply to other types of income.* There is, however, no constant ratio between the corporate tax and the individual tax, since this depends upon such variant factors as the size of the income, the application of the excess profits tax, and the personal status of the individual taxpayer. The recent revenue acts, which have reimposed the excess profits tax and permitted married taxpayers to split their incomes, have tended to favor partnerships and sole proprietorships, rather than corporations, as a form of business organization. However, the actual rate, at which the income from an enterprise is taxed, depends to such an extent upon the unique facts of the particular situation that it is impossible to generalize about which rates are more favorable.

B. Double Taxation

An important factor in determining the actual *effective* rate of tax upon the income of a close corporation is the possibility of avoiding a double tax. If corporate income is taxed first to the corporation, when it is earned, and again to the stockholders, when it is distributed to them in the form of dividends, it is obvious that the aggregate tax upon corporate income will be heavier than that which would be incurred by a partnership or a sole proprietorship.† In many cases, however, it is possible to eliminate the double tax. In a given situation it may even be possible to divide the income from an incorporated enterprise between the corporation and the individual entrepreneurs, so that part of the income is taxed to the corporation and part to the individual shareholders, with a lower aggregate tax than if it were all taxed directly to the individual owners of the business.

As a general rule, if the corporate profits can be distributed to the stockholders in a form which is deductible from the corporate income, a business may be conducted as a corporation about as economically from a tax point of view as a part-

* An excess profits tax was in effect during World Wars I and II and during the period 1950-1953. [Ed.]

† The dividends received credit enacted in 1954, *supra*, p 456, of course, moderates the effect of the separate corporate tax to a degree [Ed.]

nership, because of the elimination of any additional corporate tax. Thus, many small enterprises, whose earnings are derived chiefly from the efforts of the owners of the business, are able to operate as corporations without any undue tax penalty, because they can distribute their profits in the form of salaries, which are deductible from the corporate income. In fact, if part of the corporate earnings are plowed back into the business for expansion, it may be more economical to operate as a corporation than a partnership. In the case of a partnership, all of the partnership income is taxed to the partners, regardless of whether it is distributed to them or retained in the business. There is, therefore, no opportunity to divide the income from the business between the partners and the firm. In the case of a corporation, however, if part of the corporate income can be distributed to the shareholders in the form of salaries, or other items deductible from the corporate income, and part can be retained in the corporation, it is possible to divide the income from the enterprise between the corporation and the stockholders, so as to take advantage of the lower brackets under both the corporate and individual taxes.

Of course, matters may not work out so neatly. The deduction for salaries is limited to reasonable salaries, or in the words of the statute to "a reasonable allowance for salaries or other compensation for personal services actually rendered." Moreover, there are restrictions upon the earnings which a corporation may retain without encountering the surtax under Section 102,‡ which is imposed as a penalty upon a corporation "formed or availed of for the purpose of preventing the imposition of the surtax upon its shareholders or the shareholders of any other corporation, through the medium of permitting earnings or profits to accumulate instead of being divided or distributed." The limitation upon the deduction for salaries to reasonable salaries may create an awkward situation, if the particular stockholder needs a greater portion of the earnings of the business than can properly be regarded as reasonable compensation for the services which he renders to the corporation. Furthermore, in order to accumulate earnings in the corporation without incurring the Section 102 surtax, there must be some showing that they are needed for expansion or some independent business purpose of the corporation.

Salaries or compensation for personal services are not the only items which may be deducted from corporate income. Although dividends distributed by a corporation are not deductible in computing the corporate tax, the interest which a corporation pays on its debts is. Consequently, it has become customary to finance a corporation largely with borrowed capital in order to distribute the corporate earnings in the form of interest upon its obligations, which is deductible from the corporate income.... In addition to deducting the interest paid on the obligations of the corporation, it is possible to retain substantial amounts of the corporate earnings in the corporate treasury to fund its indebtedness without incurring the Section 102 surtax. Moreover, the corporation can distribute its earnings by redeeming its bonds, or paying off its debts, without subjecting such payments to an additional tax in the hands of the stockholder-creditors, where a similar distribution in redemption of part of its stock would run the risk of being taxed as an ordinary dividend under Section 115 (g).§

‡ Now, somewhat modified, § 532. [Ed.]

§ The stock-redemption area has been altered by the 1954 Code, *infra*, p. 495, but the general principle still stands. [Ed.]

While thin incorporation has its advantages, there is a still unsettled problem as to just how thin incorporation can get before the Commissioner can see through it. It has been held that if the borrowed capital is substantially disproportionate to the equity capital, the borrowed capital will be treated as equity capital and a deduction for interest paid on the borrowed capital will be disallowed. Moreover there appears to be no manifest reason why the redemption of bonds in such a case could not be taxed under Section 115(g) as an ordinary dividend. It is obvious that while it may be possible to eliminate a corporate tax by paying out corporate earnings in the form of interest rather than dividends, the restrictions on thin incorporations, like the limitation upon the deduction of salaries, make this a matter calling for skillful and sophisticated tax management.

In addition to the distribution of corporate earnings in the form of salaries and interest to minimize or eliminate the corporate income tax, part of the corporate profits are frequently paid out in the form of rent, which the corporation can deduct from its income as a business expense. Under this scheme, the stockholders will retain title to the property which the corporation needs to operate its business and lease it to the corporation, so that the rent paid by the corporation can be deducted from its income. Here again, however, caution must be exercised. If the rent paid by the corporation is in excess of the fair figure which would have been fixed in an arm's length transaction, the excess above the fair rental value of the property will be disallowed as a deduction. It seems possible, moreover, that if the lease simply represents a scheme for diverting income from the corporation and serves no independent business purpose of the corporation, any deduction for rent may be disallowed, while the rent itself may be taxed to the stockholder who receives it as a dividend.‖

C. Tax-Exempt Income, Capital Gains

In addition to the effective rates of tax upon the income of an enterprise conducted as a corporation and as a partnership, there are other differences between the ways in which corporations and partnerships are taxed, which follow as more or less logical corollaries from the recognition of the corporation as a distinct taxable entity, and which must be taken into account in the choice of a form of business organization. One of these differences, for example, is the way in which tax-exempt income of a corporation and of a partnership is treated.

Tax-exempt income of a partnership does not lose its tax-exempt status when it is taxed to the partners, since the partnership is merely a conduit for allocating the partnership income to the partners. Tax-exempt income of a corporation, however, is transmuted into taxable income when it passes through the hands of the corporation and is distributed in the form of dividends, since the exemption is lost by the interposition of an independent taxable entity between the income and the stockholders. The moral, of course, is plain. Tax-exempt or partially tax-exempt income should not be given to a corporation, but should, as far as practicable, be retained by the individual stockholders.

The fact that income may change its character between the time it is earned by a corporation and distributed to the stockholders does not, however, always work to the disadvantage of the stockholders. It is sometimes possible to convert ordi-

‖ See White v. Fitzpatrick, *supra*, p. 358. [Ed.]

nary income of a corporation into a long-term capital gain in the hands of a stockholder by liquidating the corporation. Incidentally, however, there is no profit in transferring capital assets, which have increased in value, to a corporation with the idea of having the corporation sell the assets and realize the gain, since the minimum tax which a corporation must pay upon such a gain is 26 ** per cent, which is the maximum tax which an individual may pay, and he may pay less. Moreover, if the gain realized by the corporation is ultimately distributed to the stockholder it will be taxed to him again, and, unless the distribution occurs in connection with a liquidation of the corporation, taxed as ordinary income.

D. Deferring Gains and Losses

One of the advantages of conducting an expanding business as a corporation, which was noted earlier, is that the earnings which are retained by the corporation may be kept out of the incomes of the stockholders and taxed to the corporation in a lower bracket than they would be taxed to the stockholders. In other words, this is a possible way of dividing the income of a business between the corporation and the proprietors of the business and taking advantage of the lower brackets of both the corporate and individual taxes. On the other hand, if a business is conducted as a partnership or a sole proprietorship, all of the income of the business will be taxed to the partners or to the sole proprietor, regardless of whether it is actually distributed to them or plowed back into the business.

Conversely, however, it may be advantageous to organize a new business, in which losses are anticipated in the early years, as a partnership or sole proprietorship, rather than a corporation, since the losses incurred in starting the business can be utilized directly by the partners or the sole proprietor to offset their gains from other sources, and if they arise from the operation of the business, as distinguished from the sale or exchange of capital assets, they will be fully deductible as ordinary business losses. If, on the other hand, the business is conducted as a corporation, any losses incurred in the operation of the business will be the losses of the corporation and cannot be availed of by the stockholders. Although such losses may give rise to a net operating loss which can be carried over and offset against the profits of later years, if the corporation continues to be unsuccessful and realizes no gains the carry-over cannot be utilized either by the corporation or the stockholders. Moreover, although the stockholders will realize a loss when the corporation is finally liquidated, the loss will ordinarily take the form of a long-term capital loss subject to the restrictions on such losses.

E. Organization and Liquidation

Although theoretically a corporation should pay a heavier tax than a partnership or a sole proprietorship, because corporate income is exposed to the hazard of a double tax, actually the tax burden of a close corporation depends upon a number of adventitious circumstances. Moreover, the circumstances which determine the relative tax advantages of doing business under the corporate form are not static but are subject to constant fluctuation. At one stage in the existence of a business, it may be profitable to operate as a corporation, and at another, as a partnership or

** Now 25 per cent for individuals, for corporations the rate will drop from 26 per cent to 25 per cent for taxable years beginning on or after April 1, 1954. [Ed.]

sole proprietorship. Not only changes in the fortunes of the business, but changes in the law, such as the enactment or repeal of an excess profits tax, permission for married taxpayers to split their incomes, and upward and downward revisions in the corporate and individual rate schedules, may make a change in the form of business organization imperative. In this connection it is important to bear in mind that it is much easier to shift into a corporation than it is to shift out of one.

A partnership can be organized or liquidated without realizing taxable gain or loss. Moreover, a partnership can be converted into a corporation without incurring any gain or loss, if the partners are in control of the corporation after the transfer of the partnership assets to the corporation, and they retain the same proportionate interests in the corporation, which they had in the partnership property.

The recognition of the corporation as a distinct taxable entity, however, usually makes it impossible to liquidate a corporation and shift to a partnership without serious tax consequences

Section B. The Corporation As a Taxable Entity

***Note.* Section 7701(a)(3) of the 1954 Code, defining the term "corporation" to include "associations," is identical with § 3797 (a)(3) of the 1939 Code.**

Section 269 of the 1954 Code, relating to acquisitions to evade or avoid income tax, is virtually identical with Section 129 of the 1939 Code, except for the presumption of 269(c), which is new. See Regs. 118, Secs. 39.3797-1-5 and 39.129-1-4.

MORRISSEY v. COMMISSIONER

Supreme Court of the U.S., 1935

296 U.S. 344

MR. CHIEF JUSTICE HUGHES delivered the opinion of the Court.

Petitioners, the trustees of an express trust, contest income taxes for the years 1924 to 1926, inclusive, upon the ground that the trust has been illegally treated as an "association.". . . We granted certiorari because of a conflict of decisions as to the distinction between an "association" and a "pure trust," the decisions being described in one of the cases as "seemingly in a hopeless state of confusion." *Coleman-Gilbert Associates* v. *Commissioner*, 76 F.(2d) 191, 193.

The facts were stipulated. In the year 1921 petitioners made a declaration of trust of real estate in Los Angeles. They were to be designated in "their collective capacity" as "Western Avenue Golf Club." The trustees were authorized to add to their number and to choose their successors, to purchase, encumber, sell, lease and operate the "described or other lands"; to construct and operate golf courses, club houses, *etc.*, to receive the rents, profits and income, to make loans and investments, to make regulations; and generally to manage the trust estate as if the trustees were its absolute owners. The trustees were declared to be without power to bind the beneficiaries personally by "any act, neglect or default," and the

beneficiaries and all persons dealing with the trustees were required to look for payment or indemnity to the trust property. The beneficial interests were to be evidenced solely by transferable certificates for shares which were divided into 2,000 preferred shares of the par value of $100 each, and 2,000 common shares of no par value, and the rights of the respective shareholders in the surplus, profits, and capital assets were defined. "Share ledgers" showing the names and addresses of shareholders were to be kept.

The trustees might convene the shareholders in meeting for the purpose of making reports or considering recommendations, but the votes of the shareholders were to be advisory only. The death of a trustee or of a beneficiary was not to end the trust, which was to continue for twenty-five years unless sooner terminated by the trustees.

During the years 1921 and 1922, the trustees sold beneficial interests and paid commissions on the sales. About 42 acres (of the 155 acres described by the declaration of trust) were plotted into lots which were sold during the years 1921 to 1923, most of the sales being on the installment basis. On the remaining property a golf course and club house were constructed, and in 1923 this property with the improvements was conveyed to Western Avenue Golf Club, Inc., a California corporation, in exchange for its stock. Under a lease from the corporation, petitioners continued the operation of the golf course until January 12, 1924. After that date petitioners' activities were confined to collections of installments of principal and interest on contracts of purchase, the receipt of interest on bank balances and of fees on assignments by holders of purchase contracts, the execution of conveyances to purchasers, the receipt of dividends from the incorporated club, and the distribution of moneys to the holders of beneficial interests. On December 31, 1923, the total number of outstanding beneficial interests was 3016, held by 920 persons; by December 31, 1926, the number of interests had been gradually decreased to 2172, held by 275 persons. The holdings by the trustees ranged approximately from 16 to 29 per cent.

Petitioners contend that they are trustees "of property held in trust," within Sec. 219 of the Revenue Acts of 1924 and 1926, and are taxable accordingly and not as an "association." They urge that, to constitute an association, the applicable test requires "a quasi-corporate organization in which the beneficiaries, whether or not certificate holders, have some voice in the management and some control over the trustees and have an opportunity to exercise such control through the right to vote at meetings"; and that, in any event, the activities in which petitioners were engaged, during the tax years under consideration, did not constitute "a carrying on of business" within the rule applied by this Court.

The Government insists that the distinction between associations and the trusts taxed under Sec. 219 is between "business trusts on the one side" and other trusts "which are engaged merely in collecting the income and conserving the property against the day when it is to be distributed to the beneficiaries"; that Congress intended that all "business trusts" should be taxed as associations.

1. The Revenue Acts of 1924 and 1926 provided·

"The term 'corporation' includes associations, joint-stock companies, and insurance companies." * . . .

* Section 3797(a)(3) of the 1939 Code, § 7701(a)(3) of the 1954 Code. [Ed.]

"Association" implies associates. It implies the entering into a joint enterprise, and, as the applicable regulation imports, an enterprise for the transaction of business. This is not the characteristic of an ordinary trust—whether created by will, deed, or declaration—by which particular property is conveyed to a trustee or is to be held by the settlor, on specified trusts, for the benefit of named or described persons. Such beneficiaries do not ordinarily, and as mere *cestuis que trustent*, plan a common effort or enter into a combination for the conduct of a business enterprise. Undoubtedly the terms of an association may make the taking or acquiring of shares of interests sufficient to constitute participation, and may leave the management, or even control of the enterprise, to designated persons. But the nature and purpose of the cooperative undertaking will differentiate it from an ordinary trust. In what are called "business trusts" the object is not to hold and conserve particular property, with incidental powers, as in the traditional type of trusts, but to provide a medium for the conduct of a business and sharing its gains. Thus a trust may be created as a convenient method by which persons become associated for dealings in real estate, the development of tracts of land, the construction of improvements, and the purchase, management and sale of properties; or for dealings in securities or other personal property; or for the production, or manufacture, and sale of commodities, or for commerce, or other sorts of business, where those who become beneficially interested, either by joining in the plan at the outset, or by later participation according to the terms of the arrangement, seek to share the advantages of a union of their interests in the common enterprise.

The Government contends that such an organized community of effort for the doing of business presents the essential features of an association. Petitioners stress the significance of, and the limitations said to be implied in, the provision classifying associations with corporations

The inclusion of associations with corporations implies resemblance, but it is resemblance and not identity. The resemblance points to features distinguishing associations from partnerships as well as from ordinary trusts. As we have seen, the classification cannot be said to require organization under a statute, or with statutory privileges. The term embraces associations as they may exist at common law. *Hecht* v. *Malley*, 265 U S 144 (1924) We have already referred to the definitions, quoted in that case, showing the ordinary meaning of the term as applicable to a body of persons united without a charter "but upon the methods and forms used by incorporated bodies for the prosecution of some common enterprise." These definitions, while helpful, are not to be pressed so far as to make mere formal procedure a controlling test. The provision itself negatives such a construction. Thus unincorporated joint-stock companies have generally been regarded as bearing the closest resemblance to corporations But, in the revenue acts, associations are mentioned separately and are not to be treated as limited to "joint-stock companies," although belonging to the same group While the use of corporate forms may furnish persuasive evidence of the existence of an association, the absence of particular forms, or of the usual terminology of corporations, cannot be regarded as decisive Thus an association may not have "directors" or "officers," but the "trustees" may function "in much the same manner as the directors in a corporation" for the purpose of carrying on the enterprise. The regulatory provisions of the trust instrument may take the place of "by-laws"

And as there may be, under the reasoning in the *Hecht* case, an absence of control by beneficiaries such as is commonly exercised by stockholders in a business corporation, it cannot be considered to be essential to the existence of an association that those beneficially interested should hold meetings or elect their representatives. Again, while the faculty of transferring the interests of members without affecting the continuity of the enterprise may be deemed to be characteristic, the test of an association is not to be found in the mere formal evidence of interests or in a particular method of transfer.

What, then, are the salient features of a trust—when created and maintained as a medium for the carrying on of a business enterprise and sharing its gains—which may be regarded as making it analogous to a corporate organization? A corporation, as an entity, holds the title to the property embarked in the corporate undertaking. Trustees, as a continuing body with provision for succession, may afford a corresponding advantage during the existence of the trust. Corporate organization furnishes the opportunity for a centralized management through representatives of the members of the corporation. The designation of trustees, who are charged with the conduct of an enterprise,—who act "in much the same manner as directors"—may provide a similar scheme, with corresponding effectiveness. Whether the trustees are named in the trust instrument with power to select successors, so as to constitute a self-perpetuating body, or are selected by, or with the advice of, those beneficially interested in the undertaking, centralization of management analogous to that of corporate activities may be achieved. An enterprise carried on by means of a trust may be secure from termination or interruption by the death of owners of beneficial interests and in this respect their interests are distinguished from those of partners and are akin to the interests of members of a corporation. And the trust type of organization facilitates, as does corporate organization, the transfer of beneficial interests without affecting the continuity of the enterprise, and also the introduction of large numbers of participants. The trust method also permits the limitation of the personal liability of participants to the property embarked in the undertaking.

It is no answer to say that these advantages flow from the very nature of trusts. For the question has arisen because of the use and adaptation of the trust mechanism. The suggestion ignores the postulate that we are considering those trusts which have the distinctive feature of being created to enable the participants to carry on a business and divide the gains which accrue from their common undertaking,—trusts that thus satisfy the primary conception of association and have the attributes to which we have referred, distinguishing them from partnerships. In such a case, we think that these attributes make the trust sufficiently analogous to corporate organization to justify the conclusion that Congress intended that the income of the enterprise should be taxed in the same manner as that of corporations.

Applying these principles to the instant case, we are of the opinion that the trust constituted an association. The trust was created for the development of a tract of land through the construction and operation of golf courses, club houses, *etc.* and the conduct of incidental businesses, with broad powers for the purchase, operation and sale of properties. Provision was made for the issue of shares of beneficial interests, with described rights and priorities. There were to be preferred shares of the value of $100 each and common shares of no par value. Thus

those who took beneficial interests became shareholders in the common undertaking to be conducted for their profit according to the terms of the arrangement. They were not the less associated in that undertaking because the arrangement vested the management and control in the trustees. And the contemplated development of the tract of land held at the outset, even if other properties were not acquired, involved what was essentially a business enterprise. The arrangement provided for centralized control, continuity, and limited liability, and the analogy to corporate organization was carried still further by the provision for the issue of transferable certificates.

Under the trust, a considerable portion of the property was surveyed and subdivided into lots, which were sold and, to facilitate the sales, the subdivided property was improved by the construction of streets, sidewalks, and curbs. The fact that these sales were made before the beginning of the tax years here in question, and that the remaining property was conveyed to a corporation in exchange for its stock, did not alter the character of the organization Its character was determined by the terms of the trust instrument. It was not a liquidating trust, it was still an organization for profit, and the profits were still coming in. The powers conferred on the trustees continued and could be exercised for such activities as the instrument authorized....

The judgment is affirmed.

Note

See Regs. 118, Secs. 39.3797-3 and -4 for an attempt to generalize about the differences between an "association" and what the Regulations term an "ordinary trust" Are centralized management and continuity of existence more characteristic of corporations than of trusts, so that an organization that possesses these characteristics should be classified as a corporation? The trustees of a Massachusetts business trust or similar organization are *not* immune from personal liability for their official acts (though they may insure against such liability, seek reimbursement from the trust corpus to the extent thereof, or protect themselves by contract when the parties with whom they deal are willing). The beneficiaries, however, are immune from personal liability. But is their immunity any more characteristic of the stockholders of a corporation than of the beneficiaries an of "ordinary" trust?

If the organization has the legal characteristics (centralized management, continuity of existence, transferable interests, *etc.*) that the Regulations regard as indicia of corporateness, is it necessary that there be business activity as well before a corporation tax will be due? If so, why? Corporations are taxed as such even though the only activity is the holding, conserving, or investing of corporate assets

See Smith, "Associations Classified As Corporations Under the Internal Revenue Code," 34 *Calif. L. Rev.* 461 (1946).

PAYMER v. COMMISSIONER

U.S. Court of Appeals, Second Circuit 1945
150 F 2d 334

Before L. HAND, SWAN, and CHASE, Circuit Judges.

CHASE, Circuit Judge.

These four petitions, which were consolidated for hearing, require us to decide whether the 1938 net income of certain real estate was taxable to the petitioning

corporations each of whom held the title to a part of it, or to the petitioning individuals who owned all the stock of the two corporations. And, if the corporations are taxable on the income, whether their failure to file income and excess profits returns made them liable for a penalty. The Commissioner determined that the corporations were taxable and also that the individuals, to whom the income was paid directly by the lessees of the property, were taxable on the amounts each received on the theory that what was done was the equivalent of dividend distributions by the corporations. He also assessed a penalty against each corporation. The Tax Court affirmed.

The individual petitioners are two brothers, who have been in partnership for many years under the name of Paymer Bros., owning partnership property which has in part been real estate that they improved and managed. Because Samuel had become the co-signer on a note and the guarantor of an account both of which were overdue in 1932, it was then thought that he might be sued by creditors and the partnership property attached. To avoid that, if possible, the partners in that year organized Raymep Realty Corp., Inc. and Westrich Realty Corp., two New York corporations which were given broad powers to own, manage and dispose of real estate and conveyed to each of them a parcel of income-producing real estate in New York City. The conveyance to Raymep was in 1932 and was made directly by the partners. That to Westrich was conveyed first by the partners to Paymer Bros. Realty Corp. Inc., a corporation wholly owned by them, and was then by it deeded to Westrich. In each instance, each of the two partners received half of the stock of the grantee in exchange for the property. The minutes of a meeting of directors and stockholders of each grantee held about the time the property was deeded to it contain the following statement

> The said conveyance was and is made with the express understanding that the corporation is only to hold title to the property, the beneficial interest and profits to be in the individual stockholders and the management and control of the property to be exclusively theirs. It is understood and agreed that this corporation was only organized for the convenience of the shareholders in the management thereof.

After these meetings neither corporate petitioner held any others. Neither ever elected any officers or directors after Samuel was elected president and Joseph treasurer at the organization meeting, ever had any office or bank account, or collected any income. The two partners managed the real estate conveyed as above and collected the income, paid the expenses, deposited the money received in the bank account of Paymer Bros., and used the net profits of the real estate as they pleased, treating that property as the partnership property it had formerly been. The leases existing on the real estate when the conveyances were made were not assigned to the corporations and nothing was done by Westrich in respect to the property held in its name. That is not true, however, as to Raymep for a loan of $50,000 was obtained by it in 1938 and as part security for the loan it assigned to the lender all the lessor's rights, profits and interest in two leases on the property and covenanted that they were in full force and effect and that it was the sole lessor. Capital stock tax returns were filed by both Raymep and Westrich for the fiscal year ended June 30, 1938. During 1938 the two partners received gross rentals amounting to $18,999.86 from the property to which Raymep held the title and $3300. from that whose title was held by Westrich.

The petitioners, acting on the advice of their accountant, included the 1938 income from the property held by these corporations in their own partnership in-

formation return for that year, in which they also included the incomes and expenses of two other corporations wholly owned by them. The net income so reported was treated as the net income of the partners in their returns.

The petitioners now contend that Raymep and Westrich were mere "dummies" which held the legal title to property owned by the two individual petitioners and that both corporations are to be disregarded for income tax purposes As a general rule a corporation is a taxpayer separate and distinct from its stockholders. *New Colonial Ice Co.* v. *Helvering*, 292 U.S. 435, 442, 54 S. Ct. 788, 78 L. Ed. 1348 And this applies to a corporation wholly owned by one stockholder. *Burnet* v. *Commonwealth Improvement Co.*, 287 U S 415, 53 S. Ct. 198, 77 L. Ed. 399. But there are exceptions and the corporate form will be disregarded where it serves no business purpose and is but a sham. *Gregory* v. *Helvering*, 293 U S. 465, 55 S. Ct. 266, 79 L. Ed. 596, 97 A.L.R. 1355 So, too, a taxpayer may gain the advantage of doing his own business through a wholly owned corporation if he pleases, but the treasury may disregard the separate corporate entity where it serves but as a shield against taxation and treat the one who actually may take the benefit of the income as the owner of the property which produces it and tax him accordingly. *Higgins* v *Smith*, 308 U.S. 473, 60 S Ct 355, 84 L. Ed. 406. Yet the treasury may treat a corporation as a separate taxable entity when its organization "is followed by the carrying on of business by the corporation." *Moline Properties* v. *Commissioner of Internal Revenue*, 319 U.S 436, 439, 63 S Ct. 1132, 1134, 87 L. Ed. 1499.

We think that Raymep was active enough to justify holding that it did engage in business in 1938. The absence of books, records and offices and the failure to hold corporate meetings are not decisive on that question Though Raymep was organized solely to deter creditors of one of the partners, it apparently was impossible or impracticable to use it solely for that purpose when it became necessary or desirable to secure the above mentioned loan in a substantial amount. There was, to be sure, less business activity than was shown in *Sheldon Building Corporation* v. *Commissioner of Internal Revenue*, 7 Cir., 118 F.2d 835, but we think enough did appear to make the principles applied in that case applicable to Raymep and that the decision of the Tax Court should be affirmed as to the taxability of that corporation. Compare, *Watson* v. *Commissioner of Internal Revenue*, 2 Cir., 124 F.2d 437; *Vim Securities Corporation* v *Commissioner of Internal Revenue*, 2 Cir., 130 F 2d 106, and *Palcar Real Estate Co.* v. *Commissioner of Internal Revenue*, 8 Cir., 131 F.2d 210.

Westrich, however, was at all times but a passive dummy which did nothing but take and hold the title to the real estate conveyed to it. It served no business purpose in connection with the property and was intended to serve only as a blind to deter the creditors of one of the partners. It was but a sham to be disregarded for tax purposes. *Gregory* v. *Helvering, supra.* See, also. *112 West 59th Street Corporation* v. *Helvering*, 62 App. D C. 350, 68 F.2d 397, and *North Jersey Title Ins. Co* v. *Commissioner of Internal Revenue*, 3 Cir., 84 F.2d 898.

Note

1. Can a corporation be a "passive dummy" one year and a taxable business entity the next?

2. Three wholly owned subsidiaries of the Air Reduction Corporation entered into

contracts with their parent providing that the subsidiaries were employed as agents to manage and operate designated manufacturing plants and to sell the output of these plants. The parent was to furnish working capital, executive management, and office facilities. The subsidiaries agreed to pay all profits to the parent except for six per cent on their outstanding capital stock, which was in each case nominal in amount. Title to the plants and related equipment was in the subsidiaries, but these assets were offset by loans payable to the parent. In *National Carbide Corp.* v. *Commissioner*, 336 U.S. 422 (1949), the Supreme Court held that the entire operating profit, not merely the retained six per cent, was taxable to the subsidiaries, citing *Lucas* v. *Earl*, *supra*, p. 298, and related cases. The court went on

> What we have said does not foreclose a true corporate agent or trustee from handling the property and income of its owner-principal without being taxable therefor. Whether the corporation operates in the name and for the account of the principal, binds the principal by its actions, transmits money received to the principal, and whether receipt of income is attributable to the services of employees of the principal and to assets belonging to the principal are some of the relevant considerations in determining whether a true agency exists. If the corporation is a true agent, its relations with its principal must not be dependent upon the fact that it is owned by the principal, if such is the case. Its business purpose must be the carrying on of the normal duties of an agent. (336 U.S. at 437.)

In *Interstate Transit Lines* v. *Commissioner*, 319 U.S. 590 (1943), a parent corporation was denied a deduction under § 162(a) for a payment to its wholly-owned subsidiary to defray the subsidiary's operating deficit for the taxable year, despite the fact that by contract it was entitled to the subsidiary's profits and was to reimburse the subsidiary for its losses. The Court held that the subsidiary's operating deficit was not an expense of the parent's business. The case was complicated by the fact that the subsidiary was organized to engage in operations (intrastate transportation in California) that were forbidden to the parent because it was a foreign corporation. The Court did not pass on the question of whether the parent's payments could be treated as an additional investment in the subsidiary to be recovered as a loss when the subsidiary was ultimately sold or liquidated.

3. See generally Cleary, "The Corporate Entity in Tax Cases," 1 *Tax Law Rev.* 3 (1945).

ALPROSA WATCH CORP. v. COMMISSIONER

Tax Court of the U.S., 1948

11 T.C 240

[The Swiss representative of an American partnership engaged in importing and selling Swiss watches bought on behalf of the partnership certain watches that the firm then found it was not able to import because of a competitor's exclusive franchise. The competitor agreed to permit the partnership to withdraw the watches, which as a result of war-time confusion had already been shipped to New York, from customs on condition that the partnership turn them over to some existing non-competitive organization, with the profits to be shared equally between the partnership and the competitor.

[The attorney for the partnership suggested that the firm purchase the stock of the Esspi Glove Corporation from an estate that he also represented. This corporation had been previously engaged in the manufacture of gloves, though it was authorized by its charter to buy, sell, and deal in all kinds of merchandise. The stock of the corporation was purchased by the partners' wives from the estate on

June 14, 1943, and two days later the corporation sold all of its assets (principally glove-manufacturing machinery) back to the estate. Thereafter its name was changed to Alprosa Watch Corporation, it acquired and sold the watches in question, and it continued in the jewelry business for three years.]

ARUNDELL, Judge The petitioner herein, the Alprosa Watch Corporation, which was engaged in the business of selling jewelry, including watches, during the period June 15 to June 30, 1943, claims the right to include in its returns for the fiscal year ended June 30, 1943, the income and losses realized by the Esspi Glove Corporation during the preceding portion of that fiscal year and in a prior year. Petitioner also seeks the benefit of the excess profits credits of the latter corporation. These claims are predicated on the theory that petitioner and Esspi are one and the same taxable entity, notwithstanding changes in the corporate name, stock ownership, business activity, and the location of the place of business.

Respondent takes the position that, while "technically the same corporate entity may have continued in existence," the benefit of the deductions and credits stemming from the prior activities of Esspi should be denied the petitioner. He argues that the control of Esspi was in fact acquired by the partners in the names of their wives "for the sole purpose of evading or avoiding federal taxes," that the whole transaction was unrealistic, served no business purpose, and should be rejected on the authority of *Gregory* v. *Helvering*, 293 U.S. 465, and *Higgins* v. *Smith*, 308 U.S. 473.

The cases relied on by respondent are landmark cases which have been regularly invoked to prohibit unreal uses of the corporate form to effect tax savings. Both cases involve transactions between corporations and their sole stockholders that were held to be unrealistic, tax-dodging devices, without substance or a legitimate business purpose. In both cases, the corporate entity used by the taxpayer as a vehicle of tax avoidance was disregarded for Federal tax purposes.

Under the theory upon which respondent has determined the deficiency in this proceeding, there is neither a corporation nor a transaction which we may "disregard" in determining the issue before us. Respondent submits that the "new corporation," Alprosa Watch Corporation, should be disregarded for Federal tax purposes—yet that corporation and not its stockholders or the partnership, is the taxpayer against which the respondent has found the deficiency. On the other hand, the transaction between the partnership and petitioner may not be disregarded, once it has been tacitly recognized by the finding of a deficiency against the petitioner based primarily upon the profits realized as a result of that transaction.

In addition, the facts in the instant case do not support a finding that the sole or principal purpose of the entire transaction was the evasion or avoidance of Federal taxes. We have found as a fact that the acquisition of an existing corporation was necessary if the Pierce watches were to be marketed, and, while we are satisfied that the parties in interest were not unaware of the tax advantages that might accrue through Esspi, the record does not support a finding that tax avoidance was the dominating motive.

A man's tax avoidance motives do not alone establish his liability. In *Chrisholm* v. *Commissioner*, 79 Fed.(2d) 14, it was stated:

> . . . In *Gregory* v. *Helvering*, *supra*, . . . the incorporators adopted the usual form for creating business corporations; but their intent, or purpose, was merely to draught

the papers, in fact not to create corporations as the court understood that word. That was the purpose which defeated their exemption, not the accompanying purpose to escape taxation; that purpose was legally neutral. Had they really meant to conduct a business by means of the two reorganized companies, they would have escaped whatever other aim they might have had, whether to avoid taxes, or to regenerate the world.

It follows that the principles of *Gregory* v. *Helvering*, and *Higgins* v. *Smith*, are inapplicable.

It has been conceded by both parties that the provisions of § 129 of the Internal Revenue Code [§ 269, 1954 Code] are inapplicable, since the present case involves a taxable year beginning prior to December 31, 1943. However, it is respondent's suggestion that the legal principles set out in § 129 may well have been the law existing prior to the enactment of that section. Section 128(c) of the Revenue Act of 1943, which limits the significance of the date upon which the amendments made by § 129 were made effective, states in part:

. . . The determination of the law applicable to prior taxable years shall be made as if this section had not been enacted and without inferences drawn from the fact that the amendment made by this section is not expressly made applicable to prior taxable years.

The parties have not cited, nor have we been able to discover, any statement of law prior to the enactment of § 129 expressive of the specific principles set out in that section. There is considerable doubt in our minds that, even assuming that this case were to be governed by § 129, the facts constitute a situation condemned by that section. That section would seem to prohibit the use of a deduction, credit, or allowance only by the acquiring person or corporation and not their use by the corporation whose control was acquired.

The remaining question in the case is whether Esspi and petitioner are actually the same corporate entity. In view of the established principle that a corporation and its stockholders are separate legal entities, it is recognized that a change in stock ownership does not produce a new corporate personality. *Erie Coca Cola Bottling Co.*, 1 B.T.A. 531; *East Coast Motors, Inc.*, 35 B.T.A. 212. In *Northway Securities Co.*, 23 B.T.A. 532, we held that the petitioner corporation was the same jural person as its so-called predecessor, notwithstanding a change in name, business situs, and type of business. *Cf. American Coast Line, Inc.* v. *Commissioner*, 159 Fed.(2d) 665.

In the case before us the corporate name was changed, the locus of business was immediately moved, the corporate stock was acquired by new owners, and the nature of the business was converted from the manufacture and sale of gloves to the purchase and sale of jewelry. The new business activity was authorized by the original certificate of incorporation. Furthermore, it is significant that no steps were taken to liquidate Esspi in the taxable year—in fact, petitioner conducted business for three years thereafter. In these circumstances, and on the authority of the cited cases, we hold that Esspi Glove Corporation and Alprosa Watch Corporation were the same corporate person for Federal tax purposes.

As it is our conclusion that the petitioner and the Esspi Glove Corporation constitute for Federal tax purposes one and the same taxpayer, it follows that petitioner may include in its corporate tax returns for the fiscal year ended June 30, 1943, the income and expenses of the Esspi Corporation for the period July 1, 1942, to

June 14, 1943, and is entitled to deduct the net operating losses of the latter company for its prior taxable year ended April 30, 1942. We hold further that petitioner is entitled to the use of the unused excess profits credits of the Esspi Glove Corporation in computing its excess profits credit for the taxable year ended June 30, 1943.

Note

1. Does the Tax Court's interpretation of § 269 conflict with the Treasury's view as expressed by example (1) in Regs. 118, Sec. 39.129-3(b)? See Tarleau, "Acquisition of Loss Companies," 31 *Taxes* 1050, 1054 (1953).

> Turning from the words of the statute, and of the Congressional committee report, to the *Alprosa Watch* dictum is indeed astounding. If the Tax Court is correct, Section 129 is practically meaningless . . . The *Alprosa Watch* dictum is flatly contrary to the intent of Congress in passing Section 129

2. An investor who contemplates the purchase of stock, whether of a public or a closely-held corporation, will presumably be influenced to some extent by the corporation's tax position of two corporations with equal future potential for profit-making, the one with a loss carryover will be more attractive.* Investor interest in corporate tax histories was especially marked when the excess profits tax was in effect, since this tax was applicable only when a corporation's earnings exceeded a putative normal rate based on either its earnings in the past or its invested capital. The corporation's tax history, then, is bound to have some effect on the price that will be paid for its shares See also the remarks of Mr. Justice Jackson, in *Western Pacific R.R Corp.* v. *Western Pacific R.R. Co*, *supra*, p. 370, suggesting that a tax loss is like any other corporate asset except for its restricted market. Moreover, if a corporation with either a loss in the early months of the taxable year or a loss carryover from previous years abandons its old line of business for more profitable activity, without any change in stock ownership, there would be no objection from the Commissioner to employing its losses to offset the income from its new activities. Why then should § 269 punish the sale of the stock of a loss corporation to other investors who can make use of its tax history, a transaction that may be the only way the old stockholders can recoup part of their lost investment?

---

* Illustrations can be frequently found in the financial sections of the newspapers Even the sports pages take cognizance of this fact of life. The following is from the *New York Times* for November 3, 1953:

ORIOLES TO REBUILD CLUB WITH HELP OF INCOME TAX 'CARRY BACK' ON $500,000
Baltimore Gains by Brown Losses
Tidy Sum Above Tax Saving to be Spent for Players
Oriole President Says

The Orioles disclosed today that their purchase of the Browns included a provision that makes the first half million dollars of net income tax free and every cent will go toward rebuilding the American League team.

And that isn't all.

"Over and above that half million we have a very tidy and substantial figure to spend this year for new players," said Clarence W. Miles, president of the new Orioles.

"I'm 56 years old," he continued "I'd like to live long enough to win a pennant and a world series. I have only a few years left."

Miles told a luncheon of the Baltimore Sports Reporters Association that he was "letting his hair down" to them.

"We are blessed with one asset, the most important except for the franchise," he said "That's a tax carry-back"

He explained that the Browns had lost half a million dollars "which we can take as a loss. It means that Baltimore won't have to pay taxes to that extent."

All to Be 'Plowed Back'

He then promised that it all "will be plowed back into building up this ball club. No purchaser of a ball club ever enjoyed that before"

See generally Tarleau, *supra*; Rudick, "Acquisitions to Avoid Income or Excess Profits Tax Section 129 of the Internal Revenue Code," 58 *Harv. L. Rev* 196 (1944).

3. The 1954 Code introduced a new curb on the market in "loss" corporations· § 382 denies the operating loss carryover if there is a significant change in ownership (as defined) and if the corporation does not continue "to carry on a trade or business substantially the same" as before the change in ownership It should be noted that the bulk of the tax advantage in the *Alprosa Watch Corp.* came from losses in the part of the taxable year that preceded the change in ownership, rather than from the loss carryover from the previous year. Section 382 deals only with loss carryovers, moreover, it will not affect the corporation that has a "potential" tax loss, *e.g.*, because it owns property that has greatly depreciated in value.

The 1954 Code also added the presumption of § 269(c).

4. Woolford Realty Co. v. *Rose*, 286 U S 319 (1932), involved a consolidated return filed for 1927 by two affiliated corporations. One of the corporations had suffered losses in 1925 and 1926, before it became affiliated with the other, it suffered an additional loss in 1927, after affiliation. The other corporation had substantial profits in 1927. The Supreme Court upheld the Commissioner's determination that the pre-affiliation losses could not be carried forward and used in computing the 1927 consolidated income.

> A different ruling would mean that a prosperous corporation could buy the shares of one that had suffered heavy losses and wipe out thereby its own liability for taxes. The mind rebels against the notion that Congress in permitting a consolidated return was willing to foster an opportunity for juggling so facile and so obvious. (286 U.S. at 329-339.)

Pre-affiliation losses can be carried forward and used, however, to offset such part of the consolidated income as is produced by the corporation that experienced the losses. Regs. 129, Sec. 24(b)(3)

It will be noted that in the *Woolford Realty Co.* case, the newcomer's *1927* loss was allowed to offset the other corporation's income In *J. D. & A. B. Spreckels Co.* v. *Commissioner*, 41 B T.A. 370 (1940), however, such a post-affiliation loss was disallowed on the consolidated return, upon a showing that the loss was anticipated when the corporation was acquired and that the only purpose of the acquisition was to take advantage of the expected loss by filing a consolidated return. Note the relation between this holding and § 269.

Even if tax avoidance is not the purpose of the acquisition, the consolidated return regulations now provide that certain losses of a newly acquired corporation (*e.g*, those incurred on the sale of capital assets or of § 1033 property) can be used to offset only its own portion of the consolidated income, except to the extent that the losses are attributable to events occurring after affiliation. Regs. 129, Sec. 29 31(b)(11)(ii); Hellerstein, "Consolidated Federal Income Tax Returns," 5 *Amer. U. Tax Inst. Lectures* 415, 448-51 (1953).

Section C. Creating the Corporation

> ***Note:*** **Section 351 of the 1954 Code, governing transfers to controlled corporations, carries forward the basic principle of § 112(b)(5) of the 1939 Code.**
>
> **Section 368(c) of the 1954 Code, defining "control," is identical with § 112(h) of the 1939 Code.**
>
> **Sections 358 and 362, governing the basis of property acquired on an exchange, are based on §§ 113(a)(6) and 113(a)(8) of the 1939 Code.**

If Jones organizes a new corporation, Jones, Inc., paying cash for its shares, neither he nor the corporation realizes income on the transaction. Jones has done

no more than to buy property (a capital asset, unless he is a security dealer buying for resale), and the corporation on original issue of its stock is not regarded as selling or exchanging property or as otherwise realizing income * The par value, if any, of the shares is irrelevant. See Regs 118, Sec. 39.22(a)-15. The tax consequences would be no different if Jones, Inc were being organized not by a single individual but by the Jones Holding Co., Inc., or by Thomas, Richard, and Harold.

But suppose that Jones owns a business, now operated as an individual proprietorship, and that he proposes to transfer it to a newly organized corporation, Jones, Inc., in return for all of the stock of the new entity The regulation just cited will prevent the corporation from realizing gain or loss. What of Jones? He has transferred property—his business or its constituent assets—for other property, *viz.*, the Jones Inc. stock. We have noted before that on a sale or exchange, the transferor realizes gain or loss if the value of the property received either exceeds or is less than the adjusted basis of the property given up, § 1001, and that the entire amount of the realized gain or loss must be recognized unless some statutory exception is applicable, § 1002. Since 1921, a statutory exception—§ 112(b)(5) of the 1939 Code, now § 351 of the 1954 Code—has provided for the non-recognition of gain or loss on most incorporations. Where this non-recognition provision is inapplicable, any gain or loss must be recognized, just as under the pre-1921 statute gain or loss realized on the creation of *any* corporation had to be recognized. *Livingston v. Commissioner*, 18 B.T.A. 1184 (1930).

In the simple, but common, situation just suggested, § 351 will apply and Jones will report neither gain nor loss on the exchange. In accordance with the usual rule, however, non-recognition of gain or loss requires the old basis (of the property given up) to be carried over and applied to the property received on the exchange See § 358(a). In the interest of simplicity, it is assumed that Jones got nothing but stock and that the corporation did not assume, or take property subject to, any liabilities.

If Jones sells the stock at a later date, he will (assuming no change in values) recognize his postponed gain or loss then † The stock will be a capital asset, however, whereas the unincorporated business was not a united item of property but a conglomeration of assets, some capital (*e.g.*, good will), some non-capital (*e.g.*, inventory), some quasi-capital (*i.e.*, subject to § 1231, like real estate, machinery and fixtures). *Williams v. McGowan*, *supra*, p. 436

If the incorporation of a business does not comply with § 351, gain or loss will be recognized on the exchange, and the basis of the stock will be its "cost," *i.e.*, the value of the property given in exchange for it. Since, therefore, the basis of stock received when a business or other appreciated or depreciated assets are trans-

---

* Until 1954, if the corporation at a later date bought back some of its own stock and then reissued it, it might realize profit or loss if the reissue price was more or less than the price it paid on reacquiring the stock. See Murphy, 'How To Handle Treasury Stock, Distinction Between Treasury Stock and Unissued Stock Is there Any Justification for This?' *10th Annual N.Y.U Inst. on Fed Taxation* 1161 (1952), Anderson, "Gain Or Loss to a Corporation Dealing in Its Own Shares," 1953 *So Calif. Tax Inst* 121

Section 1032 of the 1954 Code provides that no gain or loss shall be recognized by the corporation in these circumstances

† If the stock is held until death, however, Jones heirs will get a basic equal to its value at the date of death, by reason of § 1014

ferred to a corporation depends upon whether the exchange was taxable when made, the applicability of § 351 may come into question not only when the corporation is organized but also many years later, when the stock is sold.

Our man Jones is not the only one who must worry about a preservation of the old basis. Section 362(a) provides that if the transfer to the corporation was a tax-free exchange, the *corporation's* basis for the assets transferred to it shall be the basis they had in the hands of Jones. It has been held that the transferee corporation steps into the shoes of the transferor so that the total old basis is allocated among the various assets in the same way as when they were held by the transferor, rather than being re-allocated in proportion to market values at the time of the transfer. *Birren* v. *Commissioner,* 116 F.2d 718 (7th Cir. 1940).

Why this dual preservation of the old basis? Could tax avoidance result if only one of the parties retained the old basis, the other getting a basis equal to market value? Can inequity be produced by the existing statutory scheme?

FAHS v. FLORIDA MACHINE & FOUNDRY CO.

U.S. Court of Appeals, Fifth Circuit, 1948
168 F.2d 957

Before HUTCHESON, HOLMES, and MCCORD, Circuit Judges.

MCCORD, Circuit Judge.

Appellee, Florida Machine and Foundry Company, filed suit to recover additional income and excess profits taxes, aggregating $19,089.44, paid for the years 1941 and 1942 under protest. From a judgment for appellee taxpayer, the Collector takes this appeal.

The only question presented is the proper cost basis to be used by taxpayer in computing gain or loss on the sale of certain land it owned in 1941, and in determining taxpayer's equity invested capital [for computing excess profits tax] for the years 1941 and 1942.

Title 26 U.S.C.A. Int. Rev. Code, § 112(b)(5), provides

> Sec. 112. Recognition of gain or loss— . . .
> (b) Exchanges solely in kind— . . .
> (5) Transfer to corporation controlled by transferor.
> No gain or loss shall be recognized if property is transferred to a corporation by one or more persons solely in exchange for stock or securities in such corporation, and immediately after the exchange such person or persons are in control of the corporation; . . .

Section 112(h) defines the term "control," as used in the above quoted provision, as follows:

> . . . . Definition of control As used in this section the term "control" means the ownership of stock possessing at least 80 per centum of the total combined voting power of all classes of stock entitled to vote and at least 80 per centum of the total number of shares of all other classes of stock of the corporation. . . .

Section 718(a) (2) of the Code requires that property paid in for stock be included in equity invested capital in the amount of its basis for determining loss upon sale or exchange. The basis to be used for property acquired by a corporation after December 31, 1920, through the issuance of its stock for property in accordance with Section 112(b) (5), above, is the same as it would be in the

hands of the transferor. Section 113(a) (8), Internal Revenue Code. If, however, the issuance of the stock for property is not governed by Section 112(b) (5), the taxpayer's basis is the cost to it of such property, or the fair market value of the property on the date of acquisition. Section 113(a).

The evidence reveals that for some years prior to 1912, Franklin G Russell, Senior, as sole owner, operated a business known as Florida Machine Works on Riverside Avenue in Jacksonville, Florida. On May 31, 1912, he purchased a tract of land bordering on West Church Street in Jacksonville, to which location the plant was later moved.

About the year 1920, it was shown that the Senior Mr. Russell, who had little technical education for foundry and machine shop work, discussed with his son, Franklin G. Russell, Junior, the possibility of the son eventually succeeding him in the business. The son had graduated from college in 1916 with a degree in mechanical enginering and, with the exception of about two years spent as a soldier in World War I, had served since that time as an apprentice in the various departments of his father's plant, later becoming assistant manager. When the location of the business was changed from Riverside Avenue to West Church Street, the son himself had planned and laid out the new plant installations. In 1921 the father and son entered into an agreement whereby the son would eventually receive a one-half interest in the business, if he remained with it and continued to operate the plant In pursuance of this agreement, the Florida Machine and Foundry Company, taxpayer, was organized and incorporated on July 16, 1924. At the organization meeting on that date, the Senior Russell conveyed to the corporation all of the assets of the business which he then owned individually, including the tract of land in question, for stock in the corporation, with the shares thereof to be issued directly to himself, his son, and one share each to three other persons. The father received 1181 shares and his son 1176 shares, the father thereby retaining only a bare majority of the stock issued.

In 1941, the corporation sold a parcel of the land on West Church Street for $15,000. The March 1, 1913, value of this tract was $7,522.60. On July 16, 1924, the date taxpayer corporation was organized, the fair market value of the tract sold was $13,164.55.

In its 1941 return, the taxpayer claimed a loss on the above sale in the sum of $11,270, using as its basis of value for the land sold, the amount of $26,270,* which was the proportionate fair market value of the land sold as compared with the fair market value of the entire tract as of July 16, 1924, the date of organization of the corporation and acquisition of the land by taxpayer. The Commissioner denied the validity of the basis used, on the ground that the transfer to the corporation on July 16, 1924, was really a non-taxable exchange of property for stock, as described in § 112(b) (5) of the Code, and ruled that, for the purpose of computing taxpayer's gain or loss under § 113(a) (8), the proper basis of value was the March 1, 1913 value in the hands of the transferor, Franklin G. Russell, Senior, or $7,824.53, so that instead of a loss of $11,270 as claimed by taxpayer, there was a taxable gain of $7,175 47; he further required the use of

* The District Court, while it accepted the taxpayer's contention that the 1924 value was controlling, found that value to be $13,164.55, rather than $26,270 as claimed by the taxpayer. [Ed.]

the same basis in computing taxpayer's equity invested capital under § 718(a) (2), for the years 1941 and 1942.

We are of opinion the district court's finding that Franklin Russell, Senior, was not in "control" of taxpayer corporation "immediately after the transfer" on July 16, 1924, and therefore, that § 112(b) (5) did not apply, is abundantly supported by the evidence.[1] 26 U.S.C.A. Int. Rev. Code, §§ 112(b) (5), 112(h); *Heberlein* v. *U.S.*, 2 Cir., 105 F.2d 965; *Bassick* v. *Commissioner*, 2 Cir., 85 F.2d 8, *Hazeltine Corporation* v. *Commissioner*, 3 Cir., 89 F.2d 513.

Appellant's contention that the son, Franklin Russell, Junior, by virtue of the agreement with his father in 1921, acquired an equitable one-half interest in the land involved, which thereafter placed him and his father, as joint transferors, in "control" of taxpayer immediately after the transfer, is not borne out by the evidence. We further find no merit in the argument that taxpayer should be required to use the basis of its transferor, Franklin G. Russell, Senior, because of the latter's failure to report the transfer in 1924. There can be no estoppel against taxpayer for the act of its transferor, who was not in control of taxpayer corporation immediately after the transfer, and who was shown to have acted in good faith. *Cf. Portland Oil Co.* v. *Commissioner*, 1 Cir., 109 F.2d 479; *Orange Securities Corporation* v. *Commissioner*, 5 Cir., 131 F.2d 662.

It follows that the proper basis for the land in question is its fair market value when acquired by taxpayer corporation on July 16, 1924.

We find no reversible error in the record, and the judgment is therefore affirmed.

Note

1. Wilgard Realty Co. v. *Commissioner*, 127 F.2d 514 (2d Cir.), cert. den. 317 U.S. 655 (1942), involved a transfer of appreciated property by an individual to a corporation in exchange for all its stock. Immediately after the stock was issued to him, he transferred more than 20 per cent of it by gift to members of his family. On a later sale of the transferred property, the corporation claimed a stepped-up basis on the ground that the incorporation fell outside of § 351. The Court held that the transfer was non-taxable.

> Though it was plainly enough [the transferor's] intention to create the petitioner [corporation] . . . in order to provide him with stock to give as he did to his relatives, he was under no obligation to make the gift. There is neither claim nor proof that he was bound to carry out his intention to give any of it away when he received the stock or that he was not free at any time up to the very moment he gave it away to change his mind and use it for any lawful purpose. . . .

[1] The district court found:

". . Obviously, Mr. Russell, Senior, owned far less than 80% of taxpayer's capital stock according to the stock register. There is no basis in the evidence to find that the issue of stock on July 16, 1924, and the interests in the corporation thereby represented, were other than bona fide There is no evidence of subterfuge or evasion,—no evidence that Mr. Russell sought to conceal a personal control of the corporation by formally placing one-half of the capital stock in his son's name. To the contrary, it appears that the entire transaction was regular and in good faith, for the declared purpose of bringing his son into the business as a one-half owner, so that the son could and would carry on this long-standing family business after the retirement of his father, who was then getting along in years. At the time of this transaction, the son was a mature and experienced man, 31 years old, fully competent by education and experience to take over and manage the responsibilities of the business, which he did. The uncontradicted evidence is that the son was the absolute owner of the stock issued to him; that he exercised all the privileges of ownership thereof, and paid income tax on the dividends therefrom. . . ."

In the absence of any restriction upon his freedom of action after he acquired the stock, he had 'immediately after the exchange' as much control of the petitioner as if he had not before made up his mind to give away most of his stock and with it consequently his control. (127 F.2d at 516.)

For the effect of an underwriting arrangement by which part or all of the stock received by the transferor is to be sold after the incorporation, see *American Bantam Car Co.* v. *Commissioner*, 11 T.C. 397 (1948), aff'd p.c. 177 F.2d 513 (3d Cir. 1949); see also *May Broadcasting* v. *United States*, 200 F 2d 852 (8th Cir 1953); *National Bellas Hess, Inc.* v. *Commissioner*, 20 T C. 636 (1953).

Does the "special rule" of § 351(c), which is new in the 1954 Code, suggest that fleeting control is insufficient in those instances where the special rule is inapplicable?

See Mintz, "Step Transactions in Corporate Reorganizations," 12th *Annual N.Y.U Inst. on Fed. Taxation* 247 (1954).

2. As to the issue of estoppel, is the court's holding realistic? Is either the transferor, Franklin G. Russell, Sr., or his son, estopped to claim a "stepped-up" basis for his stock? The student should at this point probe into the murky recesses of §§ 1311-15, which provide a partial antidote to inconsistency by either the taxpayer or Commissioner. How does this statutory approach differ from the doctrine of estoppel? Note the limitation of § 1314(d). See also Regs. 118, Sec. 39.3801(b)-5, Example (1). Section 3801, the predecessor of these sections, is thoroughly considered in Maguire, Surrey, and Traynor, "Section 820 of the Revenue Act of 1938," 48 *Yale L. J.* 509, 719 (1939). In *Orange Securities Corporation* v. *Commissioner*, 131 F.2d 662 (5th Cir. 1942), the corporation was denied a stepped-up basis on grounds of estoppel, Section 3801 was not mentioned.

See *infra*, pp. 758-770.

3. Section 351(a) provides for non-recognition of gain or loss only if property is transferred to a corporation "*solely* in exchange for stock or securities in such corporation." What if all other requirements are met, but the transferor receives some cash or other property "to boot"? This could occur, for example, if the transferee, either an existing corporation with cash on hand or a newly organized corporation which received property from one stockholder and cash from another, gave a transferor of property some cash as well as securities. Section 351(b) provides that the receipt of other property or money (often known as "boot") results in the *pro tanto* recognition by the transferor of whatever gain is realized on the transfer. The reason is that to the extent of the "boot" the transferor has changed his investment in substance as well as in form, the "boot" does not represent a continuing interest in the transferred property, as do stocks or other securities of the transferee corporation. In return for the recognition of gain on the receipt of "boot," § 358 permits the transferor to adjust the basis of his securities upward, and § 362(a) provides for a similar upward adjustment of the property received by the corporation.

It should be noted that where depreciated, rather than appreciated, property is transferred to a corporation, the receipt of "boot" does not take the transaction out of § 351 so as to permit the recognition of loss. See § 351(b). Of course, if the transaction is outside of § 351 for some reason other than the receipt of "boot," loss can be recognized under the general rule of § 1002. But recall that a loss cannot be taken on sales or exchanges between certain related persons Section 267; *Commissioner* v. *Whitney*, 169 F.2d 562 (2d Cir. 1948).

4. Section 351 has dropped a requirement contained in its predecessor, § 112(b)(5) of the 1939 Code, that "in the case of an exchange by two or more persons this paragraph shall apply only if the amount of the stock and securities received by each is substantially in proportion to his interest in the property prior to the exchange." The clause gave rise to difficult questions of valuation, as well as to conflicting opinions on how the proportion of change was to be calculated and on what constituted a "substantial" change. See Hoffman, "The Substantial Proportionment Requirement of Section 112(b)(5)," 5 *Tax Law Rev.* 235 (1950). Moreover, the purpose of the requirement was quite obscure. Under it, a reshuffling of the interests of the trans-

ferors could throw an exchange outside of the tax-free provision, and this would mean that gain or loss on the creation of the corporation would be fully recognized in amounts that might bear no relationship at all to the gain or loss resulting from the reshuffling itself. For example, if *A* transferred property worth $100,000 and *B* property worth $50,000, and in exchange stock worth $80,000 was issued to *A* and stock worth $70,000 was issued to *B*, the "substantially in proportion" test would not be met. (Under one interpretation, an even less drastic change would violate the clause). The exchange would then be fully taxable. If *A*'s property had an adjusted basis of $25,000 and *B's* an adjusted basis of $150,000, the result would apparently be a gain to *A* of $55,000 and a loss to *B* of $80,000, despite the fact that the change in interests at the time of the exchange caused a loss to *A* and gain to *B*

In abandoning the "substantially in proportion" requirement, the new Code points out that an exchange may have the effect of a gift or of the payment of compensation. §§ 351(d)(3) and (4). The Senate Report states (pp. 264-5):

> To the extent . . . that the existing disproportion between the value of the property transferred and the amount of stock or securities received by each of the transferors results in an event taxable under other provisions of this code, your committee intends that such distribution will be taxed in accordance with its true nature. . . . In any case in which the stock and securities received are not in proportion, the transaction will be treated as if the stock and securities had first been received in proportion and then some of such stock and securities had been used to make gifts, to pay compensation, or to satisfy obligations of any kind

What is the relation of the second sentence of § 351(a) to the foregoing? Suppose one person transfers property and another does not, but each gets 50% of the stock. Has the control requirement, see § 368(c), been met?

The "substantially in proportion" requirement may be gone, but it cannot be forgotten. In the case of exchanges before the 1954 Code became effective, the basis of property will be governd by the old law. § 1052(c). Note how long a period of time elapsed between the incorporation and the litigation in the *Florida Machine & Foundry Co.* case. Another important case in this area, *Mather & Co.* v. *Commissioner*, 171 F.2d 864 (3d Cir 1949), cert. den. 337 U.S. 907, involved an exchange in 1926 and a sale in 1942 of property acquired on the exchange.

5. Suppose a dozen independent grocers transfer their separate businesses to a newly organized corporation, each taking common stock in proportion to the present value of the property transferred by him. Is this transaction within § 351?

Can one transferor take back common stock and the others nothing but preferred stock or bonds?

6. The term "securities" as used in § 351 is not defined In view of the tax treatment of "boot," it is reasonable to assume that short-term notes and similar instruments will be treated as the equivalent of cash or other property rather than as "securities." This possibility is not examined further here, since the term "securities" has been the subject of important judicial explanation under the tax-free reorganization sections, but it should be borne in mind. See *infra*, p. 566 Instruments of long-term debt are clearly "securities" and may be received tax-free. If non-recognition is granted because the taxpayer has changed his investment in form only, should all debt be treated as "boot," leaving only common and preferred stock for tax-free receipt?

7. If the corporation at the time of the exchange assumes an indebtedness of the transferor, he receives a benefit that may be the equivalent of "boot." The parallel is particularly pronounced if the transferor mortgages the property just before the exchange, keeps the cash thus raised, and then transfers the property for stock plus an assumption of the mortgage. In these circumstances he may be as well off as though he had received cash as "boot" from the corporation itself. In *United States* v. *Hendler*, 303 U.S. 564 (1938), it was held (under the somewhat parallel reorganization sections) that an assumption of the transferor's indebtedness constituted "boot." Besides promising future inconvenience, since virtually all incorporations of existing businesses and reorganizations include an assumption of liabilities, the decision threatened to confer stepped-up bases on both transferor and transferee in countless past

transactions assumed to be tax-free when consummated The Treasury, not sure whether the defense of estoppel would prevent the claims of stepped-up basis, hastened to relinquish its victory. §§ 357(a) and (b), substantially the same as § 112(k) of the 1939 Code, are the result. See Surrey, "Assumption of Indebtedness in Tax-Free Exchanges," 50 *Yale L. J.* 1 (1940).

Assuming or taking subject to debt is treated as "boot" only in limited instances. Why then does such a transaction always require a downward adjustment of basis under §§ 358(a) and (d)?

Section 357(c) is new in the 1954 Code. What is its purpose?

Section D. The Corporation's Capital Structure

Since interest is deductible while dividends are not, there is an obvious tax incentive to having a corporation issue evidences of indebtedness as well as stock for the cash or property transferred to it by its stockholders. Moreover, certain personal tax advantages will accrue to the organizers of the corporation, if they become creditors as well as stockholders of the corporation. If the corporation prospers, it may pay off its debt and the creditor-stockholders will realize income only to the extent that the payment exceeds the "adjusted basis" of the instruments paid off * The income, if any, will be capital gain under § 1232.

If the organizers hold only stock, however, the entire amount of any payment by the corporation (including a *pro rata* reacquisition of stock) would probably be taxed as a dividend, *i.e.*, as ordinary income. See *infra*, p. 495.

On the other hand, if the corporation should fail, the creditor-stockholder has at least a fighting chance to write off his loss on the worthless debt against ordinary income. Such a deduction will be permissible if §§ 166(d) and (e) are not applicable, *i.e.*, if the debt is not evidenced by a "security" and if it is not a "nonbusiness bad debt," see the *Smith* case, *supra*, p. 257. Loss on worthless stock, however, must be treated as a capital loss, § 165(g), unless § 165(g) (3) is applicable.

Some of the other ways in which corporate debt is encouraged by the Internal Revenue Code will be encountered later in this book. For a study of the economic effect of these tax incentives, see Lent, "Bond Interest Deduction and the Federal Corporation Income Tax," 2 *Nat'l Tax J.* 131 (1949).

In an effort to exploit the tax advantages enjoyed by debt, taxpayers have on occasion gone too far and thereby lost out:

(a) Where the corporation is not able to issue ordinary evidences of indebtedness, usually because of a fear of clogging its credit position, there have been attempts to get the same tax effect by issuing "hybrid" securities. These instruments look like preferred stock to creditors, but it is hoped that they will pass muster as bonds, debentures, or notes before the tax collector. Among the characteristics of such "hybrid" securities are the following: (1) they are held by the same persons and in the same proportions as the stock; (2) they are transferable only with stock; (3) they have far-off maturities, or no maturity dates; (4) the

* In this connection, § 358 should be reexamined. Suppose assets with an adjusted basis of $60,000 and a market value of $150,000 are transferred to a newly organized corporation for 1000 shares of common stock without par value plus bonds of a total face amount of $50,000. What is the basis of the bonds? Would the result be different if the stock had a par value?

"interest" is geared to income or is discretionary with the directors; (5) payment of the "interest" or "principal" (or both) is subordinated to general creditors, and (6) they are issued only to stockholders and not for new consideration.

If too many of these features are found, the instruments will be treated as preferred stock rather than as evidences of indebtedness.† The leading case on the subject is *John Kelley Co.* v. *Commissioner*, 326 U.S. 521 (1946). Suppose an instrument is labelled preferred stock, but has all the other indicia of a bond. Can the issuing corporation deduct the "dividends" on the ground that they constitute interest on indebtedness? The deduction has occasionally been permitted. *United States* v. *Title Guarantee & Trust Co.*, 133 F.2d 990 (6th Cir. 1943); *Choctaw, Inc.* v. *Commissioner*, ¶ 53,397 P-H Memo TC. In the former case the misleading label was employed to avoid recognition of debt on the issuer's balance sheet; in the latter case, it was apparently intended to give the investor an opportunity to claim the dividends received credit granted to corporate stockholders by § 26(b) (1) of the 1939 Code. (This allowance, which is now a deduction, is carried over by § 243 of the 1954 Code.)

(b) At the opposite extreme are the corporations that are so unconcerned about their credit standing that they can issue seemingly orthodox debt securities in an amount that overwhelms the common stock investment, *e.g.*, bonds in the amount of $99,000 plus common stock against assets valued at $100,000. Here the problem is that the bonds, although containing iron-clad indicia of debt, may be treated as the equivalent of stock for tax purposes because anyone buying such instruments would regard himself, in the light of the corporation's trivial equity, as a stockholder or potential stockholder and not as a bondholder. An obvious parallel is the bankruptcy treatment of stockholder advances as capital contributions rather than as loans where the corporation was inadequately capitalized. See *Dobkin* v. *Commissioner*, 15 T.C. 31 (1950); aff'd p.c. 192 F.2d 392 (2d Cir. 1951); Schlesinger, " 'Thin' Incorporations. Income Tax Advantages and Pitfalls," 61 *Harv. L. Rev.* 50 (1947); Semmel, "Loan Versus Investment—Inadequate Capitalization," 5 *Tax L. Rev.* 424 (1950).

(c) If the bonds were issued by a subsidiary corporation to its parent, a recent Tax Court case suggests that they might be treated as the equivalent of stock because of a lack of bona fide intent to create a debtor-creditor relationship, even though the bonds on their face have all the indicia of debt instruments and even though the subsidiary is not under-capitalized. *Kraft Foods Co.* v. *Commissioner*, 21 T.C. No. 63 (1954).

The credit for dividends received by individuals that is granted by § 34 of the 1954 Code may reduce to some degree the pressure on corporations to take advantage of the deduction for interest paid on indebtedness. Will the total tax savings to a closely-held group from the dividends received credit match the savings that can be achieved by the use of corporate debt? In some instances, we may find the corporation claiming that it paid "interest" while the stockholders argue that they received "dividends."

† The House version of the 1954 Code contained definitions designed to indicate precisely what instruments would qualify for the interest deduction and for other tax privileges. But the Senate dropped these definitions, stating (S. Rept. p. 42) "Your committee believes that any attempt to write into the statute precise definitions which will classify for tax purposes the many types of corporate stocks and securities will be frustrated by the numerous characteristics of an interchangeable nature which can be given to these instruments."

The foregoing discussion has focused upon loans, or purported loans, with respect to which the corporation issued evidences of indebtedness. Stockholders often advance funds or transfer property to their corporations, however, without receiving any stock or securities in return and without making clear whether the advances are loans to the corporations or capital contributions. If an ambiguous advance is interpreted as a capital contribution, it increases the stockholder's basis for his stock. Any return paid thereon would be a non-deductible distribution by the corporation rather than interest on a loan, and if the corporation suffered financial reverses, the loss would be written off with the stock becoming worthless. The stockholder would have a capital loss under § 165(g), unless § 165 (g) (3) is applicable.

On the other hand, if the advance is found to be a loan by the stockholder to his corporation, payment for the use of the money or property advanced would be interest, deductible by the corporation. Moreover, if the obligation becomes worthless, it can be written off as a bad debt in the year of worthlessness under § 166. The loan might prove to be worthless in a different year than that in which the stock becomes worthless; and under some circumstances a partial write-off would be in order. The bad debt will give rise to an ordinary or a capital loss, depending upon whether it is a business or a non-business bad debt. See *supra*, p. 257.

See generally Holland, "Tax Effects of Stockholder Loans to Corporations," *9th Annual N.Y.U. Inst. on Fed. Taxation* 1083 (1951).

Section E. Distributions of Earnings by the Going Concern

Note: Section 316(a) of the 1954 Code, defining the term "dividend," is substantially the same as §§ 115(a) and 115(b) of the 1939 Code.

Section 301(c), prescribing how corporate distributions shall be taxed, is substantially the same as §§ 22(e), 115(b), and 115(d) of the 1939 Code.

See Regs. 118, Sec. 39.115(a)-2.

1. "Earnings and Profits"

Section 316(a) provides that any distribution either from earnings and profits accumulated after February 28, 1913 or from earnings and profits of the current year is a "dividend." Sections 61(a)(7) and 301(c)(1) provide that "dividends" shall be included in gross income. Any corporate distribution that is not a "dividend" — as that term is defined by § 316 — is received tax-free but must be applied in reduction of the basis of the stock on which it is distributed. § 301(c)(2). Once the stockholder has recovered his basis, non-dividend distributions are ordinarily taxed as capital gains. § 301(c)(3)(A). If the non-dividend distribution consists of an increase in the value of corporate property that accrued before March 1, 1913 (even though realized thereafter by sale or otherwise), however, it is applied in reduction of the stockholder's basis for his stock in the same way as other non-dividend distributions, but any excess is not taxed. Section 301(c)(3) (B) codifies existing law; see *Higginson* v. *United States*, 81 F. Supp. 254 (Ct.Cl. 1948); *Blauvelt* v. *Commissioner*, 4 T.C. 10 (1944).

If we assume a corporation newly organized for cash, the reason for gearing the taxability of its distributions to its record of earnings and profits is clear enough. Until the corporation has engaged in profitable operations, any distribution to its original stockholders is a return of their investment rather than income. Once the corporation has realized profits, on the other hand, its distributions may *pro tanto* be fairly regarded as income to the stockholders.

The equity of §§ 316 and 301(c) is far less clear if we assume that after a period of corporate profits the stock changes hands and that before additional earnings arise (the next day, if you will) there is a distribution to the new stockholder. Has not *he* received a return of *his* capital? Sections 316 and 301(c) are inescapable, however, and to the extent of his share of the earnings and profits the surprised stockholder has realized income This "miracle of income without gain" —the phrase is from Powell, "Income from Corporate Dividends," 35 *Harv. L. Rev.* 363 (1922)—long ago was attested by the Supreme Court in *United States* v. *Phellis*, 257 U.S. 156, 171–2 (1921).

Where, as in this case, the dividend constitutes a distribution of profits accumulated during an extended period and bears a large proportion to the par value of the stock, if an investor happened to buy stock shortly before the dividend, paying a price enhanced by an estimate of the capital plus the surplus of the company, and after distribution of the surplus, with corresponding reduction in the intrinsic and market value of the shares, he was called upon to pay a tax upon the dividend received, it might look in his case like a tax upon his capital. But it is only apparently so. In buying at a price that reflected the accumulated profits, he of course acquired as a part of the valuable rights purchased the prospect of a dividend from the accumulations—bought "dividend on," as the phrase goes—and necessarily took subject to the burden of the income tax proper to be assessed against him by reason of the dividend if and when made. He simply stepped into the shoes, in this as in other respects, of the stockholder whose shares he acquired, and presumably the prospect of a dividend influenced the price paid, and was discounted by the prospect of an income tax to be paid thereon.

How accurately can the purchaser tailor the price he offers for a share of stock to fit the income tax liability he will incur if a dividend is declared?

Whatever argument of equity may be urged against *United States* v. *Phellis*, it would no doubt be administratively unfeasible to tax each individual stockholder on dividends only to the extent that his corporation had had earnings after he purchased his shares. This suggests the question. if we can stomach the inequity arising in thousands of *Phellis* transactions, is there any reason for tying the taxation of corporate distributions to earnings and profits at all?

It is a curious fact that the Code, ordinarily so prodigal in the use of words, nowhere defines the term "earnings and profits," although the term has no counterpart in the field of corporation law. The term is partly explained by Regs. 118, Sec. 39.115(a)-2, and the effect of a few transactions on earnings and profits is prescribed by the Code. See § 312 and 381(c)(2). See also the exhaustive discussion by Rudick, " 'Dividends' and 'Earnings or Profits' Under the Income Tax Law: Corporate Non-Liquidating Distributions," 89 *U. of Pa. L. Rev.* 865 (1941). Mr. Rudick's article is brought up to date by Albrecht, " 'Dividends' and 'Earnings or Profits'," 7 *Tax L. Rev.* 157 (1952); and see *Diebold* v. *Commissioner*, ¶ 53,052 P-H Memo TC. The determination of earnings and profits is often no simple feat, especially when they must be traced through a series of corporate reorganizations or similar transactions. It may be necessary to go back many years to decide

how a transaction should have been taxed under a now interred statute because of its effect upon earnings and profits.

See § 312(j), adopted in 1954 to insure that shareholders will be taxed at ordinary income rates on corporate distributions of "excess" mortgage proceeds when the loan is guaranteed by the United States under the F.H.A. and similar programs. Previously it had been assumed that such distributions were taxable only as capital gain and only to the extent they exceeded the basis of the stock. Litigation in the Tax Court in regard to pre-1954 loans is now pending and is unaffected by the enactment of § 312(j).

Two more aspects of earnings and profits should be noted.

(1) If a corporation has earnings and profits *in the taxable year*, any distribution will be taxable *pro tanto*, even though the corporation has a deficit. Section 316 (a)(2). This provision has a curious ancestry. It was enacted in 1936 as a relief measure when the undistributed profits tax was in effect. That tax was imposed on the undistributed part of corporate income, computed by deducting "dividends" from total income. Unless a deficit corporation could treat distributions out of current earnings as "dividends" for this purpose, it would be unable to avoid the undistributed profits tax no matter how large its distributions to stockholders were. To enable such corporations to obtain a credit for "dividends" paid out of current earnings, § 316(a)(2) was enacted * Apparently no thought was given to the effect of the new subsection apart from the undistributed profits tax. Its impact can sometimes be avoided by postponing the distribution until the next year. If the corporation has no earnings in that year and still has a deficit, the distribution will be receivable tax-free since it will fall under neither § 316(a)(1) nor § 316(a)(2).

(2) Note the importance in this area of March 1, 1913, the date on which the Revenue Act of 1913 (the first federal income tax imposed after the Sixteenth Amendment was adopted) became effective. Earnings and profits accumulated before this date are not included in gross income, but they are applied to reduce the basis of the stock on which they are distributed, and (as pointed out above) any excess is ordinarily taxed as capital gain. Post-1913 earnings and profits must be distributed first, as a result of the second sentence of § 316(a); "earmarking" is not permissible.

These pre-1913 sources do not enjoy constitutional immunity from tax, *Lynch v. Hornby*, 247 U.S. 339 (1918), but Treasury attempts to obtain a repeal of the privilege have been defeated. See House Ways and Means Committee, 77th Cong., 2d sess., Hearings on Revenue Revision of 1942, pp. 1692ff; H. Rept. No. 2319, 81st Cong., 2d sess., reprinted in 50-2 C.B. 380, 418-9, estimating that revenues would be increased about $1 million annually by removing the immunity of pre-1913 earnings and increase in value.

Note should also be taken of the deduction granted by § 243 for dividends received by one corporation from another. Suppose a corporation pays $110,000 for all the stock of another corporation that has $100,000 of earnings and profits. The acquired corporation then declares and pays a dividend of $100,000, and

* A 1942 amendment provided retroactive relief for deficit corporations that had been taxed on their undistributed profits even though prohibited by state law from paying dividends § 501(a)(2), Revenue Act of 1942, 56 Stat. 798, 954. See *United States v. Oglivie Hardware Co.*, 330 U.S. 709 (1947); *Hamilton Mfg. Co. v. United States* — F.2d — (7th Cir. 1954).

after receiving the dividend the parent corporation sells the subsidiary for $10,000. Does the parent have a capital loss of $100,000 on the sale of the stock and only $15,000 of ordinary income (*i.e.*, $100,000 less the 85 per cent deduction) on the dividend?

When a consolidated return is filed, intra-system dividends are not taxed; dividends from outside the affiliated group are still taxable, but the 85 per cent deduction is available with respect to them. *Supra*, p. 370.

BANGOR & AROOSTOOK R.R. CO v. COMMISSIONER

Tax Court of the U.S., 1951
16 T.C. 578

RAUM, Judge. In 1942 petitioner repurchased its own bonds, paying $497,553.30 for bonds of the face amount of $634,000, and realized a taxable gain of $136,446.70. *United States* v. *Kirby Lumber Co.*, 284 U.S. 1, *Commissioner* v. *Jacobson*, 336 U.S. 28; *Spear Box Co.* v. *Commissioner*, 182 Fed.(2d) 844 (C.A. 2). It elected, however, to take advantage of a statutory option under which the gain was excluded from its 1942 gross income, and, instead, the gain was applied in reduction of the basis of property held by petitioner Section 22(b)(9) and 113(b)(3) [now, somewhat modified, §§ 108 and 1017 of the 1954 Code].

Thereafter, in calculating its excess profits tax liability for 1943, petitioner used the invested capital method for computing its excess profits credit. Part of that credit consisted of its "accumulated earnings and profits" as of the beginning of 1943. Petitioner included its 1942 bond profit in its accumulated earnings and profits as of the beginning of 1943. Respondent, however, excluded that bond profit from petitioner's accumulated earnings and profits and, with the resulting reduction in petitioner's excess profits credit, found a deficiency. This proceeding was brought to review that determination of deficiency.

The concept of "earnings and profits" has been an important part of Federal tax legislation for many years, being employed for income tax purposes to identify the source of taxable corporate dividends. Section 115(l) of the Internal Revenue Code, which was added by section 501 of the Second Revenue Act of 1940, was the first attempt by Congress to deal with the meaning of the concept, prior thereto its intended scope was developed by judicial and administrative construction. See *Commissioner* v. *Wheeler*, 324 U.S. 542, 545. Moreover, section 115(l) deals with "earnings and profits" only in certain particulars; it makes no attempt to furnish a comprehensive definition of the term.*. . .

Section 115(l) is literally not applicable here. By its terms, it deals with the effect on "earnings and profits" of certain corporate distributions and of "gain or loss realized from the sale or other disposition of property." We have before us neither a corporate distribution nor a sale or other disposition of property by petitioner. The gain herein grew out of petitioner's reacquisition of its own obligations, and does not fall into either of the foregoing categories. Accordingly, since section 115(l) does not provide a comprehensive test applicable in all circumstances as the mandatory measure of earnings and profits, and since the present

* Section 115(l) is now § 312(f). Certain other problems in computing "earnings and profits" have been cleared up by the 1954 Code, but we still have no "comprehensive definition." [Ed.]

situation is not covered by the provisions of section 115(l), it becomes necessary to determine petitioner's earnings and profits under the statute apart from these provisions.

That is not to say, however, that section 115(l), and the expression of legislative intent accompanying its enactment, may not be of guidance in the treatment of situations not within its boundaries. When it enacted section 115(l), Congress was aware that an extensive body of interpretative law had grown up in connection with its use of the term "earnings and profits." It was prompted to act, not primarily to change that law, but to make clear in certain areas the extent to which that law was an accurate embodiment of its pre-existing intent. In the words of the Committee on Ways and Means sponsoring the provision which culminated in section 115(l), "The purpose of this amendment is *to clarify* the law with respect to what constitutes earnings and profits of a corporation." (Emphasis added.) H. Rept. No. 2894, 76th Cong., 3d Sess., p. 41. That law, which was then the subject of Congressional examination and which had survived enactment of earlier revenue statutes, treated earnings and profits as unaffected by a transaction on which gain or loss was not recognized for income tax purposes. *Cf. Commissioner* v. *Wheeler,* 324 U.S. 542, 547; *Commissioner* v. *Sansome,* 60 Fed.(2d) 931, 933 (C.A. 2). See also *Commissioner* v. *Munter,* 331 U.S. 210, 214–215. Some decisions had been rendered, however, which increased earnings and profits because of unrecognized gain in connection with corporate reorganizations or related transactions. Congress desired to clarify the law by disapproving the latter decisions (H. Rep. No. 2894, 76th Cong., 3d Sess., pp. 41–42) and giving statutory recognition to the principle that "there shall be no increase or decrease in earnings and profits by reason of a wholly unrecognized gain or loss" (Sen. Rept. No. 2114, 76th Cong., 3d Sess., p. 25). It therefore provided in section 115(l) that, as to the sale or other disposition of property,

> Gain or loss so realized shall increase or decrease the earnings and profits to, but not beyond, the extent to which such a realized gain or loss was recognized in computing net income under the law applicable to the year in which such sale or disposition was made.

We think that although section 115(l) is not applicable here, it nevertheless gave expression to a concept of "earnings and profits" that was already widely recognized and which inheres in the meaning of those words. *Cf. Commissioner* v. *Estate of Holmes,* 326 U.S. 480, 487–488. Surely, by taking pains to make certain that unrecognized gains or losses from sales or other dispositions of property would not be reflected in earnings and profits, Congress could not have intended thereby to produce a different result with respect to other unrecognized gains or losses, merely by failing to mention them. There is nothing in the history of the Second Revenue Act of 1940, which added section 115(l) to the Code, that suggests any such purpose. Basic considerations with respect to the interpretation of the revenue laws do not allow a taxpayer, in the absence of clear language to the contrary, to elect to postpone the recognition of income for purposes of being taxed, and at the same time permit it inconsistently to treat such unrecognized income as earnings and profits. *Cf. Commissioner* v. *South Texas Lumber Co.,* 333 U.S. 496, *May, Stern & Co.* v. *Commissioner,* 181 Fed.(2d) 407 (C.A. 3), certiorari denied, 340 U.S. 814; *White Bros. Co.* v. *Commissioner,* 180

Fed.(2d) 451 (C.A. 5), certiorari denied, 340 U.S. 825; *Benjamin Siegel*, 29 B.T.A. 1289; *Corinne S. Koshland*, 33 B.T.A. 634.

Nor is the result sought by petitioner required by the fact that Congress in 1942 amended section 115(l) by adding the sentence dealing with wash sales.* For, notwithstanding the concern which prompted the enactment of the 1942 amendment, it is quite possible that the provisions as they stood prior to the 1942 amendment might have produced the same result, just as the original enactment in 1940 of section 115(l) itself was regarded in certain respects merely as declaratory of existing law in *Commissioner* v. *Wheeler*, 324 U.S. 542. Moreover, the report of the House Ways and Means Committee which sponsored the amendment, in making known its impression that disallowed losses from wash sales could affect earnings and profits under section 115(l) as it then stood, made clear its understanding that giving such effect to those losses would be "contrary to the uniform practice prior to the enactment of Section 501 of the Second Revenue Act of 1940." H. Rept. No. 2333, 77th Cong., 2d Sess., p. 93. The purpose of the amendment was to assure adherence to that uniform practice, which was thought to have been interrupted by section 115(l). As we have observed, there may well be some doubt that section 115(l), as it was originally enacted in 1940, caused such an interruption. But whatever view is taken in this regard, a wash sale, unlike income from discharge of indebtedness, is a transaction with respect to property within the general coverage of section 115(l), and any change in practice produced by that section affected the treatment of the former only. The rule we deem applicable to this case is that of the "uniform practice" understood by the legislature to have obtained prior to 1940 respecting wash sales, and that practice supports the conclusion that unrecognized income from discharge of indebtedness is to be excluded from earnings and profits.

The present case must be distinguished from situations where fully realized income which is exempt from tax, such as interest on state bonds, is included in earnings and profits. See Treasury Regulations 118, Sec. 39.115(a)-2. Although the general introductory language of section 22(b) of the Code characterizes the various types of income in the subdivisions to follow as "exempt," the fact is that, under the specific provisions of section 22(b)(9), the income from discharge of indebtedness escapes taxation only by reason of the option in section 22(b)(9), and the effect of exercise of the option is not a complete withdrawal or insulation of the profit from tax. Unlike other exclusions from income provided for by section 22(b), the profit from discharge of indebtedness is excluded only on the condition that it be applied in reduction of the basis of property held by the petitioner. Sections 22(b)(9), 113(b)(3), Internal Revenue Code. In reality, by providing for an adjustment altering the basis of property which petitioner would otherwise be entitled to use, Congress did not relieve the profit of tax but only postponed the time for levying the tax. Instead of collecting a tax on the profit when received, Congress merely deferred recognition of the profit and collection of the tax until the time at which the property with the reduced basis was sold or otherwise disposed of.[1] See *Commissioner* v. *Jacobson*, 336 U.S. 28, 44–46.

* § 312(f)(1), last sentence [Ed.]

[1] Where the property involved is of a depreciable character, recognition may occur gradually over the years by reason of the smaller depreciation deductions which result from the reduction in the basis of the property. Thus, in this very case there was a reduction in depreciation and related items in 1942 to the extent of $1,736.69, which petitioner does not contest, and which is reflected in its accumulated earnings and profits.

This method of treating the profit is comparable to the treatment accorded nontaxable exchanges governed by the so-called reorganization provisions in section 112 of the Code [§ 354, 1954 Code], where recognition is similarly postponed. In both situations, the earnings and profits are affected, not at the time of the original unrecognized transaction, but at the time that the gains or losses are actually taken into account in computing taxable income. True, the result with respect to section 112 transactions, dealing with sales and exchanges, is specifically called for by section 115(l),[2] but, as we have seen, section 115(l) was merely declaratory of existing law in this regard, and the same result is required by a proper interpretation of the term "earnings and profits."

Moreover, petitioner's position is open to the objection that it might actually require the same gains to be included twice in its earnings and profits. As the Supreme Court emphasized in *Commissioner* v. *Wheeler,* 324 U.S. 542, 547, section 115(l) expressly prescribes, as the basis for computing gain or loss for purposes of earning and profits, "the adjusted basis . . . for determining gain." As to the property affected by petitioner's election in the instant case, the adjusted basis for determining gain is the basis as adjusted downward under section 113(b) (3) [§ 1017, 1954 Code]. When petitioner disposes of that property, the adjusted basis will increase the taxable gain or decrease the deductible loss. Since use of the same basis seems to be required under section 115(l), a comparable increase in earnings and profits apparently will take place at the time of disposition of the property. If this consequence follows from the adjustment in basis under section 113(b)(3), there would be a duplication in the increase in petitioner's earnings and profits were they also to be increased, as petitioner contends they should be, upon the realization of the bond profit responsible for the basis adjustment. A construction which involves such an irrational result is to be avoided in the presence of an acceptable alternative. *Cf. Taylor-Wharton Iron & Steel Company,* 5 T.C. 768, 781–783.

Reviewed by the Court.

Decision will be entered for the respondent.

Note

1. The Tax Court was affirmed, with an opinion that accepts the Tax Court's reasoning, in *Bangor & Aroostook R. Co.* v. *Commissioner,* 193 F 2d 827 (1st Cir. 1951), cert. den. 343 U.S. 934.

2. Many more adjustments are required to convert taxable income into earnings and profits; for details, the articles of Rudick and Albrecht, *supra*, p. 484, should be consulted. Certain previously unsettled problems are expressly dealt with in the 1954 Code, and will be referred to hereafter.

[2] Indeed, petitioner suggests that section 115(l) was intended to deal exclusively in this connection with section 112 transactions, and that the only unrecognized gain which does not augment earnings and profits is the gain which is relieved of tax by section 112. While it is true that the committtee reports accompanying the legislation which added section 115 (l) to the Code made prominent reference to section 112, both the Senate Finance Committee and the Conference Committee indicated that section 112 was mentioned only by the way of illustration in referring to realized but unrecognized gains that do not increase earnings and profits; the reports of these committees explicitly used such phrases as "for instance" and "for example" in referring to section 112. See Sen Rept. No. 2114, 76th Cong., 3d sess, pp. 23-24, H. Rept. No. 3002, 76th Cong., 3d sess., p. 60. Thus, even if section 115 (l) governed the present situation, the effect which petitioner seeks to attribute to it is not justified by its legislative history.

2. *Disguised Dividends*

Just as the Code does not define "earnings and profits," so also it fails to define "distribution." We have already encountered two examples of disguised corporate distributions that will be taxed as "dividends" if the corporation has post-1913 earnings and profits

(1) Purported "salary" that is not compensation for services but rather a distribution to a stockholder-employee or to a donee of a stockholder. *Supra*, p. 239. A dividend may also be disguised as rent, royalties, or as the purchase price for property transferred to the corporation by the stockholders. If such payments are excessive, the excess will be taxed as a dividend. *Cf. Staab* v. *Commissioner*, 20 T.C. 834 (1953); *Crabtree* v. *Commissioner*, 22 T.C. No. 9 (1954).

(2) "Interest" on hybrid securities or on evidences of indebtedness issued by an under-capitalized corporation that are the equivalent of stock. *Supra*, pp. 481–2.

To these should be added·

(3) Sales of corporate property to stockholders for less than fair market value, and rent-free use of corporate property. Regs. 118, Sec. 39.22(a)-1(b), *Byers* v. *Commissioner*, 199 F.2d 273 (8th Cir. 1952), *cf. Dean* v. *Commissioner*, 9 T.C. 256 (1947).

(4) "Loans" by a corporation to its stockholders that are not intended to be repaid. See *Regensburg* v. *Commissioner*, 144 F.2d 41 (2d Cir. 1944).

See generally Toll, "Constructive Dividends," 1951 *So. Calif. Tax Inst.* 211.

Section F. Distributions of Earnings by the Liquidating Corporation

1. *Complete Liquidations*

> *Note:* **Section 331 of the 1954 Code, relating to complete liquidations, is substantially the same as § 115(c) of the 1939 Code.**
>
> **Section 332 of the 1954 Code, relating to complete liquidations of subsidiary corporations, is substantially the same as § 112(b)(6) of the 1939 Code.**
>
> **Section 333 of the 1954 Code, permitting an election as to recognition of gain in certain complete liquidations, is substantially the same as § 112(b)(7) of the 1939 Code.**
>
> **See Regs. 118, Secs. 39.115(c)-1, 112(b)(7)-1-5, and 112(b)(6)-1-5.**

Section 331(a) provides that on a complete liquidation of a corporation the stock shall be treated as though it had been sold, so that the stockholder realizes gain or loss on the difference between the adjusted basis of the stock he surrenders and the value of what he receives. Thus the earnings and profits account, so critical to the tax status of the distributions of a going concern, becomes irrelevant when the distribution is in complete liquidation. In analogizing a complete liquidation to a sale rather than to a dividend, § 331(a) carries forward a policy established in 1924, though for a period (1934–36) liquidations were short-term capital transactions whereas a sale could give rise to either short or long-term gain or loss. Is the analogy to a sale valid?

The fact that the corporate earnings and profits account is obliterated by a complete liquidation is of central importance to the progressive rate structure of the federal income tax. We have already noted that the earnings of a corporation, unlike those of a partnership or individual proprietorship do not run the gauntlet of the individual tax rates when earned. Now we find that on a complete liquidation, the earnings may be received by the stockholder as capital gain. To be sure, they could be converted into capital gain by an alternate route sale of the stock. But unless the buyer was assured of a painless way of extracting the earnings, he might follow the *Phellis* suggestion (*supra*, p. 484) of discounting his price by the prospect of the tax. Thus § 331 makes it possible to receive corporate earnings at the capital gains rate, either by selling the stock or by liquidating the corporation.

BITTKER AND REDLICH
CORPORATE LIQUIDATIONS AND THE INCOME TAX

5 Tax L. Rev. 437-438 (1950)
(Reprinted by Permission)

"In addition to the tax loopholes I have described, there are a number of others which also represent inequities, and should be closed Most of these permit individuals, by one device or another, to take unfair advantage of the difference between the tax rates on ordinary income and the lower tax rates on capital gains As one example, under present law producers of motion pictures, and their star players, have attempted to avoid taxes by creating temporary corporations which are dissolved after making one film. By this device, their income from making the film, which ought to be taxed at the individual income-tax rates, would be taxed only at the capital gains rate Thus, they might escape as much as two-thirds of the tax they should pay." [1]

President Truman has called the attention of Congress to the "collapsible corporation," one more of the perennially alluring contrivances for transmuting ordinary income into capital gain. A motion picture producer and the leading performers organize a corporation to manufacture and market a single film They invest nominal amounts, receiving the corporation's stock in return, and the corporation borrows enough to defray the costs of production. Since the producer and the key performers receive modest salaries, if any, the costs of production are appreciably less than normal. After the picture has been completed, contracts for its distribution are made by the corporation Then the corporation is liquidated, the shareholders surrendering their stock in exchange for proportionate interests in the distribution contracts. Since section 115(c) of the Internal Revenue Code [now § 331] provides that a complete liquidation shall be treated like a sale, the shareholders report a capital gain of the difference between the value of the contracts (which can be estimated from the film's early reception) and the cost basis of the shares. The gain is long-term if the shares have been held for more than six months. The value reported for the shareholder's rights under the contract is then depreciated over the estimated commercial life of the film. If the net receipts correspond to the reported value, there will be no further gain or loss.

[1] President Truman's tax message to Congress, N. Y. Herald Tribune, Jan. 24, 1950, p. 14.

If, however, the receipts depart from the estimate, the shareholder will realize ordinary income or loss in the amount of the difference.[2] It is immediately patent that the value of the contracts, received on liquidation, or their proceeds are intended by all concerned to be remuneration for the shareholders' previously uncompensated personal services. The Treasury Department reported to the Congress that in one such case an independent producer and his wife realized a net gain of $615,000, taxed only at 25 per cent rather than at the enervatingly higher rate which would have been applicable if the gain had been received as salary for his services.

The President took film production as his example in illustrating this tax "loophole," though it . . . is suited to any industry characterized by short-term enterprises, such as real estate, construction, novelties, and others. The Treasury Department alone knows the extent of its use, but it is unlikely that only the motion picture industry has succumbed to the lure of "25 per cent money." [3]

Note

1. To curb use of the "collapsible corporation," Congress enacted in 1950 what is now, with some modifications, § 341. When applicable, § 341 requires the gain on either the liquidation of a collapsible corporation or the sale of its stock to be reported as ordinary income instead of as capital gain. The crux of § 341 is its requirement that the corporation be "formed or availed of principally . . . with a view" to a sale (including a liquidation) of its stock or a distribution of its property prior to its realization "of a substantial part of the taxable income to be derived" from its property. When originally enacted, the provision embraced only corporations that "manufactured, constructed, or produced" property; Congress had in mind primarily the motion picture and building construction industries. In 1951, the section was expanded to include corporations purchasing inventory property and stock in trade. The purpose of the amendment was to prevent the appreciation on inventory property or stock in trade from being realized as a capital gain by a transfer of such property to a corporation under § 351 followed by a sale of the stock of the corporation. In *Jacobs* v. *Commissioner*, 21 T.C. 165 (1953), a corporation organized under such circumstances was disregarded even without the help of § 341, and the sale was treated as a sale of the property by the original owner (producing ordinary income) rather than as a sale by him of the stock of the corporation.

See the presumption of § 341(c), added in 1954.

See generally DeWind, "Collapsible Corporations Under the Revenue Act of 1950," 1951 *So. Calif. Tax Inst.* 583; Note, Legislative Response to the Collapsible Corporation, 51 *Col. L. Rev.* 361 (1951); and, for a discussion of the regulations under § 117(m), MacLean, "Collapsible Corporations—The Statute and Regulations," 67 *Harv. L. Rev.* 55 (1953).

2. Was § 341 necessary? When it was enacted, the Congressional committees stated that "no inference shall be drawn from the amendment with respect to gains realized prior to 1950." H. Rept. No. 2319 and S. Rept. No. 2375, 81st Cong. 2d Sess., 50-2 C.B. 380, 451, 516. Could the collapsible corporation be assailed successfully with such weapons as *Commissioner* v. *Laughton, supra,* p. 352; *Lucas* v. *Earl, supra,* p. 298; and *Higgins* v. *Smith,* 308 U.S. 473 (1940)? See Bittker and Redlich, "Corporate Liquidations and the Income Tax," 5 *Tax L. Rev.* 437, 437-448 (1950).

[2] On the possibility of reporting as capital gain rather than as ordinary income any subsequent receipts which exceed the value of the contracts at the time of liquidation, see Brodsky and King, "Tax Savings Through Distributions in Liquidation of Corporate Contracts," 27 Taxes 806 (1949).

[3] The Treasury [reported to Congress] that "there are over a hundred cases being examined by the Bureau of Internal Revenue," and that the device "is also being used to some extent in the building and construction trades."

In the only reported case of an attempt by the Treasury to disregard the liquidation of a collapsed corporation, it lost. *Herbert* v. *Riddell,* 103 F. Supp. 369 (S.D. Calif. 1952). There, however, the court found that the stockholders did not intend to collapse the corporation when they organized it; the liquidation was decided upon subsequently, as a result of a difference of opinion among its stockholders as to future business policy.

3. Whether the liquidation produces ordinary income under § 341 or capital gain under § 331, the distributed property will take on a stepped-up basis. If subsequent receipts in respect of such property exceed its basis, will the taxpayer realize ordinary income or capital gain?

4. Section 331 provides that amounts distributed in complete liquidation shall be treated as though they had been received on a sale or exchange of the stock. Ordinarily, the gain or loss thus computed, which will be capital gain or loss if (as is ordinarily the case) the stock is a capital asset, is fully recognized under the general rule of § 1002. Two important exceptions should be noted here.

Section 333. This provision was enacted in 1943, but it was then applicable only to certain corporate liquidations occurring in 1944. It was revived by the Revenue Act of 1950 for liquidations taking place in 1951, and was later amended, so as to embrace 1952 and 1953 liquidations It became a permanent part of the Code in 1954.

Section 333's principal function is to permit a corporation holding appreciated assets but having no earnings and profits or cash (e g., a real estate holding corporation) to be liquidated without the recognition of any gain. The stockholders, however, hold the distributed assets with a basis equal to the basis of the surrendered stock. Section 334(c). If the liquidated corporation had either earnings and profits or cash, gain is recognized *pro tanto* Stock or securities acquired by the corporation after December 31, 1953 (the date § 333 was revived) are treated as the equivalent of cash. Use of § 333 is optional with the stockholders. Moreover, it provides for the non-recognition of gain only. If the liquidation produces loss rather than gain, the loss would be recognized under § 331. See Eaton, "Liquidation Under Section 112(b) (7)," 38 *Va. L. Rev.* 1 (1952); *Osenbach* v. *Commissioner,* 198 F.2d 235 (4th Cir. 1952); *Meyer's Estate* v. *Commissioner,* 200 F.2d 592 (5th Cir. 1952).

Section 332. This provision provides in substance that no gain or loss shall be recognized on the liquidation of a subsidiary corporation The provision, which was enacted in an earlier form in 1935, was proposed by the Treasury as a measure to encourage the simplification of elaborate corporate structures. In the absence of such a non-recognition provision, unnecessary subsidiary corporations could be eliminated (if they were successful enterprises) only by paying a capital gains tax under the general rule, § 331, applicable to complete liquidations. Unlike § 333, § 332 is not optional; moreover, it provides for the non-recognition of both gain and loss.

Section 332's basis provision, § 334(b) (1), does not follow the usual practice of giving the property received on a tax-free exchange the same basis as the property given up, as does § 358, for example. Instead, § 334(b) (1) provides that, as a general rule, the transferee (the parent corporation) takes over the basis of the transferor—its subsidiary. This will be advantageous if the subsidiary has a high basis for its assets, but disadvantageous when its basis is low. The disadvantage is especially striking if the parent acquired the subsidiary by purchasing its stock for the fair market value of the assets and if the subsidiary's basis for those assets is low

KIMBELL-DIAMOND MILLING CO. v. COMMISSIONER

Tax Court of the U.S., 1950

14 T.C. 74 aff'd. 187 F.2d 718 (5th Cir.), cert. den. 342 U.S. 827 (1951)

[After a fire destroyed the taxpayer's plant, it purchased for $210,000 in cash all of the stock of Whaley Mill & Elevator Co., in order to use Whaley's plant and

equipment to replace its own. The purchase price was made up of $120,000 of insurance proceeds and $90,000 of additional funds.* Taxpayer liquidated Whaley three days after acquiring the stock. In a previous proceeding, reported at 10 T.C. 7 (1948), the Tax Court held that the acquisition of Whaley by the taxpayer came within § 112(f), so that its gain on the involuntary conversion (amounting to $100,000, the difference between the insurance proceeds of $120,000 and the adjusted basis of the destroyed assets, $20,000) was not recognized. Since the taxpayer's acquisition of the Whaley stock qualified under § 1033, its basis for the stock would not be the full price ($210,000), but only $110,000 (*i.e.*, the adjusted basis of the plant that was destroyed by fire, $20,000, plus the $90,000 of funds which were paid in addition to the insurance proceeds).

[The assets of Whaley, which were acquired by the taxpayer upon liquidating Whaley, had an adjusted basis in Whaley's hands of more than $300.000; the depreciable assets represented about $140,000 of this amount.]

Black, Judge: . . .

Petitioner argues that the acquisition of Whaley's assets [stock?] and the subsequent liquidation of Whaley brings petitioner within the provisions of section 112(b)(6) [§ 332, 1954 Code] and, therefore, by reason of section 113(a)(15) [prescribing what is the "general rule" of § 334(b)(1), 1954 Code], petitioner's basis in these assets is the same as the basis in Whaley's hands. In so contending, petitioner asks that we treat the acquisition of Whaley's stock and the subsequent liquidation of Whaley as separate transactions. It is well settled that the incidence of taxation depends upon the substance of a transaction. *Commissioner* v. *Court Holding Co.*, 324 U.S. 331. . . . It is inescapable from petitioner's minutes . . . and from the "Agreement and Program of Complete Liquidation" entered into between petitioner and Whaley, that the only intention petitioner ever had was to acquire Whaley's assets.

We think that this proceeding is governed by the principles of *Commissioner* v. *Ashland Oil & Refining Co.*, 99 Fed.(2d) 588, certiorari denied, 306 U.S. 661. In that case the stock was retained for almost a year before liquidation. Ruling on the question of whether the stock or the assets of the corporation were purchased, the court stated:

> The question remains, however, whether if the entire transaction, whatever its form, was essentially in intent, purpose and result, a purchase by Swiss of property, its several steps may be treated separately and each be given an effect for tax purposes as though each constituted a distinct transaction. . . . And without regard to whether the result is imposition or relief from taxation, the courts have recognized that where the essential nature of a transaction is the acquisition of property, it will be viewed as a whole, and closely related steps will not be separated either at the instance of the taxpayer or the taxing authority. *Prairie Oil & Gas Co.* v. *Motter*, 10 Cir., 66 F.2d 309; *Tulsa Tribune Co.* v. *Commissioner*, 10 Cir., 58 F.2d 937, 940; *Ahles Realty Corp.* v. *Commissioner*, 2 Cir, 71 F 2d 150; *Helvering* v. *Security Savings Bank*, 4 Cir., 72 F.2d 874.

See also *Koppers Coal Co.*, 6 T.C. 1209 and cases there cited.

We hold that the purchase of Whaley's stock and its subsequent liquidation must be considered as one transaction, namely, the purchase of Whaley's assets which was petitioner's sole intention. This was not a reorganization within

* All figures have been rounded off, in the possibly vain hope of simplifying the issues. [Ed.]

§ 112(b)(6), and petitioner's basis in these assets, both depreciable and nondepreciable, is, therefore, its cost,† or $110,000 ($20,000 the basis of petitioner's assets destroyed by fire, plus $90,000, the amount expended over the insurance proceeds). Since petitioner does not controvert respondent's allocation of cost to the individual assets acquired from Whaley, both depreciable and nondepreciable, respondent's allocation is sustained.

Note

1. Note the "exception" to the general basis rule, set out in § 334(b) (2). This provision is new in the 1954 Code, and it is based on the *Kimbell-Diamond* case.

2. In *Snively* v. *Commissioner*, 19 T.C. 850 (1953), the Tax Court, relying on the *Ashland Oil* case, held that an individual did not realize gain under what is now § 331 when he liquidated a corporation whose stock he had acquired six months earlier for the primary purpose of obtaining the corporate assets. See *Western Wine & Liquor Co.* v. *Commissioner*, 18 T.C. 1090 (1952), and *cf. Distributors Finance Corp.* v. *Commissioner*, 20 T.C. 768 (1953). The court also held that the income produced in the interim by the corporate assets should be taxed to the corporation, rather than to the stockholder, despite the plan to liquidate:

> The stock purchase coupled with the intent to dissolve the corporation and the taking of some steps to that end, in our opinion did not *ipso facto* either destroy the existence of the corporation as a taxable entity or permit the petitioner to appropriate as his own income which would otherwise be taxable to the corporation. (19 T.C. 850, 858.)

3. Until 1954, there were no statutory rules to prescribe the effect of a liquidation of a subsidiary corporation on the earnings and profits of the parent. It was held that the subsidiary's earnings and profits were passed up to the parent in *Robinette* v. *Commissioner*, 148 F.2d 513 (9th Cir. 1945); but in *Commissioner* v. *Phipps*, 336 U.S. 410 (1949), it was held that the subsidiary's deficit in earnings and profits did not reduce the parent's earnings and profits account. See Rice, "Transfers of Earnings and Deficits in Tax-Free Reorganizations The Sansome-Phipps Rule," 5 *Tax L. Rev.* 523 (1950).

Section 381 of the 1954 Code now provides statutory guidance for these and related problems.

4. If a corporation wishes to avoid § 332 in order to recognize loss on the liquidation of a subsidiary, can it accomplish its aim by selling some of the stock so that it owns less than 80%? Before 1954, § 112(b) (6) (the predecessor of § 332) provided that a disposition of any stock by the parent between the time the plan of liquidation was adopted and the time it was consummated would take the transaction out of the tax-free category. This restriction was removed by the 1954 Code "with the view to limiting the elective features of the section." S. Rept. p. 255. Does this mean, by negative inference, that a sale to reduce ownership below 80% will be effective? See Colgan and Molloy, "Tax-Free Liquidations of Corporate Subsidiaries under Section 112(b) (6) of the Internal Revenue Code," 4 *Tax L. Rev.* 305, 333–334 (1949); Busterud, "The Liquidation of Subsidiaries under Section 112(b) (6)," 58 *Yale L.J.* 1050 (1949).

2. *Partial Liquidations*

Note: **Section 331(a)(2) of the 1954 Code, relating to partial liquidations, states the same rule as § 115(c) of the 1939 Code.**

Section 346 of the 1954 Code, defining partial liquidation, is substantially expanded from § 115(i) of the 1939 Code.

† The court is using the term "cost" in a rather special way The cash outlay was $210,000, but because gain on the fire in the amount of $100,000 went unrecognized by virtue of § 1033, the taxpayer's basis is only $110,000. [Ed.]

Section 302 of the 1954 Code, relating to the redemption of stock, is derived from § 115(g) of the 1939 Code, but with substantial modifications.

Section 317 of the 1954 Code, defining redemption, is new.

The cases that follow, decided under § 115(g) of the 1939 Code, present the problems that the 1954 changes were intended to solve.

COMMISSIONER v. ROBERTS

U.S. Court of Appeals, Fourth Circuit, 1953
203 F.2d 304

Before PARKER, Chief Judge, and SOPER and DOBIE, Circuit Judges.

DOBIE, Circuit Judge.

This is a petition by the Commissioner of Internal Revenue to review a decision of the Tax Court of the United States. The Tax Court held that the distribution in connection with the redemption of the stock of the corporation, *under the circumstances of this case*, was not essentially equivalent to, and not taxable as, the distribution of a dividend under section 115(g) of the Internal Revenue Code.* We think the decision of the Tax Court was clearly erroneous. It must, therefore, be reversed. . . .

There is little or no dispute about the facts of this case. In March, 1932, John T. Roberts, hereinafter called taxpayer, and his brother transferred to a newly created corporation all of the assets of a wholesale plumbing and heating supply business, theretofore conducted by them in partnership, in exchange for all of the stock of the corporation, consisting of 2,000 shares of common stock, par value $100 each. Fifteen hundred shares were issued to taxpayer, who continued to hold them through the taxable year 1944 here involved. Five hundred shares were issued to taxpayer's brother. Taxpayer's brother died in October, 1943, and by his last will made a specific bequest to taxpayer of any shares of stock of the corporation owned by him at the time of his death. Pursuant to an order of the probate court, the executor of the brother's will transferred to taxpayer stock certificates for the 500 shares of the corporation's stock which the brother had owned. These 500 shares were valued for estate tax purposes at $92,000.

During the war the business of the corporation was adversely affected by Government regulations, and during the period 1941 to 1944 the difficulties of operating increased. Gross sales in 1939 were roughly $771,000; increased to $1,677,000 in 1941; and dropped in succeeding years to a low of $400,000 in 1944. Adjusted net income (that is, prior to taxes) amounted to roughly $28,000 in 1939; $47,000 in 1940, $63,000 in 1941, $106,000 in 1942; $49,000 in 1943, and $13,000 in 1944.

* Section 115(g) provided "If a corporation cancels or redeems its stock (whether or not such stock was issued as a stock dividend) at such time and in such manner as to make the distribution and cancellation or redemption in whole or in part essentially equivalent to the distribution of a taxable dividend, the amount so distributed in redemption or cancellation of the stock, to the extent that it represents a distribution of earnings or profits accumulated after February 28, 1913, shall be treated as a taxable dividend"

On the other hand, Section 115(c) provided that a partial liquidation should be treated, by the stockholder, like a sale, so that he would realize capital gain or loss if, as is ordinarily the case, the stock is a capital asset [Ed]

On January 1, 1944, total assets amounted to approximately $414,000 (including cash of $160,000 and United States obligations of $96,000), and the earned surplus amounted to approximately $170,000. As of December 31, 1944 (that is, after the distribution in redemption of stock here involved), the corporation's balance sheets showed assets of $320,000 (including cash of $60,000 and United States obligations of $106,000) and an earned surplus of $135,000.

The corporation paid a dividend of $4 a share in 1934; $16 in 1935; $8 in each year 1936 through 1940; $6 in 1941; and no dividends in 1942 and 1943. In 1944, after the stock redemption hereinafter mentioned, a dividend of $2 was distributed. In 1944 taxpayer also was paid a salary of $27,900 by the corporation as its president.

On December 26, 1944, at a special meeting of the corporation's board of directors, on motion of taxpayer, it was resolved that the corporation purchase from taxpayer for $92,000 the 500 shares of stock which taxpayer had acquired by bequest from his brother, and that the capital stock of the corporation be reduced to 1,500 shares, par value $100. On the same day, a special meeting of the stockholders (namely, taxpayer, for he then owned all the shares of stock in this corporation) approved, the transaction was completed; and an amendment to the certificate of incorporation was executed which was later approved by the State Tax Commission. Taxpayer never considered selling his shares to anyone but the corporation because he wanted to keep the stock in the family.

The taxpayer did not report the transaction in controversy on his return, and the Commissioner determined a deficiency on the ground that the amount of $92,000 paid by the corporation was taxable as a dividend.

The Tax Court specifically found that the earnings and profits of the corporation prior to and during 1944 were accumulated for no definite purpose, that the operations of the corporation were not impaired by reason of the transaction in controversy, and that the corporation had never followed a policy of contraction of business; that the corporation's financial position on December 26, 1944, permitted of a dividend of $92,000, and that the corporation continued in the same business in subsequent years.

The Tax Court further found that the payment of the $92,000 to taxpayer by the corporation in the taxable year was a distribution in complete cancellation and redemption of all of that portion of the corporation's stock bequeathed by taxpayer's brother, constituting a partial liquidation, and not the essential equivalent of the distribution of a taxable dividend.

We cannot agree with the holding of the Tax Court that, as of the time of the stock redemption, the stock acquired by taxpayer which was redeemed, must be regarded as the stock of the brother. This runs absolutely counter to reality. This stock had been the brother's, but, months before the redemption, taxpayer's title to this stock had been completely perfected. See, *Matthews* v. *Turner and Woodyard*, 64 Md. 109, 121, 21 A. 224.

The vital thing here, as we see it, is that, by the redemption of this stock, the *essential relation* of the taxpayer to the corporation was not, in any practical aspect, changed. Before the redemption, he was the sole stockholder in the corporation; after the redemption, he was still the sole stockholder. Of what real consequence was it that before the redemption his sole ownership was divided into

2,000 shares, and after the redemption, this same sole ownership was divided into 1,500 shares: He owned the whole corporation before the redemption; after the redemption, he was still the sole owner.

Here, then, we find a single individual owning all the corporate stock. *Flanagan* v. *Helvering*, 73 App. D.C. 46, 116 F 2d 937, *Bazley* v. *Commissioner*, 3 Cir. 155 F.2d 237, 239, affirmed 331 U.S. 737, 67 S. Ct. 1489, 91 L. Ed. 1782. The corporation had on hand a large and unnecessary accumulation of cash, representing "earnings or profits accumulated after February 28, 1913." *Hirsch* v. *Commissioner*, 9 Cir., 124 F.2d 24, 29. The corporation did not then intend to liquidate or to contract its business. *Rheinstrom* v. *Conner*, 6 Cir. 125 F.2d 790, 793, certiorari denied 317 U.S. 654, 63 S. Ct. 49, 87 L. Ed. 526. The redemption served no business purpose of the corporation; it was motivated entirely by the personal considerations of taxpayer. *Commissioner* v. *Snite*, 7 Cir., 177 F.2d 819, *Smith* v. *United States*, 3 Cir., 121 F.2d 692, 695. The net effect of the redemption was clearly to distribute to taxpayer the corporate earnings just as if a cash dividend had been declared. *Kirschenbaum* v. *Commissioner*, 2 Cir., 155 F.2d 23, 170 A.L.R. 1389, certiorari denied 329 U.S. 726, 67 S. Ct. 75, 91 L. Ed. 628; *Hyman* v. *Helvering*, 63 App. D.C. 221, 71 F.2d 342, certiorari denied 293 U.S. 570, 55 S. Ct. 100, 79 L. Ed. 669. See, also, Nolan, "The Uncertain Tax Treatment of Stock Redemptions: A Legislative Proposal," 65 *Harv. L. Rev.* 255; Pedrick, "Some Latter Day Developments in the Taxation of Liquidating Distributions," 50 *Mich. L.R.* 529. Indeed, it is difficult to imagine a more ideal set-up for the application of Section 115(g) than the facts involved in the instant case.

The cases of *Flinn* v. *Commissioner*, 37 B.T.A. 1085 and *Tiffany* v. *Commissioner*, 16 T.C. 1443, cited by the Tax Court are clearly not in point There, the corporations purchased all of the stock of a particular stockholder, when there were still other stockholders, here, the corporation merely purchased part of the stock of its sole stockholder. There, the relationship of the stockholder to the corporation was radically changed by the redemption, from stockholder to mere ex-stockholder; here, as we have pointed out, there was no such change for, both before and after the redemption taxpayer was and remained the sole stockholder of the corporation.

The ultimate question of whether, in a particular case, section 115(g) does or does not apply, is usually held to be a question of fact. *Boyle* v. *Commissioner*, 3 Cir., 187 F.2d 557, certiorari denied 342 U.S. 817, 72 S. Ct. 31, 96 L. Ed. 618; *Commissioner* v. *Cordingley*, 1 Cir., 78 F.2d 118, *Hill* v. *Commissioner*, 4 Cir., 66 F.2d 45.

The Regulations, which have been in effect for many years, provide in part that a redemption by a corporation of a portion of its stock *pro rata* among all the shareholders would generally be considered as effecting a distribution essentially equivalent to a dividend distribution to the extent of the earnings and profits accumulated after February 28, 1913. The provision of the Regulations is fully met in the case, and likewise other factors which have sometimes been held relevant are also present here.

It might be noted that while dividends were paid by the corporation here prior to 1942, no dividends were paid by the corporation in 1942, 1943, or 1944 prior to redemption, though the corporate earnings in all these years were quite substantial.

Any conclusion other than that which we have reached readily shows how easily the tactics of the taxpayer here could be used as a means of tax evasion. A prosperous corporation, for example, with a single stockholder, earns large sums of money, available for, and which should be paid out as, dividends. This sole stockholder siphons off this money (as was done in the instant case) to himself by selling a portion of his stock to the corporation at a price per share which will just cover these earnings. Surely, this is a redemption "essentially equivalent to the distribution of a taxable dividend." Congress must have had just such a situation in mind when it enacted section 115(g). See cases previously cited and compare, decided by our Court, *Wall* v. *United States*, 4 Cir., 164 F.2d 462.

The decision of the Tax Court of the United States is reversed and the case is remanded with directions to enter a decision in favor of the Commissioner.

Reversed and remanded with directions.

IMLER v. COMMISSIONER

Tax Court of the U.S., 1948
11 T.C. 836

The Commissioner determined a deficiency of $2,410.27 in the petitioner's income and victory tax for the year 1943. The sole question is, Was the retirement of certain shares of its stock by the Imler Supply Co. in 1942 accomplished at such time and in such manner as to make the distribution and cancellation and redemption essentially equivalent to a taxable dividend? The question arises on the following facts: . . .

Previous to December 1, 1941, the company was engaged in the business of retinning and soldering metals and in the rental of excess space in buildings owned by the company. The company owned 5 buildings, consisting of a 7-story brick building and 4 smaller buildings. The main building was equipped with a large freight elevator capable of carrying automobiles. The company rented space in its buildings to the Allegheny County Milk Exchange at a fixed rental of $650 per month, the exchange being entitled to whatever space it required for its operations. Prior to December 1, 1941, the exchange used all of the sixth floor of the main building and one-half of the seventh floor. The portion of the seventh floor that was not used in the actual operation by the exchange was rented for storing various items of freight, including automobiles.

On December 1, 1941, a fire destroyed the two upper floors of the main building. This building was covered by insurance and in April 1942, the company recovered $28,603 as insurance proceeds on account of the fire.

After the insurance proceeds were received, the company obtained an estimate as to the cost of rebuilding the 2 top floors of the main building, which had been destroyed by the fire. It was estimated that the cost would run from $40,000 to $50,000. The company did not have sufficient cash to rebuild at this cost at that time. Because of war conditions and consequent scarcity of materials, building was difficult. The company decided to remove the 2 top floors of the main building which had been burned out and to place a roof over the fifth floor. It was estimated that the cost of this operation would be $15,340. The company thereupon removed the remains of the top floors and placed a roof over the building at the fifth floor, making a 5-story out of what had been a 7-story building.

Petitioner, who was a director of the company, sought out an employee of the Bureau of Internal Revenue at its Pittsburgh office and requested advice as to the treatment to be accorded the leftover fire insurance proceeds. Imler was advised that if the funds were used to retire part of the company stock at par, the transaction would not be taxable as a dividend. . . .

[The corporation thereupon reacquired about one-half of its outstanding shares, approximately proportionately from its shareholders, at par ($50) for a total consideration of $15,000 in cash.]

The cash working capital of the company for some years prior to December 1, 1941, ranged from $7,500 to $9,000. The cash balance of the company, exclusive of the estimated fire proceeds left after reconstruction of the building, was $9,628.76. At that time approximately $4,500 had been expended on the damaged building and it was estimated that the total cost of repairing and reroofing the building would amount to $15,340. This estimated cost proved to be excessive in the amount of $175.81.

Except for the remaining proceeds of fire insurance, the company could not have paid a dividend in the amount of $15,000 on April 6, 1942, without borrowing money.

After the building was repaired and reduced in size, Imler Supply Co. discontinued its retinning and soldering activities and has never resumed the same. This cessation of activity was primarily due to the fact that the corporation lacked space for storage of articles required in its retinning and soldering operations, together with the fact that war conditions and scarcity of materials made such operations unprofitable. . . .

Van Fossan, Judge: The issue here raised presents a question of fact depending on the circumstances of the particular case. *Rheinstrom* v. *Conner*, 125 Fed.(2d) 790, certiorari denied, 317 U.S. 654. No sole or universally applicable test can be laid down. *Flanagan* v. *Helvering*, 116 Fed.(2d) 937. The statutory provision is couched in broad terms—"at such time and in such manner." Though decided cases are not controlling, they are helpful as indicating what elements have been considered important, *viz.*, the presence or absence of a real business purpose, the motives of the corporation at the time of the distribution, the size of the corporate surplus, the past dividend policy, and the presence of any special circumstance relating to the distribution. . . .

The principal building owned by the company had been damaged by fire in 1941. When the company undertook to repair the building it was found that, because of war conditions, the shortage of building materials, and high costs, it was advisable to abandon 2 damaged floors and reduce the 7-story building to one of 5 stories. The consequence was that the company found its facilities inadequate to carry on the retinning and soldering operations formerly engaged in. Moreover, these operations had proven unprofitable in recent experience because of war conditions and shortage of necessary materials. For these reasons the company discontinued the retinning and soldering operations. This reduction in operations likewise reduced the amount of capital necessary for carrying on the business activities of the company. This was a bona fide contraction of business operations and consequent reduction in capital used. The company thus had a real and legitimate purpose for reducing its outstanding capital stock.

The motives of the corporation were all related to the above business purpose and were, therefore, legitimate and properly conceived. If the excess of insurance proceeds be set to one side, the surplus of the company had remained almost constant for 10 years. The company had followed a conservative dividend policy throughout its history and had not paid a dividend since 1934. The original issuance of the stock had occurred many years before and there was no connection between the issuance and the redemption of the same. There was no special circumstance or condition relating to the distribution excepting the fact that the company had in its hands the excess insurance proceeds which formed the basis of the distribution. We are convinced that, except for the fire and the excess insurance proceeds, there would have been no distribution.

Under the facts here present, the redemption of the company's stock was not accomplished at such time and in such manner as to be essentially equivalent to the distribution of a taxable dividend.

COMMISSIONER v. SULLIVAN

U.S. Court of Appeals, Fifth Circuit, 1954
210 F.2d 607

Before HUTCHESON, Chief Judge, and HOLMES and RIVES, Circuit Judges.

HOLMES, Circuit Judge. . . .

The Texon Royalty Company, a Delaware corporation, made a distribution in kind on April 1, 1943, to its two sole stockholders in cancellation of 2,000 shares, or two fifths, of its capital stock. . . . The question presented here is whether the redemption and cancellation of the stock was at such time and in such manner as to make the distribution essentially equivalent to a taxable dividend so as to be taxable to the recipients to the extent of Texon's accumulated earnings and profits, instead of being treated as payment in exchange for the stock and subject only to a capital gains tax. In other words, was the distribution taxable under Section 115(g) or 115(c) of the Internal Revenue Code?

The Tax Court held that § 115(g) was inapplicable and, therefore, that the taxpayers' entire gain on the distribution was taxable as a long-term capital gain. This holding was based primarily upon findings of fact, in substance as follows: Texon held a great many producing oil leases outside of the Agua Dulce oil field, which was a high pressure field. A suit for damages from a blowout which occurred in prior operations in that field was pending against Texon at the time of the distribution. The leases transferred needed to be developed, and they were transferred because Texon did not want to take the risk of developing them and because it did not have authority under its charter to drill wells. The same reasons prompted the distribution of its drilling equipment. Another reason was that this equipment could be used in the development of the oil properties transferred. The gas payment and the notes were included in the distribution in order to furnish the distributors with additional capital or credit to aid them in the development of the properties transferred, which was undertaken soon after the distribution. The drilling equipment was transferred by the stockholders to a corporation in connection with the development. The avoidance of taxes was not one of the reasons for the distribution.

The petitioner argues that, if the redemption of stock is made pro rata, any business purpose for the redemption thereof will usually be outweighed by the net effect of the transaction. The respondents contend that the Tax Court has weighed the evidence in this case with regard to the net effect of the transaction as well as to the business purposes of the corporation, and has found that the distribution was dictated by the reasonable needs of the corporate business, not merely to benefit the stockholders by giving them a share of the earnings of the corporation.

The Tax Court's opinion expressly refers to its considering the net effect of the transaction; and we cannot say that it used the wrong test, or that there was any specific test for the issue before it. We agree that the pro rata redemption of stock will generally be considered as effecting a distribution essentially equivalent to a dividend distribution to the extent of the earnings and profits, but to hold that this is always true would nullify the regulation which sanctions it in some cases and says that the question depends upon the particular circumstances of each case. See Treasury Regulations 118, Secs. 39 115-5 and 39.115-9.

The so-called net-effect test is not a weighted formula by which to solve the issue before the court. The net effect of the transaction is not evidence or testimony to be considered; it is an inference to be drawn or a conclusion to be reached. It is not a solvent but a residuum; it is not a process but a product; it is not a means but an end; it is not a solution but a restatement of the statutory provision; it is the gist of the governing law of the case; it is not a balance for weighing the law against the facts, it is the law itself. "Net effect" is a paraphrase for "essentially equivalent." It is just as if the statute read: "If a corporation redeems its stock in whole or in part, so that the net effect of the transaction is the same as the payment of a taxable dividend, the amount so distributed shall be treated as a taxable dividend." The net-effect test is not a test but an attractive abbreviation of the statute, as to which we shall be on safer ground if we stick to the words of the statute: essentially equivalent.

The distribution of the high-pressure leases and the drilling equipment constituted a contraction of Texon's business. When there is a contraction or shrinkage of corporate business, the need of a corporation for funds to carry on its former activities is largely eliminated. Following a contraction of its activities, and with surplus funds on hand, good business and accounting practices dictated a redemption of a portion of the corporation's capital stock. Failure to reduce its capital would have resulted in the payment of unnecessary capital-stock taxes contrary to good business practices. There were other factual considerations that entered into the decisions of the Tax Court.

Strong as is the pro-rata factor in this case, it is not sufficient in itself to require or authorize us to set aside the findings of the Tax Court and invoke the application of § 115(g). To do so would nullify the regulation that authorizes the complete retirement of any part of the stock, whether or not pro rata among the shareholders. In a number of cases, in applying the so-called net-effect test, some of which held the distribution taxable, the courts have called attention to the fact that there was no purpose on the part of the taxpayer to contract its business or narrow the scope of its operations. In *Flanagan* v. *Helvering*, Justice Vinson (later Chief Justice of the United States) said: "The corporation did not manifest any policy of contraction." 73 App. D.C. 46, 116 F.2d 937, 939. . . .

The decisions of the Tax Court are affirmed.

Affirmed.

RIVES, Circuit Judge (*dissenting*).

Congress has consistently and wisely, I think, been as definite and objective as possible in defining what corporate distributions constitute taxable dividends. It has left as small field as is required by necessity for the operation of such uncertainties and variables as the motives, plans, or business purposes of the corporation or its stockholders. The general rule is that *any* distribution of either money or property by a corporation to its stockholders constitutes a taxable dividend to the extent of the corporation's earnings and profits. Internal Revenue Code Sec. 115 (a) and (b). There is an exception when the distribution is in complete or partial liquidation of the corporation. Sec. 115(c). Even then, however, to the extent that it represents a distribution of earnings or profits, it is treated as a taxable dividend if made "at such time and in such manner as to make the distribution and cancellation or redemption in whole or in part essentially equivalent to the distribution of a taxable dividend". Sec. 115(g). . . .

The Regulations make it clear that the fact that the cancellation or redemption of stock is pro rata is the most important single fact tending to show essential equivalence to the distribution of a taxable dividend. A pro rata redemption of stock does not change the stockholders' proportionate interest in and control over the corporation and is usually a mere formality. It seems to me utterly immaterial whether each of the two stockholders owned 1500 shares, as before the distribution, or 2500 shares, as after the distribution. They each owned fifty percent of the stock both before and after the distribution Their interests in and control over the corporation were not affected in any way.

It seems to me that the fact most frequently mentioned and given greatest weight in the decisions is that the cancellation or redemption of stock was pro rata, or substantially so, and that, therefore, the same proportionate ownership of and control over the corporation existed after the distribution as before.

An essential, of course, is that the corporation had a surplus which could have been distributed by the declaration of a true dividend, and the fact of a large surplus is often mentioned in the decisions. This corporation had accumulated earnings and profits in the amount of either $905,217.95 or $359,878.24. Another fact mentioned in the decisions is the corporation's history as to payment of dividends. The stock redeemed in 1943 was originally issued in 1937, and the corporation had never declared any regular dividends. Another fact mentioned is that the amount paid for the redeemed stock was not based upon value, book or otherwise, and that holds true in this case. Other factors discussed in the cases go to the presence or absence of a business contraction or liquidation purpose or of a tax avoidance motive. On the other hand, that a business purpose prompted the distribution has been regarded as immaterial, and it has been recognized that the absence of a motive of tax avoidance is not determinative of the issue.

The last two subjective purposes or motive factors are the only ones tending to support the majority decision. There were business needs and purposes of the corporation as explained in the majority opinion for a distribution of the properties except as to two of those properties, the gas payment and notes receivable having a total fair market value of $774,036.27. Those two were included in the distribution for the stockholders' benefit rather than by reason of any business

purpose of the corporation. As to the distribution of the other properties, the corporation's business purposes and needs furnished no reason for the redemption of stock accompanying the distribution Such distribution, or any disposition, of these properties could have been made just as well without as with the redemption of stock.

The only real reasons suggested for the redemption of stock were to reduce capital stock taxes, usually a very small factor, and to accord with good business and accounting practices. If those reasons were really substantial, they did not call for any liquidation, even partial, of the corporation, but merely for a simple amendment of the corporate charter A mere change in capital structure is not, in and of itself, a legitimate business reason for the redemption of stock. *Bazley* v. *Commissioner*, 331 U.S. 737, 67 S. Ct. 1489, 91 L. Ed. 1782

It seems to me that the law is clearly to the effect that the actual conduct of the parties and the objective results of the distribution and redemption of stock, rather than any business motives, needs or purposes, furnish the controlling factors for the application *vel non* of § 115(g). Whatever may have been the mental ratiocinations of the two stockholders and the assumed business purposes and needs of the corporation, their conduct and the results thereof were "essentially equivalent to the distribution of a taxable dividend." Their acts seem to me more important taxwise than their intentions.

I, therefore, respectfully dissent.

Note

1. In approaching the 1954 amendments in this area, the student should note that under the 1939 Code, the term "partial liquidation" embraced any "distribution by a corporation in complete cancellation or redemption of a part of its stock" Section 115(i). Under § 115(c), a partial liquidation was treated like a sale or exchange of the stock (producing capital gain or loss if the stock was a capital asset), unless the cancellation or redemption was "essentially equivalent to the distribution of a taxable dividend" under § 115(g).

The 1954 Code seeks to divide redemptions of stock into (a) "partial liquidations" under § 331(a) (2) (always treated like a sale or exchange of the stock) and (b) "redemptions" under § 302 (treated either like a sale or exchange of the stock or like an ordinary distribution). The dividing line between the two categories is not entirely clear, though it *is* clear that the two categories overlap to some extent.

Section 346 provides that a distribution "shall be treated as in partial liquidation" under certain circumstances. The most important requirement, to be found in § 346(a) (2), is that the distribution "is not essentially equivalent to a dividend." Section 346(b) gives one example of a distribution that qualifies as a distribution in partial liquidation: a specifically limited type of corporate contraction. But it is explicitly stated in § 346(a) (2) that the kind of corporate contraction set out in § 346(b) is only *one* kind of distribution that qualifies, and we are not told what the characteristics of the others are, except that they cannot be "essentially equivalent to a dividend." The Senate Report says (p. 262) of § 346(a): "Primarily, this definition involves the concept of 'corporate contraction' as developed under existing law. . . . It is intended that a genuine contraction of the business as under present law will result in partial liquidation. See, for example, *Joseph Imler* (11 T.C. 836). However, a distribution of a reserve for expansion is not a partial liquidation." But nothing in the language of § 346(a) appears to require a corporate contraction. It says only that ". . . a distribution shall be treated as in partial liquidation of a corporation if— . . . the distribution is not essentially equivalent to a dividend, is in redemption of a part of the stock of the corporation pursuant to a plan. . . ."

In addition to §§ 331(a) (2) and 346, the 1954 Code contains § 302, dealing with redemptions. Subsection (a) of § 302 sets out a "general rule" that certain redemptions of stock shall be treated like sales or exchanges, and subsection (d) of § 302 states that all other redemptions shall be treated like ordinary distributions under § 301 (which means that they will be taxed as dividends if the corporation has earnings and profits) The sheep are separated from the goats by § 302(b), which describes three types of redemptions (a fourth is not here important*) that will qualify for the favorable treatment. The first is our old friend, a redemption that "is not essentially equivalent to a dividend." § 302(b) (1). The second is a "substantially disproportionate redemption" (as defined), and the third is a complete redemption of all of the stock owned by the stockholder. §§ 302(b) (2) and (3). But § 302(c) provides that in determining the ownership of stock for § 302, the constructive ownership rules of § 318(a) are applicable Since they provide that an individual is "considered as owning" the stock owned directly or indirectly by or for his spouse, children, grandchildren, and parents, as well as that owned by partnerships, estates, trusts, and certain corporations in which he is interested, it is apparent that in the case of many closely-held corporations it will be impossible for any shareholder to qualify under § 302(b) (2), relating to "substantially disproportionate" redemptions. It would also often be impossible in such circumstances to qualify under § 302(b)(3) (redemption of all stock owned by the stockholder) except that § 302(c)(2) moderates the constructive ownership rules in certain circumstances.

What is the relation between paragraphs (2) and (3) of § 302(b) and paragraph (1) thereof? If a redemption would qualify under (2) (substantially disproportionate redemption) or under (3) (redemption of all stock owned by the stockholder) were it not for the constructive ownership rules of § 318(a), could the redemption be brought under § 302(b) (1) ("not essentially equivalent to a dividend") on the ground that all the facts and circumstances demonstrated that the stock owned by other members of the stockholder's family was not subject to his control? See the first sentence of § 302(b) (5). The Senate Report (p. 233) states "In general, under [§ 302(b)] your committee intends to incorporate into the bill existing law as to whether or not a reduction is essentially equivalent to a dividend under section 115(g) (1) of the 1939 Code, and in addition to provide three definite standards [*i.e.*, §§ 302(b)(2),(3), and (4)] in order to provide certainty in specific instances."

As indicated above, § 302 (redemptions) and § 331(a) (2) (partial liquidations) overlap to a degree. Their separate co-existence is explained in the Senate Report as follows (p. 49)

> Existing law is complicated by the fact that stock redemptions are included within the terms of the partial liquidation provisions. Thus, a redemption of all of the stock of 1 of 2 sole shareholders of a corporation may result in capital-gain treatment to the redeemed shareholder. The result occurs, however, not by reason of the use of any particular assets of the corporation to effect the redemption but because the distribution when viewed at the shareholder level is so disproportionate with respect to the outstanding shareholder interests as not to be substantially equivalent to a dividend.
>
> Your committee, as did the House bill, separates into their significant elements the kind of transactions now incoherently aggregated in the definition of a partial liquidation. Those distributions which may have capital-gain characteristics because they are not made pro rata among the various shareholders would be subjected, at the shareholder level, to the separate tests described in part I of this subchapter [C]. On the other hand, those distributions characterized by what happens solely at the corporate level by reason of the assets distributed would be included as within the concept of a partial liquidation.

How is "existing law" simplified by separating "into their significant elements the kind of transactions now incoherently aggregated in the definition of a partial liquidation?" Note that § 302 provides, among other things, that a "redemption shall be treated as a

*§ 302(b) (4) relates to redemptions of certain stock of railroad corporations.

distribution in part or full payment in exchange for the stock . . . if the redemption is not essentially equivalent to a dividend." § 346(a) provides, in part, that "a distribution shall be treated in partial liquidation of a corporation if . . . the distribution is not essentially equivalent to a dividend, is in redemption of a part of the stock of the corporation pursuant to a plan. . . ."

Consider the effect of §§ 302 and 331(a) (2) on this problem *A* owns all the stock of a corporation; he wishes to sell out to *B*, but *B* cannot finance the entire purchase with his own funds. The corporation's assets include a substantial amount of cash and marketable securities. *A* sells part of the stock to *B*, and then the corporation redeems the rest of *A's* stock. Has either *A* or *B* received a taxable dividend? Note that if part of *A*'s stock had been redeemed while he was the sole stockholder, the redemption would probably have been essentially equivalent to a dividend, and if *B* had borrowed enough money to buy all the stock and then had caused the corporation to redeem enough to enable him to pay off the loan, the redemption would probably have been taxed as a dividend. See *Zens* v *Quinlivan*, — F.2d — (6th Cir. 1954), *Edenfield* v. *Commissioner*, 19 T C. 13 (1952); First, "Use of Corporate Funds to Buy Out Shareholders — Acquisitions by Third Parties," *12th Annual N.Y.U. Inst. on Fed. Taxation* 191 (1954); Note, "Income Tax Problems in the Use of Stock Redemptions to Purchase a Corporation Out of Future Earnings," 67 *Harv. L. Rev.* 1387 (1954); Redlich, "The Sale of a Closely-Held Corporate Business," 9 *Tax L. Rev.* 354 (1954).

2. Section 317(b) defines redemption. By specifically including a transaction in which reacquired stock is held in the corporate treasury, it clears up a problem under § 115(g) of the 1939 Code, which spoke of a "cancellation" or "redemption" of stock. The Court of Appeals for the Second Circuit expressed the view that treasury shares have not been cancelled or redeemed, *Kirschenbaum* v. *Commissioner*, 155 F 2d 23 (2d Cir. 1946) cert. den. 329 U.S. 726. The Court of Appeals for the Seventh Circuit agreed, *Commissioner* v. *Snite*, 177 F.2d 819 (7th Cir. 1949), but the Fourth Circuit was contra.

> If it should be held that taxpayers can avoid the terms of the statute by the simple device of selling their stock to the corporation and having it held as treasury stock, the purpose of the statute to prevent the evasion of taxes upon corporate dividends would be completely frustrated. (*Wall* v. *United States*, 164 F.2d 462, 465 (4th Cir. 1947).)

An intermediate position, treating treasury shares as cancelled or redeemed where there was no intention to reissue them, was apparently approved in *Boyle* v. *Commissioner*, 187 F.2d 557 (3d Cir 1951).

Section 317(b)'s definition of redemption is clearly applicable to that term as used in § 302. But does it also apply to "redemption" as used in § 346?

3. Section 303, relating to distributions in redemption of stock to pay death taxes and funeral and administration expenses, is a liberalized version of a provision that first entered the Code in 1950, as § 115(g) (3) of the 1939 Code. If the stock of a single corporation constitutes more than 35 per cent of the value of a decedent's gross estate or more than 50 per cent of his taxable estate, a redemption of the stock up to the amount of the death taxes and funeral and administration expenses will be a capital gain or loss transaction. The stock of two or more corporations can also qualify under certain circumstances. Of course, not every redemption of an estate's stock would be a taxable dividend under § 302 even in the absence of § 303, recourse to the latter section will be necessary only if without it the distribution would be a dividend. For an estimate of the need for a provision of this type, see Harriss, "Estate Taxes and the Family Owned Business," 38 *Calif. L. Rev.* 117 (1950). The details of § 115(g) (3) of the 1939 Code are discussed in Dean, "The New Section 115(g) Regulations," *11th Annual N.Y.U. Inst. on Fed. Taxation* 587 (1953).

4. Section 304 is derived from § 115(g) (2) of the 1939 Code, enacted in 1950 to overrule *Wanamaker Trust* v. *Commissioner*, 11 T.C. 365 (1948), affirmed p.c. 178 F.2d 10 (3d Cir. 1949), which held that § 115(g) did not apply to an acquisition by a wholly owned subsidiary of stock in the parent corporation. By virtue of changes in 1954, this

section now covers redemptions by one corporation of the stock of a wider range of related corporations, as well as parent-subsidiary redemptions

5. Sections 302 and 346 both speak of a redemption of "stock." The retirement of bonds and other evidences of indebtedness is ordinarily a capital gain or loss transaction by virtue of § 1232, and there is no counterpart of § 302 to treat the retirement of such creditor instruments as a distribution of earnings and profits. Once more (see *supra*, p. 481) we find the Internal Revenue Code smiling on the issue of debt instruments instead of stock by the newly organized corporation, § 1232 is a channel through which corporate profits may be withdrawn without being classified and taxed as dividends. But the same criteria that turn ostensible bonds or debentures into stock so as to deny the deduction for so-called interest may also require the "bonds" to be treated as "stock" under § 302. *Supra*, pp. 481-2; Schlesinger, "'Thin' Incorporations: Income Tax Advantages and Pitfalls," 61 *Harv. L. Rev.* 50, 78-86 (1947).

6. When a taxpayer receives an ordinary dividend, the basis of his shares is unaffected by the receipt, and gain or loss on a subsequent disposition of the shares is calculated accordingly. But if he gets a § 302(d) dividend, he no longer has the shares for a later sale or other disposition. What happens to his basis? If it is lost, a § 302(d) distribution is not the equivalent of an ordinary dividend, it is worse than one. See Katcher, "The Case of the Forgotten Basis. An Admonition to Victims of Internal Revenue Code Section 115(g)," 48 *Mich. L. Rev.* 465 (1950).

7. Section 306, dealing with the redemption of certain classes of stock (primarily preferred stock issued as a stock dividend), is dealt with *infra*, pp. 535-6.

Section G. Distributions In Kind

1. *The "Court Holding Co." Problem*

> *Note:* **Section 337 of the 1954 Code, providing for the nonrecognition of gain or loss by a corporation on certain sales and exchanges, has no counterpart in the 1939 Code.**
>
> **Section 336 is also new in the 1954 Code, but it is based on a provision in Regs. 118, Sec. 39.22(a)-20.**

COMMISSIONER v. COURT HOLDING CO.

Supreme Court of the U.S., 1945
324 U.S. 331

MR. JUSTICE BLACK delivered the opinion of the Court.

An apartment house, which was the sole asset of the respondent corporation, was transferred in the form of a liquidating dividend to the corporation's two shareholders. They in turn formally conveyed it to a purchaser who had originally negotiated for the purchase from the corporation The question is whether the Circuit Court of Appeals properly reversed the Tax Court's conclusion that the corporation was taxable under Section 22 of the Internal Revenue Code [1] for the gain which accrued from the sale. The answer depends upon whether the findings of the Tax Court that the whole transaction showed a sale by the corporation

[1] Profits from the sale of property are taxable as income under Section 22(a) of the Internal Revenue Code. The Treasury Regulations have long provided that gains accruing from the sales of a corporation's assets, in whole or in part, constitute income to it, but that a corporation realizes no taxable gain by a mere distribution of its assets in kind, in partial or in complete liquidation, however much they may have appreciated in value since acquisition. Regs. 118, Sec. 39.22(a)-20.

rather than by the stockholders were final and binding upon the Circuit Court of Appeals.

It is unnecessary to set out in detail the evidence introduced before the Tax Court or its findings. Despite conflicting evidence, the following findings of the Tax Court are supported by the record:

The respondent corporation was organized in 1934 solely to buy and hold the apartment building which was the only property ever owned by it. All of its outstanding stock was owned by Minnie Miller and her husband. Between October 1, 1939 and February, 1940, while the corporation still had legal title to the property, negotiations for its sale took place. These negotiations were between the corporation and the lessees of the property, together with a sister and brother-in-law. An oral agreement was reached as to the terms and conditions of sale, and on February 22, 1940, the parties met to reduce the agreement to writing. The purchaser was then advised by the corporation's attorney that the sale could not be consummated because it would result in the imposition of a large income tax on the corporation. The next day, the corporation declared a "liquidating dividend," which involved complete liquidation of its assets, and surrender of all outstanding stock. Mrs. Miller and her husband surrendered their stock, and the building was deeded to them. A sale contract was then drawn, naming the Millers individually as vendors, and the lessees' sister as vendee, which embodied substantially the same terms and conditions previously agreed upon. One thousand dollars, which a month and a half earlier had been paid to the corporation by the lessees, was applied in part payment of the purchase price. Three days later, the property was conveyed to the lessees' sister.

The Tax Court concluded from these facts that, despite the declaration of a "liquidating dividend" followed by the transfers of legal title, the corporation had not abandoned the sales negotiations, that these were mere formalities designed "to make the transaction appear to be other than what it was," in order to avoid tax liability. The Circuit Court of Appeals drawing different inferences from the record, held that the corporation had "called off" the sale, and treated the stockholders' sale as unrelated to the prior negotiations.

There was evidence to support the findings of the Tax Court, and its findings must therefore be accepted by the courts. *Dobson* v. *Commissioner of Internal Revenue*, 320 U.S. 489, 64 S. Ct. 239, 88 L. Ed. 248, *Commissioner of Internal Revenue* v. *Heininger*, 320 U.S. 467, 64 S. Ct. 249, 88 L. Ed. 171, *Commissioner of Internal Revenue* v. *Scottish American Investment Co.*, 323 U.S. 119, 65 S. Ct. 169. On the basis of these findings, the Tax Court was justified in attributing the gain from the sale to respondent corporation. The incidence of taxation depends upon the substance of a transaction. The tax consequences which arise from gains from a sale of property are not finally to be determined solely by the means employed to transfer legal title. Rather, the transaction must be viewed as a whole, and each step, from the commencement of negotiations to the consummation of the sale, is relevant. A sale by one person cannot be transformed for tax purposes into a sale by another by using the latter as a conduit through which to pass title. To permit the true nature of a transaction to be disguised by mere formalisms, which exist solely to alter tax liabilities, would seriously impair the effective administration of the tax policies of Congress.

It is urged that respondent corporation never executed a written agreement, and that an oral agreement to sell land cannot be enforced in Florida because of the Statute of Frauds, *Comp. Gen. Laws of Florida,* 1927, vol. 3, Sec. 5779, F.S.A. § 725.01. But the fact that respondent corporation itself never executed a written contract is unimportant, since the Tax Court found from the facts of the entire transaction that the executed sale was in substance the sale of the corporation. The decision of the Circuit Court of Appeals is reversed, and that of the Tax Court affirmed.

It is so ordered.

Reversed.

Note

1. Note that the Court Holding Company is without assets to pay the tax that the Court finds to be due. It must therefore be paid by those who rendered the corporation insolvent, *viz.*, the stockholders. In effect, they overpaid their personal tax in the year the assets were distributed, since they calculated their gain on the liquidation without allowing for the corporation's tax liability. The Supreme Court has held that the proper adjustment is a capital loss in the year the transferee stockholders pay up the liquidated corporation's liability. *Arrowsmith* v. *Commissioner,* 344 U.S. 6 (1952). This rule is qualified by § 1341 of the 1954 Code.

2. The Commissioner asserted a fraud penalty, which was expunged by the Tax Court with the statement

> If the petitioner here was of the opinion that the method by which it attempted to effect the sale in question was legally sufficient to avoid the imposition of tax upon it, its adoption of that method is not subject to censure. Petitioner took a position with respect to a question of law, the substance of which was disclosed by the statement endorsed on its return. (2 T.C. 531, 541–542 (1943).)

The statement on the corporation's return was

> This corporation declared a dividend in kind in complete liquidation of all of its assets to its stockholder on February 23, 1940 The property was sold on April 1, 1940, the corporation collecting the rents to the date of sale by the stockholder only. (*Id*, 534.)

3. See Regs. 118, Sec. 39.22(a)-20, providing.

> When a corporation is dissolved, its affairs are usually wound up by a receiver or trustees in dissolution. The corporate existence is continued for the purpose of liquidating the assets and paying the debts, and such receiver or trustees stand in the stead of the corporation for such purposes . . Any sales of property by them are to be treated as if made by the corporation for the purpose of ascertaining the gain or loss.

U. S. v. CUMBERLAND PUBLIC SERVICE CO.

Supreme Court of the U.S, 1950

338 U.S. 451

MR. JUSTICE BLACK delivered the opinion of the Court.

A corporation selling its physical properties is taxed on capital gains resulting from the sale.[1] There is no corporate tax, however, on distribution of assets in

[1] 26 U.S.C. § 22(a), Treas. Reg. 118, § 39.22(a)-18.

kind to shareholders as part of a genuine liquidation.[2] The respondent corporation transferred property to its shareholders as a liquidating dividend in kind. The shareholders transferred it to a purchaser. The question is whether, despite contrary findings by the Court of Claims, this record requires a holding that the transaction was in fact a sale by the corporation subjecting the corporation to a capital gains tax.

Details of the transaction are as follows. The respondent, a closely held corporation, was long engaged in the business of generating and distributing electric power in three Kentucky counties. In 1936 a local cooperative began to distribute Tennessee Valley Authority power in the area served by respondent. It soon became obvious that respondent's Diesel-generated power could not compete with TVA power, which respondent had been unable to obtain. Respondent's shareholders, realizing that the corporation must get out of the power business unless it obtained TVA power, accordingly offered to sell all the corporate stock to the cooperative, which was receiving such power. The cooperative refused to buy the stock, but countered with an offer to buy from the corporation its transmission and distribution equipment. The corporation rejected the offer because it would have been compelled to pay a heavy capital gains tax. At the same time the shareholders, desiring to save payment of the corporate capital gains tax, offered to acquire the transmission and distribution equipment and then sell to the cooperative. The cooperative accepted. The corporation transferred the transmission and distribution systems to its shareholders in partial liquidation. The remaining assets were sold and the corporation dissolved. The shareholders then executed the previously contemplated sale to the cooperative.

Upon this sale by the shareholders, the Commissioner assessed and collected a $17,000 tax from the corporation on the theory that the shareholders had been used as a mere conduit for effectuating what was really a corporate sale. Respondent corporation brought this action to recover the amount of the tax. The Court of Claims found that the method by which the stockholders disposed of the properties was avowedly chosen in order to reduce taxes, but that the liquidation and dissolution genuinely ended the corporation's activities and existence. The court also found that at no time did the corporation plan to make the sale itself. Accordingly it found as a fact that the sale was made by the shareholders rather than the corporation, and entered judgment for respondent. One judge dissented, believing that our opinion in *Court Holding Co.* v. *Com'r*, 324 U.S. 331, 65 S. Ct. 707, 708, 89 L. Ed. 567, required a finding that the sale had been made by the corporation. Certiorari was granted, 338 U.S. 846, 70 S. Ct. 88, to clear up doubts arising out of the *Court Holding Co.* case.

Our *Court Holding Co.* decision rested on findings of fact by the Tax Court that a sale had been made and gains realized by the taxpayer corporation. There the corporation had negotiated for sale of its assets and had reached an oral agreement of sale. When the tax consequences of the corporate sale were belatedly recognized, the corporation purported to "call off" the sale at the last minute and distributed the physical properties in kind to the stockholders. They promptly conveyed these properties to the same persons who had negotiated with the cor-

[2] ". . . No gain or loss is realized by a corporation from the mere distribution of its assets in kind in partial or complete liquidation, however they may have appreciated or depreciated in value since their acquisition. . . ." Treas. Reg. 118, § 39.22(a)-20.

poration. The terms of purchase were substantially those of the previous oral agreement. One thousand dollars already paid to the corporation was applied as part payment of the purchase price The Tax Court found that the corporation never really abandoned its sales negotiations, that it never did dissolve, and that the sole purpose of the so-called liquidation was to disguise a corporate sale through use of mere formalisms in order to avoid tax liability. The Circuit Court of Appeals took a different view of the evidence. In this Court the Government contended that whether a liquidation distribution was genuine or merely a sham was traditionally a question of fact. We agreed with this contention, and reinstated the Tax Court's findings and judgment. Discussing the evidence which supported the findings of fact, we went on to say that "the incidence of taxation depends upon the substance of a transaction" regardless of "mere formalisms," and that taxes on a corporate sale cannot be avoided by using the shareholders as a "conduit through which to pass title."

This language does not mean that a corporation can be taxed even when the sale has been made by its stockholders following a genuine liquidation and dissolution.[3] While the distinction between sales by a corporation as compared with distribution in kind followed by shareholder sales may be particularly shadowy and artificial when the corporation is closely held, Congress has chosen to recognize such a distinction for tax purposes. The corporate tax is thus aimed primarily at the profits of a going concern. This is true despite the fact that gains realized from corporate sales are taxed, perhaps to prevent tax evasions, even where the cash proceeds are at once distributed in liquidation.[4] But Congress has imposed no tax on liquidating distributions in kind or on dissolution, whatever may be the motive for such liquidation. Consequently, a corporation may liquidate or dissolve without subjecting itself to the corporate gains tax, even though a primary motive is to avoid the burden of corporate taxation.

Here, on the basis of adequate subsidiary findings, the Court of Claims has found that the sale in question was made by the stockholders rather than the corporation. The Government's argument that the shareholders acted as a mere "conduit" for a sale by respondent corporation must fall before this finding. The subsidiary finding that a major motive of the shareholders was to reduce taxes does not bar this conclusion. Whatever the motive and however relevant it may be in determining whether the transaction was real or a sham, sales of physical properties by shareholders following a genuine liquidation distribution cannot be attributed to the corporation for tax purposes.

The oddities in tax consequences that emerge from the tax provisions here controlling appear to be inherent in the present tax pattern. For a corporation is taxed

[3] What we said in the Court Holding Co case was an approval of the action of the Tax Court in looking beyond the papers executed by the corporation and shareholders in order to determinate whether the sale there had actually been made by the corporation. We were but emphasizing the established principle that in resolving such questions as who made a sale, fact finding tribunals in tax cases can consider motives, intent, and conduct in addition to what appears in written instruments used by parties to control rights as among themselves. See, *e.g.*, Helvering v. Clifford, 309 U.S 331, 335–337, 60 S. Ct 554, 556–557, 84 L Ed. 788, Commissioner of Internal Revenue v. Tower, 327 U S. 280, 66 S. Ct. 532, 90 L. Ed. 670, 164 A.L R. 1135.

[4] It has also been held that where corporate liquidations are effected through trustees or agents, gains from sales are taxable to the corporation as though it were a going concern. See, *e.g.*, First Nat'l Bank of Greeley, Colorado v. United States, 10 Cir, 86 F.2d 938, 941; Treas. Reg. 118, § 39.22(a)–20.

if it sells all its physical properties and distributes the cash proceeds as liquidating dividends, yet is not taxed if that property is distributed in kind and is then sold by the shareholders. In both instances the interest of the shareholders in the business has been transferred to the purchaser. Again, if these stockholders had succeeded in their original effort to sell all their stock, their interest would have been transferred to the purchasers just as effectively. Yet on such a transaction the corporation would have realized no taxable gain.

Congress having determined that different tax consequences shall flow from different methods by which the shareholders of a closely held corporation may dispose of corporate property, we accept its mandate. It is for the trial court, upon consideration of an entire transaction, to determine the factual category in which a particular transaction belongs. Here as in the *Court Holding Co.* case we accept the ultimate findings of fact of the trial tribunal. Accordingly the judgment of the Court of Claims is affirmed.

Affirmed.

MR. JUSTICE DOUGLAS took no part in the consideration or decision of this case.

Note

Note that the respondent's shareholders offered to sell their stock to the potential vendee. What tax and non-tax reasons might cause the vendee to refuse to buy stock and to insist instead upon purchasing the assets? If the vendee *had* bought the stock, and had promptly liquidated the corporation, would the sellers have been protected against the possibility of a double tax? Note that the buyer might have relied on the *Kimbell-Diamond* line of cases, *supra*, p. 493, to establish that the transaction was "really" a purchase of assets rather than a purchase of stock. If this assertion was accepted, would it follow that the liquidated corporation had sold its assets? And if so, who must pay the tax that the liquidated corporation is unable to pay? See Magill, "Sales of Corporate Stock or Assets," 47 *Col. L. Rev.* 707 (1947).

UNITED STATES v. LYNCH

U.S. Court of Appeals, Ninth Circuit, 1951
192 F.2d 718, cert den. 343 U.S. 934 (1952)

Before MATHEWS, ORR and POPE, Circuit Judges

ORR, Circuit Judge.

We have for determination two appeals. In the first the United States of America, hereinafter referred to as the Government, is appellant, and P. J. Lynch is appellee. In the second P. J. Lynch is appellant, and the United States of America is appellee.

We first consider the appeal of the Government. It concerns the correctness of a determination made by the Commissioner of Internal Revenue, that the net proceeds of profits from the sale of apples, which the Washington Fruit and Produce Company, a corporation had attempted to distribute to its stockholders as a dividend in kind, was taxable to the corporation.

Lynch is one of several stockholders to whom a dividend in kind was issued by the Washington Fruit and Produce Company, a corporation, to which we hereinafter refer as the corporation. This dividend consisted of 21,977 boxes of apples.

The corporation at that time had three stockholders and was engaged in the business of growing, handling, warehousing and marketing of fresh fruits and vegetables. The dividend in kind was declared February 28, 1944. The apples distributed as a dividend were on that date owned and held by the corporation in its warehouse. At the same meeting at which the dividend was declared, the shareholders agreed among themselves to pool the apples and entered into an agreement with the corporation to dispose of the apples and account to the shareholders for the net proceeds after deducting the costs of washing, packing and storing. During April 1944 the apples were sold and the proceeds distributed. Possession of the apples was retained by the corporation and the sale thereof accomplished without difficulty, the state of the market being such that solicitation by the corporation for buyers was unnecessary. On April 29, 1944 the corporation was liquidated. The Commissioner held that the excess of the sale price of the apples above cost to the corporation was corporate income. The trial court found otherwise We think its finding was clearly erroneous for the following reasons. The dividend was not, nor was it intended to be, a liquidating dividend made in the process of winding up corporate affairs. The trial court found the dividend to be an ordinary one, reported as ordinary income by the recipients. The corporation continued to engage in its normal business for a period of two months after the dividend declaration. We are, therefore, required to regard the dividend under consideration here as one declared by a going concern and, inasmuch as the corporation, among other things, was engaged in the business of selling apples the property distributed represented its inventory or stock in trade.

It is clear that the shareholders caused the dividend to be declared with the knowledge and expectation that the property distributed would be sold immediately. Furthermore, the simultaneously executed agreement with the corporation to do the selling manifested a purpose on the part of the shareholders to use the corporate agency as the vehicle to effectuate the sale of apples. The corporation was to sell the apples in the normal course of its business, in essentially the same manner, and it is fair to assume to the same persons to whom it would have sold had there been no dividend declared. Under these circumstances we fail to see a motive for the dividend other than to escape taxation. It is fundamental that,

> . . in construing words of a tax statute which describe commercial or industrial transactions we are to understand them to refer to transactions entered upon for commercial or industrial purposes and not to include transactions entered upon for no other motive but to escape taxation.[1]

The dividend in question was not the kind of a distribution contemplated by the statute, § 115(a) of the Internal Revenue Code, and must be ignored for tax purposes. Distribution of corporate inventory with the expectation of immediate sale by the shareholders pointedly suggests a transaction outside the range of normal commercially-motivated and justifiable corporate activity, yet we have here a stronger case, because the sale was to be made by utilizing the corporation's facilities in the ordinary course of its business; the shareholders did not engage in a separate and independent business in which the apples were to be used. The

[1] C I R. v. Transport Trading & Terminal Corp, 2 Cir., 1949, 176 F 2d 570, 572, certiorari denied 338 U S 955, 70 S. Ct. 493, 94 L.Ed. 589.

shareholders, under the circumstances of this case, cannot avoid payment of the price Congress has decreed must be paid for use of the corporate entity.

In its opinion the trial court used language indicating its belief that the doctrine announced in *Court Holding Co.* v. *C.I.R.* 324 U.S. 331, 65 S. Ct. 707, 89 L. Ed. 567, required a finding in the instant case that the sale was made by the shareholders. The *Court Holding Company* case, as well as the case of *Cumberland Public Service Co.* v. *U. S.*, 338 U.S. 451, 70 S. Ct. 280, 282, 94 L. Ed. 251, dealt with liquidating dividends and not, as here, with a dividend in kind by a going concern. In the *Cumberland* case the Supreme Court points out that "The corporate tax is thus aimed primarily at the profits of a going concern." Hence, in determining the "factual category" in which the present transaction belongs the factor of the going concern is most important. In the instant case, at the time the transaction was planned and executed all concerned knew that no necessity existed for the corporation to engage in prior negotiations and solicitations for sale of the apples because of available ready market. The record discloses that the corporation gave the shareholders most favored customer treatment by not charging a selling commission and, in addition, certain customary handling charges were not imposed. These circumstances constitute grounds for attributing the sale to the corporation. . . .

Note

1 Section 337 of the 1954 Code provides a statutory rule to govern this much-litigated area. Neither gain *nor loss* is recognized by the corporation on sales or exchanges to which § 337 applies. If the stockholders want the loss on certain property to be recognized by the corporation, what can they do to avoid the application of § 337(a)?

Note that § 337(a) does not apply to the corporation's stock in trade (unless sold in bulk), nor does it apply to a liquidation under § 333 (where the stockholders of the corporation elect not to recognize gain on the liquidation, *supra*, p. 493) or under § 341 (collapsible corporations), or to certain liquidations under § 332 (liquidations of subsidiary corporations without recognition of gain or loss, *supra*, p. 493). Section 337(a) is also inapplicable to property distributed in a *partial* liquidation What is the relation of the *Court Holding Co.* case to sales of corporate property in these excluded situations?

2. With the *Lynch* case, see *Commissioner* v. *Carter*, *supra*, p. 442, and *Commissioner* v. *First State Bank of Stratford*, *infra*, p 517.

3. See generally Cary, "The Effect of Taxation on Selling Out a Corporate Business For Cash," 45 *Ill. L. Rev.* 423 (1950), and authorities there cited.

2. *The "General Utilities" Case*

> ***Note:*** **Section 311 of the 1954 Code, relating to the effect of a distribution of property on the income of the distributing corporation, has no counterpart in the 1939 Code.**
>
> **Section 336 of the 1954 Code, relating to the effect of a distribution in partial or complete liquidation on the distributing corporation, is also new, but it is derived from Regs. 118, Sec. 39.22(a)-20.**

In the *Court Holding Co.* line of cases, the Treasury sought to tax the corporation by attributing to it a sale made in form by the stockholders. Is there a broader basis for regarding the gain as realized by the corporation? The case that follows

involved certain securities that had cost a corporation less than $2,000 and that were distributed in kind when worth more than $1 million. They were sold by the stockholders shortly after the distribution. The Treasury advanced three arguments for taxing this appreciation in value to the corporation. The first, upon which the Treasury relied in the Board of Tax Appeals, was that the corporation realized income by declaring a dividend of $1 million and then satisfying the indebtedness thus created by distributing the securities. This view was rejected by the Board of Tax Appeals. Secondly, before the Court of Appeals, the Treasury added the *Court Holding Co.* argument, *viz.*, that the shareholders were a conduit through which the assets were sold by the corporation. On this point, the Court of Appeals agreed with the Treasury. The Supreme Court granted certiorari. There the Treasury added a third argument

> It is not open to doubt that the phrase "sale or other disposition" connotes a transfer by which a gain is realized or a loss is sustained, and one of the principal reasons for rejecting the suggestion that a dividend distribution is a "disposition" has been the circumstance that the stockholders pay no consideration to the corporation, and hence there is no actual receipt of gain in a tangible form. We think that this reasoning misses the point, for in making it available to its own stockholders the corporation is realizing the appreciation, and nothing more is necessary. It is our view that the addition to surplus on account of the increased value and the distribution of this increased value in satisfaction of the company's general liability to its stockholders, are the evidence that the gain has been realized, for it is incomprehensible how a corporation can distribute to its stockholders something which it has not itself received. Petitioner had an earned surplus equivalent to the value of the stock distributed. . . . It is clear that petitioner used the increased value for a corporate purpose, and was thereby enabled to pay its stockholders $1,071,426.25. Thus was petitioner serving the principal end for which it was organized—to earn profits which it could distribute to its stockholders—and we submit that in so justifying the hopes of its organizers this economic entity, called a corporation, truly derived an economic gain. (Respondent's brief, 17–19, 25.)

It should be noted that if this third argument were accepted, the appreciation in the value of the distributed property would be taxed to the corporation even if it were conceded that the sale of the property was made by the stockholders and not by the corporation. Indeed, a sale of the distributed property would not be necessary; the distribution itself, it is contended, constitutes a realization of income by the corporation.

GENERAL UTILITIES & OPERATING CO. v. HELVERING

Supreme Court of the U.S., 1935
296 U.S. 200

MR. JUSTICE MCREYNOLDS delivered the opinion of the Court. . . .

Both tribunals below rightly decided that petitioner derived no taxable gain from the distribution among its stockholders of the Islands Edison shares as a dividend. This was no sale; assets were not used to discharge indebtedness.

The second ground of objection, although sustained by the court, was not presented to or ruled upon by the Board. The petition for review relied wholly upon the first point; and, in the circumstances, we think the court should have considered no other. Always a taxpayer is entitled to know with fair certainty the

basis of the claim against him. Stipulations concerning facts and any other evidence properly are accommodated to issues adequately raised.

Recently (April, 1935) this court pointed out: "The Court of Appeals is without power on review of proceedings of the Board of Tax Appeals to make any findings of fact." "The function of the court is to decide whether the correct rule of law was applied to the facts found, and whether there was substantial evidence before the Board to support the findings made." "If the Board has failed to make an essential finding and the record on review is insufficient to provide the basis for a final determination, the proper procedure is to remand the case for further proceedings before the Board." "And the same procedure is appropriate even when the findings omitted by the Board might be supplied from examination of the records." *Helvering* v. *Rankin*, 295 U.S. 123, 131, 132.

Here the court undertook to decide a question not properly raised. Also it made an inference of fact directly in conflict with the stipulation of the parties and the findings, for which we think the record affords no support whatever. To remand the cause for further findings would be futile. The Board could not properly find anything which would assist the Commissioner's cause.

The judgment of the court below must be reversed. The action of the Board of Tax Appeals is approved.

Reversed.

Note

1. On the first point, there is authority for treating appreciation or depreciation as realized on a distribution if the dividend resolution creates a debt to the shareholders. *Bacon-McMillan Veneer Co.* v. *Commissioner*, 20 B.T.A. 556 (1930) (gain), *Callanan Road Improvement Co.* v. *Commissioner*, 12 B.T.A. 1109 (1928) (loss). These cases were held by the Board of Tax Appeals to be inapplicable to the General Utilities & Operating Co. distribution because the dividend resolution was interpreted as declaring a dividend of property only, rather than a dividend of a specified amount of money.

2. Although the Supreme Court did not pass on the Treasury's argument that the distribution itself constituted a realization of the appreciation by the corporation, this case was often cited as rejecting the argument. See, however, *R. D Merrill Co.* v. *Commissioner*, 4 T.C. 955, 961 (1945).

3. Section 336 of the 1954 Code gives statutory sanction to the rule, formerly expressed only in the regulations, that no gain or loss is to be recognized by a corporation on the distribution of property in partial or complete liquidation. Regs. 118, Sec. 39.22(a)-20 (which used the term "realized" rather than "recognized"). The Senate Report does not disclose whether the term "partial liquidation" as used in § 336 is restricted to distributions that reflect a contraction of the corporation's business. See *supra*, p. 504. Under the pre-1954 law, the term as used in the regulations probably embraced any redemption or cancellation of stock.

Section 311, derived from the *General Utilities & Operating Co.* case (or from the common understanding of its meaning), provides that no gain or loss shall be recognized by a corporation on a distribution of property, except for a distribution of "LIFO inventory" (*infra*, p. 683) or of property whose adjusted basis is less than the liability (if any) to which it is subject or which is assumed by the shareholder in connection with the distribution. Why is income to be recognized on these distributions? What is the relation of §§ 311(b) and (c) to §§ 1001 and 61(a)? Do §§ 311(b) and (c) require the corporation to recognize income on unrealized appreciation in the value of property, see *Eisner* v. *Macomber*, *supra*, p. 51?

4. Section 312(a)-(c) clarifies the effect of a distribution in kind upon the earnings and profits of the distributing corporation, a previously baffling problem. See *Godley's*

Estate v. *Commissioner*, 213 F.2d 529 (3d Cir. 1954); *Commissioner* v. *Hirshon Trust*, 213 F.2d 523 (2d Cir. 1954); Molloy, "Some Tax Aspects of Corporate Distributions in Kind," 6 *Tax L. Rev.* 57, 69–76 (1950).

FIRST STATE BANK OF STRATFORD v. COMMISSIONER

U S. Court of Appeals, Fifth Circuit, 1948
168 F.2d 1004, cert. den. 335 U. S. 867

Before SIBLEY, HUTCHESON, HOLMES, McCORD, WALLER, and LEE, Circuit Judges.

HOLMES, Circuit Judge:

The Commissioner is seeking the correction of errors alleged to have been made by the Tax Court in its decision in this case. The question for decision is whether certain recoveries on notes in 1942 were income to the taxpayer, the respondent on review.

On October 17, 1942, the First State Bank of Stratford declared a dividend in kind, which consisted of certain notes that had been charged off as wholly worthless, and deducted as bad debts in its income-tax returns for years previous to 1942. These notes did not appear on the bank's books. They had been kept in a case by themselves, but were brought to the directors' meeting on the above date, when the possibility of their collection was discussed. It then appeared that collections on the notes were currently being made, about $25,000 already having been collected. The payment of a dividend by the bank was next considered Attention was called to the matter of increased taxes and the advisability of deferring a cash dividend until more would be known about the new income-tax law soon to be enacted. It was pointed out that the bank had a number of charged-off accounts of doubtful value, also real estate carried on the books at the nominal sum of one dollar. The advisability of paying a dividend in these properties was fully considered, and the following resolution adopted:

> Whereas, This bank is the owner of several thousand dollars of charged off notes, some of which may be collected in future, and the balance of which are of doubtful value.
>
> Now, Therefore, Be it resolved that the following charged off notes be assigned to the stockholders of this bank without recourse on it, said notes being paid as a dividend in kind and without any value being placed thereon by this bank. (A list and description of the notes followed.)

After the meeting the directors, as stockholders, further discussed the matter. It was suggested, with approval, that W. N. Price take charge of the notes for the stockholders. Within the next few days, the notes included in the dividend were endorsed to W. N. Price without recourse on the bank. Amounts thereafter collected in 1942 on the dividend notes were deposited in the bank in an account designated "W. N. Price, Special." In attempting collection of these notes. Price, who worked in the bank, did nothing that he did not do in collecting notes owed to the bank, except at various times he worked after banking hours. No system of bookkeeping for the notes was set up by the stockholders in 1942. The debtors were not notified of the assignment of their debts to the stockholders. The notes when paid were marked paid with a stamp on which appeared the bank's name, but not the stockholders'.

After October 17, 1942, and prior to January 1, 1943, collections amounting to $11,662.71 were made on these dividend notes, of which the sum of $10,548.20 was determined by the Commissioner to be taxable income of the respondent on the theory that to this extent the distribution of the dividend in kind merely represented an assignment of anticipated income, because a tax benefit * had been received for it in prior years. The Tax Court reversed the Commissioner's determination, and held that the amounts so collected were not taxable to the respondent as income.

The taxpayer relies upon *General Utilities Co.* v. *Helvering*, 296 U.S. 200, as authority that a corporation does not realize income by its distribution of a dividend in kind. It contends that collections made on notes subsequent to their distribution as a dividend in kind are not taxable to the corporation that distributed the dividend but to their legal owners, who in this instance are the stockholders. The Commissioner argues that, having recovered its capital investment in the notes through the allowance of bad-debt deductions, the taxpayer in declaring and distributing the dividend in 1942 made an anticipatory assignment of the bank's right to collect the income represented by the notes, and was taxable on the amounts collected.

The Commissioner cites *Helvering* v. *Horst*, 311 U.S. 112, and *Helvering* v. *Eubank*, 311 U.S. 122, as to the realization and enjoyment of taxable income After stating the issues before it, the Tax Court in its opinion said

We have here, on its face, a dividend in kind which under the settled law indicated in the *General Utilities & Operating Co.* case, *supra*, is no ground for realization of taxable income, and our problem therefore is: Does the fact of previous charge-off, as worthless, of the notes involved, distinguish that case? We do not think so. Though it is true that the *National Bank of Commerce of Seattle* case [115 F.(2d) 875] . . . states ". . . that after the loans there involved were charged off and deducted from income, they were no longer a capital asset but represented income," yet it was held that when they were transferred to another bank, in a non-taxable reorganization, recoveries thereafter made were income within the broad meaning of section 22(a), Internal Revenue Code, . . . the transferee having the same basis of zero which the transferor had after the charge-off and deduction from income. Here instead of transfer in a reorganization, we find a transfer in a dividend in kind, and the *National Bank of Commerce* case seems to us recognition of the principle that despite their nature as representing income after deduction by the transferor bank, such loans nevertheless are subject to transfer as property and may constitute income to the transferee. The *Horst* and *Eubank* cases, *supra*, do not help the respondent That line of authority involves transfers of rights to income, without consideration, where it was denied that the transferor was freed from tax. Here it can not be said that there was assignment of the notes for no consideration. Distribution of a dividend in kind to stockholders is not gift, and is not without consideration—which appears inherent in the original cost of the stock upon which the dividend in kind is received. We think the logic of the *Horst* and similar cases is not applicable here. (8 Tax Court 831.)

We think we are bound under the *Dobson* rule by the decision of the Tax Court as to the reality and good faith of the dividend declaration, and as to the finding that the stockholders were owners of the notes after the assignment; but the facts are undisputed that these notes had been charged off as worthless, and that income-tax deductions had been taken for them by the respondent in prior years. Therefore, an issue of law is presented as to whether or not for all purposes of income-

* See *infra*, p. 757. [Ed.]

tax accounting, these notes ceased to be capital assets of the bank and became purely potential income, which when assigned to and collected by the stockholders was required to be included in respondent's gross income. Another way of stating the question of law is: Does the fact that the notes were distributed as a dividend in kind preclude the treatment of the transaction as an assignment of anticipatory income? The ultimate legal question is: What are the tax consequences of a dividend in kind that admittedly was intended to effect and did effect an anticipatory assignment of future corporate income?

It is well settled that, when a deduction for income-tax purposes is taken and allowed for debts deemed worthless, recoveries on the debts in a later year constitute taxable income for that year to the extent that a tax benefit was received from the deduction taken in a prior year. Thus, when the tax benefit for a bad debt is obtained, the debt loses its nature as capital, and becomes representative of that portion of the taxpayer's income which was not taxed. As stated in the just-cited case. "The profits or income used to pay back the capital when the debt is charged off is represented by the worthless loan, so that when such loan is paid the profits are replaced."

A dividend to a shareholder by a corporation in any medium other than money is a dividend in kind, and in a formal sense the notes here represented such a dividend. Ordinarily no gain or loss is realized by a corporation from the mere distribution of its assets in kind in partial or complete liquidation, however they may have appreciated or depreciated in value since their acquisition but the rule is deemed to be otherwise where the dividend in kind is not in liquidation and consists of bad debts on account of the worthlessness of which a deduction was allowed for a prior taxable year. Whether or not the respondent corporation made an assignment of anticipatory income upon the distribution of its dividend in kind depends upon the nature of the property distributed in relation to the capital structure of the corporation. In this case, the charged-off debts no longer represented an asset except in the sense that any vested right to receive income is an asset; the notes had a basis of zero, and were no longer reflected in the capital structure of the corporation. They merely represented potential income to the extent of the tax deduction previously allowed.

The Tax Court distinguished the *Horst* and *Eubank* cases because in them the anticipatory assignments were without consideration, which is not true as to a dividend in kind. We think the question of consideration is not controlling or even important here. The question is one of the realization of income. Property may be disposed of by gift, sale, exchange, or abandonment, among which only abandonment could involve no taxable gain. The distribution of a dividend in kind is none of these. It is a delivery or assignment of property to its equitable owners. In this case, a sale or exchange of the notes would doubtless have resulted in the realization of a taxable gain, but no such disposition was required to realize income. The notes as collected would have been income to the corporation, and they were nonetheless the fruition of economic gain when collected by the assignees. It is the realization of income, rather than the acquisition of the right to receive it, that is the taxable event, and there is no reason why the rule that income tax is not to be avoided by an anticipatory assignment of income shall not apply to dividends. When not received in money or property, realization may occur when

the last step is taken by which one obtains the fruition of the economic gain.

If the bad debts stood in place of income, if the respondent was the owner of them, if it had the power to dispose of them, and if it did dispose of them to its shareholders as a dividend in kind in anticipation of their collection, all of which is conceded· the following from the opinion in *Helvering* v. *Horst, supra*, is strikingly applicable:

> The power to dispose of income is the equivalent of ownership of it. The exercise of that power to procure the payment of income to another is the enjoyment, and hence the realization, of the income by him who exercises it. We have had no difficulty in applying that proposition where the assignment preceded the rendition of the services, *Lucas* v. *Earl*, *supra*; *Burnet* v. *Leininger*, *supra*, for it was recognized in the *Leininger* case that in such a case the rendition of the service by the assignor was the means by which the income was controlled by the donor and of making his assignment effective. But it is the assignment by which the disposition of income is controlled when the service precedes the assignment, and in both cases it is the exercise of the power of disposition of the interest or compensation, with the resulting payment to the donee, which is the enjoyment by the donor of income derived from them.

If, as it has been held, there is no basis for distinguishing between the gift of interest coupons and the gift of salary or commissions, then there is none between interest coupons and notes that represent potential income. It may be said that these notes were worthless, but we know from the evidence in the record that, when the dividend in kind was declared and distributed, these formerly worthless notes had a substantial value and large sums were afterwards collected on them.[1] The income assessed in this case is less than the amounts collected on the notes during the remainder of the taxable year after the dividend was declared.

The notes were assets of the bank, and subject to transfer as other property, but they were not capital assets for income-tax purposes. The amount determined by the Commissioner to be income to the bank consisted of collections on the principal of the debts represented by the notes and perhaps of some interest that had accrued prior to the assignments. The principal was overdue and payable to the bank prior to the dividend declaration. Therefore, in declaring a dividend of the notes and assigning them without recourse, the bank assigned its vested right to receive the income that the notes represented. As the Supreme Court said in *Harrison* v. *Schaffner*, 312 U.S. 579, 581–582:

> In construing these and like provisions in other revenue acts we have uniformly held that they are not so much concerned with the refinements of title as with the actual command over the income which is taxed and the actual benefit for which the tax is paid. See *Corliss* v. *Bowers*, 281 U.S. 376; *Lucas* v. *Earl*, *supra*, *Helvering* v. *Horst*, *supra*; *Helvering* v. *Eubank*, *supra*; *Helvering* v. *Clifford*, *supra*. It was for that reason that in each of those cases it was held that one vested with the right to receive income did not escape the tax by any kind of anticipatory arrangement, however skillfully devised, by which he procures payment of it to another, since, by the exercise of his power to command the income, he enjoys the benefit of the income on which the tax is laid.

Therefore, as a matter of law, under the anticipatory assignment-of-income rule, the respondent's declaration of a dividend, its assignment of the notes, and their subsequent collection, must be treated as if the bank had thereby realized income.

[1] As nearly as may be ascertained from the record, the face value of these notes was $111,254.38 Subsequent to the date of the assignment, Oct. 17, 1942, sixty to seventy per cent of the face value was collected by Price for the stockholders.

The facts indisputably show that the bank was making collections on these notes and declared a dividend only of the notes on which it was expected collections would be made. Over $11,000 was collected in the two-and-a-half months of the taxable year remaining after the dividend declaration. The collections were made at the bank by an officer of the bank. No pro rata distribution to stockholders was effected prior to collections, and the notes were not in any manner apportioned among the stockholders. The dividend in kind was declared and the notes assigned by the respondent with tax consequences in mind and, so far as the record shows, for no other purpose.

Like Banquo's ghost, the question that will not down is this. May a bank detach interest coupons from negotiable bonds owned by it, assign the coupons to its shareholders as a dividend in kind, and avoid the payment of income tax on the interest subsequently collected by the assignee of the coupons? In other words, by means of a dividend in kind, may a corporation avoid income taxes by doing exactly what was done (without success) by an individual by means of a gift in *Helvering* v. *Horst*, 311 U.S. 112? If so, a corporation need not ever again pay an income tax on interest derived from coupons detached from negotiable bonds. To paraphrase, and apply to the instant case, the language of the court in the above case Even though the bank never received the money, it derived money's worth from the disposition of the notes which it used in place of money in procuring a satisfaction that was procurable only by the expenditure of money or money's worth The enjoyment of the economic benefit was realized as completely as it would have been if the bank had collected the notes in dollars and cents and paid the money as a dividend to its shareholders. To say that a bank, which has declared a dividend in kind consisting of notes representing interest or earnings, subsequently paid to its shareholders, has not enjoyed or realized the fruits of its investment or labor, because it has assigned the notes instead of collecting them itself and then paying the proceeds over to its shareholders, "is to affront common understanding and to deny the facts of common experience. Common understanding and experience are the touchstones for the interpretation of the revenue laws." 311 U.S. 117–118

The avoidance of taxes may be perfectly legitimate, but it cannot be done by the anticipatory assignment of notes representing income, as a dividend in kind, and the subsequent collection of said notes by the assignees. The respondent is a banking corporation, organized and operated for profit. The acquisition of profits for its shareholders was the purpose of its creation. The collection of interest on loans was a principal source of its income. The payment of dividends to its shareholders was the enjoyment of its income. A body corporate can be said to enjoy its income in no other way. Like the "life-rendering pelican," it feeds its shareholders upon dividends. Whether they are in the form of notes or money is immaterial if the dividend is out of earnings, or consists of property purchased from earnings or which is regarded as earnings for accounting purposes. The respondent exercised its power to procure payment of its income to another, which was "the enjoyment, and hence the realization," of its income.

The distinction between *General Utilities* v. *Helvering*, *supra*, and this case lies in the difference in the character of the respective properties distributed as dividends in kind; one represented a capital asset, the other represents income. In the

former, the fruit was on the tree; in the latter, the tree itself represents fruit of prior years that was not taxed. The distinction is the same as would have existed in the *Horst* case if the father had given his son the bond with the unearned-interest coupon attached.

Consistency is essential to fairness in income-tax accounting. This is particularly true in respect to bad-debt deductions and recovery exclusions. The worthlessness of a bad debt is a question of fact; the burden of proving it is on the taxpayer. The incentive to claim it as a deduction may be tempered by the certainty that in subsequent years, if recovered, the debt will be treated not as a capital asset but as income.

There remains a question as to the correctness of the Commissioner's determination of the amount of income realized by the respondent upon the subsequent collection by the assignees of the notes distributed to them as a dividend in kind. It is contended that the tax liability, if any, should be measured by the market or intrinsic value of said notes when assigned, rather than (as the Commissioner determined) by the amounts collected less recoveries for which no tax benefit has been received.

Section 115(j) of the Internal Revenue Code [see § 301(b) (1), 1954 Code] provides that, if the whole or any part of a dividend is paid to the shareholder in any medium other than money, the property received shall be included in gross income at its fair market value as of the time that it became income to the shareholder. This paragraph relates to the value of property received by a shareholder as the distributee; it does not apply to the realization of income by the corporation that is distributing the property as a dividend. We are not here determining the tax liability of the respondent's shareholders, and therefore said paragraph is not applicable to the question before us.

To ascertain in this case the amount of income taxable to the respondent, it is necessary to inquire as to the time that the income is realized under the anticipatory-assignment doctrine. Is it when the dividend in kind is declared, when the assignment is made, or when actual payment is received by the shareholder? Mere unrealized appreciation in the value of property does not constitute taxable income; but this principle is not in conflict with the doctrine announced in the *Horst* and *Eubank* cases, in which unquestionably taxable income was involved. Unrealized appreciation, since it is not taxable income, is not covered by the rule as to anticipatory assignments of income. The latter rule is *sui generis;* it applies to debts, including bad debts, to the extent that they represent income. The acquisition of the right to receive payment of a bad debt is not necessarily a taxable event, and therefore the realization of gain by the assignor is not deemed to occur until the debt is paid to the assignee. After assignment and prior to payment the tax liability is incomplete. The rule is founded upon administrative convenience, and operates to postpone the taxable event until realization is consummated by the assignee's receipt of the money. The reasoning underlying the rule, it is said, is the thought that the "taxpayer procured the satisfaction of his wants" by diverting to others the income which he could have received himself, and that thereby he enjoyed the fruits of his labor or investment. Such use of a dividend in kind, where the property distributed represents potential income, is an economic gain to the corporation in the amounts collected less recoveries for which no tax benefit has been received.

Reversed.

SIBLEY, Circuit Judge, concurring.

I concur in the judgment of reversal and the reasoning of the majority opinion, but I wish to express an additional view which seems to me simpler and more fundamental.

It is true that a corporation which is contemplating a sale of its property by which a gain will be realized may, before anything is done by way of sale, decide to distribute the property in kind to its stockholders and escape taxation for the gain which it did not realize. This was successfully done through a dividend in kind, each stockholder receiving his share of property actually divided, in *General Utilities Co.* v. *Helvering*, 296 U.S. 200 [*supra*]. It was successfully done by a distribution to stockholders in liquidation of the corporation in *Howell Turpentine Co.* v. *Commissioner*, 162 F.2d 319. Where, however, the corporation made a contract to sell the property and afterwards called the sale off and conveyed the property to its stockholders as a liquidating dividend and the stockholders carried out the sale as made by the corporation, it was held that a finding was justified that the stockholders were in fact carrying out the corporation's sale. *Commissioner* v. *Court Holding Co.*, 324 U.S. 331.

But the present case involves no sale by a corporation or by its stockholders, but involves the proper tax treatment of a large aggregate of debts due to the corporation which in past years the corporation, on its representation that they were bad debts and a loss, had been permitted to deduct as such with a full resulting tax benefit. This deduction was not of constitutional right, but of legislative grace, and was allowed on terms stated in applicable Regulations. Beginning in 1918 Article 52 of Regulation 45 said.

> Bad debts or accounts charged off because of the fact that they were determined to be worthless, which are subsequently recovered, whether or not by suit, constitute income for the year in which recovered, regardless of the date when the amounts were charged off.

This language was continued down through Regulation 103, Sect. 19.42-1, under the Internal Revenue Code, when the deductions were made and allowed which are now in controversy. The restoration to income of all subsequent recoveries was a condition of the deductions. The making of this adjustment in its tax accounts with the Government became the legal and the moral duty of this corporation. When in the tax year it found it was making collections on these charged-off debts, and would likely collect considerable sums, it was not free in law or morals to evade its tax duty by turning the bad debts over to its stockholders for them to collect. The directors picked out only debts that were regarded as likely to yield collections, keeping those that were wholly bad. They did not divide them among the stockholders, but the five directors turned the hopeful debts over to one of themselves, he being vice-president and cashier of the bank, and he collected in the name of the bank, deposited the collections in the bank, and then later distributed the money to the stockholders. The stockholders returned nothing for taxation till each got his money in later years. I think there was in reality nothing divided as a dividend to the stockholders till the money was paid them, and in reality the bank made the recoveries on the charge-off debts, and the Tax Court ought to have so held. But if this were a real distribution of undivided property to the stockholders, the bank could not thus free itself of the accounting obligation which it assumed in taking the bad debt deductions. For this pur-

pose the receipt of payments by the stockholders is receipt by their corporation. All that was said in *United States* v. *Joliet & Chicago R. Co.*, 315 U.S. 44, as to the force of Regulations and the ineffectualness of anticipating arrangements to evade taxes made between stockholders and their corporation, may be applied to this case. Another instance in which Regulations were held to inhere in deductions so as to require a restoration to income accordingly, though nothing was received in the tax year, is *Sneed* v. *Commissioner*, 119 F.2d 767. (Cert. denied.) This bank had no option to avoid incurring a tax by a lawful course. The course it took was not lawful because of the obligation assumed in taking the deductions with full tax benefits at the time.

JUDGES HOLMES, McCORD, and LEE also concur in the additional views expressed in the above opinion.

HUTCHESON, Circuit Judge, *dissenting*:

I agree with the conclusion of the Tax Court that the distribution to its stockholders of the notes in question was not a realization of income by it. I agree too with the reasons it gave for so concluding. I, therefore, dissent from the opinion of the majority.

WALLER, Circuit Judge, *dissenting*

I think, as did the Tax Court, that this case is controlled by *General Utilities Company* v. *Helvering*, 296 U.S. 200. I think further that even if there were some sort of tax liability to the Bank, it should be measured by the reasonable, or market, value, at the time of the making of the dividend-in-kind, of the charged-off securities, rather than by the collections thereafter made by the stockholders when improved financial conditions, increase in values, enlargement of opportunities, greater availability for refinancing of loans, such as the Court of its own knowledge knows has attended the lush period since the assignments were made, aided the makers in paying obligations which they could not have paid theretofore.

Moreover, I do not think that the doctrine in *Helvering* v. *Horst*, 311 U.S. 112, can rightly be stretched to cover this case for the chief reason that the action of the stockholders in agreeing to accept a dividend-in-kind in lieu of a dividend in a fixed percentage cannot truly be said to be without consideration. True it is that the stockholders owned the Bank, but the law does not contemplate that banks shall be one with their stockholders.

The ascertainment of the correct amount of taxes due on income actually received is already difficult and onerous enough without, through judicial processes, adding to the taxpayer's perplexity and burden by requiring him to compute and pay taxes on income merely anticipated but never received, but which has theretofore been assigned in due and lawful course of business.

I do not consider these assignments as gratuitous transfers of income already earned and readily collectible, such as characterized the interest coupons in the *Horst* case, *supra*. I, therefore, must dissent to the learned and persuasive opinion of the majority in this case.

Note

See § 311(a). The Senate Report p. 247) states:

[Y]our committee does not intend to change existing law with respect to attribution of income of shareholders to their corporation as exemplified for example in the case of *Commissioner* v. *First State Bank of Stratford*.

Section H. Stock Dividends and Recapitalizations

1. Stock Dividends

Note: Section 305(a) of the 1954 Code, relating to distributions by a corporation of its own stock, substantially changes § 115(f)(1) of the 1939 Code.

Section 305(b)(1), relating to distributions of stock in discharge of preference dividends, has no counterpart in the 1939 Code.

Section 305(b)(2), relating to elective distributions of stock, is derived from § 115(f)(2) of the 1939 Code.

Section 307(a) of the 1954 Code, relating to the basis of stock received tax-free, is derived from § 113(a)(19) of the 1939 Code

Section 307(b) of the 1954 Code, relating to the basis of certain stock rights, has no counterpart in the 1939 Code.

The federal income tax treatment of distributions by a corporation of its own stock (and of the rights to acquire its own stock) can be divided into four eras as follows

The first period ended with *Eisner* v. *Macomber*, *supra*, p. 51, holding that § 2(a) of the Revenue Act of 1916, taxing all stock dividends (if covered by earnings and profits) to the extent of their fair market value, was unconstitutional as applied to a distribution of common stock on common stock by a corporation having no other class of stock outstanding. *Eisner* v. *Macomber* should be reviewed at this point.

The second period began with the Revenue Act of 1921, which provided (in response to *Eisner* v. *Macomber*) that "a stock dividend shall not be subject to tax," a provision that was carried forward until the enactment of the Revenue Act of 1936. During this period the Treasury's regulations required the adjusted basis of the old stock to be allocated between the old shares and the dividend shares in the same proportion as their respective market values at the time of distribution. In *Koshland* v. *Helvering*, 298 U.S. 441 (1936), this regulation was held invalid as to a taxpayer who had received a dividend of common stock on non-voting preferred shares. No such distribution was made on the common stock. The Court reasoned that the dividend shares, unlike those in *Eisner* v. *Macomber*, gave "the stockholder an interest different from that which his former stockholdings represented." Therefore, said the Court, the shares were constitutionally taxable when received. The Court then held that the failure of Congress to tax the dividend shares did not authorize the Treasury to allocate part of the basis of the old shares to the dividend shares. Consequently the old shares retained their full basis for determining gain or loss on their disposition.

Besides making clear that *Eisner* v. *Macomber* did not immunize all stock dividends, the *Koshland* case opened up the possibility of an escape from taxation for taxpayers who had accepted the benefit of the regulation in question by allocating part of their original basis to the dividend shares on sales of those shares. It was possible that such taxpayers could claim the full original basis on a later sale of the original shares Not long after the *Koshland* case, the Court held in *Helvering* v. *Gowran*, 302 U.S. 238 (1937), that under the 1921–36 statutes the basis of dividend shares was zero, since they cost the stockholder nothing and were not taxed as income when received. This determination opened up the possibility—the converse of the possible escape from taxation under the *Koshland* case

—that a taxpayer who had complied with the invalidated regulation on selling his original shares (by allocating part of their basis to the retained dividend shares) would now have to use a zero basis on selling the dividend shares, and thus would never recover tax-free his total investment.

To counteract these possible results of the *Koshland* and *Gowran* cases, Congress in 1939 enacted § 113(a) (19) of the 1939 Code, the predecessor of § 307(a) of the 1954 Code. It adopted the rules applied under the invalidated Treasury regulation and also made provision for situations in which income on the sale of either the original or the dividend shares had been computed in a fashion inconsistent with the old regulation. Alvord and Biegel, "Basis Provisions for Stock Dividends under the 1939 Revenue Act," 49 *Yale L.J.* 841 (1940). Under § 117(h) (5) of the 1939 Code [now § 1223(5) of the 1954 Code], also enacted in 1939, the "holding period" of non-taxable dividend shares includes the period during which the original shares were held.

The third era began in 1939 when Congress, in addition to clearing up the debris left by the *Koshland* and *Gowran* cases with respect to stock dividends declared in the earlier years, went on to enact § 115(f) (1) of the 1939 Code:

A distribution made by a corporation to its shareholders in its stock or in rights to acquire its stock shall not be treated as a dividend to the extent that it does not constitute income to the shareholder within the meaning of the Sixteenth Amendment to the Constitution.

Did this section tender the Supreme Court an opportunity to re-examine *Eisner* v. *Macomber* or did it take that case as its starting point? In *Helvering* v. *Griffiths*, 318 U.S. 371 (1943), a majority of the Court held that § 115(f) (1) was not intended to invite a reconsideration of *Eisner* v. *Macomber;* the minority saw such an invitation, accepted it, and expressed the view that *Eisner* v. *Macomber* should be overruled. As § 115(f) (1) was interpreted by the majority, then, "the tax status of a stock dividend now [pre-1954] turns in effect on what would have been unconstitutional under *Eisner* v. *Macomber* if *Eisner* v. *Macomber* had been correct in its premise that a constitutional issue is present." Cohen, Surrey, Tarleau, and Warren, "A Technical Revision of the Federal Income Tax Treatment of Corporate Distributions to Stockholders," 52 *Col. L. Rev* 1, 9–10 (1952).

Just what stock dividends could be taxed under § 115(f) (1) of the 1939 Code, as thus construed, was veiled with obscurity. In *Strassburger* v. *Commissioner,* 318 U.S. 604 (1943), the Supreme Court held (by a 5–3 vote), that a distribution of a newly created issue of non-voting cumulative preferred stock by a corporation that had only common stock outstanding was not taxable. All of the common stock was owned by a single stockholder, the taxpayer, and the Court said:

While the petitioner . . . received a dividend in preferred stock, the distribution brought about no change whatever in his interest in the corporation. Both before and after the event he owned exactly the same interest in the net value of the corporation as before. At both times he owned it all and retained all the incidents of ownership he had enjoyed before.

In *Helvering* v. *Sprouse,* decided at the same time as the *Strassburger* case, the Court held that a distribution of non-voting common stock by a corporation having both voting and non-voting common outstanding was also non-taxable. The non-voting common was distributed to the holders of both the voting and the

non-voting common, but the taxpayer, before the stock dividend, owned only common stock. The government argued that the distribution came within the rule of the *Koshland* case that "where a stock dividend gives the stockholder an interest different from that which his former stock holdings represented he receives income." But the Court (5–3) said:

> We think *Koshland* v. *Helvering*, 298 U.S. 441, 56 S. Ct. 767, 80 L Ed. 1268, 105 A.L.R. 756, distinguishable. That was a case where there were both preferred and common stockholders and where a dividend in common was paid on the preferred. We held, in the circumstances there disclosed, that the dividend was income but we did not hold that any change whatsoever in the character of the shares issued as dividends resulted in the receipt of income. On the contrary the decision was that, to render the dividend taxable as income, there must be a change brought about by the issue of shares as a dividend whereby the proportional interest of the stockholder after the distribution was essentially different from his former interest.

Two more decisions under § 115(f) (1) of the 1939 Code, both involving the same distribution, are of interest. The corporation in question had 4000 shares of Class A common stock and 24,000 of Class B common outstanding, some shareholders held both classes, some held only Class B, and one held only Class A. The distribution consisted of ½ share of Class A on each share of Class A, and ½ share of Class B on each share of Class B. Because the Class A shares were entitled to a $6 dividend before any dividend could be declared on Class B, the effect of the distribution was that the Class A shareholders as a group became entitled to receive $36,000, rather than only $24,000, before the Class B shareholders could receive a dividend. There was a similar worsening in Class B's rights to a liquidating distribution.* The Tax Court held that the stock dividends were taxable. Its decision was reversed as to a stockholder who owned 2% of each class on the ground that his proportionate interest in the corporation was unchanged, because what he lost in his capacity as a holder of Class B stock he gained in his capacity as a Class A stockholder. *Tourtelot* v. *Commissioner*, 189 F.2d 167 (7th Cir. 1951), cert. den. 343 U.S. 901 (1952). When a case involving all of the other stockholders came before the Court of Appeals for the Third Circuit, it first affirmed the Tax Court, distinguishing the *Tourtelot* case because there the taxpayer held both classes in equal proportion. On reargument, however, it reversed the Tax Court, saying of the changes which the distribution effected in the priorities of the respective classes to current and liquidating distributions:

> These were practical, money-wise changes as distinguished from alterations of rights. No changes whatsoever were effected in the strict legal rights of stockholders either *vis-a-vis* each other or the corporation. (*Wiegand* v. *Commissioner*, 194 F.2d 479 (3d Cir. 1952).)

Even if one is not persuaded by this reasoning, it should be noted that the Tax Court's decision had the surprising result that the Class B stockholder, whose position was worsened by the distribution, received a taxable dividend precisely because of that detriment. For more on the pre-1954 status of stock dividends, see Lowndes, "The Taxation of Stock Dividends and Stock Rights," 96 *U. of Pa. L. Rev.* 147 (1947); Rottschaefer, "Present Taxable Status of Stock Dividends in Federal Law," 28 *Minn. L. Rev.* 106 and 163 (1944); *Schmitt* v. *Commissioner*, 208 F.2d 819 (3d Cir. 1954).

---

* At higher levels of corporate income, however, the respective positions of the two classes would come into balance once more

Any hope that the constitutional limits to the taxation of stock dividends will be clearly staked out in the near future was much dampened as the 1954 Code brought on the fourth era in the taxation of stock dividends. While the courts will have to continue to wrestle with pre-1954 distributions under § 115(f) (1) of the 1939 Code, § 305(a) of the 1954 Code reinstates the 1921–36 rule that distributions by a corporation of its own stock or of rights to acquire its own stock are not taxable. See, however, the limitations of § 305(b). The corresponding basis provision, § 307(a), continues the method of allocation first established by the Treasury regulation that was invalidated by the *Koshland* case and reinstated by § 113(a) (19) of the 1939 Code. An exception, to avoid trifling basis adjustments when stock rights are received, is provided by § 307(b). Where stock rights take over (either by election under § 307(b) (2) or because § 307(b) (1) (B) is not satisfied) part of the basis of the stock with respect to which they are distributed, upon exercise their basis will be added to the cost of the stock thus acquired in determining its basis. If stock rights with a basis are allowed to lapse without exercise, the Treasury takes the position that no loss is incurred, and that the shares in respect to which the rights were issued reacquire their original basis. See Note, "Taxing Corporate Distributions of Stock or Property Warrants," 51 *Col. L. Rev.* 496 (1951), G.C.M. 25063, 47–1 C.B. 45.

By virtue of § 312(d), a non-taxable distribution of stock does not reduce the earnings and profits of the distributing corporation Moreover, under § 312(f)(2), if a corporation receives a non-taxable stock distribution from another corporation, the recipient corporation's earnings and profits are not increased thereby.

CHAMBERLIN v. COMMISSIONER

U. S. Court of Appeals, Sixth Circuit, 1953
207 F.2d 462, cert. den. 347 U. S. 918 (1954)

Before SIMONS, Chief Judge, and MCALLISTER and MILLER, Circuit Judges

MILLER, Circuit Judge.

Petitioner C. P. Chamberlin seeks a review of an income tax deficiency determined by the Respondent for the calendar year 1946, and sustained by the Tax Court. In the Tax Court the proceeding was consolidated with the proceedings of five other taxpayers similarly situated, all of which proceedings involved the same factual and legal questions. The taxpayers, all of whom were stockholders of Metal Moulding Corporation, about which this litigation centers, and their respective deficiencies were as follows:

C. P. Chamberlin	$343,650.86
Grace A. Chamberlin, his wife	63,225.55
John H. Toner	19,620.37
Benjamin James Carl	7,244.29
Guy V. Schrock	9,177.83
Robert and Josephine Pierce	14,635.19

The Tax Court upheld the deficiency assessment in each proceeding. . . .

The facts in the main are stipulated and are not in dispute. . . .

The Metal Moulding Corporation, hereinafter referred to as the Corporation, is a Michigan corporation engaged in the business of manufacturing metal mouldings and bright work trim used in the manufacture of automobiles. . . . From 1940 until December 20, 1946, the issued and outstanding common stock totaled 1,002½ shares, of which Chamberlin and his wife together owned 83.8%. . . .

The business of the Corporation prospered, and after paying substantial cash dividends over a period of years, its balance sheet at the end of the first six months in 1946 reflected total assets of $2,488,836.53 and included in current assets $722,-404.56 cash and $549,950 United States Government Bonds and notes.

On December 16, 1946, the Corporation's authorized capital stock was increased from $150,000 to $650,000, represented by 6,500 shares of $100 par value common stock. On December 20, 1946, a stock dividend was declared and distributed of five shares of common for each share of common outstanding, and the Corporation's accounts were adjusted by transferring $501,250 from earned surplus to capital account.

On December 26, 1946, the articles of incorporation were amended so as to authorize, in addition to the 6,500 shares of common stock, 8,020 shares of 4½% cumulative $100 par value preferred stock. On December 28, 1946, a stock dividend was declared of 1⅓ shares of the newly authorized preferred stock for each share of common stock outstanding, to be issued pro rata to the holders of common stock as of December 27, 1946, and the Company's accounts were adjusted by transferring $802,000 from earned surplus to capital account The preferred stock was issued to the stockholders on the same day. Prior to the declaration of the preferred stock dividend, the Corporation at all times had only one class of stock outstanding.

On December 30, 1946, as the result of prior negotiations hereinafter referred to, all of the holders of the preferred stock, except the estate of Edward W. Smith, deceased, which owned 20 shares, signed a "Purchase Agreement," with the Northwestern Mutual Life Insurance Company and The Lincoln National Life Insurance Company, which instrument was also endorsed by the Corporation for the purpose of making certain representations, warranties and agreements. Under the "Purchase Agreement" 4,000 shares of the preferred stock was sold to each of the two insurance companies at a cash price of $100 per share plus accrued dividends from November 1st, 1946 to date of delivery. Pursuant to the "Purchased Agreement" the holders of the preferred stock, with the exception of the estate of Edward W. Smith, delivered their stock certificates endorsed in blank to agents of the two insurance companies, who transferred to C. P. Chamberlin as agent for the stockholders funds for the amount of the purchase price, which Chamberlin distributed to the stockholders in proportion to their interests by delivery of his personal checks. . . .

In the latter part of 1945, the Corporation's attorney and Chamberlin discussed with an investment firm in Chicago the possibility of selling an issue of preferred stock similar to the stock subsequently issued. The Corporation had such a large accumulated earned surplus it was fearful of being subjected to the surtax provided for by Sec. 102 [§ 531 of the 1954 Code], but at the same time Chamberlin, the majority stockholder, was not willing to have the Corporation distribute any substantial portion of its earned surplus as ordinary dividends because his indi-

vidual income was taxable at high surtax rates. It was proposed that the issuance of a stock dividend to the stockholders and the sale of it by the stockholders would enable the stockholders to obtain accumulated earnings of the Corporation in the form of capital gains rather than as taxable dividends. The investment counselor contacted The Lincoln National Life Insurance Company of Fort Wayne, Indiana, and during October 1946, furnished the Insurance Company financial information relative to the Corporation. On November 7, 1946, a representative of the Insurance Company came to Detroit and made an inspection of the plant and properties of the Corporation. On November 20, 1946, The Lincoln National Life Insurance Company's finance committee approved the proposed issue and the purchase of one-half thereof. The Northwestern Mutual Life Insurance Company was contacted for the purpose of participating in the purchase of the preferred stock. It made a detailed investigation of the Corporation and of the terms and conditions of the proposed preferred stock issue, and about two weeks before December 30, 1946, its committee on investments approved the purchase of 4,000 shares of the preferred stock to be issued, and passed the matter over to its legal department for the conclusion of the transaction.

The preferred stock contained the following provisions among others: The holders were entitled to cumulative cash dividends at the rate of $4.50 per annum payable quarterly beginning November 1, 1946; the stock was subject to redemption on any quarterly dividend date in whole or in part at par plus specified premiums and accrued dividends, it was subject to mandatory retirement in amounts not exceeding 2,000 shares on May 1, 1948 and 1,000 on May 1st on each succeeding year, depending upon the Corporation's net earnings for the preceding year, until fully retired on May 1, 1954; in the event of certain defaults, of dividend payments or annual retirements, the holders were entitled to elect a majority of the directors; as long as any preferred shares remained outstanding the consent of the holders of at least 75% thereof was required to validate certain actions, including changing the articles of incorporation or capital structure, the sale of the company's property, or the incurrence of indebtedness for borrowed money in excess of a certain amount; the Corporation could not pay any cash dividend upon any stock junior to the preferred if there was any default in the payment of dividend upon and the annual retirements of the preferred, or if such dividend reduced the net working capital of the Corporation below an amount equal to 150% of the aggregate par value of all outstanding preferred, or $750,000, whichever amount was greater, or reduced the currents assets of the Company to an amount less than 200% of current liabilities. These provisions had been discussed with the Lincoln National Life Insurance Company and some of them, at least, were included in order to satisfy the investment requirements of the two insurance companies.

No agreement of purchase and sale was entered into between any of the petitioners and either of the two insurance companies prior to the "Purchase Agreement" executed on December 30, 1946, but the stockholders and directors of the Corporation took the necessary actions to put the negotiated plan into effect, as hereinabove set out, only after the insurance companies certified their willingness to participate in the purchase, if, as, and when the preferred stock was issued on the terms and conditions prescribed by them and as set out in the Company's charter as amended on December 27, 1946.

In reporting this sale of the preferred stock in their 1946 tax returns, each of

the stockholders reported his proportion of the proceeds from the sale as a net long-term capital gain from the sale of a capital asset held for more than six months, used a substituted basis as the cost basis of the preferred stock, and in determining the period the preferred stock had been held included the holding period of the common stock upon which the preferred stock dividend was declared

The Respondent ruled that the preferred stock constituted a dividend taxable as ordinary income, and further determined that the value was the amount received on the sale of the shares against which the expenses incurred in the sale were a valid deduction. This ruling resulted in the deficiency assessments involved in these consolidated proceedings.

Before considering the ruling of the Tax Court it is well to briefly review some of the Supreme Court decisions involving the taxability of stock dividends. . . .

In *Helvering* v. *Sprouse*, 318 U.S. 604, 63 S. Ct. 791, 87 L Ed. 1029, and in *Strassburger* v. *Commissioner of Internal Revenue*, 318 U.S. 604, 63 S. Ct. 791, 87 L. Ed. 1029, the Court restated the rule that in order to render a stock dividend taxable as income there must be a change brought about by the issue of shares as a dividend whereby the proportional interest of the stockholder after the distribution was essentially different from his former interest. The rule was applied to the facts in the *Strassburger* case where preferred stock was created and distributed as a stock dividend to a stockholder who owned the entire outstanding common stock, the Court holding that the preferred stock dividend did not constitute taxable income.

The Commissioner supported his assessment on the ground that although the preferred stock was issued as a non-taxable dividend, a concerted plan to sell the dividend shares was formulated prior to the distribution of such shares, which, coupled with actual sale immediately after receipt and the payment of the proceeds of sale direct to the stockholders constituted a taxable dividend to the extent of available earnings. He also took the position that the plan and the immediate sale resulted in a change in the proportional interest of the stockholders which was sufficient to exclude it from the rulings in the Supreme Court cases above referred to. . . .

The Tax Court held that the issue of whether the stock dividend constituted income to the stockholders should be determined from a consideration of all the facts and circumstances surrounding the issuance of the dividend and not by a consideration limited to the characteristics of the stock declared as a dividend; that each case involving a stock dividend must be decided upon its own facts and circumstances as establishing whether the receipt of a particular kind of stock dividend was in fact taxable; that such a decision did not rest upon matters of form or nomenclature attending a stock dividend distribution but rather upon the real substance of the transaction involved, that disregarding the circumstances and terms of the issue it might be said that as a matter of form the stock dividend constituted one which fell within the *Strassburger* case, but that considering the real substance of the transaction it was of the opinion that the stock dividend was not in good faith for any bona fide corporate business purpose, and that the attending circumstances and conditions under which it was issued made it the equivalent of a cash dividend distribution out of available earnings, thus con-

stituting ordinary taxable income in the amount of the value of the preferred shares received. The Court also said that the real purpose of the issuance of the preferred shares was concurrently to place them in the hands of others not then stockholders of the Corporation, thereby substantially altering the common stockholders' pre-existing proportionate interests in the Corporation's net assets and thereby creating an entirely new relationship amongst all the stockholders and the Corporation. One judge concurred in the result without separate opinion; one judge concurred in a separate opinion which did not concur in the reasoning of the majority opinion, and a third judge wrote a dissenting opinion.

In our opinion, the declaration and distribution of the preferred stock dividend, considered by itself, falls clearly within the principles established in *Towne* v. *Eisner*, *supra*, and *Eisner* v. *Macomber*, *supra*, and is controlled by the ruling in the *Strassburger* case. Accordingly, as a preliminary matter, we do not agree with the Tax Court's statement that the stock dividend is taxable because as a result of the dividend and immediate sale thereafter it substantially altered the common stockholders' pre-existing proportional interests in the Corporation's net assets The sale to the insurance companies of course resulted in such a change, but the legal effect of the dividend with respect to rights in the corporate assets is determined at the time of its distribution, not by what the sockholders do with it after its receipt. In *Helvering* v. *Griffiths*, *supra*, 318 U.S. 371, at page 394, 63 S. Ct., at page 648, 87 L. Ed. 843, the Court pointed out· "at the latest the time of receipt of the dividend is the critical one for determining taxability." In none of the Supreme Court cases referred to above is it suggested that events subsequent to the distribution have any bearing on whether the stockholder's proportional interest is changed. The fact that events occur in quick succession does not by itself change their legal effect. *Biddle Avenue Realty Corp.* v. *Commissioner*, 6 Cir., 94 F.2d 435. It seems clear to us that if taxability exists it is not because of the change in pre-existing proportional interests caused by a later sale, but by reason of the other ground relied upon by the Tax Court, namely, that viewed in all its aspects it was a distribution of cash rather than a distribution of stock. That this is the real basis of the ruling appears from the statement in the opinion that "disregarding the circumstances and terms of the issue, it might be said as a matter of form the stock dividend constituted one which fell within the *Sprouse* and *Strassburger* cases. . . . However, . . , not form but the real substance of the transaction is controlling"

The general principle is well settled that a taxpayer has the legal right to decrease the amount of what otherwise would be his taxes, or altogether avoid them, by means which the law permits. . . .

It is equally well settled that this principle does not prevent the Government from going behind the form which the transaction takes and ascertaining the reality and genuineness of the component parts of the transaction in order to determine whether the transaction is really what it purports to be or is merely a formality without substance which for tax purposes can and should be disregarded. . . .

The question accordingly presented is not whether the overall transaction, admittedly carried out for the purpose of avoiding taxes, actually avoided taxes which would have been incurred if the transaction had taken a different form,

but whether the stock dividend was a stock dividend in substance as well as in form.

No question is raised about the legality of the declaration of the dividend. Respondent does not contend that proper corporate procedure was not used in creating the preferred stock and in distributing it to the stockholders in the form of a dividend. If the transaction had stopped there we think it is clear that the dividend would not have been taxable in the hands of the stockholders. *Strassburger* v. *Commissioner, supra.* Whether the declaration of the dividend was in furtherance of any corporate business purpose or was the result of correct judgment and proper business policy on the part of the management, we believe is immaterial on this phase of the case. The Supreme Court cases in no way suggest that the taxability of a stock dividend depends on the purpose of its issuance or the good or bad judgment of the directors in capitalizing earnings instead of distributing them. The decisions are based squarely upon the proportional interest doctrine. See also *Tourtelot* v. *Commissioner of Internal Revenue,* 7 Cir., 189 F.2d 167; *Wiegand* v. *Commissioner of Internal Revenue,* 3 Cir., 194 F.2d 479. In *Dreyfuss* v. *Manning, D.C.N.J.,* 44 F. Supp. 383, a stock dividend of preferred stock, declared solely for the purpose of avoiding taxes on undistributed net income, was held non-taxable, which ruling apparently was not appealed by the Commissioner. The presence or absence of a corporate business purpose may play a part in determining whether a stock dividend is a bona fide one, one in substance as well as in form, but it does not by itself change an otherwise valid dividend into an invalid one. A stock dividend, legally created and distributed, which is a dividend in substance as well as in form, does not change from a non-taxable dividend into a taxable one because of the purpose of its issuance or on account of the good or bad judgment of the directors in declaring it. *Eisner* v. *Macomber, supra,* 252 U.S. at page 211, 40 S Ct. at page 194.

Nor is there any question about the genuineness and unconditional character of the sale of the preferred stock by the stockholders who received it to the two insurance companies. The facts show conclusively that title passed irrevocably from the stockholders to the insurance companies, and that the sellers received in cash without restriction a full consideration, the adequacy of which respondent does not question. But respondent contends that the sale of the stock following immediately upon its receipt resulted in the stockholder acquiring cash instead of stock, thus making it a taxable dividend under Secs 22(a) and 115(a), Internal Revenue Code. There are two answers to this contention.

A non-taxable stock dividend does not become a taxable cash dividend upon its sale by the recipient. On the contrary, it is a sale of a capital asset. *Eisner* v. *Macomber,* 252 U.S. 189, 212, 40 S. Ct. 189; *Miles* v. *Safe Deposit & Trust Co.,* 259 U.S. 247, 42 S. Ct. 483, 66 L. Ed. 923. The rulings in those cases make it clear that its character as a capital asset is in no way dependent upon how long it is held by the taxpayer before its sale. In none of the Supreme Court cases referred to above, dealing with the taxability of stock dividends, was the length of the holding period considered as a factor. Obviously, if the non-taxability of a stock dividend rests solely upon the principle that it does not alter the pre-existing proportionate interest of any stockholder or increase the intrinsic value of his holdings, the disposition of the stock dividend by the stockholder thereafter is not a

factor in the determination. See also *Insull* v. *Commissioner*, 7 Cir., 87 F.2d 648, *Silas H. Burnham*, 29 B.T.A. 605.

The foregoing conclusion is supported by Sec. 117(h)(5), Internal Revenue Code, [§ 1223(5), 1954 Code] which provides that for the purpose of determining whether a non-taxable stock dividend which has been sold is a long-term capital gain there shall be included in the holding period the period for which the taxpayer held the stock in the distributing corporation prior to the receipt of the stock dividend. This necessarily recognizes that a stock dividend will often be sold before the expiration of six months after its receipt, and makes no distinction between a stock dividend held one day or for any other period less than six months. Likewise, Sec. 39.113(a)(19)-1, Treasury Regulations 118, in establishing the cost basis of a non-taxable stock dividend which has been sold for a gain or loss, makes no distinction between a stock dividend sold immediately after receipt and one held a long period of time before sale.

The other answer to the contention is that although the stockholder *acquired* money in the final analysis, he did not *receive* either money or property *from* the corporation. Sec. 115(a), Internal Revenue Code, in dealing with taxable dividends, defines a dividend as "any distribution *made by a corporation* to its shareholders, whether in money or in other property . . . out of its earnings or profits. . . ." (Emphasis added.) The money he received was received from the insurance companies. It was not a "distribution" by the corporation declaring the dividend, as required by the statute.

We come then to what in our opinion is the dominant and decisive issue in the case, namely, whether the stock dividend, which, by reason of its redemption feature, enabled the Corporation to ultimately distribute its earnings to its stockholders on a taxable basis materially lower than would have been the case by declaring and paying the usual cash dividend, was a bona fide one, one in substance as well as in form. . . .

It seems clear that it was an issue of stock in substance as well as in form. According to its terms, and in the absence of a finding that it was immediately or shortly thereafter redeemed at a premium, we assume that a large portion of it has remained outstanding over a period of years with some of it still unredeemed after nearly seven years. It has been in the hands of the investing public, free of any control by the corporation over its owners, whose enforceable rights with respect to operations of the corporation would not be waived or neglected. Substantial sums have been paid in dividends. The insurance companies bought it in the regular course of their business and have held it as approved investments. For the Court to now tell them that they have been holding a sham issue of stock would be most startling and disturbing news.

It also seems clear that the insurance companies were not purchasers in form only without acquiring any real interest in the property conveyed. The character of the transaction as a bona fide investment on the part of the insurance companies is not challenged by the respondent. The element of a formal conduit without any business interest is entirely lacking.

If the transaction lacks the good faith necessary to avoid the assessment it must be because of the redemption feature of the stock, which, in the final analysis, is what ultimately permitted the distribution of the corporate earnings and is the

key factor in the overall transaction. Redemption features are well known and often used in corporate financing. If the one in question was a reasonable one, not violative of the general principles of bona fide corporate financing, and acceptable to experienced bona fide investors familiar with investment fundamentals and the opportunities afforded by the investment market we fail to see how a court can properly classify the issue, by reason of the redemption feature, as lacking in good faith or as not being what it purports to be. The insurance companies, conservative, experienced investors, analyzed the stock issue very carefully, provisions were required to make it conform to sound investment requirements, and each of the two companies, acting independently of the other, purchased a very substantial amount in the regular course of their investment purchases. If the redemption feature was unreasonable or not in accord with generally accepted investment principles the stock would not have been approved as an investment and purchased by the two insurance companies. In our opinion, the redemption feature, qualified as it was with respect to premiums, amounts subject to redemption in each year, and the length of time the stock would be outstanding, together with the acceptance of the stock as an investment issue, did not destroy the bona fide quality of the issue. We cannot say that the preferred stock was not in fact what it purported to be, namely, an issue of stock in substance as well as in form

Each case necessarily depends upon its own facts. The facts in this case show tax avoidance, and it is so conceded by petitioner. But they also show a series of legal transactions, no one of which is fictitious or so lacking in substance as to be anything different from what it purports to be. Unless we are to adopt the broad policy of holding taxable any series of transactions, the purpose and result of which is the avoidance of taxes which would otherwise accrue if handled in a different way, regardless of the legality and realities of the component parts, the tax assessed by the Commissioner was successfully avoided in the present case. We do not construe the controlling decisions as having adopted that view. . . .

In deciding this case it must be kept in mind that it does not involve a ruling that the profit derived from the sale of the stock dividend is or is not taxable income. Such profit is conceded to be taxable. The issue is whether it is taxable as income from a cash dividend or as income resulting from a long-term capital gain. Accordingly, it is not the usual case of total tax avoidance. Congress has adopted the policy of taxing long-term capital gains differently from ordinary income. By Sec. 115(g), Internal Revenue Code, it has specifically excluded certain transactions with respect to stock dividends from the classification of a capital gain. The present transaction is not within the exclusion. If the profit from a transaction like the one here involved is to be taxed at the same rate as ordinary income, it should be done by appropriate legislation, not court decision.

The judgment is reversed and the case remanded to the Tax Court for proceedings consistent with the views expressed herein

Note

1. Section 306 of the 1954 Code is aimed squarely at the *Chamberlin* type of preferred stock "bail-out." The preferred stock received as a dividend in the *Chamberlin* case would be (if distributed after § 306 took effect) "section 306 stock" under § 306 (c)(1)(A) and § 306(c)(2). As a consequence, a sale of the preferred stock by one of the stockholders would produce ordinary income under § 306(a)(1) to the extent of the stock's share of the corporation's earnings and profits at the time it was issued.

In the *Chamberlin* case, the stock was worth $100 per share when issued and this amount was fully covered by earnings and profits, therefore, on a sale of the stock the proceeds would be ordinary income up to $100, and the balance, if any, would be taxed as a capital gain to the extent that it exceeded the stock's adjusted basis.* If "section 306 stock" is not sold but is instead redeemed by the corporation, its redemption is to be treated like an ordinary distribution, so that ordinary income will be received to the extent of the corporation's earnings and profits at the time of redemption. The proceeds of a sale, on the other hand, will be ordinary income to the extent of the stock's ratable share of earnings and profits when it was issued, even though the corporation has no earnings and profits when the stock is sold, and if the corporation has earnings and profits at that time, they are not reduced despite the fact that the shareholder is required to report ordinary income on the sale. Thus, to revert to the *Chamberlin* case, the sale of "section 306 stock" by the recipients would have been taxed as an ordinary dividend, but the corporation's earnings and profits account would not reflect this fact, and a subsequent distribution of the very earnings and profits that caused the preferred stock to be treated as "section 306 stock" will also be taxed as ordinary income to the stockholders. If they had caused the corporation to redeem their "section 306 stock," on the other hand, they would have realized ordinary income to the extent of earnings and profits at the time of redemption, but the corporate earnings and profits account would be reduced accordingly. Whether the stock is sold or redeemed, however, the adjusted basis of the "section 306 stock" will often not be recovered Compare the status of stock redeemed under § 302(d), *supra*, p. 505.

It will be noted that § 306 does not require any prearranged plan to sell the stock or to cause its redemption

The statute moderates the draconic rule of § 306(a) with several exceptions. If the stockholder disposes of his † entire stock interest in the corporation under circumstances set out in § 306(b)(1), he can avoid ordinary income treatment. A redemption of the "section 306 stock" in partial or complete liquidation will also relieve him of the special rules of § 306. With respect to this exception, § 306(b)(2), the Senate Report states (p. 243)

> In the case of a partial liquidation your committee contemplates a contraction of the corporate business so that it is immaterial that the distribution in partial contraction is with respect to section 306 stock. A bona fide contraction of the corporate business is not considered a means of distributing corporate earnings to shareholders at capital gains rates.

See *supra*, p. 504, on the relation of the term "partial liquidation" to a corporate contraction. An exchange of "section 306 stock" in a nontaxable transaction (such as a tax-free reorganization or a § 1036 exchange) is also excepted from the general rule of § 306(a), but the stock received on the exchange will ordinarily become "section 306 stock", and its disposition will be subject to the same rules that would have governed a disposition of the "section 306 stock" given up. Finally, § 306(b)(4) excepts transactions where it is established to the satisfaction of the Secretary of the Treasury that tax avoidance was not a principal purpose. This exception includes "isolated dispositions of section 306 stock by minority stockholders who do not in the aggregate have control of the distributing corporation" (S. Rept. p. 243), as well as dispositions of "section 306 stock" by stockholders who have previously disposed of, or simultaneously dispose of, the stock on which the "section 306 stock" was issued

Note that common stock distributed on common stock is not "section 306 stock." § 306(c)(1)(A). Why not? What *is* "common stock"? Why should common stock received by a shareholder who owns *preferred* stock be treated as "section 306 stock"?

* There is a conflict on this point between the statute. § 306(a)(1)(B), which permits recovery of basis (after the stock's ratable share of earnings and profits has been taxed as ordinary income), and the example in the Senate Report (p 242), which assumes that the entire excess is taxed as capital gain. Apparently the stock would have an allocated basis by virtue of § 307(a).

† The constructive ownership rules of § 318(a) are applicable.

2. For discussions of the pre-1954 law, which by virtue of § 306(h) remains applicable to dispositions and redemptions of stock received before the new Code took effect, see DeWind, "Preferred Stock Bail-Outs and the Income Tax," 62 *Harv. L. Rev.* 1126 (1949), Darrell, "Recent Developments in Nontaxable Reorganizations and Stock Dividends," 61 *Harv. L. Rev.* 958 (1948); Kanter, "The Present Tax Status of Stock Dividends," 31 *Taxes* 418 (1953).

3. The problem of the preferred stock "bail-out" is not new. Note the parenthetical phrase in § 115(g) of the 1939 Code, quoted in the footnote to the *Roberts* case, *supra*, p. 496 The prototype of § 115(g), enacted in 1921, was directed *exclusively* at the redemption of shares that had been issued as stock dividends. The parenthetical phrase, subjecting redemptions to the test of § 115(g) whether the stock was issued as a dividend or not, was enacted in 1926, among other reasons for its enactment was a realization that a corporation wishing to distribute cash at capital gains rates might redeem some of its originally issued stock on a pro rata basis, either getting along thereafter with a smaller stated capital or replacing the redeemed stock with a stock dividend at a subsequent time. For some time after 1926, however, the courts, influenced by § 115(g)'s original purpose, were reluctant to apply it to the redemption of shares that had not been issued as a stock dividend. In the course of time, however, the courts departed more and more frequently from this restrictive construction. Bittker and Redlich, "Corporate Liquidations and the Income Tax," 5 *Tax L. Rev.* 437, 466–468 (1950)

2. *Recapitalizations*

> ***Note.*** **Section 354(a)(1) of the 1954 Code, relating to the recognition of gain or loss on exchanges of stock or securities in corporate reorganizations, is identical with § 112(b)(3) of the 1939 Code.**
>
> **Section 354(a)(2) of the 1954 Code, imposing a limitation on the "general rule" of § 354(a)(1), has no counterpart in the 1939 Code.**
>
> **Section 368(a)(1)(E) of the 1954 Code, defining "reorganization" to include a "recapitalization," is identical with § 112(g)(1)(E) of the 1939 Code.**

While the tax status of stock dividends has varied from time to time, it has always been clear that a distribution of its own *debt* securities by a corporation with earnings and profits is a taxable dividend. But the status of debt securities issued by a corporation in the course of a corporate *recapitalization* has been less clear.

Before the 1954 Code was enacted, § 112(b)(3) of the 1939 Code provided, as does the "general rule" laid down in § 354(a)(1) of the 1954 Code, that no gain or loss was to be recognized if stock or securities of a corporation that was a party to a "reorganization" were exchanged for other stock or securities of the same corporation Section 112(g)(1)(E) of the 1939 Code, like § 368(a)(1)(E) of the 1954 Code, defined "reorganization" to include a "recapitalization." Suppose, then, that a corporation "recapitalized" by calling in its outstanding common stock and issuing in exchange other common stock (with a different par value or some other alteration of rights) plus bonds, debentures, or notes? Was the transaction a tax-free exchange of the old stock for the new stock and bonds or other securities? A taxable sale or exchange of the old stock? A dividend of the bonds or other securities? The case that follows considers this problem.

The effect of a statutory change in 1954 is taken up in the note that follows the case.

BAZLEY v. COMMISSIONER

U.S. Supreme Court, 1947, 331 U.S. 737

MR. JUSTICE FRANKFURTER delivered the opinion of the Court.

The proper construction of provisions of the Internal Revenue Code relating to corporate reorganizations is involved in both these cases. Their importance to the Treasury as well as to corporate enterprise led us to grant certiorari, 329 U.S 695, 67 S. Ct. 62; 329 U.S. 701, 67 S. Ct. 77. While there are differences in detail to which we shall refer, the two cases may be disposed of in one opinion.

In the *Bazley* case, No. 287, the Commissioner of Internal Revenue assessed an income tax deficiency against the taxpayer for the year 1939. Its validity depends on the legal significance of the recapitalization in that year of a family corporation in which the taxpayer and his wife owned all but one of the Company's one thousand shares. These had a par value of $100. Under the plan of reorganization the taxpayer, his wife, and the holder of the additional share were to turn in their old shares and receive in exchange for each old share five new shares of no par value, but of a stated value of $60, and new debenture bonds, having a total face value of $400,000, payable in ten years but callable at any time. Accordingly, the taxpayer received 3,900 shares of the new stock for the 798 shares of his old holding and debentures in the amount of $319,200. At the time of these transactions the earned surplus of the corporation was $855,783.82.

The Commissioner charged to the taxpayer as income the full value of the debentures. The Tax Court affirmed the Commissioner's determination, against the taxpayer's contention that as a "recapitalization" the transaction was a tax-free "reorganization" and that the debentures were "securities in a corporation a party to a reorganization," "exchanged solely for stock or securities in such corporation" "in pursuance of a plan of reorganization," and as such no gain is recognized for income tax purposes. I.R.C. §§ 112(g)(1)(E) and 112(b)(3). The Tax Court found that the recapitalization had "no legitimate corporate business purpose" and was therefore not a "reorganization" within the statute. The distribution of debentures, it concluded, was a disguised dividend, taxable as earned income under §§ 22(a) and 115(a) and (g). 4 T.C. 897. The Circuit Court of Appeals for the Third Circuit, sitting en banc, affirmed, two judges dissenting. 155 F.2d 237.

Unless a transaction is a reorganziation contemplated by § 112(g), any exchange of "stock or securities" in connection with such transaction, cannot be "in pursuance of the plan of reorganization" under § 112(b) (3). While § 112(g) informs us that "reorganization" means, among other things, "a recapitalization," it does not inform us what "recapitalization" means. "Recapitalization" in connection with the income tax has been part of the revenue laws since 1921. Congress has never defined it and the Treasury Regulations shed only limited light. Treas Reg. 118, Sec. 39.112(g). One thing is certain. Congress did not incorporate some technical concept, whether that of accountants or of other specialists, into

§ 112(g), assuming that there is agreement among specialists as to the meaning of recapitalization. And so, recapitalization as used in § 112(g) must draw its meaning from its function in that section. It is one of the forms of reorganization which obtains the privileges afforded by § 112(g). Therefore, "recapitalization" must be construed with reference to the presuppositions and purpose of § 112(g). It was not the purpose of the reorganization provision to exempt from payment of a tax what as a practical matter is realized gain. Normally, a distribution by a corporation, whatever form it takes, is a definite and rather unambiguous event. It furnishes the proper occasion for the determination and taxation of gain. But there are circumstances where a formal distribution, directly or through exchange of securities, represents merely a new form of the previous participation in an enterprise involving no change of substance in the rights and relations of the interested parties one to another or to the corporate assets. As to these, Congress has said that they are not to be deemed significant occasions for determining taxable gain.

These considerations underlie § 112(g) and they should dominate the scope to be given to the various sections, all of which converge toward a common purpose. Application of the language of such a revenue provision is not an exercise in framing abstract definitions. In a series of cases this Court has withheld the benefits of the reorganization provision in situations which might have satisfied provisions of the section treated as inert language, because they were not reorganizations of the kind with which § 112, in its purpose and particulars, concerns itself. See *Pinellas Ice & Cold Storage Co.* v. *Commissioner*, 287 U.S 462, 53 S. Ct. 257, 77 L. Ed. 428, *Gregory* v. *Helvering*, 293 U.S. 465, 55 S. Ct. 266, 79 L Ed. 596, 97 A.L.R. 1355, *Le Tulle* v. *Scofield*, 308 U.S. 415, 60 S. Ct. 313, 84 L. Ed. 355.

Congress has not attempted a definition of what is recapitalization and we shall follow its example. The search for relevant meaning is often satisfied not by a futile attempt at abstract definition but by pricking a line through concrete applications. Meaning frequently is built up by assured recognition of what does not come within a concept the content of which is in controversy. Since a recapitalization within the scope of § 112 is an aspect of reorganization, nothing can be a recapitalization for this purpose unless it partakes of those characteristics of a reorganization which underlie the purpose of Congress in postponing the tax liability.

No doubt there was a recapitalization of the Bazley corporation in the sense that the symbols that represented its capital were changed, so that the fiscal basis of its operations would appear very differently on its books. But the form of a transaction as reflected by correct corporate accounting opens questions as to the proper application of a taxing statute; it does not close them. Corporate accounting may represent that correspondence between change in the form of capital structure and essential identity in fact which is of the essence of a transaction relieved from taxation as a reorganization. What is controlling is that a new arrangement intrinsically partake of the elements of reorganization which underlie the Congressional exemption and not merely give the appearance of it to accomplish a distribution of earnings. In the case of a corporation which has undistributed earnings, the creation of new corporate obligations which are transferred to stockholders in relation to their former holdings, so as to produce, for all

practical purposes, the same result as a distribution of cash earnings of equivalent value, cannot obtain tax immunity because cast in the form of a recapitalization-reorganization. The governing legal rule can hardly be stated more narrowly. To attempt to do so would only challenge astuteness in evading it. And so it is hard to escape the conclusion that whether in a particular case a paper recapitalization is no more than an admissable [inadmissable?] attempt to avoid the consequences of an outright distribution of earnings turns on details of corporate affairs, judgment on which must be left to the Tax Court. See *Dobson* v. *Commissioner*, 320 U.S. 489, 64 S. Ct. 239, 88 L. Ed. 248.

What have we here? No doubt, if the Bazley corporation had issued the debentures to Bazley and his wife without any recapitalization, it would have made a taxable distribution. Instead, these debentures were issued as part of a family arrangement, the only additional ingredient being an unrelated modification of the capital account. The debentures were found to be worth at least their principal amount, and they were virtually cash because they were callable at the will of the corporation which in this case was the will of the taxpayer. One does not have to pursue the motives behind actions, even in the more ascertainable forms of purpose, to find, as did the Tax Court, that the whole arrangement took this form instead of an outright distribution of cash or debentures, because the latter would undoubtedly have been taxable income whereas what was done could, with a show of reason, claim the shelter of the immunity of a recapitalization-reorganization.

The Commissioner, the Tax Court and the Circuit Court of Appeals agree that nothing was accomplished that would not have been accomplished by an outright debenture dividend. And since we find no misconception of law on the part of the Tax Court and the Circuit Court of Appeals, whatever may have been their choice of phrasing, their application of the law to the facts of this case must stand. A "reorganization" which is merely a vehicle, however elaborate or elegant, for conveying earnings from accumulations to the stockholders is not a reorganization under § 112. This disposes of the case as a matter of law, since the facts as found by the Tax Court bring them within it. And even if this transaction were deemed a reorganization, the facts would equally sustain the imposition of the tax on the debentures under Sec. 112 (c) (1) and (2). * *Commissioner* v. *Estate of Bedford*, 325 U.S. 283, 65 S. Ct. 1157, 89 L. Ed. 1611.

In the *Adams* case, No. 209, the taxpayer owned all but a few of the 5914 shares of stock outstanding out of an authorized 6000, par value $100. By a plan of reorganization, the authorized capital was reduced by half, to $295,700, divided into 5914 shares of no par value but having a stated value of $50 per share. The 5914 old shares were cancelled and the corporation issued in exchange therefor 5914 shares of the new no-par common stock and 6 per cent 20 year debenture bonds in the principal amount of $295,700. The exchange was made on the basis of one new share of stock and one $50 bond for each old share. The old capital account was debted in the sum of $591,400, a new no-par capital account was credited with $295,700, and the balance of $295,700 was credited to a "Debenture Payable" account. The corporation at this time had accumulated earnings available for distribution in a sum not less than $164,514.82, and this account was left unchanged.

* §§ 356(a) and (b) of the 1954 Code. [Ed.]

At the time of the exchange, the debentures had a value not less than $164,208.82.

The Commissioner determined an income tax deficiency by treating the debenture bonds as a distribution of the corporation's accumulated earnings. The Tax Court sustained the Commissioner's determination, 5 T.C. 351, and the Circuit Court of Appeals affirmed. 155 F 2d 246. The case is governed by our treatment of the *Bazley* case. The finding by the Tax Court that the reorganization had no purpose other than to achieve the distribution of the earnings. is unaffected by the bookkeeping detail of leaving the surplus account unaffected. See § 115(b), and *Commissioner* v *Wheeler*, 324 U S. 542, 546, 65 S Ct 799, 801, 89 L Ed 1166

Other claims raised have been considered but their rejection does not call for discussion

Judgments affirmed.

Mr Justice Douglas and Mr. Justice Burton dissent in both cases for the reasons stated in the joint dissent of Judges Maris and Goodrich in the court below *Bazley* v *Commissioner*, 3 Cir., 155 F 2d 237, 244.

Note

1. The "general rule of § 354(a)(1) of the 1954 Code, which is identical with § 112(b)(3) of the 1939 Code, is subject to the limitation of § 354(a)(2)—it is made inapplicable if the principal amount of any securities received on the exchange is greater than the principal amount of the securities (if any) surrendered. In the *Bazley* case the stockholders did not surrender any "securities" Suppose they had owned both bonds and stock, and had surrendered both classes in exchange for new stock and new bonds of the same principal amount but with a different interest rate, maturity, or priority. Would the "general rule" of § 354(a)(1) be applicable, or could a court find that the new bonds were (in the language of the *Bazley* case) "virtually cash because they were callable at the will of the corporation which in this case was the will of the taxpayer"? Or that the exchange did not partake "of those characteristics of a reorganization which underlie the purpose of Congress in postponing the tax liability"?

Where, as in the *Bazley* case, no securities were surrendered, the effect of § 354(a)(2), in conjunction with § 356(d), is that the securities received on the exchange are "boot" Would the gain be taxed under § 356(a)(1) or under § 356(a)(2)? If the taxpayer's basis for the stock he gave up was equal to or greater than the value of the stock and securities he received in exchange, could the bonds be taxed as a dividend under the 1954 Code?

2. The Court says that Congress has determined that gain and loss shall not be recognized 'where a formal distribution, directly or through an exchange of securities, represents merely a new form of the previous participation in an enterprise, involving no change of substance in the rights and relations of the interested parties one to another or to the corporate assets" Why is this not an apt description of the *Bazley* and *Adams* recapitalizations? Is it not more applicable to these exchanges than to an exchange in the course of a corporate merger or consolidation, both of which are included in the term 'reorganization" by § 368(a)(1)(A)?

3 The *Bedford* case, cited by the Court, involved these facts: Under a recapitalization, a shareholder exchanged 3,000 shares of cumulative preferred stock (par value $100) for 3,500 shares of cumulative preferred stock (par value $75), 1,500 shares of common stock (par value $1), and $45,240 in cash. The shareholder's gain (the difference between the adjusted basis of the shares given up and the value of the stock plus the cash received) was $139,740. The corporation's "earnings and profits" were sufficient to cover the entire cash distribution. It was admitted by the government that the transaction was a reorganization exchange, and it was admitted by the taxpayer that

the cash was "boot." The only issue was whether under what is now § 356(a)(1) and (2) the "boot" should be taxed as capital gain or as a dividend. The Court, admitting that the matter "is not wholly free from doubt," concluded that because the corporation had earnings and profits, the distribution of cash had "the effect of the distribution of a taxable dividend." Its conclusion should be compared with the way in which the courts have construed the phrase "essentially equivalent to the distribution of a taxable dividend" under § 115(g) of the 1939 Code, *supra*, pp. 495-504.

4. It has been seen previously that on original organization corporations often issue bonds or debentures to the incorporators, instead of only stock, so that the corporation can lay a basis for the deduction of interest under § 163. Moreover, the bonds can be retired at capital gains rates under § 1232, whereas the redemption of stock would open the Pandora's box of § 302. In addition, an accumulation of surplus by the corporation to pay off the indebtedness, unlike an accumulation for the purpose of redeeming stock, may be permissable under § 531, *infra*, p. 581. The *Bazley* case and § 354(a)(2) mean that a corporation which does not issue debt securities for these purposes to its stockholders at the time of organization will not be able to rectify its error later on.

Does the *Bazley* case also threaten the corporation which issues bonds or other evidences of indebtedness at the time of organization? Note the statement that the debentures "were virtually cash." Does this mean that they might be regarded as "boot" rather than "securities" if issued in a § 351 transaction?

SEIDE v. COMMISSIONER

Tax Court of the U.S., 1952
18 T.C. 502

RAUM, Judge: The New Jersey Publishing Company had three classes of stock outstanding in August 1942: 1,600 shares of voting common, 2,500 shares of non-voting common, 3,200 shares of non-voting 8 per cent cumulative preferred having a par value of $100. The shares of stock were held as follows:

Owner	Voting Common	Non-Voting Common	Preferred
Daisy Seide		850	1,300
Harold Seide	200	300	300
Joan Fagan Trust		200	400
Lois Fagan Trust		200	400
Frederick A. Seide	600	100	
Arthur L. Fagan	800	100	
Elizabeth M. Fagan		500	
Arthur L. Fagan Jr., Trust		250	
Elisabeth Fagan			160
Marilyn Fagan			160
Robert A. Fagan			160
Peter S. Fagan			160
Constance A. Fagan			160
Total	1,600	2,500	3,200

Pursuant to a plan of readjustment of its corporate structure, the Company issued a total of $320,000 face amount 8 per cent 20-year debentures in August 1942, and exchanged the debentures for all its preferred stock, each holder receiving a $1,000 debenture for 10 shares of preferred stock. The Company canceled the stock thus received and adjusted the capital on its books accordingly. In determining the deficiencies originally, the Commissioner apparently

took the position that the distribution of the debentures in redemption and cancelation of the preferred stock was essentially equivalent to the distribution of a taxable dividend, within the meaning of 115(g) of the Internal Revenue Code The Commissioner now makes that contention only as to the four petitioners who held common (either voting or non-voting), and argues that the other five realized capital gain upon receipt of the debentures and that they have not proved their basis in the preferred stock which they surrendered. We hold that the exchange of debentures for preferred stock was not essentially the equivalent of a taxable dividend and that the exchange was tax free pursuant to § 112(b)(3).

Section 112(b)(3) provides for the nonrecognition of gain or loss "if stock or securities in a corporation a party to a reorganization are, in pursuance of the plan of reorganization, exchanged solely for stock or securities in such corporation. . . ." And § 112(g)(1)(E) defines "reorganization" to include "a recapitalization." There was here in fact a readjustment of the Company's capital structure, and there was an exchange of preferred stock solely for debentures. The transaction literally falls within the foregoing statutory provisions (*cf. Wolf Envelope Co.*, 17 T.C. 471), and unless there are considerations which render these provisions inapplicable they are dispositive of the present controversy.

The situation here is wholly unlike that presented in *Bazley* v. *Commissioner*, 331 U.S. 737, where the form of reorganization was employed in an effort to achieve the distribution of a disguised dividend, and where it was held that the reorganization provisions were not intended to govern in such circumstances. The net effect of the transaction in the *Bazley* case was a pro rata distribution of debentures among stockholders in such manner as to render them the substantial equivalent of a cash dividend. No such circumstances are present here. The exchange of debentures for the preferred did not even remotely resemble a pro rata distribution of debentures among the holders of the two classes of common stock, considered either separately or together

Five holders of the preferred stock owned no common stock whatever. The holders of 87½ per cent of the voting common owned no preferred and thus received no debentures. Similarly, several holders of a substantial block of non-voting common owned no preferred and likewise received no debentures. And finally, those holders of common who also owned preferred received debentures in percentages entirely unrelated to their holdings of common. To be sure, it is not a *sine qua non* of a taxable dividend that the distribution be made pro rata among the stockholders. But the fact that an alleged distribution is highly disproportionate raises a serious question whether it is in truth a disguised dividend.

Moreover, the debentures here involved were not readily marketable by reason of the following considerations They were unsecured and had a remote maturity date, without likelihood of acceleration except in the event of dissolution or insolvency; there was the risk that they might be subordinated to the payment of other obligations; the Company had obsolete plant and equipment, and its business was in an unhealthy state, having sustained net losses in four of five preceding years and having fared poorly in relation to its competitors The petitioners have asked us to find that the debentures had no fair market value at all. This we have not done, but the factors outlined above do show that the debentures could not readily have been sold, notwithstanding the Company's

relatively strong balance sheet, and this fact is an additional element to be considered in determining whether the transaction was in fact a distribution of earnings rather than the reorganization which it purported to be. Taking all the facts into account we conclude that there was not here a distribution essentially equivalent to a taxable dividend. The *Bazley* case is not controlling, indeed it points in the other direction.

Nor are the reorganization provisions inapplicable by reason of the absence of a "business purpose." One of the reasons for the elimination of the preferred stock was to wipe out the accumulated "deficit" in unpaid dividends, and we have no reason to conclude on this record that such objective was not attained. This was a valid business or corporate purpose (*cf. Okonite Co.* v. *Commissioner* (C.A. 3), 155 F.2d 248, 250, certiorari denied 329 U.S. 764, *Thermoid Co.* v. *Commissioner* (C.A. 3), 155 F.2d 589, 590, *Morainville* v. *Commissioner* (C.A. 6), 135 F.2d 201; *Skenandoa Rayon Corp.* v. *Commissioner* (C.A. 2) 122 F.2d 268, certiorari denied, 314 U.S. 696; *H. Grady Manning Trust* 15 T.C. 930, 942), and the reorganization provisions, which otherwise literally cover this controversy, cannot therefor be rendered inapplicable.

Note

1. How would the foregoing reorganization be treated under the 1954 Code?

Note that the table in the Court's opinion might be recast in the following form

Owner	Voting Common	Non-Voting Common	Preferred
Seide Family	800	1250	1600
Fagan Family	800	1250	1600

In determining whether a recapitalization exchange "has the effect of the distribution of a dividend," § 356(a)(2), can the effect on persons related to or controlled by the taxpayer be taken into account? Note that the constructive ownership rules of § 318(a) come into force only when they "are expressly made applicable."

2. Does the last paragraph of the opinion mean that a "business purpose" must be served by the recapitalization, else the gain (or loss) will be recognized? Is there a difference between a "shareholder" business purpose and a "corporate" business purpose? The lower courts in the *Bazley* case had written extensively on the subject of business purpose; note that the Supreme Court approved their conclusions "whatever may have been their choice of phrasing." See Bittker, "What is 'Business Purpose' in Reorganization?" *8th Annual N.Y.U. Inst. on Fed. Taxation* 134 (1950).

3. See generally Tarleau, "Recapitalizations," *11th Annual N.Y.U. Inst. on Fed Taxation* 371 (1953)

Section I. Spin-Offs, Split-Offs, and Split-Ups

Note: **Section 355 of the 1954 Code, relating to divisive reorganizations, is derived, with substantial modifications, from §§ 112(b)(11) and 112(b)(3) of the 1939 Code.**

Section 356 of the 1954 Code, relating to the receipt of "boot," is derived, with modifications, from § 112(c) and (e) of the 1939 Code.

Section 368(a)(1)(D) of the 1954 Code, defining the term "reorganization," is similar to § 112(g)(1)(D).

Sections 368(b) and (c) of the 1954 Code, defining the terms "party to a reorganization" and "control" respectively, are similar to §§ 112(g)(2) and 112(h) of the 1939 Code.

See Regs. 118, Secs. 39.112(g)-1-5 and 112(b)(11)-1-2.

When the shareholders of a corporation no longer wish to entrust their eggs to one basket, * there are various ways of getting them into several baskets. One is a corporate distribution to the stockholders of some of the assets; this will constitute a "dividend" if the corporation has earnings and profits. If instead, the assets are distributed to the shareholders in exchange for some of the corporation's stock, the distribution may run afoul of § 302(d), *supra*, p. 504, at least if the distribution is on a pro rata basis.

Other methods of dividing up the corporate investment are the "spin-off," the "split-off," and the "split-up." In a spin-off, the existing corporation, *A*, transfers some of its assets to *B* Corp., newly organized for the purpose, in exchange for *B*'s stock, which *A* then distributes to its shareholders. In a split-off, *A* also transfers some of its assets to *B* for *B*'s stock, but *A* distributes the *B* stock in exchange for part of its own stock. In a split-off, *A* transfers part of its assets to *B* Corp. and the rest to *C* Corp. both newly organized for the purpose, and then completely liquidates, distributing the *B* and *C* stock in exchange for its own. The economic consequences to *A*'s stockholders of all three methods are practically identical. Until 1954, however, the tax consequences of these transactions were quite divergent.

The split-up, under the 1939 Code, was a tax-free reorganization. The transfer of *A*'s assets to *B* and *C* was a reorganization, as that term was defined by § 112(g)(1)(D) [see § 368(a)(1)(D) of the 1954 Code], and all three corporations were "parties to the reorganization" by virtue of § 112(g)(2) [see § 368 (b) of the 1954 Code]. Consequently *A* recognized neither gain nor loss on its exchanges of property for the stock or securities of *B* and *C* because of § 112(b)(4) [see § 361(a) of the 1954 Code]. And *A*'s stockholders recognized neither gain nor loss on their exchange of *A* stock for the stock or securities of *B* and *C* under § 112(b)(3) [see § 354(a) of the 1954 Code].
